Many of these materials are still not fully published. All the Murabba‹at texts were published in volume two of the series *Discoveries in the Judaean Desert.* Texts 42–48 are Bar Kokhba letters, and numbers 49–52 may be also, but are so fragmentary that a certain identification of their genre is not impossible. The fifteen letters from Naḥal Ḥever have not been published. One must rely on prepublication descriptions, which contain significant excerpts. The Greek materials of the Babatha archive are now available, while the Semitic materials from that group are expected to be published by 1992.

B. Description and Contents

The Bar Kokhba letters thus derive from two different find spots, the caves of Murabba‹at and Naḥal Ḥever. They number 22 (or perhaps as many as 26 depending on the identification of Mur 49–52) and are written in three languages, Hebrew eleven, Aramaic eight, and Greek two (Ḥev 13 is so fragmentary that it is uncertain whether it is in Hebrew or Aramaic). With one exception, where an addressee is identifiable, those from Murabba‹at involve a man named Yeshua b. Galgula, who is designated by Mur 42 as "camp commander." The only missive which does not concern him is Mur 46, addressed to one Yose b. x (patronym lost) from Yonatan b. MḤNYM (vocalization of patronym unknown). It may be that Yose was an underling of Galgula's, for it seems likely that the letters of the Murabba‹at cave were brought there by Galgula or his family. The letters from Naḥal Ḥever, again with one exception, also have an obvious common denominator in their addressee, Yehonatan b. Ba‹yan (also spelled Ba‹yah). Most of the letters also mention Masabala b. Shimon, but as Ḥev 4, 5, 6 and 9 omit his name, it seems likely that this collection is Yehonatan's rather than Masabala's. These two men were co-commanders of the military forces centered in En-Gedi; perhaps Yehonatan was the senior officer, thus explaining why some matters did not involve Masabala. In the case of both groups of letters, from Murabba‹at and from Naḥal Ḥever, the great majority were sent by Bar Kokhba or, as the letters reveal, Shimon b. Kosiba (his real name). Mur 42, 46, and 48 are exceptions to this generalization, as are Ḥev 6 and perhaps Ḥev 3. The latter was sent by a man called Soumaios, a Hellenized form of the Hebrew name *Shimon.* The doubt as to the sender's identity arises because in another Greek letter Bar Kokhba's name is simply rendered Simon (a second way in which Greek could handle the Heb *Shimon*). Since Ḥev 3 is addressed to Yehonatan and Masabala in the manner of superior to inferior, however, and since a position of superiority is one that a "Shimon" other than Bar Kokhba is unlikely to have occupied given the considerable authority of the addressees, it is probable that "Soumaios" was simply one scribe's way of rendering his leader's name. Ḥev 3 is therefore likely to be from Shimon b. Kosiba.

The letters for the most part concern relatively trivial matters; there is no clear mention of a specific battle, for example, in a way which would enable scholars to coordinate the letters with information from classical and rabbinic sources. Further, not a single letter bears a date. The relevance of the matters which are raised to the course of the war will be considered below. The following table schematizes the addressee, sender, concerns, and language of each letter.

Table 1. An Overview of the Bar Kokhba Letters

Designation	*To*	*From*	*Language*	*Concerns*

Mur 42	Yeshua b. Galgula Camp commander	Yeshua b. Eleazar Eleazar b. Yehosef	Heb	Ownership of cow
Mur 43	Yeshua b. Galgula	Shimon b. Kosiba	Heb	Treatment of “Galileans”
Mur 44	Yeshua b. Galgula	Shimon	Heb	Shipment of wheat
Mur 45	——	——	Heb	Food shortage; death in fighting
Mur 46	Yose b. [ ]	Yonatan b. MḤNYM	Heb	Difficulties of [ ] bar Eliezer
Mur 47	——	——	Heb	A matter in Tekoa (?)
Mur 48	——	[ ] b. Yohanne	Heb	Uncertain
Ḥev 1	Yehonatan Masabala	Shimeon b. Kosiba	Aram	Confiscation of wheat; punishment of Tekoans for repairing homes; arrest of Yeshua b. Tadmoraya
Ḥev 2	Yehonatan (?) Masabala (?)	Shimon b. Kosiba	Aram	Uncertain
Ḥev 3	Yehonatan b. Baʿyan Masabala	Soumaios	Gk	Gathering of citrons by one Agrippa
Ḥev 4	Yehonatan b. Baʿyan	Shimon b. Kosiba	Aram	Yehonatan is to assist one Elisha in all he does
Ḥev 5	Yehonatan	——	Heb	Mentions the “people of En Gedi”
Ḥev 6	Yehonatan	Ananos (Hanan)	Gk	Sending of supplies to troops; Hanan transmits order from B. Kokhba
Ḥev 7	(very badly preserved)	Shimon b. Kosiba	Heb	Uncertain
Ḥev 8	Yehonatan b. Baʿyan Masabala b. Shimon	Shimon b. Kosiba	Aram	Sending of Eleazar b. Hitta to B. Kokhba immediately
Ḥev 9	Yehonatan	Shimon b. Kosiba (?)	Heb	Uncertain
Ḥev 10	Yonatan Masabala	Shimon	Aram	Sending supplies to camp(s)
Ḥev 11	Yehonatan b. Baʿyan Masabala	Shimon b. Kosiba	Aram	Mentions Romans; requires the two to come to Shimon and bring Thyriss b. Tinianus; mentions a rabbi, Bitniya b. Mesa
Ḥev 12	The men of En Gedi Masabala Yehonatan b. Baʿyan	Shimon b. Kosiba	Heb	Negligence of addressees; mentions a ship
Ḥev 13	Masabala (?) + (?) very fragmentary	——	?	——
Ḥev 14	Yehonatan Masabala	Shimon b. Kosiba	Aram	Mobilization or punishment of Tekoans refusing to fight
Ḥev 15	Yehudah b. Manasseh	Shimon	Aram	Gathering of the four “kinds” for Feast of Tabernacles

C. Historical Significance

It is commonly remarked that the Second Revolt lacked a historian such as the First Revolt possessed in Josephus, author of *Bellum Judaicum.* This remark may be a little naive if it means to suggest that by virtue of Josephus the course of events in the First Revolt (66–74 C.E.) is entirely clear, but it contains a basic truth:we are almost entirely ignorant about the Bar Kokhba rebellion. Basic questions such as the causes of the outbreak, the geographical extent of the conflict, and even the dates of the war are impossible to answer definitively because of lack of evidence. The Bar Kokhba letters are teasers in regard to these questions:scholars may feel that by reading between the lines, it will be possible to deduce something more than the immediate exigencies which provoked their composition.

Thus the scholarly literature on the war is replete with speculations of varying plausibility. The fact remains that in spite of the discovery of the letters and the contracts which often help in their understanding, it is not possible to write a history of the Second Revolt. Still, the letters and accompanying documents do shed considerable light on certain limited aspects of the situation. Among other things they illumine the course of the war, the administration under Bar Kokhba, and the prosopography of those involved in the conflict—but even here scholars are often divided on how to understand the new evidence.

1. The Course of the War. According to the ancient historian Cassius Dio, the war between Rome and the Jews was the result of the Emperor Hadrian's attempt to build a shrine to the Roman god Jupiter Capitolinus on the site of the ruined Jewish temple to Yahweh. The effort was in connection with the emperor's rather aggressive policy of building Hellenistic cities throughout the eastern portions of the empire. The *Life of Hadrian,* on the other hand, attributes the outbreak of the conflict to Hadrian's prohibition of castration which, in Roman eyes, included "half-hearted" efforts such as circumcision. Many scholars think that these two suggested causes ought to be understood as complementary rather than mutually exclusive; indeed, this seems a reasonable interpretation. Typically, Greco-Roman sources do not mention another aspect of the Jewish situation which may well have been equally significant in provoking conflict:messianic speculation and eschatological calculations. It is said in rabbinic literature that Rabbi Akiba, one of Bar Kokhba's principal supporters, was among the *měḥaššěbê ʾittōt,* "calculators of the (end) times." In other words, he was taken up with messianic speculations and the attempt to calculate when the Messiah would appear based on hints in the Scriptures. The pseudepigraphic work *Apocalypse of Baruch,* now extant only in Syriac, is a writing from the period immediately after the destruction of the temple in 69 C.E., one with many connections to rabbinic Judaism in terms of concept and legal interpretations. It is therefore not unreasonable to suggest that it represents the type of thinking which was going on in some circles of nascent rabbinic Judaism in the period between the revolts. The dominant typology of *Baruch* involves the temple:it draws parallels between the destruction of the first temple at the time of Jeremiah and that of the second in 69 C.E. Just as there was a rebuilding of the first temple under Ezra and Nehemiah 70 years after its destruction, *Baruch* promises a future rebuilding, a third temple, to inaugurate messianic times. For a people saturated in scriptural knowledge such as these circles of ancient Jewry, who were convinced of such typologies, it was natural to think that another seventy-year period would be involved. And thus the date of the outbreak of the revolt is perhaps connected to an understanding of its causes:here the Bar Kokhba material may be helpful.

Scholars usually prefer the dates Cassius Dio supplies for the revolt, 132–135 C.E., to those of other ancient sources. Mur 24 appears to confirm the first date. This document belongs to the genre of lease contract known in Greek as *diastrōma;* examples have long been known from the Oxyrhynchus papyri of Egypt. Mur 24 specifies in lines 9 and 10 that the lease is to last "until the end of the eve of Remission, which is five full fiscal years." Since the document is dated "the twentieth of Shebat, the second year of (the era of) the redemption of Israel by Shimon b. Kosiba, Prince of Israel," it must have been composed in the second year of the seven-year sabbatical cycle. Earlier sabbath years are known, making it possible to affirm that 131/132 C.E. was the first year of the cycle and, therefore, this document was written in early February 134; concomittantly, the revolt must have begun in 132/133. It is not known whether the years of the revolt were dated from Nisan, the first month of the Jewish year for some functions, or from

Tishri, the seventh month but considered the first for other functions. Mur 24 is not the earliest dated document among those of Bar Kokhba's era—that honor belongs to Ḥev 42, which dates to April 132 C.E.

Given that the temple in Jerusalem had been destroyed in 69 C.E. and that, on the basis of a "seventy-year" typology, the next would be built in 139 C.E., it appears that the revolt broke out seven years prior to what some expected to be the dawn of the messianic era. Seven is, of course, a number pregnant with significance in eschatological speculation, and one might suspect that such passages as Dan 9:24–27 and the prophecy of "Seventy Weeks" helped guide those calculating the end. The Bar Kokhba materials thus support the suggestion that eschatological fervor fueled the outbreak of the war, confirming the possible relationship between the war's outbreak and the expected dawn, after a seven-year period of "tribulation," of messianic peace.

With regard to the end of the war, Greco-Roman evidence is not specific. The few known facts seem to require that it ended in late 135 C.E. The Bar Kokhba materials accord with such a date. The latest dated document is Mur 30, written in October 135. The place where it was written is not fully preserved, but what can be read fuels another debate about the Second Revolt for which the Bar Kokhba materials are relevant: whether the rebels ever succeeded in capturing Jerusalem.

Little doubt attaches to the question whether the rebellion aimed at the conquest of Jerusalem. Coins minted by the rebels amply demonstrate the significance of the city in contemporary ideology. They picture numerous images connected with the sacrificial cultus, which had apparently ceased with the defeat of the First Revolt. Some coins bear the inscriptions *yršlm,* "Jerusalem," or more fully *lḥrwt yrwšlm,* "of the freedom of Jerusalem." That they sought to capture the city, indeed, that its capture from the Roman occupiers was perhaps the preminent goal of the warriors under Bar Kokhba, is not at issue. But did they succeed? On this point scholarly opinion is divided.

Against the possibility of conquest is the silence of the best ancient authority, Cassius Dio. Also weighing on the side of the negative is the numismatic evidence. Almost no coins of the Bar Kokhba period have been discovered in Jerusalem, in face of the relatively numerous hoards known from elsewhere in Judea. But this negative evidence, significant as it is, may not be enough to decide the issue. Christian authors of the patristic period are unanimous in asserting that Jewish forces took the city and that the Romans eventually won it back. And two of the Bar Kokhba documents seem to confirm this assertion.

Mur 29, inscribed in August/September 133, says that it was transacted *b[ ] šlym*. Apparently only two letters are missing, probably spelling *byršlym,* "in Jerusalem" (similarly Mur 30, dating as noted to October 135). The reading is unfortunately broken, but it is not apparent what toponym could fit the letters which remain, other than "Jerusalem." (One must be cautious about being overly assertive on this point, however, for the documents under discussion have revealed quite a few previously unknown toponyms.) Also in favor of the view that the rebels held Jerusalem at some point in the war is the evidence of the dating formulas used in the Bar Kokhba contracts and, in modified form, on the coins.

The full form of the standard dating formula was seldom used. Usually contracts would abbreviate by dropping one or more elements. All the contracts would begin, however, with a notation of the day, month, and year of the Bar Kokhba era. A contract from Kefar Baru may provide the best example of the full form. After noting day, month, and year it reads "of the Freedom of Israel at the hands of Shimon ben Kosiba, Prince of Israel." Other contracts, and coins, read "of the Redemption of Israel." The coins and contracts use either "redemption" or "freedom" capriciously, so that, contrary to what was once believed, nothing can be inferred from these terms as to the ideology or progress of the war. One contract, Mur 25, reads "year three of the Freedom of Jerusalem." Taking all this evidence together, it appears that the Bar Kokhba era was dated alternately by "the Freedom of Jerusalem," the "Freedom of Israel," or "the Redemption of Israel." (The dated contracts so far known are, from earliest to latest, Ḥev 42, Mur 22, Mur 23, Mur 24, Mur 29, Kefar Baru, Mur 25, Ḥev 44, Ḥev 45–46, Ḥev 47, "Kefar Bebayu" [now known to come from Kefar Baru], and Mur 30.) The implication of this prosaic dating phraseology is therefore that there existed an equivalence between the freedom of Israel and that of Jerusalem. The formulas thus suggest that the war began with an uprising led by Bar Kokhba which liberated Jerusalem and began the

new era by occupying the city. If the readings in Mur 29 and 30 are indeed referring to Jerusalem, then it would seem that the city was in the hands of the rebels for a substantial portion of the war. It is possible, of course, that this period was punctuated by one or more Roman reconquests of the city. But it would seem that, toward the end of the war, the city was under rebel control for long enough to provide some feeling of security. This impression arises from two of the Bar Kokhba letters, Ḥev 3 and Ḥev 15, which apparently belong together.

Ḥev 3 is written in Greek and follows Greek epistolographic conventions. It reads in full:

> Soumaios to Jonathan son of Baianos and to Masabala, greetings: I already sent Agrippa to you. Make haste to send me … and citrons. And he [Agrippa] will transport these things back to the headquarters of the Jews. And be sure you do so! It was written in Greek because no one was found [was able?] to write it in "Hebrew." Dismiss him very speedily in view of the festival. And be sure you do so! Soumaios. Farewell. [author's translation]

Ḥev 15 is written in Aramaic and, accordingly, follows the conventions then governing Hebrew and Aramaic letters. It reads:

> Shimon to Yehudah bar Menasseh, at Qiryat Arabayah. I have sent to you two donkeys that you should send with them two men to Yehonatan bar Baʿyan and Masabala. They are to load them with branches and citrons and send them to the camp, to you. As for you, send other men to bring to you myrtles and willows. Prepare them (= tithe them?) and send them to the camp (i.e., to Shimon) because the men comprising the forces are numerous. Be well. [author's translation]

It is impossible to be certain of the relation of these letters to one another, if indeed they are referring to the same situation. One scenario which seems to make sense is to assume that Shimon wrote the Greek letter first. Yehonatan and Masabala carried out their orders and sent branches and citrons to the main camp of the Jews located, perhaps, at Jerusalem. There the forces were about to celebrate the Festival of Tabernacles—those who could be spared and could disengage the Romans for a week or so. Shimon had previously arranged to get myrtles and willows, the other two of the "four kinds" used in the celebration, elsewhere. As men (with their families?) continued to arrive, however, it became evident that not enough of the four kinds had been gathered, so Shimon sent a letter to Yehudah b. Menasseh to arrange for more to be sent. Other interpretations are equally cogent, but the important point is this: Shimon b. Kosiba, a man known from other letters as a Jew who adhered strictly to the legal requirements of Jewish observance, was about to celebrate the Festival of Tabernacles.

In addition to the procession bearing the four kinds, the Feast of Tabernacles was distinctive in two regards:like Passover and Pentecost, it was a pilgrimage festival; adult males were required to journey to Jerusalem. Second, it required the most burnt offerings of any occasion of the religious calendar. While by the time of Bar Kokhba it was perhaps not always legally necessary to journey to Jerusalem, it was always desirable. If offerings were to be made, they, of course, could be made nowhere else. Thus it is likely that at the time of these two letters Jewish forces controlled Jerusalem, although, as noted, it is not absolutely certain. We are ignorant of precisely how the feast was to be celebrated.

Assuming the reading of Mur 30 is indeed "Jerusalem," then it is clear that Bar Kokhba was in control of the city at the time of the Feast of Tabernacles (Tishri 15–22) in the year 135. Do the two letters date from that year, the only year in which there is direct evidence of Jewish control of the city at the time of the festival? Again, the data are of uncertain interpretation, but it appears that the answer is no.

Both letters come from Naḥal Ḥever and, presumably, the "papers" of Yehonatan b. Baʿyan. It appears that b. Menasseh had sent his letter on to Yehonatan and Masabala as an explanation of his requirements from them. Now, among the Ḥever materials no document thus far published postdates Ḥev 47, a contract of January 135, some eight months before Tabernacles of that year. During this year, the last of the revolt, Roman forces were presumably wiping out the last centers of Jewish resistance. Thus it seems likely that En Gedi, Yehonatan's village, had already been conquered before Tabernacles of 135—a date which is, after all, at most two months prior to the end of the revolt.

Thus, from this rather lengthy excursus, it would seem that the letters pertain to the year 134 or perhaps earlier. Since according to Mur 29, rebel forces apparently held Jerusalem in late August of 133—only a

short time before the Festival of that year—the letters may refer to that occasion. The problem with that hypothesis is that the other Bar Kokhba letters addressed to En Gedi seem to presuppose a deteriorating situation in which the men of Tekoa, for example, have lost heart and refuse to support the now clearly failing rebellion. If this intuition is correct, and if the En Gedi letters all date to the last months before it fell to the Romans, then once again we are back to the year 134. And if so, then we may perceive Jewish control of Jerusalem at the beginning of the revolt in 132, in August 133, in October 134, and in October 135. The implication is of a rather lengthy Jewish control of the capital city whose loss signaled the ultimate failure of the revolt.

The Bar Kokhba materials also indicate something of the geographical extent of the war. Taken together with the findings of archaeology and the numismatic evidence, it appears that the revolt was very largely, if not entirely, confined to Judea. Thus the mention of "Galileans" in Mur 43 should not be understood to imply any large-scale hostilities to the north. The reference is probably to Jews from Galilee who had joined the efforts in the south and who now required discipline.

2. Administration of Israel. Indirectly, and if one or two reasonable assumptions are admitted, the Bar Kokhba materials reveal a considerable amount about the political administration during the period 132–135 C.E. It is perhaps fortuitous that among the names which are prominent either in these materials or in the little evidence we possess from classical sources, there are several which served as the capitals of toparchies in the time of the First Revolt and, apparently, in the period which led up to the Second Revolt. Josephus, in *JW* 3.54–55, provides a list of the toparchies in his time, and there one finds, among others, Jerusalem, the central toparchy; Acraba; Herodium; Beth Gubrin (very near Betar, the site of the final battle of the war); and En Gedi. One of the two toparchies of Peraea, Livias, is mentioned prominently in Papyrus Yadin 37 (part of Babatha's archive). In addition, new discoveries in the caves at Ketef Jericho from the time of the revolt may suggest that Jericho, another toparchy mentioned by Josephus, was still functioning as such under b. Kosiba.

Of course, the mere mention of these localities in the Bar Kokhba materials does not alone indicate that he had taken over the administrative machinery he found operating under the Romans. But the evidence that he did so consists of more than mere names. He appears to have taken over imperial lands which had belonged to Hadrian and to have continued the system of leasing them which the Romans employed. For example, in Mur 24, several men lease lands from the administrator in Herodium, a man named Hillel b. Garis. These lands were in a village by the name of ʿIr Naḥaš of uncertain location. It is clear that the men had to travel to Herodium in order to transact the lease and, therefore, it would seem that it was the capital of a toparchy for at least a part of the war. Later it may have fallen, for while Mur 47, presumably addressed to Yeshua b. Galgula, appears to require him to act in Tekoa (as one would expect the commander of nearby Herodium to do), both Ḥev 1 and 14 direct the attention of the commanders of En Gedi to matters there. Presumably such would not have been necessary if Herodium still functioned. We know from Mur 24 that it was still in Jewish hands in February 134, but later in that year Tekoa was administered from En Gedi. In addition to larger capitals of toparchies, there were smaller centers of bureaucracy as well.

At each administrative center b. Kosiba appears to have appointed one or more "civilian" administrators to lease the state-held lands. These were designated in Hebrew by the term *parnās,* and in Aramaic, if our inference is correct, by *šāṭĕrâ.* The names of a number of such officials are known from the letter and contracts. The administrators of Beth Mashiko near Herodium (?) were Yeshua b. Eleazer and Eleazer b. Yehosef, the men who sent Mur 42 to b. Galgula. In the first year of the revolt the administrators of state lands in En Gedi were Yehonatan b. MḤNYM and Ḥorin b. Ishmael. By the third year only Yehonatan is mentioned in Ḥev 44–46. It appears that Ḥorin was removed or killed in battle. Ḥev 1 mentions a Ḥanun b. Ishmael who is in trouble with b. Kosiba because of some dealings involving wheat. If the two men were brothers—an uncertain point, since about two percent of Jewish men bore the name Ishmael—then perhaps Ḥorin was guilty, with his brother, of malfeasance. At Herodium Hillel b. Garis apparently functioned as *parnās,* although he is not so called. At Kefar Baru, located perhaps in Transjordan near Machaerus, Eleazer b. Eleazar is called a *šāṭĕrâ,* and sells a house (his own, not one belonging to the

state). Just north of Beth Gubrin, an archaeological survey has discovered a lead plaque which reads, "Bar Kosiba, Prince of Israel, and his administrator, Shimon DSWY, one half."

In addition to these civilian administrators who leased out the vast estates to which b. Kosiba had fallen heir, there were military commanders in charge of "camps." Yeshua b. Galgula was one such, apparently stationed at Herodium. Yehonatan and Masabala were the two in En Gedi. Yehudah b. Menasseh of Ḥev 15 was apparently another, as may have been Ananos of the Greek letter Ḥev 6 (= Ḥanun b. Ishmael of Ḥev 1?). These men were in charge of military operations; from the surviving letters they seem to have been greatly involved with problems of supplies, especially of wheat. En Gedi served as b. Kosiba's port, wheat coming thence across the Dead Sea. Yehonatan and Masabala saw to it that it was sent where it was needed. From Mur 42 one may deduce that civilian administrators were subordinate to the military commanders of camps.

3. Prosopography. Space permits only a brief indication of the application of the Bar Kokhba finds to this aspect of 2d century Palestine. Actually, prosopographical analysis of these texts is difficult and risky because of the fact that so many Jews of both sexes bore the same overwhelmingly common names. It is comparable to a situation in which seventy or eighty per cent of all male Americans would be named Tom, Dick, Harry, Mike, John, or Jim. How can one decide which Tom is the one in question in a given text? In spite of this obstacle, some insights are possible.

First, we now know, as indicated, the real name of the leader of the revolt. From Christian texts we had known him as Bar Kokhba, "the son of the star." Rabbinic texts call him Bar Koziba, "the son of the Liar." It is now clear that both these appellations are puns on Bar Kosiba's given name. "Bar Kokhba" refers to his messianic claims, which are evident, for example, in the star depicted on some of his coins. The reference is to Num 24:7, "a star shall arise from Jacob," a traditional messianic text. The rabbinic pun is, of course, reaction to the failure of the revolt.

His letters reveal b. Kosiba as a man involved in the small details of affairs in the various camps. They show him to be a man of piety in the sense of legal observance, and of harsh threats. The degree to which this messianic claimant had to resort to threats to get his own men to carry out his orders is both surprising and revealing. He seems to have commanded little awe from his peers, although ordinary soldiers may have been more impressed. And, of course, it must be remembered that most or all of the letters date from a period in the revolt when it was becoming clear to all but the most idealistic of the faithful that the war could not be won.

From the Babatha materials it seems that she was related to the military commander of En Gedi, Yehonatan b. Baʿyan. Babatha was married twice in her short life (she probably did not live to be older than 30), and the second of her husbands came from En Gedi. Upon his death she inherited property there, and the descriptions of those holdings give us some insight into the topography of the village. The legal materials belonging to her also reveal her to have been a woman of some wealth. Given her relation to Yehonatan b. Baʿyan, one may hazard that he, too, was a relatively wealthy individual and that their family was one of the leading families of En Gedi. Yehonatan could apparently read all three languages—Greek, Hebrew, and Aramaic—which were in common use among the Jews of Palestine. If his appointment as camp commander is paradigmatic, then we may conclude that b. Kosiba drew his administrators and highest military officers from the village upper classes and families of elders. The ordinary soldiers of his army may have been more like Eleazar b. Hashiloni, Ḥalifa b. Yehosef, and Naqalah b. Yehonatan, three illiterates who leased land in Mur 24 but were unable to sign their own names.

In addition to the aspects of their study here discussed, the Bar Kokhba letters and related materials contain precious information on many other areas of ancient Palestinian life which space precludes discussing. These areas include sociolinguistics, legal and religious practice, Roman administration, and the economics of early 2d century Palestine. While they leave many questions unanswered and frustrate scholars who wish to pull the veil back a little further, they are a priceless legacy of the ancient world.

MICHAEL O. WISE

BAR KOSIBA. See BAR KOKHBA.

BAR-JESUS (PERSON) [Gk *Bariēsoûs* (Βαριησοῦς)]. A magician, also called a "Jewish false prophet" (Acts 13:6), in the court of Sergius Paulus, proconsul of Cyprus at Paphos. When Sergius Paulus requested to hear Paul and Barnabas, Bar-Jesus opposed them, which resulted in his being struck blind at Paul's denouncement. He is called a false prophet because of his opposition to the message of Paul and Barnabas rather than his association with the practice of magic. In his denunciation, Paul called Bar-Jesus "son of the devil," a play on his name, "son of Jesus." The element *bar* is Aramaic for "son" (Acts 13:10). Bar-Jesus was also known as ELYMAS, a name sometimes interpreted to mean "magician," based on the statement in Acts 13:8. The awkward phrasing in 13:8, however, is likely meant to identify Bar-Jesus with Elymas rather than suggesting Elymas means "magician."

FRANK E. WHEELER

BARABBAS (PERSON) [Gk *Barabbas* (Βαραββας)]. The name "Barabbas" occurs in all four Gospels for the criminal chosen by the crowd—at the prompting of the priests, in preference to Jesus Christ—for Pilate to release on the feast of the Passover. His name does not occur elsewhere in the NT, and there is no extra-biblical account of his activities leading up to the biblical account, nor of his subsequent history.

"Barabbas" is evidently the Gk rendering of an Aram name, although the precise origin is debated. Most scholars suggest that it is a patronymic derived from Bar Abba, "son of Abba." Some suggest that Barabbas' father was named "Abba." Although no written evidence exists for the use of Abba as a personal name in Jesus' day, a contemporary of Johanan ben Zakkai (ca. A.D. 75) was so named (*m. Peʿa* ii. e), and thereafter the evidence for the use of Abba as a personal name is quite conclusive (Abrahams 1924:201–2). Others suggest that Barabbas was the son of a well-known rabbi, because "Abba" was used for esteemed scholars and rabbis. There are even some codices with a double "*r*" in the name, suggesting the possibility that Barabbas is derived from Bar Rabba (n), meaning "son of a teacher." A less likely suggestion is that Barabbas finds its origin as a disguised abbreviation for the venerated name Abraham ("son of Abraham").

An interesting variant occurs in Matt 27:16–7, where he is called "Jesus Barabbas." While extant manuscript evidence is weak, Origen implies that most manuscripts in his day (*ca.* A.D. 240) included the full name. Many scholars today accept the full name in Matthew as original and suggest that it was probably omitted by later scribes because of the repugnance of having Jesus Christ's name being shared by Barabbas (*TCGNT* 67–8). It is not improbable for Barabbas to have the very common name *Jesus.* Matthew's text reads more dramatically with two holders of the same name:"Which Jesus do you want; the son of Abba, or the self-styled Messiah" (cf. Albright and Mann *Matthew* AB, 343–4). There is some evidence that the full name "Jesus Barabbas" also originally appeared in Mark's gospel (Mann *Mark* AB, 637).

Barabbas is called "one of those among the rebels who had committed murder in the insurrection" (Mark 15:7; Luke 23:19; cf. Acts 3:14), a "notorious prisoner" (Matt 27:16), and a "robber" (John 18:40).

These terms closely resemble the characteristics of social banditry uncovered in recent studies of the social history of 1st century Palestine (e.g., Horsley and Hanson 1985:48–87). As a bandit (*lēstēs,* the same term used of the two criminals between whom Jesus was crucified [Mark 15:27]), Barabbas may have belonged to one of the rural brigands. These brigands were popular with the common people because they preyed upon the wealthy establishment of Israel and created havoc for the Roman government. Barabbas was being held prisoner by the Roman authorities at the time of Jesus' trial and was released by Pontius Pilate to carry out the customary paschal pardon (Mark 15:6–15). The reason given for the crowd choosing Barabbas over Jesus is said to be the instigation of the chief-priests and elders (Matt 27:20; Mark 15:11), but quite likely the Jerusalem crowds also preferred Barabbas's active methods of Roman resistance to Jesus' way of nonresistance.

The absence of extra-biblical historical verification for the paschal pardon custom remains a problem. Some scholars have attempted to resolve the difficulty by suggesting that the entire incident, including Barabbas himself, is an apologetic creation of the evangelists (e.g., Rigg 1945; Maccoby 1970; Davies 1980). But recent studies have produced evidence of widespread customs of prisoner releases at festivals in the ancient world (e.g., Merritt 1985:53–68). The gospel account of a custom of reprieve of a prisoner at the Passover echoes the practice of the ancient world.

The portrait of Barabbas in the gospel account remains hazy. In contrast, the portrait of the innocently charged Jesus is thrown into sharp focus. Such appears to be the purpose of the evangelists.

MICHAEL J. WILKINS

BARACHEL (PERSON) [Heb *barak›ēl* (בַּרַכְאֵל)]. The father of Elihu from the land of Buz (Job 32:2). Barachel is not otherwise attested, whereas Berechiah is attested as a Jewish personal name both epigraphically and in the MT (see BERECHIAH). The name does, however, occur in Safaitic (Harding 1971:102). Although the speech of Elihu (Job 32–37) most probably is an early orthodox addition (and commentary) to the original book of Job, the Elihu-author obviously took pains to accommodate his hero to the Arabian locale of the book of Job by means of Elihu's patronym and country of origin. The Masoretic tradition, as represented by the Leningrad Codex, may acknowledge the Arabian context of Barachel by its peculiar vocalization, which does not accord to the rules of classical Hebrew word formation (one might expect **běrak›ēl* or *bārak›ēl*).

ERNST AXEL KNAUF

BARAITA [Aram *bāraytā›* (בָּרַיְתָא) = Heb *ḥîṣônâ* (חִיצוֹנָה), "outside"]. The Babylonian Talmud often (and the Jerusalem Talmud once) uses this term in reference to a text that is to be distinguished from the Mishnah of R. Judah Hanasi. Thus, a baraita is a "mishnah" that is "outside" the recognized Mishnaic canon. More correctly, a baraita is any text or tradition not included in the Mishnah for which tannaitic status is claimed (the Tannaim were religious leaders of the Mishnaic period).

Baraitot (pl. of baraita) are preserved in independent collections and in both Talmuds. Collections of baraitot include the Tosefta and the legal midrashim *(Mekilta, Sifra, and Sifre).* See also MIDRASH. The Talmuds preserve thousands of individual baraitot. The Babylonian Talmud generally introduces them

with technical terms, including *tĕnô rabbānān* ("our teachers taught"), *dĕtanyā*› ("from the teachers"), etc.; in the Jerusalem Talmud there is often no such introduction.

Baraitot originated in various ways. In addition to tannaitic traditions that were preserved independently of R. Judah Hanasi's Mishnah, there are others that, given their dependence on Judah's Mishnah, were clearly composed later (Albeck 1960:32–33). The Babylonian Talmud preserves Babylonian baraitot (Higger 1948:36–41), some of which may have been composed by tannaim who settled there in the 2d century (Neusner 1962) but others of which were authored by Amoraim (religious leaders of the Talmudic period). In addition, baraitot of all kinds were transformed by the Babylonian rabbis (Jacobs 1971; Hauptman 1988).

The form in which baraitot circulated in the talmudic period is subject to question. For example, Albeck (1969:58–72) claims that the Tosefta (a standard collection of baraitot) was not yet present before the authors of the Babylonian Talmud; Neusner widely assumes that it was. Hauptman (1988) shows that there were at least organized collections of baraitot at this time.

The authority of baraitot among rabbinic traditions is second only to the Mishnah. An Amora could (theoretically) dispute a Mishnah or baraita only with the support of another baraita. Thus, the presence of such a wide variety of baraitot in the talmudic tradition provided for immense flexibility in the developing system.

DAVID KRAEMER

BARAK (PERSON) [Heb *bārāq* (בָּרָק)]. The son of Abinoam and military commander from Kedesh, located in Naphtali, north of lake Huleh (Judg 4:6). His name (meaning "lightning") is widely attested among the Semitic peoples (*HALAT* 155). Barak was summoned from the north by DEBORAH in Ephraim to fight against a coalition of forces commanded by Sisera (note the plural *mĕlākîm* "kings" in Judg 5:19; *Judges* 94). Not all the tribes of Israel were enthusiastic about the mobilization (Judg 5:16–17), but contingents from Benjamin (probably brought by Deborah), Issachar, Zebulun, and Naphtali were led to battle near Meggido by Deborah and Barak. Sisera's army was routed all the way to his home town of Harosheth Haggoyim and was murdered by Jael as predicted by Deborah (Judg 4:15–21). The story contrasts the role of Barak with Deborah. The narrator named Deborah the judge, not Barak. It is possible that he occupied a similar position in the north by virtue of his military stature, but the texts do not say so. It is Deborah who manifests a greater faith in Yahweh than Barak. And Barak loses the opportunity to personally humiliate his foe. Yet ironically it is Barak and not Deborah who is cited by the New Testament writer of Hebrews for his faith (Heb 11:32). If we read with the and Peshitta *bārāq* instead of the MT *bĕdān* in 1 Sam 12:11, then Barak has once again usurped Deborah's place in the tale of heroes.

KIRK E. LOWERY

BARDAISAN OF EDESSA (PERSON). A nobleman of Edessa (ca. A.D. 155–222) and associate of its ruler King Abgar VIII (d. A.D. 212; Drijvers *ANRW* 8:2.876; not Abgar IX as Duval 1891–92:212). Bardaisan was reputed to be of Parthian or Armenian origin, skilled in archery and schooled in Greek philosophy and rhetoric (Sextus Julius Africanus, *Kestoi,* cf. *PG* 10.45–46; Eusebius *h.e.* 4.30; *p.e.* 6.9; Hieronymus *vir. ill.* 33; Epiphanius *haer.* 56). The earliest known Syriac author, Bardaisan invented the *madrāšâ* (Syr), a hymn composed in isosyllabic verse which uses parallelism, rhyme, alliteration, and a variety of wordplay to achieve its effects. Later Greek tradition erroneously attributes this

accomplishment to his son Harmonius (Sozomenus *h.e.* 3.16; Brock 1980:6). According to Ephrem Syrus (d. A.D. 373), in imitation of David's Psalms, Bardaisan composed 150 such hymns, fragments of which are preserved by later Syriac authors (Beck 1957:203 = Ephrem *HCH* 53.6; cf. Drijvers 1966:165). Also extant is a dialogue, composed on the Platonic model by his disciple, Phillip, entitled in the Syriac manuscript *The Book of the Laws of the Countries* (Nau 1907 = *BLC;* cf. Drijvers 1965) but known by Eusebius as *On Fate.* Substantively and formally influenced by Carneades' *nomima barbarika,* it sets forth as Bardaisan's view a subtle reconciliation of natural law, astrological determinism, and free will (Eusebius *h.e.* 4.30; *p.e.* 6.10.6 and *Clem. recogn.* 9.19; Schaeder 1932:32–41; Drijvers 1966:60–95). Later sources attribute to him works on astronomy, astrology, chronology, and ethnography, particularly on Indian customs, and a history of Armenia.

A clear and unbiased view of Bardaisan's teaching is virtually impossible since all relevant information is mediated by later sources originating with either his followers or their opponents. The formulation of the content of his doctrine depends which of diverse and often conflicting sources are seen as most reliable. Having distinguished three distinct cosmogonic traditions preserved in the later Syriac sources, Drijvers (1966:96–152) harmonizes the earliest with *BLC* and Ephrem. By contrast, Jansma (1969; cf. Davids 1971) argues that "catholicising" and "manichaeicising" tendencies among the later Bardaisanites militate against this approach; in his view, *BLC* and Ephrem *HCH* 55 best represent the two later tendencies and should be distinguished both from one another and from Bardaisan's views. Essentially following the method of Drijvers produces the following cosmogony: There are four entities (Syr *ʾîtyê* = Gk *ousiai*), water, fire, light, and wind, arranged horizontally according to the cardinal points of the compass, as N, E, S, and W, respectively. Each entity has characteristics associated with each of the five senses, producing in the case of sight a correspondence between the entities and the colors:water with green, fire with red, light with white, and wind with blue (Mitchell, Bevan, and Burkitt 1921 = Ephrem *Pr. Ref.* 2.223–24). Above them is God and below them darkness (Syr *hešôkâ*). A chance movement causes the mixing of the pure entities with darkness, resulting in the creation of matter (Syr *hûlê* from Gk *hyle*). The entities call upon the Most High, Who Sends the Primal Word (Syr *mêmrâ* = Gk *logos*) to order the matter. The four entities and the darkness are repurified and returned to their places through the "mystery of the cross" (Mitchell 1912 = Ephrem *Pr. Ref.* 1.52–60, 138–40, 2.220.29–33; Nau 1932:191–92 = Barhadbesabba *Arb.* 1.5). Bardaisan's tripartite anthropology of body (Syr *pagrâ* = Gk *sōma*), soul (Syr *nafšâ* = Gk *psyche*), and mind (Syr *madʿâ* or *reʿyanâ* = Gk *nous*) corresponds to three realms in the cosmos, the natural world, the planetary, and the spiritual, which are ruled respectively by Nature (Syr *kyanâ*), Fate (Syr *ḥelqâ*), and Freedom (Syr *ḥerutâ*). The body, subject to the law of Nature, is determined by biological needs; economic and social status are determined by the rules of astrology; moral life and therefore eternal destiny are ruled by freedom of the will (Drijvers 1966:76–95, 152–61). Consequently resurrection of the body is rejected (Ephrem *Pr. Ref.* 2.143–69; cf. *Pr. Ref.* 1.146; Beck 1963 = Ephrem *Car. Nis.* 46:8, 51:2–3), and the Bardaisanites are said to hold a docetic Christology (Adamantius *dial.* 5.8–10). Mythological elements emerge more strongly in some doctrines attributed by Ephrem to the Bardaisanites if not to Bardaisan himself:Wisdom (Syr *hekmeta* = Gk *sophia*), appearing before the archons and governors, stirred them up to produce the human body (Ephrem *Pr. Ref.* 1.122.45–123:14). "Something flows and comes down from the living Father and the Mother conceives and gives birth to him in the mystery of the fish and he is called the living Son" (Ephrem *HCH* 55.1.3–5). The Holy Spirit has two daughters, one of whom is the reflected image of her sister (*HCH* 55:3–5).

As a whole Bardaisan's work consists of a blend of ideas and imagery with parallels in the NT, Odes of Solomon, Philo, the Hermetic literature, the literature of various Gnostic sects, Aramaean paganism, astrology, Stoicism, and later Platonism. Some scholars argue that his is an independent syncretism without special affinities to Gnosticism of any sort (Schaeder 1932; Drijvers 1966:166–228; de Halleux 1968; Brock 1970). Some, beginning with Hippolytus, have considered Bardaisan a Valentinian, Ophite, or Saturninian Gnostic (Hippolytus *haer.* 6.35; cf. Ephrem *HCH* 21:10; Ehlers 1970). Other early Greek and Latin writers thought him a Valentinian who converted to orthodoxy or vice versa (Eusebius *h.e.* 4.30.3; Hieronymus *vir. ill.* 33; Epiphanius *haer.* 56.2). Notably, although they consider him a heretic,

neither Ephrem nor any later Syriac writer alludes to ties with Valentinianism. Ephrem frequently associates him with Marcion and Mani from whose views, however, he carefully distinguishes those of "the Aramaean philosopher" (Ephrem *Pr. Ref.* 2.7.48–8:1, 225.25–26). There is substantial scholarly agreement with Ephrem's remark that "unwillingly, Mani entered by the door Bardaisan opened," i.e., that Mani's cosmological and anthropological notions were based on Bardaisan's views pushed in a strongly dualistic direction (Ephrem *Pr. Ref.* 1.122.25–31; cf. 123.15–22; Schaeder 1932:63–73; Aland 1975; Drijvers 1975; but cf. Jansma 1969). Bardaisan's followers survived in the Syriac speaking Christian environment at least until the episcopate of Rabbula of Edessa (d. A.D. 435), and perhaps as late as the 8th century.

KATHLEEN E. MCVEY

BARIAH (PERSON) [Heb *bārîaḥ* (בָּרִיחַ)]. The third son of SHEMAIAH in the list of postexilic Davidic descendants in 1 Chr 3:22. The text of MT is problematic, however:the phrase which appears earlier in v 22, "… and the sons of Shemiah …," is probably best deleted as a dittography (see Williamson *Chronicles* NCBC, 58). This makes Bariah not the third son of Shemiah, but rather the fourth son of Shecaniah, who then had a total of six sons, which agrees with the tally at the end of v 22. The name "Bariah" means "fugitive."

RUSSELL FULLER

BARKOS (PERSON) [Heb *barqôs* (בַּרְקוֹס)]. The head of a family of *nĕtînîm* (temple servants) (see NETHINIM) listed among those exiles returning from Babylon to Jerusalem and Judah (Ezra 2:53 = Neh

7:55; 1 Esdr 5:32). It is a theophoric Aramaic name meaning "son of *Qōs*" (Zadok 1980:114). Although *Qōs* appears in Edomite names, evidence from the Arab world suggests that the deity is Arab in origin and, with the westward tribal movements of the 8th and 7th centuries, entered Edom and gave his name to a deity long established there (Rose 1977:29–30).

BARLEY. See AGRICULTURE; FLORA.

BARNABAS (PERSON) [Gk *Barnabas* (Βαρναβας)]. An apostle, an associate of Paul, prominent in the church of Antioch-on-the-Orontes in Syria, and an early leader in the mission to gentiles. According to Acts, his name was Joseph, but he was called Barnabas by the apostles. Luke, the author of Acts, translates Barnabas to mean "son of encouragement," (from Aram *bar nĕbû᾽â*) but it may simply mean "son of (the god) Nebo," or something similar. Acts reports that Barnabas was a Levite whose family came from Cyprus; hence he was a Diaspora Jew. He is first mentioned as a man who sold some land and donated the proceeds to the apostles in Jerusalem (4:36–37). Thus in vivid contrast to Ananias and Sapphira, who withheld a portion of their property (5:1–11), Barnabas is shown to typify the spirit of communal sharing which Luke emphasizes in the earliest Jerusalem community.

A. Association with Paul

In Acts, Barnabas receives extensive mention in connection with Saul (later to be known as Paul) and with the emergence of a mission to gentiles. When the disciples in Jerusalem were afraid to meet with Saul after his call, Barnabas brought him to them and gave him a favorable introduction (9:27). Later, when the Jerusalem church received reports that believers from Cyprus and Cyrene were making converts of Greeks in Antioch (11:20–22), Barnabas was sent to investigate. He encouraged them in this missionary activity, then brought Saul with him from Tarsus to Antioch, where they taught together (11:25–26). As leaders in the Antioch community, Barnabas and Saul were sent to deliver a contribution for famine relief to the community in Jerusalem (11:27–30). Collecting contributions of gentile communities for "the poor" in Jerusalem was evidently an arrangement agreed upon between the missionaries to gentiles—Paul and Barnabas, and the leaders of the Jerusalem community (Gal 2:9–10). Such contributions continued to be of great concern in Paul's later work (Rom 15:25–28; 1 Cor 16:1–4; 2 Cor 8–9).

Next, Acts recounts that Barnabas and Saul were commissioned by the Antioch community for a missionary journey to Cyprus, bringing as an assistant John Mark, who had joined them in Jerusalem (12:25–13:3). That Barnabas was Paul's senior partner in the relationship is evident from the fact that Barnabas' name is mentioned before Paul's name in all Acts accounts thus far. But while recounting their stay in Paphos, Luke shifts to the name Paul for Saul just as he performs a miracle to effect the conversion of the Roman proconsul Sergius Paulus (13:8-12). At this point Luke begins to give Paul greater prominence than Barnabas in the mission narrative, calling their party "Paul and his company" (13:13) and mentioning Paul's name several times before that of Barnabas (13:43, 46, 50). Upon leaving Cyprus, Paul and Barnabas traveled without John Mark through the southern regions of central Asia Minor, visiting the cities of Pisidian Antioch, Iconium, Lystra, Derbe, Perga, and Attalia. Acts reports that they conducted their mission through preaching in synagogues and performance of miracles. In Lystra Paul's miraculous healing of a crippled man led the crowd to call Barnabas "Zeus" and Paul "Hermes" (14:8–18). Despite threats from Jews and gentiles (14:5) and physical violence against Paul at the hands of some Jews (14:19), Acts states that the mission of Paul and Barnabas met with success in several cities among Jews, recent converts to Judaism (13:43), gentiles (13:48), and Greeks (14:1). But the summary of their activity reported to the church at Antioch makes it clear that the success of Barnabas' and Paul's pioneering work among gentiles is what Luke wishes most to stress (14:27).

However in Antioch the question of how a gentile mission ought to be conducted came to be hotly debated. According to Acts "some" from Judea were teaching there that circumcision according to the custom of Moses was a prerequisite for salvation. Paul and Barnabas argued against requiring circumcision for gentiles and were appointed to a delegation which brought the question before apostles and elders in Jerusalem (15:1–3). During the debate at this Jerusalem Council, Barnabas and Paul reported on their success among gentiles (15:12), and the council eventually adopted a position which must have been largely favorable to them, since it did not require gentile circumcision. Paul and Barnabas returned to Antioch together with delegates appointed from Jerusalem who carried a letter detailing the decision of the Council (15:22–32).

B. Separation from Paul

After resolution of the question of required gentile circumcision, Paul and Barnabas made plans in Antioch to revisit the cities of their previous mission together, but there arose between them what Luke terms a "sharp disagreement." According to Acts, Barnabas wished to bring John Mark along, but Paul did not (15:37). Consequently Paul left without Barnabas, bringing Silas with him through Syria and Cilicia to the cities of Asia Minor; Barnabas took Mark with him to Cyprus (15:38–40). That there was a close association between Barnabas and Mark is corroborated in Col 4:10, where Mark is called Barnabas' "cousin."

But the parting of ways between Barnabas and Paul may well have been occasioned by more than the personal disagreement mentioned in Acts. Although Acts hints at no disagreement between Barnabas and Paul on the conduct of a mission to gentiles, Paul's letter to Galatia indicates that the two did not share identical views on the observance of Jewish dietary laws. Paul writes that at Antioch he was distressed when Peter refrained from eating with gentiles out of deference to representatives from James. Paul objected to Peter's abrupt withdrawal from his practice of table fellowship and writes that "even Barnabas" sided against Paul (Gal 2:11–13). On this occasion Barnabas, like Peter, took a moderate position between those associated with James, who advocated a strict separation of Jews from gentiles, and Paul, who strongly opposed such separation. Because Paul does not claim to have persuaded Barnabas and the others, it may be inferred that he lost this debate in Antioch and consequently left. Galatians suggests, then, that the split between Barnabas and Paul arose over different views of proper social practice in Christian communities, perhaps due to a theological disagreement about the continuing validity of Jewish laws. It is uncertain how bitter the rift remained because Paul's reference to Barnabas in 1 Cor 9:6 seems to reflect a sympathetic attitude toward his former mentor. Here Barnabas is mentioned as an apostle who, like Paul, practiced a trade and earned his own living while a missionary. It is possible that they had established this practice as a joint policy during their early mission work together.

C. Mention of Barnabas in Extra-Canonical Sources

Concerning Barnabas' career after separating from Paul and journeying to Cyprus, we have no early information. Later Christian writers make legendary claims about Barnabas: e.g., that he preached in Rome during Jesus' lifetime and introduced Clement of Rome to Christianity (*Ps.-Clem. Recogn.* 1.7–13), and that he was one of the seventy (Luke 10:1) sent out by Jesus (Clement of Alexandria *Str.* 2.20). The 5th- or 6th-century *Acts of Barnabas* purports to describe his later mission and martyrdom in Cyprus. Barnabas is also named as the author of some early Christian texts. Clement of Alexandria credits him as the author of the *Epistle of Barnabas*, a treatise which was included in some early biblical manuscripts, e.g., Sinaiticus. Some Western traditions regard Barnabas as the author of Hebrews, and he is also listed (in the *Decretum Gelasianum*) as the author of a gospel.

BARNABAS, EPISTLE OF. An early Christian writing, the significance of which lies not so much in its later influence as in what it preserves of earlier traditions, both Jewish and Christian. The anonymous Christian teacher who wrote *Barnabas* passed on traditional instruction regarding "spiritual" understandings of the Jewish scriptures and God's requirements. Many issues concerning *Barnabas* are problematic and must remain unresolved.

———

A. Form, Structure, Style

Although *Barnabas* has several characteristics of an epistle, it is probably best understood as a tractate in epistolary dress. Its contents may be outlined as follows:

I. Introduction (framework), chap. 1
II. First major section:correct understanding of scripture, 2:1–16:10
A. What the Lord requires:not sacrifice and fasting, 2–3
B. Warnings in a lawless age facing judgment, 4
C. Why the Lord endured suffering in the flesh, 5–6
D. The Lord's suffering foreshadowed in scapegoat and red heifer, 7–8
E. Circumcised understanding, 9–10
F. Baptism and cross foreshadowed, 11–12
G. Correct understanding of the Covenant and its heirs, 13–14
H. Correct understanding of the Sabbath, 15
I. Correct understanding of the Temple, 16
III. Transition (framework), 17:1–18:1a
IV. Second major section:The "Two Ways" tradition, 18:1b–20:2
A. Introduction, 18:1b–2
B. The Way of Light, 19
C. The Way of Darkness, 20
V. Conclusion (framework), 21

Barnabas 17:1–18:1a explicitly divides the tractate into two major sections of teaching. The two sections are set into an epistolary framework (Wengst 1971:5–14; cf. Scorza Barcellona 1975:14–21).

The tractate's stylistic norms resemble those of Jewish literature. Its rough transitions and awkward arrangement have the benefit of making it easier to isolate its sources.

B. Text

The Gk text of *Barnabas* is relatively well preserved. The chief witnesses to the text are Codex Sinaiticus, Codex Hierosolymitanus, a family of late Gk manuscripts, and an OL translation in Codex Corbeiensis. There are also fragments of a Gk papyrus and of a Syr translation, and several quotations by Clement of Alexandria and later church writers. Although there may have been a "first edition" which

lacked the Two Ways tradition, the "final form" presumably consisted of chapters 1–21. The critical edition by Prigent and Kraft (1971) provides a carefully researched eclectic text.

C. The Author and His Circle

Barnabas is anonymous. Clement of Alexandria, Origen, Jerome, Serapion of Thmuys, Codex Sinaiticus, and later manuscripts attribute the work to "Barnabas," but few contemporary scholars accept this attribution. Most scholars consider it unlikely that the Barnabas described by Paul as participating in a literal observance of Jewish cult (Gal 2:13) could write the anti-cultic polemics of *Barnabas.*

It appears that the work as a whole is produced by one person, a male, and that he primarily uses traditional materials to which he contributes little more than a framework within which he arranges them and makes simple transitions between them. He is a teacher who wants his readers to see him not as a teacher but as a friend and peer (1:4; 1:8; 4:6, 9; 9:9). He describes himself with conventional modesty (4:9; 6:5), but he participates as one "who is wise and understanding, and who loves his Lord," in a community which God has allowed to understand secrets (6:10). In the face of the impending final scandals (4:3, 9), he is concerned to pass on some of the traditional teachings of his circle (1:5; 4:9).

Because many of his traditions retain both the style and the substance of Judaism, a significant number of scholars see him as a Jewish Christian (Barnard 1978:54–58; Manns 1981:125–146). In view of *Barnabas* 16:7, it probably makes more sense to see him as a Gentile who had access to Jewish traditions in Gk (Kraft 1965:39; Prigent and Kraft 1971:28; Wengst 1984:119).

It is often quite difficult to distinguish the teacher from his sources, many of which are much older. He does not rise above his tradition as a clearly defined individual creator; he is primarily a spokesman for a living tradition, even if he has shaped it here and there. In the case of "evolved literature" such as this, it may be preferable to focus on the tradition rather than on the individual through whom the tradition speaks. The circle that preserved this tradition was a "school" in the sense that it had teachers who developed and transmitted teaching materials concerned with exegesis and moral instruction (Kraft 1965:19–22; Wengst 1971).

D. Use of Tradition

The teacher indicates in 1:5 that he is passing on traditional materials (see 4:9; 19:1; 21:1). Kraft (1961), Prigent (1961), and Wengst (1971) have examined the sources of these materials in detail.

The traditions in *Barnabas* 2–16 are concerned with understanding the (Jewish) scriptures. Analysis of the quotations show that the tradition represented by *Barnabas* did not use the Heb text (Kraft 1961:57; Wengst 1971:69). Apparently the teacher had access to OG translations in a variety of oral and written forms:complete OG scrolls of a few books of scripture (Isaiah; perhaps Psalms, Genesis, and Deuteronomy), individual sayings, independent collections of extracts, free renderings of narratives, and quotations already associated with midrashic commentary (Kraft 1961:69; Wengst 1984:129).

The Two Ways section (chapters 18–20) is the largest block of tradition in *Barnabas.* It presents ethical teachings under the rubrics of the way of light and the way of darkness. *Barnabas* 21:1 shows that the teacher considered the Two Ways teaching an authoritative written form of God's requirements. This tradition is found in similar forms in other church writings, notably in *Didache* 1–5. Most contemporary scholars agree that the Two Ways sections in *Barnabas* and *Didache* derive directly or indirectly from a common source. Two Ways concepts in the *Manual of Discipline* show that some form of the tradition existed in a Semitic-speaking Jewish environment. After being translated into Gk and passing through various recensions, it is used independently by *Barnabas* and *Didache.* The teacher incorporates the Two Ways tradition into his writing with relatively few changes (Prigent 1961:20; Wengst 1971:66–67).

The themes of the two ways of darkness and light also pervade the whole tractate. Parallels between *Barnabas* 4:9–10 and *Didache* 16:2 suggest that certain forms of the Two Ways tradition may have had an apocalyptic appendix (Kraft 1965:12–16).

E. Thought

The teacher and his circle are not systematic thinkers, and their traditions are occasionally in tension. Whether or not *Barnabas* has a central theological perspective, the following concepts characterize the tract (Kraft 1965:22–39; Wengst 1971:71–99).

1. Gnosis. One explicit purpose of *Barnabas* is to supplement its readers' faith with "perfect knowledge" (*Barnabas* 1:5). This knowledge *(gnōsis)* is a central concept for *Barnabas.* The circle seems to use the term in an exegetical sense and a related ethical sense. Exegetical gnosis is the insight God gave to Abraham, Moses, David, and the prophets, and now gives to believers. This gift enables its recipients to understand the secrets of scripture and of past, present, and future events. Ethical gnosis enables its recipients to understand the conduct required by God (5:4; 21:5).

2. Ethics and Eschatology. Ethical concerns pervade *Barnabas,* as do apocalyptic eschatological imagery, expectation, and motivation. Salvation is primarily a future reward for obeying God's requirements in this lawless age. The day of judgment is near (21:3). At that time, the obedient will be made holy and will receive the promised inheritance:the end of lawlessness and the renewal of the universe (6:13; 15:5–9). Believers should not live as if they were already justified (4:10; 15:7). Instead, they must make use of the evil days before the judgment to perform the will of God, because they will be judged according to their conduct and Satan can use his power to drive them from the Lord's kingdom (2:1, 10; 4:9–14; 19:10; 21:6, 8).

3. Israel. According to *Barnabas,* God promised the patriarchs that he would give a Covenant to "the people" but Israel proved unworthy to receive it (4:6–8; 14:1–4). Instead, Jesus gave it to a "new people" (5:7), made worthy to receive it by his suffering and death (14:4–6). In contrast, an evil angel (9:4) misled Israel into interpreting God's requirements in a literal, external fashion rather than in the intended spiritual manner. *Barnabas* criticizes major aspects of Jewish ritual observance (sacrifice, fasting, circumcision, food laws, the sabbath rest, and the temple) as resulting from this misunderstanding of scripture. Christians, the true heirs of the Covenant, understand the scriptures in their intended spiritual sense.

There is a tension in the circle's relation to Judaism. On the one hand, it defines itself in contrast to Israel, who never received the Covenant and who err in their understanding of what God wants. On the other hand, the circle has taken its ethical teachings, its citations of scripture, its hermeneutics, and even its criticisms of Jewish ritual observance *from Jewish sources.*

4. Christology. *Barnabas* refers to Jesus as Son of God, the Beloved One, the Beloved Heir, and most frequently, the Lord. Preexistent, he participated in creation (5:5, 10; 6:12). The circle denies that he is a son of David or a son of man (12:10–11), but he suffered in the flesh to purify a once-sinful people ("us") for the Covenant and to fill up the measure of "their" sins (5:1–14; 6:7; 7:2; 14:4–5). He will soon come to end this evil age, judge the living and the dead, and recreate the universe (5:7; 7:2; 15:5; 21:3).

Barnabas is concerned to interpret the suffering and death of Jesus by means of scripture. Apart from his suffering in the flesh, the circle shows little interest in the earthly Jesus' words and works as found in written gospel traditions. It looks to scripture rather than to Jesus' sayings for authority in teaching.

5. Interpretation of Scripture. The interpretive method is closely related to what is known of Christian and Jewish schools of Alexandria. The "spiritual" (rationalistic, allegorical) understanding of ritual law appears more radical than that of Philo when it excludes a literal understanding. For example, *Barnabas* 9–10, except for the gematria in 9:8–9, resembles the position of those Philo (*Migr.* 89.92–93) opposed for neglecting the literal meaning of circumcision.

F. Recipients

Barnabas is addressed to both men and women (1:1; see 10:8). The recipients are Christians, probably uncircumcised but not necessarily from the teacher's own sect.

Barnabas gives clues about their community—or at least about his own circle's ideals for a community of believers. The teacher admonishes his readers not to live as hermits but to assemble together (4:10) and to share their possessions (19:8). He mentions no church functionaries other than teachers, "those highly placed" (21:2), and those "who proclaim the Lord's word" (19:9). The community celebrates Sunday, "the eighth day" (15:8–9). They practice baptism (by immersion) as a means of receiving remission of sins and new life (11:1–11). They experience inspired speech (16:9–10).

G. Provenance

Barnabas does not give enough indications to permit confident identification of either the teacher's location or the location to which he writes. His thought, hermeneutical methods, and style have many

parallels throughout the known Jewish and Christian worlds. Most scholars have located the work's origin in the area of Alexandria, on the grounds that it has many affinities with Alexandrian Jewish and Christian thought and because its first witnesses are Alexandrian. Recently, Prigent (Prigent and Kraft 1971:20–24), Wengst (1971:114–18), and Scorza Barcellona (1975:62–65) have suggested other origins based on affinities in Palestine, Syria, and Asia Minor. The place of origin must remain an open question, although the Gk -speaking E Mediterranean appears most probable.

H. Date, Occasion, and Significance

Since *Barnabas* 16:3 refers to the destruction of the temple, *Barnabas* must be written after 70 C.E. It must be written before its first indisputable use in Clement of Alexandria, ca. 190. Since 16:4 expects the temple to be rebuilt, it was most likely written before Hadrian built a Roman temple on the site ca. 135. Attempts to use 4:4–5 and 16:1–5 to specify the time of origin more exactly have not won wide agreement. It is important to remember that traditions of varying ages have been incorporated into this work.

Barnabas does not provide sufficient clues to identify an occasion for its writing. Neither the view that it is a polemic in response to Jewish rivals (Lowy 1960:32) nor the view that it is propaganda to persuade Christian opponents (Wengst 1971:100–105) accounts for its ethical orientation.

The work appears to have had little impact in the West, although it was translated into Latin in N Africa (or possibly Rome), probably during the 3d century. Clement of Alexandria quotes it as the epistle of the apostle Barnabas, and Origen refers to it as the catholic epistle of Barnabas. Its inclusion in Codex Sinaiticus suggests that it was sometimes considered canonical in 4th century Egypt. Other church writers who mention it (e.g., Eusebius, Jerome, Mkhitar) categorize it with disputed writings or apocrypha.

Although *Barnabas* 4:14 appears to quote Matt 22:14, it must remain an open question whether the *Barnabas* circle knew written gospels. Based on Koester's analysis (1957:125–27, 157), it appears more likely that *Barnabas* stood in the living oral tradition used by the written gospels. For example, the reference to gall and vinegar in *Barnabas* 7:3, 5 seems to preserve an early stage of tradition that influenced the formation of the passion narratives in the *Gospel of Peter* and the synoptic gospels.

Barnabas is also significant for preserving early stages of Jewish tradition. It preserves halakhic traditions about atonement and red heifer rituals from a century before the Mishnah was compiled. It contains midrashic material and the Two Ways tradition in forms not greatly removed from their Jewish antecedents. It also quotes fragments of Jewish religious literature otherwise unknown (Kraft 1965:182–84).

JAY CURRY TREAT

BARODIS (PERSON) [Gk *Barōdis* (Βαρωδις)]. A servant of Solomon whose descendants returned from Babylon with Zerubbabel (1 Esdr 5:34). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf Ezra 2:57; Neh 7:59). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or

Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

BARSABBAS (PERSON) [Gk *Barsabbas* (Βαρσαββας)]. Name of 2 persons in NT. The name *Barsabbas* most probably represents the Aram *Bar-Shabba,* "son of the sabbath."

1. A surname of Joseph, who also had the Lat surname Justus (Acts 1:23). He was considered, but not chosen, for the place among the twelve disciples left vacant by the treachery of Judas Iscariot. Evidently, he had been a disciple of Jesus, for the one to take Judas' place was to be a personal witness to the ministry, resurrection, and ascension of Jesus (Acts 1:21–22). Joseph Barsabbas reportedly was one of the seventy disciples (Eus. *Hist. Eccl.* 1:12; see Luke 10:1). He allegedly drank snake venom in the name of Jesus without suffering any ill effects (Eus. *Hist. Eccl.* 3:39; see Mark 16:18).

2. A surname of Judas, one of two leading Christians in the church at Jerusalem who were sent to the churches of Antioch, Syria, and Cilicia to convey the church council's decision on the acceptance of gentile believers (Acts 15:22–33). Judas and Silas, his companion, preached at Antioch for some time until the church dismissed them (v 33). According to v 34, a spurious text, Judas returned to Jerusalem, but Silas remained in Antioch. This verse probably was originally a marginal note that explained how Silas was in Antioch for Paul to choose him as a companion (v 40).

VIRGIL R. L. FRY

BARTACUS (PERSON) [Gk *Bartakos* (Βαρτακος)]. Bartacus, who has the epithet "the Illustrious," was referred to once in 1 Esdr 4:29 as the father of Apame, the concubine of Darius. While nothing is known of Bartacus outside of this single reference, names similar to his own appear in other literature. For instance, the name "Artachaeas," a high-ranking official in Xerxes' army, was mentioned by Herodotus (7.22.117). The name of Bartacus' daughter, "Apame," is identical with the name of the Persian princess who married Seleucus I and became the mother of Antiochus I. Apamea, a city in Asia Minor, was established by Seleucus I in honor of his wife by the same name.

There are several ways to interpret the phrase "the Illustrious" *(Tou thaumostou)* appended to Bartacus' name. The name may have been an epithet, implying that Bartacus was a man of renown or even perhaps a wonder-worker. It is unlikely that the epithet was a second name for Bartacus because the Persians normally used only one name. There is also no evidence that "the Illustrious One" was an official title in the Persian state. The appendage may have been the proper name of his father. The similar Greek name "Thamasios" appears in Herodotus 7.194, and "Themasios" occurs in Josephus *Ant* 11.3.5.

SCOTT T. CARROLL

BARTHOLOMEW (PERSON) [Gk *Bartholomafos* (ΒαρθολομαΓος)]. Bartholomew appears in all four lists of the twelve disciples of Jesus (Matt 10:3; Mark 3:18; Luke 6:14; Acts 1:13), but he is otherwise unmentioned in the NT. Bartholomew is quite likely an Aram patronymic *[Bar-Talmai]* for "son of Tholami" (cf. LXX Josh 15:14) or "son of Tholomaeus" (cf. Jos. *Ant.* 20.1.1§5), a name found in several forms in the Gk OT and Josephus.

From the 9th century onward Bartholomew generally has been identified with NATHANAEL. This is based on the conjecture that Nathanael is a surname of Bartholomew, so that his full name would have been Nathaneal Bar-Tholami (cf. Simon Bar-Jonah). Several factors point in this direction. (1) Since the synoptic gospels never mention Nathanael, while John never mentions Bartholomew, the juxtaposition of the names Philip and Bartholomew in the synoptic lists of the Twelve (not in the list in Acts) suggests the close relationship between the two depicted in John 1:43–51. Study of the apostolic lists indicates pairing and grouping into fours; this suggests that Bartholomew and Philip were companions in the second group headed by Philip. (2) John's gospel treats Nathanael as an apostle. All of the companions of Nathanael are apostles (John 1:35–51) and Nathanael appears as a member of a group of apostles (John 21:1–2). Christ's promise to Nathanael, that he would be a witness to the central role of the Son of Man in God's revelation to men, suggests an apostolic function (John 1:50–1). (3) Since Bartholomew is quite likely a patronymic, its bearer would be expected to have another name as well.

Arguments have been raised against each of the above factors. (1) The juxtaposition of Philip and Bartholomew in the synoptic lists may be fortuitous, because in the Acts list they are not together. (2) Since there is no mention of Nathanael during Jesus' ministry, his interaction with Jesus in John 1:43–51 does not necessarily imply a formal call to apostleship. (3) The name "Bartholomew" may stand by itself in the apostolic lists as a proper name. It is not necessarily a patronymic. The patronymic is normally expressed in the lists by the Greek genitive, not by the Aramaic *bar*.

If the identification of Bartholomew with Nathanael is correct; Philip brought Bartholomew (Nathanael), a native of Cana of Galilee (John 21:2), to acknowledge Jesus as the Messiah (John 1:45–46). The description of his encounter with Jesus is found in John 1:47–51. A true Israelite, without guile, Nathanael gave a profound declaration of the messianic identity of Jesus. Jesus, in turn, stated that Nathanael would see even greater demonstrations of messianism. If the identification of Bartholomew with Nathanael is incorrect, then we have no NT information about Bartholomew other than the four lists.

Since the identification of Bartholomew with Nathanael is not conclusive, to assume it without question is to go beyond the evidence. Certainty is unattainable with the present evidence, but to reject categorically the identification is likewise unwarranted.

Traditional stories about Bartholomew abound, but few appear to be trustworthy. According to the "Genealogies of the Twelve Apostles," Bartholomew was of the house of Naphtali, and his name was formerly John, but Jesus changed it because of John the son of Zebedee, the beloved. Eusebius (*Hist. Eccl.* 5.10.3) reports that Bartholomew preached the gospel in India and left behind the Gospel of Matthew "in the actual Hebrew characters." Traditions also claim that Bartholomew ministered in Armenia, Phrygia, Lycaonia, Mesopotamia, and Persia. Several traditions are also associated with his death. One tradition states that Bartholomew brought the Gospel to India and to Greater Armenia, where he was flayed alive and beheaded. The *Martyrdom of Bartholomew* states that he was placed in a sack and cast into the sea.

A few apocryphal works are also traditionally associated with Bartholomew. Jerome, in the preface to his commentary on Matthew, mentions a *Gospel of Bartholomew.* Apart from its condemnation by the Decretum Gelasianum we know little about this work. A later work, "The Questions of Bartholomew," extant in five recensions, may be based in part on this earlier work. A Coptic "Book of the Resurrection of Christ by Bartholomew the Apostle" is extant in several fragments. Authentic association of these works with the apostle Bartholomew is highly doubtful.

MICHAEL J. WILKINS

BARTHOLOMEW, GOSPEL (QUESTIONS) OF. A writing mentioned by Jerome in the prologue of his commentary on Matthew (which reference may derive from Origen), and by Epiphanius the Monk (*vita virg.* 24–25). A reference by the venerable Bede (*Luc. ev. expos.* 1) probably stems from Jerome, as does one in the *Decretum Gelasianum,* which lists "gospels in the name of Bartholomew" as ones to be avoided. A *Gospel of Bartholomew* may be quoted by pseudo-Dionysius Areopagita (*myst.* 3), who attributes two sentences to "the blessed Bartholomew." The Syr *Book of Hierotheos* also contains a one-sentence quotation written by "the divine Bartholomew."

There are no extant texts of a *Gospel of Bartholomew,* but two works associated with the name Bartholomew are preserved:*Questions of Bartholomew* is preserved in Greek, Latin, and Slavonic manuscripts; the *Book of the Resurrection of Jesus Christ, by Bartholomew the Apostle* is preserved in one complete Coptic manuscript and in several other Coptic fragments. Both works stem from Greek originals, and they share affinities with one another, such as Jesus' descent into hell and deliverance of Adam, in addition to the prominence of Bartholomew as the guarantor of the traditions. It is possible that "both streams of tradition go back to a special Bartholomew tradition of the 3d or 4th centuries" (*NTApocr* 1.508), but it is unclear whether they derive from an underlying *Gospel of Bartholomew.*

Questions of Bartholomew. This work, perhaps a 5th-century composition of Egyptian provenance, is a collection of revelatory dialogues. Bartholomew is featured as the bold main questioner, seeking knowledge from the risen Jesus, from Mary, and from Beliar, particularly about heaven and the underworld. The contents of the book may be described according to the five chapters into which it has been divided. (1) At the request of Bartholomew, the risen Jesus recounts how he vanished from the cross in order to descend into the underworld. He reports a conversation there between a fearful Hades and Beliar (the devil) and briefly describes how he bound Hades and brought up the patriarchs and especially Adam. The dialogue ends with a brief exchange about the sacrifices and the souls that Jesus receives in paradise. (2) At the behest of the other apostles, Bartholomew asks Mary how she "conceived the incomprehensible," or how she "carried him who cannot be carried." After a prayer, she directs the apostles to restrain her while she reveals that she was visited in the temple by an angelic figure. She receives a baptism from heavenly dew and partakes in a Eucharist when the angelic figure miraculously produces a loaf and cup. She is then promised that after three years she will conceive his son. But her tale is interrupted:fire comes from her mouth and the world is about to be consumed when Jesus silences her. An account of the conception itself, about which Bartholomew had inquired, is therefore prevented. (3) Seven days before his ascension the risen Jesus grants the apostles a brief glimpse of the abyss. They are overwhelmed at the sight, but it is not described. (4) Peter entreats Mary to ask for a revelation of "all that is in the heavens." In a brief exchange Mary declines, but reveals that in her the Lord restored "the dignity of women." Jesus then grants Bartholomew's request to see and to question Beliar, whose dreadful appearance is described. Bartholomew, with his foot upon Beliar's neck, then learns about numerous angels and punishments for the wicked. The devil also recounts how he and his angels had refused Michael's command to worship Adam, the image of God, and how he made Eve susceptible to disobedience by defiling her drinking water with sweat from his body. The dialogue is interspersed with three reverent prayers by Bartholomew. In the end Jesus admonishes Bartholomew that the revelations should be kept secret, and Bartholomew concludes with a doxology. (5) When Bartholomew asks Jesus to name the worst of sins, he names hypocrisy, slander, "the sin against the holy spirit," i.e., speaking ill of any one who serves the Father, and swearing an oath by the head of God. Bartholomew then receives a commission to preach and raises a final question about the consequences of sins of lust. Jesus' reply praises celibacy and also allows for the validity of marriage. But he adds that "he who sins after the third marriage is unworthy of God."

In terms of genre the *Questions of Bartholomew* may be compared with other early Christian post-resurrection dialogues between Jesus and his followers, e.g., *Epistula Apostolorum, Dialogue of the Savior, Sophia Jesu Christi,* and *Pistis Sophia.* In terms of content, scholars have noted affinities to the *Acts of Pilate,* the *Gospel of Gamaliel,* and the *Gospel of Nicodemus,* especially in the descent into the underworld. The depictions of the underworld may draw upon motifs of Egyptian popular religion. The text also may reflect knowledge of the *Protevangelium of James* and the *Infancy Gospel of Thomas.* The recommendation on marriage is paralleled in the *Apostolic Constitutions.* Parallels to gnostic texts have been noted in an early study by Bonwetsch, but Beeston denies any gnostic proclivities in Mary's account of the Annunciation (2) and stresses the account's development of a Catholic doctrine of the Eucharist (Beeston 1974:127; see also *TRE* 3:316–62).

BARTIMAEUS (PERSON) [Gk *Bartimaios* (Βαρτιμαιος)]. A blind beggar whom Jesus healed while on his last journey to Jerusalem (Mark 10:46–52). Throwing his outer garment aside, leaping to his feet, and rushing to Jesus when called demonstrated his faith in Jesus and his eagerness to be healed. Since Mark records the name of only one other person whom Jesus healed (5:22), the occurrence of the name

"Bartimaeus" here implies that he became a full-fledged disciple who was well known in the early church (Cranfield *Mark* CGNT, 346).

As the title "Son of David" suggests, Bartimaeus thought of Jesus in messianic terms. This title expressed Jewish nationalistic hopes for a Davidic king to come as the deliverer of the Jews from foreign domination (see *Pss. Sol.* 17:21; Ezek 34:23–24; Taylor 1966:448). This interpretation of the address fits well with the multitude's association of Jesus with the coming Davidic kingdom in his triumphal entry into Jerusalem (see Branscomb *Mark* MNTC, 192).

Accounts of restoration of sight occur also in Matt 20:29–34 and Luke 18:35–43 with some differences. Matthew and Mark agree that the miracle occurred as Jesus left Jericho, but Luke places it as Jesus approached the city. Matthew says Jesus healed two blind men. Mark and Luke mention only one. Yet more than one miracle is unlikely because the accounts are so similar and consistent in most details. The main event is so clear and the differences in detail are so insignificant that any attempt at harmonization seems unnecessary.

Mark usually introduces the Aramaic word first and then the Greek translation (3:17; 7:11, 34; 14:36). The reverse order in v 46 may be the result of a scribal insertion into the text of a comment in the margin of an early manuscript (Branscomb *Mark* MNTC, 192). Although the derivation of the name Bartimaeus is a matter of controversy, it is most likely from the Aramaic *bar*, "son," and *tim›ai,* "Timaeus" (see Taylor 1966:447–48).

VIRGIL R. L. FRY

BARUCH (PERSON) [Heb *bārûk* (בָּרוּךְ)]. **1.** A scribe in Jerusalem during the years just prior to the Babylonian destruction of 587 B.C. and a close friend of the prophet Jeremiah. The book of Jeremiah recognizes his professional status as a "scribe" (Heb *sōpēr;* 36:26, 32). The earlier supposition that he was a royal scribe (Muilenburg 1970:231) is now all the more likely following the discovery of a seal impression in a royal archive which reads, "Belonging to Berechiah, son of Neriah, the scribe" (Avigad 1978 ["Berechiah" is the long form of "Baruch"]). The mention here and in the book of Jeremiah of Baruch with his patronym (double patronym in 32:12) suggests that he comes from a prominent scribal family (Gevaryahu 1973:209). Baruch's brother, Seraiah, was "quartermaster" [Heb *śar mĕnûḥâ*] under Judah's last king, Zedekiah (Jer 51:59); he, too, was no doubt a professionally trained scribe. It was not only in Masoretic times, but much earlier, even as far back as the Old Babylonian period, that scribes were known to cluster in families (Lundbom 1986).

Baruch had an important role in preserving the Jeremiah legacy. In chapter 36 of the book of Jeremiah he is reported to have written the first Jeremiah scroll at the prophet's dictation (v 4). Then, on a fast day in the year following, 604 B.C. (or 601 B.C. if the LXX reading of 36:9 is accepted), Baruch read this scroll to a large temple gathering and again to a group of the king's ministers. The scroll was read a third time to King Jehoiakim, though not by Baruch, and the king responded by burning the scroll in the fireplace. Jehoiakim ordered the seizure of both Baruch and Jeremiah, but they were duly warned and managed to escape. Baruch was then instructed by Jeremiah to write a new scroll to replace the one which had been destroyed. To this scroll was added more material of like substance (Jer 36:32). At the time the first scroll was written, Baruch had received a personal word of prophecy concerning his disappointment about not having the opportunity to achieve distinction in his career (Jeremiah 45). In this prophecy Jeremiah informed him that the whole nation was doomed; nevertheless, Baruch would escape with his life.

During the final siege of Jerusalem, when Jeremiah was under house arrest, Baruch served as a witness to the purchase of a piece of family real estate which Jeremiah had made in order to symbolize the nation's future restoration (Jeremiah 32). Baruch was entrusted with the deed of purchase and told to place it in an earthenware jar for safekeeping. He was very likely a signatory to the deed and also the one who affixed the seal (Avigad 1978:55; Lundbom 1986). Baruch survived the fall of Jerusalem and, like

Jeremiah, was apparently released by the Babylonians and allowed to remain in the land. His close association with Jeremiah continued, as can be seen from a charge made against him that he had convinced Jeremiah to dissuade a group from going to Egypt after the assassination of Gedaliah, the Babylonian-appointed governor of Judah. In the end, however, both Jeremiah and Baruch went to Egypt and settled with this group at Tahpanhes (Jer 43:1–7).

Many scholars believe Baruch was responsible for the eyewitness accounts in the book of Jeremiah and was, in fact, Jeremiah's biographer. Some go even further and attribute to him the bulk of the book's prose (Muilenburg 1970:237; Gevaryahu 1973; Lundbom 1986). Baruch is known to be the person who wrote the first of the Jeremiah scrolls (Jeremiah 36); his close association with the prophet over a period of years would seem to preclude his being simply a one- or two-time amanuensis. Also, the colophonic nature of 36:1–8 and chapter 45 points to Baruch as the scribe who wrote large portions of the Jeremianic text. In the LXX, the latter colophon concludes the entire book (less chapter 52) at 51:31–35. This passage was at one time Baruch's colophon to the "first edition," i.e., chapters 1–20 (Lundbom 1986). The LXX contains the shorter and generally earlier text of Jeremiah, with its provenance in Egypt, where the biblical tradition also last locates Baruch (and Jeremiah).

The notoriety denied Baruch during his lifetime is more than compensated for in later Jewish literature and tradition, where he appears bigger than life (Muilenburg 1970:237–38). An apocryphal letter is attributed to him (2d century B.C. with later additions), as well as several apocalypses (Grintz *EncJud* 4:266–67; for texts see Charlesworth *OTP* 1:615–79). See also BARUCH, BOOK OF.

JACK R. LUNDBOM

2. Son of Zabbai and a contemporary of Nehemiah (Neh 3:20). He shared with his fellow Levites in the reconstruction of the walls of Jerusalem laboring in the section described as "from the Angle to the door of the house of Eliashib," the high priest (Neh 3:17, 20).

3. One of the 22 signatories of the priestly contingent who ratified the covenant of Nehemiah (Neh 10:6). Besides these, 17 Levites, 44 chiefs of the people, and Nehemiah the governor entered into this compact, which provided for an abstinence from interracial relations and the more scrupulous observance of the Sabbath and other religious duties (Nehemiah 10).

4. Son of Colhozeh and the father of Maaseiah (Neh 11:5). In the three censuses of the returned exiles (Nehemiah 7; 11, and Ezra 2), this Baruch is mentioned but once. His son Maaseiah was among the chiefs of the province who lived in Jerusalem, a commendatory example in view of the incessant danger within the capital. Two Judahite leaders are singled out for particular notice in Nehemiah 11:Athaiah of the Judahite family of Perez, and Maaseiah the son of Baruch of the family of the Shelanite, that is, presumable from Shelah (Gen 38:5; Num 26:20). Since both have their ancestry traced for seven generations, it suggests their importance. Not only did they share the plaudits of the people for their courage (Neh 11:2), but they were accounted as "chiefs of the people" and "valiant men" (Neh 11:2, 6). Since Baruch is the father of Maaseiah, it seems reasonable to believe that he, too, was of statesmanlike character and a revered leader of the Judean repatriates. (See Myers *Ezra-Nehemiah* AB, 181–86, 254; Gunneweg *Nehemia* KAT, 64–76, 180–94.)

EDWARD R. DALGLISH

BARUCH, BOOK OF. An apocryphal text containing five chapters (in the Vulgate and Authorized Version, the Epistle of Jeremiah is added as a sixth chapter) attributed to Baruch, the son of Neriah, Jeremiah's secretary and amanuensis (Jer 36:1–32; 43:1–7). This is one of three compositions among the Apocrypha and Pseudepigrapha attributed to him (cf. *2 Baruch, 3 Baruch*). There is virtual unanimity among scholars that the book was not composed by Baruch the son of Neriah (who, according to biblical

tradition, never reached Babylon). Some pseudepigraphic works may well have been attributed to him because in biblical tradition he occupied a position between prophet and scribe, and could therefore become a symbol for the transition from prophets to scribes. The earliest preserved text of Baruch is in Greek, in the Septuagint (cf. in LXX^A and LXX^B, but not in Codex Sinaiticus), and in most Greek manuscripts it appears between Jeremiah and Lamentations. The later versions, i.e., Latin (in the oldest known mss. of the Vulgate, Amiatinus, both Baruch and the Epistle of Jeremiah are omitted), Syriac, Arabic, Ethiopic, and others are based on the Greek version, and already in Origen's time (A.D. 185?–254) there was no Hebrew text available. No text of Baruch has as yet been identified among the fragments from Qumran. The date and place of composition are uncertain; it may have been composed in the Diaspora, but Palestine cannot be entirely ruled out. See also JEREMIAH, ADDITIONS TO.

A. Contents and Literary Genre

The book is a collection of three compositions of different literary genres, linked by one common motif: Sin–Exile–Return.

1. Historical Introduction. In this section (1:1–14) the purpose of the book is stated, and its fictitious date is given. We are told that Baruch wrote a letter in Babylon in the fifth year, on the seventh day of the fifth month, the date on which the Chaldeans captured Jerusalem and set the temple and city on fire (i.e., 582/581 B.C.). Baruch read out the letter to Jeconiah son of Jehoiakim, king of Judah, and to a general assembly of the Diaspora, including nobles, princes, and elders, gathered in Babylon by the river Soud (perhaps Ahava). Money was collected to be sent to the (High) Priest Joakim son of Hilkiah in Jerusalem together with the silver vessels which Zedekiah had made in place of the temple vessels that had been taken away by Nebuchadnezzar. According to Baruch's letter, the message of the Diaspora to the Jews of Jerusalem consisted of four main points. First, they should sacrifice on the altar in Jerusalem, the sacrifices to be bought with the money sent by the Diaspora Jews. Second, they are asked to pray for Nebuchadnezzar and "his son" Belshazzar (an error also found in Dan 5:2, 13, 18, 22; Belshazzar was the son of Nabonidus) that "their days may be as long as the days of heaven are above the earth." Third, they should pray for the Diaspora, because the Jews living there have sinned against God, and God is still angry with them. Fourth, the Jerusalemites should read Baruch's letter sent to them and use it as a liturgy in the temple during the feasts and festivals. This first section of the book is in prose and sets its purpose as being a collection for liturgical purposes. The use of a letter to comment on liturgical matters is known elsewhere in the Apocrypha (2 Macc 1:1–2:18).

2. Confession of Sins. The prayer (1:15–3:8) is repetitive and at first sight seems unorganized. However, an inner logic can be traced and it can be divided into four parts.

a. 1:15–2:5. In these verses the Palestinian Jews are the ones who confess. They declare that the "men of Judah and the inhabitants of Jerusalem" have transgressed against the Torah and God's word ever since God led them out of Egypt and "until this day." They were therefore punished and subjected to all the disasters which Moses predicted when he promised them the Holy Land (Deuteronomy 28–32). Nevertheless they did not follow God's prophets and continued worshiping other gods, and even ate their own offspring, although God had already carried out his threats against the "judges, kings, nobles and the men of Israel and Judah." They were then dispersed among the nations.

b. 2:6–2:30. This section of the prayer is partially parallel to 1:15–2:5. This time, it is probably formulated from the standpoint of the Diaspora Jews (2:13–14, 30). Again we hear a confession about past sins and transgressions against Mosaic Law. The wish is expressed that God should save his people because "only a few of us are left among the nations" (2:13). A reminder is given of God's words through his prophets, and a summary of Jeremiah's words (25:8–11; 27:11–12; etc.) is condensed into three verses:God requested his people to serve the king of Babylonia; the people of Israel ignored his words; thus, they were punished in the Diaspora and their temple is desolate.

c. 2:31–2:35. A turning point will arrive, and the people of Israel will repent through remembering their fathers' sins. Then God will return them to the promised land, and will renew his covenant with them "and never again will I drive my people Israel out of the land."

d. 3:1–3:8. Another prayer for salvation. Although the Jews in exile have repented, they still suffer in the Diaspora.

The prayer shares much of its language and ideas with Dan 9:4–19, Jeremiah, and Deuteronomy 28–32, but Bar 1:15–3:8 is 47 percent longer than Dan 9:4–19 and differs from it in mood. Both prayers have the elements of confession and repentance in common and show a resemblance to liturgical texts from Qumran (4QDibHam.) See also WORDS OF THE LUMINARIES. Whereas in Daniel 9 the desolate temple and the deserted city are central, in Bar 1:15–3:8 this is not the case. Moreover, it seems that Daniel prays in Palestine, whereas Baruch prays in the Diaspora. There are two significant additions in Baruch's prayer:first, an emphasis on the transgression of God's command to serve the king of Babylonia; second, God's forgiveness and the Return motif (2:30–35). It is difficult to decide which prayer derives from the other. Possibly there may have existed two versions of a well-known prayer, one in the Diaspora (Bar 1:15–3:8), and the other in Palestine (Dan 9:4–19). The core of these prayers can already be discerned in Ezra 9:6–10 (and Nehemiah 9). Significantly, in both prayers (Daniel 9 and Baruch) there is little emphasis on data taken from Israel's past (unlike in Nehemiah 9 and in other prayers of this kind (e.g., *3 Macc* 6:1–15).

3. Eulogy of Wisdom. In these verses (3:9–4:4) the people of Israel were said to have been subjected to tribulations because they had deserted the origins of Wisdom, which is described here as the "way of God." It is often assumed that vv 3:9–13 are a later interpolation, but this assumption appears unfounded. In this poem the author echoes Proverbs (2:4 and elsewhere), Job (28:12–28), and Ben Sira (chap. 24), and asks where Wisdom dwells in the world:"Learn where Wisdom is, where strength, where understanding is, and so learn where longevity and life are, where there is light for the eyes, and peace. Who has found where she lives …" (3:14–15). Then comes a list of places where Wisdom can not be found:neither among the rulers of nations, the rich or the young, nor in Canaan or in Yemen. The giants, too, were not chosen by God to be the bearers of Wisdom, and so were destroyed (3:26–28). Only God the Creator possessed Wisdom, and He granted it to His people (3:32–37); only then did it become available to human beings in general (3:38). Wisdom is the Torah which gives life (cf. Deut 30:15–19); those who abandon the Torah will die. This section ends on a felicitous note:"Israel, we are happy because we know the things that please God" (4:4; cf. Deut 33:29). Unlike Ben Sira (chap. 24) who deals with the same theme, Baruch adopts the more general approach to the abode of wisdom (found in Job and Proverbs). He identifies Wisdom with the Torah (Deut 30:11-13), and emphasizes its place among the people of Israel, whereas Ben-Sira stresses the link between Wisdom, Jerusalem, and the land of Israel.

4. A Psalm of Solace (Zion Poem). The final part of the book (4:5–5:9) ends with the presentation of an antithesis between present and future against the background of the calamities of the past. True, the people of Israel are dispersed among the nations, Zion is deserted, and her enemies rejoice. However, this will change:the people of Israel will return to Jerusalem, which will regain its past grandeur; Jerusalem will once more become a city of "Peace through Righteousness and Glory through devotion" (5:4). The enemies will be destroyed. This part of the book is suffused with thoughts current in both Deutero-Isaiah (chaps. 40–55) and Deuteronomy. Lamentations, which in some of the mss. is the following book, has also influenced this section. Whereas in 4:9–29 Mother Zion recounts her sorrows, in 4:30–5:9 the tone of prayer is again used to express hope for salvation and return. Bar 5:1–9 resembles Psalms of Solomon 11, but is considerably shorter.

B. Unity of the Book

The unity of the book has been questioned by many. It has been attributed to two (1:1–3:8; 3:9–5:9), three (1:1–3:8; 3:9–4:4; 4:5–5:9; but also other divisions have been claimed), or even four authors (1:1–3 + 3:9–4:4; 1:4–14; 1:15–3:8; 4:5–5:9). Many scholars identify the author of Baruch with the final editor of this pseudepigraphic collection, who may also have been the author of one of its constituent parts. The possibility of a later editor is not ruled out and the entire question remains unresolved. However, it is clear that the book contains an unusual collection of compositions of different literary genres which draw on different source material. Whereas 1:1–3:8 draws heavily on Jeremiah and Deuteronomy, 3:9–4:4 show a strong dependence on wisdom literature, while 4:5–5:9 echoes Deutero-Isaiah, Deuteronomy, and to a

lesser extent, Lamentations. In this respect the three different sections of the book are almost independent of each other. Many thematic differences can also be detected. For instance, the attitude towards the Babylonians in 1:1–3:8 is positive, but is not so toward the enemies in 4:5–5:9, while the Wisdom Psalm is indifferent about the conqueror. The first section (1:1–3:8) emphasizes the four pillars on which the people of Israel's life rests:the Temple (2:26), the Torah (2:28), the land of Israel (2:34), and the People (2:35, and 2:23, where they are called "the People of Judah and Jerusalem"). The second section (3:9–4:4) emphasizes only the Torah and the people of Israel, and 4:5–5:9 is centered on Jerusalem and its people (and much less on the Torah, 4:12–13). Another difference is that in the first and third sections there is a strong awareness of the Sin–Exile–Return theme, while this is not the case in the second section. In addition, whereas the second section commonly uses *theos,* the two other sections prefer either *kurios* (1:1–3:8) or *ho aionios* (4:5–5:9).

C. Language

There is a virtual concensus since Kneucker (1879) that the original language of 1:1–3:8 was Hebrew. Concerning the second part (3:9–5:9) views are still divided between either a Hebrew or Greek original. Already Thackeray (1902–3) argued that the Semitic texts of Baruch had been translated into Greek by two different translators. The first translated Jeremiah 29–52 through Bar 3:8; the second was responsible for Bar 3:9–5:9. Whitehouse and others thought that Baruch used the Greek of Jeremiah, whereas Schürer (*RE*, 642) and Thackeray (1923) were of the opinion that the translator of Baruch merely imitated the style of Jeremiah. A good case has been made in recent years by E. Tov (1975; 1976) for the following solution:the version of Jeremiah 29–52 (Jer b) shows that a revision was made in an earlier Greek translation (called the Old Greek translation), which is still preserved in Jeremiah 1–28 (Jer a). This section of Jeremiah did not undergo such a revision. Bar 1:1–3:8, which draws heavily on Jeremiah 29–52, shows that the same hand which revised Jer b also revised Bar 1:1–3:8. This argument is supported by instances where Baruch draws on Jer a, but where the reviser changed the style in line with his style in Jer b. Because Bar 3:9–5:9 quotes neither Jeremiah nor Bar 1:1–3:8 it is impossible to establish in terms of vocabulary whether the reviser of Bar 1:1–3:8 also revised Bar 3:9–5:9.

D. Date

The date of composition of Baruch is unknown, and the issues become even more complicated if one accepts the disunity of the book. In fact, many suggestions have been put forward regarding the date of the book (or its constituent sections). These range from the 6th century B.C. to A.D. 70–135. There is no internal evidence which points decisively to some specific date. Even some of the potential clues are not very helpful. The sayings of Jeremiah were popular in Judaism at several junctures. The references to Nebuchadnezzar's "son" Belshazzar is a common error shared by both Baruch and Daniel. Originally it may have been made by Baruch, or else its author may have copied it centuries later from Daniel or some other source. Although in Baruch, Nebuchadnezzar and Belshazzar can be identified either with Antiochus IV and his son or with Vespasian and Titus, alternatively they can be accepted as authentic figures. The theme of the return of the sacred vessels is borrowed from Ezra 1:7–11, and the name of the high priest Joakim is only known from Neh 12:10, 26. The dependence of Baruch on these facts does not provide any clue to a later date. The resemblance of Baruch 1:15–3:8 to Dan 9:4–19 does not take us much further, since Daniel 9 could be an interpolation into Daniel 7–11 (composed circa 164 B.C.). Both prayers may derive from a common source, rather than being interdependent. Baruch could have used Daniel 9 (or vice versa) at a time much later than 164 B.C. The same holds true of the similarity between Bar 5:1–9 and Psalms of Solomon 11; the latter may have been composed after 67 B.C. The psalms may be based on one another, or derive from a common source. Scholars are inclined to the view that the related verses of Psalms of Solomon 11 are secondary to Baruch 5 (Pesch). Even if 3:9–5:9 (or any other part of the book except 1:1–3:8) are by a different author, the dating of the entire book still remains uncertain.) The absence of the theme of resurrection (even where one expects it, Bar 2:17), and the silence of the text regarding angelology, messianism, etc., does not necessarily point to a particular date of composition. The author of Baruch imitated biblical themes and style, and this could be done at any time from the Return until A.D. 135 or later. According to 1:10–14 (but perhaps not according to 2:26), the

temple appears to be in operation. Jer 41:5 and Lam 1:4 maintain that worship in the burnt temple (2 Kgs 25:9) continued even after the conquest of 587 B.C. The question whether Baruch borrowed from these data to allude to his own times remains open.

Four positive determinations can be made concerning the date of Baruch. First, if the LXX of Jeremiah can be approximately dated, then at least Bar 1:1–3:8 can be fixed to some point before the end of the 2d century B.C. (116 B.C.). Second, throughout the book the Jews seem to have religious freedom, but not political independence. Moreover, the mood of the entire book excludes the possibility of dating it to the Hasmonean independent state (140–67 B.C.). Third, despite the prevalent mood of desolation and despair, hope is expressed for redemption and complete return of the people of Israel to their land. Fourth, the insistent plea to serve the Babylonian king and his "son" may refer—taken together with the other points mentioned—either to the period of ca. 200 B.C., when much hope was placed in Antiochus III (who had conquered Palestine from the Ptolemies), or to the period after A.D. 70, when it was hoped that many would return to the land of Israel from all parts of the Roman Empire (4:37):"See, your sons whom you sent away are coming! They are coming, gathered from east and west at the Holy One's command, rejoicing in God's glory." At the present stage of research, the question of dating must remain open.

DORON MENDELS

BARUCH, BOOK OF 2 (SYRIAC). Approximately 30 to 50 years after the destruction of the temple by the Roman soldiers in 70 C.E. a gifted Jew, using old traditions, many of which antedate 70, struggled to assert that Judaism is a religion based on Torah—Law—and that the loss of the temple was due to the failure of the chosen nation to be obedient to God and his Law. His central message is the continuing obligation to obey the Law (note 44:5–7; 51:3; so also Collins 1984, contra Murphy 1985). In many ways the concerns and expressions in *2 Baruch* indicate how Early Judaism was moving toward Rabbinic Judaism. Some scholars speculate that the author may have been Akiba (Rosenthal 1885) or belonged to Akiba's group at Jamnia (Violet 1924); Bogaert (1969) suggests that he may have been Rabbi Joshua ben Ḥananiah (ca. 40–125).

The document, which is a full-blown apocalypse (contrast *4 Ezra*), is extant in only the following corrupt or partial manuscripts:one 6th- or 7th-century Syriac manuscript (Milan, Ambrosian Library, MS B.21 Inf. fols. 257^{a}–265^{b}), which is sometimes meaningless and is based on a lost Greek text; one 10th- or 11th-century Arabic manuscript (St. Catherine's Monastery, Arab. MS no. 589), which is defective and based on a late Syriac text; two 4th- or 5th-century fragments among the Oxyrhynchus Papyri (*P.Oxy.* 403); and three late excerpts in Jacobite lectionaries (BM Add. MS 14686 [13th cent.], BM Add. MS 14687 [13th cent.], Kerala, India, A. Konath Libr. MS 77 (4) [16th cent.]). Without a doubt the major witness to this document is the Syriac manuscript in the Ambrosian Library, but emendations are sometimes necessary.

Although not obvious, it is possible that the apocalypse was intended to have seven sections:the destruction of Jerusalem (1–12); the impending judgement (13–20); retribution and the messianic era (21–34); Baruch's lament and an allegory of the vine and the cedar (35–46); the endtime, the resurrected body, paradise (47–52); Baruch's vision of a cloud (53–76); and the epistle of Baruch (77–87). Some scholars think the epistle was later added to the apocalypse (Sayler 1984), others (Bogaert 1969; Klijn *OTP* 1:615–52) rightly see it as an original part of the document, as a kind of epilogue (Collins 1984).

While there is a consensus that the document was probably composed in Palestine, there is no agreement on whether it was composed in Greek (Bogaert 1969), Hebrew or Aramaic (Denis 1970a, b), or Hebrew (Charles 1896; Klijn *OTP* 1:615–52). Earlier in this century, scholars concluded that the work is a combination of sources (Charles isolated six), but today most scholars (Bogaert 1969; Sayler 1984; Murphy 1985) are rightly impressed with the unity of the work. Brockington thinks that *2 Baruch* is roughly contemporaneous with *4 Ezra* and *Pseudo-Philo,* but there is sufficient evidence to conclude, with many specialists, that the chronological order seems to be *Pseudo-Philo, 4 Ezra,* then *2 Baruch* (cf. Klijn *OTP* 1:615–52. No literary dependence, however, proves this sequence; but in view of the numerous and striking parallels between *4 Ezra* and *2 Baruch* (viz. cf. *4 Ezra* 7:118 with *2 Bar.* 48:42 and 54:19) it is possible that the author of *2 Baruch* attempted to correct the pessimism of *4 Ezra* (cf. Collins 1984).

The brilliant mind of the author is readily apparent. He claims apologetically that Israel's enemies were allowed to enter Jerusalem only after "all the sacred vessels" had been removed and the angels had destroyed the walls (7:1–8:5). He thereby removes the Romans' reason for boasting (7:1). Eschewing the explanation that evil derives from fallen (1 Enoch) or evil angels (cf. 1QS), the author of *2 Baruch* puts the blame on humankind, lamenting in poetic language that insinuates some free will:"Adam is, therefore, not the cause, except only for himself, but each of us has become our own Adam" (54:19; Klijn *OTP* 1). His explanation for the delay in the consummation of the ages is that the endtime will not come until the number of those to be born is fulfilled (23:4–7). One of the most beautiful eschatological passages in the history of the Jewish apocalypses is the following:"For the youth of this world has passed away, and the power of creation is already exhausted, and the coming of the times is very near and has passed by. And the pitcher is near the well, and the ship to the harbor, and the journey to the city, and life to its end" (85:10; Klijn *OTP* 1:615–52; this passage is truncated in the Arabic version).

JAMES H. CHARLESWORTH

BARUCH, BOOK OF 3 (GREEK). Attributed to Baruch and extant in two Slavonic versions (both probably derived from Greek manuscripts) and in Greek, this work is an apocalypse in which

Baruch, Jeremiah's scribe, laments over the destruction of Jerusalem until an angel sent by the Lord leads him through five heavens and reveals to him the mysteries of this world and time.

It is possible that Greek is the original language (Gaylord *OTP* 1:655). The date of composition is uncertain; it obviously must postdate 70 C.E. since the author knows about the destruction of Jerusalem by the Romans, and probably antedates 231 C.E., if Origen alludes to it in *Princ.* 2.3.6 (James 1897). Since the pseudepigraphon is closely linked with the apocryphal Baruch literature, especially 2 and 4 Baruch, which were written in the early 2d century C.E., it is either subsequent to or contemporaneous with them (Argyle 1984:898). Diez Macho (1984:295) concluded that *3 Baruch* was composed near the end of the 1st century C.E. in Egypt. A non-Palestinian provenience seems probable (*APOT* 527–32; *JSHRZ* 5/1:15–44).

The document was drawn to the attention of modern scholars in 1896 (by E. Cuthbert Butler), and M. R. James concluded soon thereafter that the work was composed in the 2d century C.E. by a Christian. Most scholars now contend that the document is Jewish (Ginsberg, Hughes, Picard, Rost, Hage) and has been redacted by a Christian (but many of the Christian passages in the Greek version are absent in the Slavonic). Thus, while the work is originally Jewish the extant versions are the result of Christian redaction.

The author struggles with many questions, including the relation between the human and the divine since the sacrifices in the temple have been abolished. The author explains that the oil of mercy and glory of God will still be available, because there is a heavenly temple in which Michael offers to God the prayers and virtues of humans. In the fifth heaven Baruch sees "Michael take hold of a very large bowl, its depth being so great as from heaven to earth, and its width so great as from north to south. And I [Baruch] said, 'Lord, what is it that Michael the archangel is holding?'And he said to me, 'This is where the virtues of the righteous and the good works which they do are carried, which are brought by him before the heavenly God' " (11:8–9). See also *OTP* 1:653–79; *APOT* 2:527–41.

JAMES H. CHARLESWORTH

BARUCH, BOOK OF 4. The pseudepigraphon generally designated as *4 Baruch* is actually entitled in Greek *Paraleipomena Ieremiou,* "Things omitted from the Prophet Jeremiah," and in the Ethiopic mss "The Rest of the Words of Baruch." The document represents itself as an account of the events surrounding the conquest of Jerusalem and the destruction of the temple by the Babylonians in 587 B.C.E.

According to this narrative, the night before the catastrophe, the Lord revealed to Jeremiah that because of the sins of the people, the holy city was about to be attacked by his angels and then delivered into the hands of the Chaldeans, who could not otherwise have prevailed over Jerusalem. Jeremiah is instructed to entrust the vessels of the temple to the earth and the keys of the sanctuary to the sun. The Lord further instructs him to accompany the exiles to Babylon, but to leave Baruch the scribe behind in Jerusalem until the return of the people.

Jeremiah asks the Lord if his faithful servant Abimelech might not be spared, and the Lord agrees, instructing Jeremiah to send Abimelech out of the city early in the morning to gather figs at the farm of Agrippa. There Abimelech takes a nap under a tree and sleeps for 66 years.

When Abimelech finally awakens from his slumber, the figs in his basket are still fresh, but he is disoriented and unable to recognize the city or other landmarks. At last an old man deduces what has happened and tells Abimelech about the destruction and subsequent events. When Abimelech is reunited

with Baruch, the scribe takes his awakening as a sign that the return of the exiles is imminent and interprets Abimelech's still-fresh figs as tokens of personal and national resurrection. Baruch then sends a letter to Jeremiah along with some of the figs, instructing the prophet to prepare the exiles for their return.

Jeremiah returns to Judea with the exiles, but as they are crossing over the Jordan river, those who will not put away their Babylonian wives are turned back. Eventually these settle down in Samaria, the progenitors of the Samaritans. In Jerusalem, Jeremiah has another marvelous vision in which he sees many divine mysteries. Following this vision, Jeremiah preaches about the future coming of Jesus Christ the Son of God, and is finally stoned to death by the people.

The date of the final form of *4 Baruch* must certainly be after the middle of the 1st century C.E., as witnessed by the reference to the farm of Agrippa and the resurrection of Jesus. Because Herod Agrippa I didn't come into control of Judea until 41 C.E., the text must date after that time. Moreover, most scholars believe that the concern for the destruction of the city and temple and for the restoration of the nation reflects a period after the destruction of the Jerusalem temple by Titus in 70 C.E. and before the Bar Kokhba revolt. Indeed, if this line of reasoning is correct, the document ought to be dated to the first third of the 2d century since an upper limit of 136 C.E. is obtained by adding the 66 years of Abimelech's sleep, the maximum period envisioned by the author before restoration, to the date of the destruction in 70. The knowledge apparently displayed in the text about Jerusalem landmarks such as the farm of Agrippa or the marketplace of the gentiles suggests, but does not prove, that *4 Baruch* was written in Palestine, or perhaps even in Jerusalem itself.

4 Baruch contains three redactional levels, two Jewish and one Christian. In the oldest portion of the text, chaps. 1–4, the central figure is Jeremiah the prophet; Baruch the scribe is either a subordinate or not present at all. This agrees with traditions preserved in canonical Jeremiah, 2 Maccabees, and *Lives of the Prophets.* The later Jewish redactor, particularly in chaps. 7 and 8, elevated the figure of Baruch the scribe above that of Jeremiah the prophet, and otherwise gave the document a distinctly Pharisaic character. This fits well the historical developments in Judaism during the early 2d century B.C.E. Finally, a Christian redactor made a few interpolations in the body of the text and added the prophecy of Christ in chap. 9.

After the Bar Kokhba revolt, Judaism repudiated much of its apocalyptic tradition and the literature it produced, including *4 Baruch.* This left only the Christianized redaction preserved in Greek, Ethiopic, Armenian, Old Church Slavonic, and the Romanian versions. However, the linguistic evidence strongly supports a Semitic original, probably Hebrew, behind these later versions (see *OTP* 2:413–25).

STEPHEN E. ROBINSON

BARZILLAI (PERSON) [Heb *barzillay* (בַּרְזִלַּי)]. The name of three men in the OT.

1. A Gileadite who supported David during his difficulties with Absalom (2 Sam 17:27–29). When David, hounded from Jerusalem by Absalom, camped at Mahanaim, Barzillai supplied him with materials and food from his own considerable wealth. David's refreshed and strengthened troops then defeated Absalom's army. Barzillai's kindness made him the object of David's peculiar favor:David invited him to Jerusalem for permanent residence, proximate to the palace where he might enjoy the privileges of royal friendship. Barzillai declined, however, because of the debilities of his advanced age which would inhibit such enjoyment. Instead he sent his son, Chimham, whom David received as his surrogate. After a solemn and ceremonious benediction pronounced upon his benefactor, the king proceeded toward Jerusalem, accompanied by Chimham; Barzillai returned to his home in Gilead (2 Sam 19:31–40). David rewarded Barzillai's kindness, generosity, and loyalty by instructing Solomon to extend to Chimham and his sons a continuing royal friendship together with its accompanying privileges (1 Kgs 2:7).

2. A resident of Abel-Meholah in Gilead (2 Sam 21:8). His son Adriel married Merab, King Saul's daughter, though she had been promised to David. From Adriel he gained five grandsons, but he suffered the shameful loss of those grandsons to the hostilities between Saul and David. David surrendered them to

the Gibeonites, whom he knew to be hostile to Saul; the Gibeonites hanged the five, exposed on a mountain (2 Sam 21:8–9).

3. The father of a family of sons who lived in Jerusalem during the postexilic period (Ezra 2:61 = Neh 7:63). He derived his name from #1 above when he took a wife from his progeny and took the name with the wife. His name is given as "Jaddus" ("Jaddous" in one manuscript) in 1 Esdr 5:38, a passage in which his wife's name is given as "Augia." But these names are both doubtful for reasons which Bewer (1922:31) summarized already in 1922 and which subsequent students of the passage have found persuasive. "Jaddus" is the corrupted Gk transliteration of the Heb *zlly,* from which the preceding syllable *br* was lost. "Augia" is a corruption of the Gk *Agiliadi,* which was the transliteration of the Heb *hglydy,* "the Gileadite." If his sons' claims were legitimate, he was a priest. His sons claimed the privileges and duties of priests in postexilic Jerusalem, though they were unable to establish their claim when they sought, in vain, their registration in the priestly genealogies. This lack marked them as unclean and excluded them from the priesthood (Ezra 2:62–63 = Neh 7:64–65). Kidner (*Ezra Nehemiah* TOTC, 42) suggests that when Barzillai appropriated a name from a non-priestly family, he compromised his status as a priest; subsequently, his and his sons' names were deleted or excluded from the priestly registers.

GERALD J. PETTER

BASEMATH (PERSON) [Heb *bāśĕmat* (בָּשְׂמַת)]. Derived from *bośem/beśem* "balm (tree)," the name belongs to two women in the OT (see below). Outside the OT, the name *bs*$_2$*mt* occurs in Minaean for a women from Gaza married to a Minaean merchant (M 392 C 47; 3d century B.C.) and in Sabaic for a man (CIS IV 725); the Sabaic reference may be vocalized according to classical Arabic *Bašâmah,* which is a man's name as well (Caskel 1966:225; Knauf 1985:93, n. 509).

1. One of the wives of Esau, the legendary ancestor of Edom (Gen 26:34; 36:3, 4, 10, 13, 17). According to Gen 26:34, she was the daughter of "Elon the Hittite." In the 1st millennium B.C., "Hittite" could denote any native of Syria/Palestine (the name "Elon" is Canaanite). In the perception of the priestly source (or layer), to which this verse is generally attributed, it could denote any non-Jewish inhabitant of Syria/Palestine.

According to Gen 36:3, Basemath was the daughter of Ishmael and sister of Nebaioth. This contradicts Gen 28:9 (P), where the daughter of Ishmael married to Esau is called Mahalath. Most probably, Gen 36:1–5 is a redactional addition to Genesis 36 which is more recent than 36:6–9, 40–43 (P) and 36:10–14, 20–28 (from the geographical source of P?). For this geographical source and its date, see Knauf 1985:61–63, and for the stratigraphy of Genesis 36, Weippert 1971:437–46. The redactor may have realized that "Basemath" sounds more "Arabic" than "Hittite." The "sister of Nebaioth" probably refers to the immigration of the Qedarite clan or subtribe *Nabaṭ* (the later Nabataeans) into Edom, which may have occurred as early as at the end of the 6th century B.C. (Knauf 1985:108f.).

According to the old (7th century B.C.?) and probably Edomite tradition in Gen 36:10–14, Basemath is the mother of the major Edomite tribe Reuel. This information is copied from Gen 36:10, 13 into Gen 36:4 and 17 (Weippert 1971:437–46). Judging from the parallels to the name, it is conceivable that the legendary ancestor of the Reuelites could have been either male or female. Only with the incorporation of Reuel into the Edomite state, or even later with the compilation of the biblical lists concerning Edom, Basemath became a wife of Esau.

2. According to 1 Kgs 4:15, Basemath was a daughter of King Solomon and married to one of Solomon's twelve provincial governors. The authenticity of the list in 1 Kgs 4:7–19 is generally accepted.

ERNST AXEL KNAUF

BASHAN (PLACE) [Heb *bāšān* (בָּשָׁן)]. The fertile area of upper Transjordan east of the Sea of Galilee and mainly north of the Yarmuk river. The ancient boundaries of Bashan, although impossible to determine exactly, appear to be the area north of Gilead, west of Salecah and the Jebel Druze Mountains (though some biblical texts appear to include Jebel Druze; see *GB*, 222), south of Mount Hermon, and east of the Jordan and the Sea of Galilee. Its southern boundary was apparently not far from the present border of Syria and Jordan which coincides with the lower Yarmuk River. One of Bashan's early capitals, Edrei (Num 21:33, Deut 3:10), was situated on a tributary of the Yarmuk. Other cities located in Bashan included Karnaim, Ashtaroth (Deut 1:4, Josh 9:10), and Salecah (Deut 3:10) in the regions of Argob (Deut 3:4), Golan (Deut 4:43), and Hauran. The ancient capital of Bashan was Ashtaroth, replaced later by Karnaim.

Bashan always appears with the definite article as "the Bashan," meaning "smooth" or "stoneless plain," or "fertile, fruitful." It was a broad, fertile plateau surrounded by basaltic, volcanic mountains, and hills. The plateau, at an altitude of 2000 feet above sea level, was perfectly suited for agriculture and cattle. The area was well known for its cattle (Ps 22:12; Amos 4:1–3) and timber (Isa 2:13; Ezek 27:6). Because of its fertility and productivity, Bashan was the prize in wars between Syria and Israel.

Bashan was inhabited as early as the late 4th millennium B.C. by whom the Bible calls the Rephaim. By the time of Moses, a prosperous agricultural area had been built around sixty cities (Deut 3:4–6). All of Bashan's cities were defeated by Moses at Edrei (Num 21:33–35; Deut 3:1–9). After the area was subdued, Moses assigned it to the half-tribe of Manasseh and even set aside Golan to be one of the cities of refuge east of the Jordan. Some of the families of Gad settled in Bashan (1 Chr 5:11–12). Ultimately, Israel was removed from Bashan by Tilgath-pileser III (745–727 B.C.) of Assyria.

In the Greco-Roman period, the area was known as Batanea. Its cities included Seleucia, Hippos, Gamala, Decapolis, Abila, and Dion. The district of Hauran became well developed in the centuries following Christ, as evidenced by the construction of aqueducts, reservoirs, temples, theaters, and basilicas. From the period following Trajan (A.D. 117–38), inscriptions abound in the area.

JOEL C. SLAYTON

BASILIDES. Basilides, active in the first half of the 2d century, was a highly influential Christian gnostic philosopher who established his own philosophical school in Alexandria (see GNOSTICISM). Also influential were the early followers of Basilides, like his most popular disciple and "son" Isidore and possibly the great gnostic reformer VALENTINUS. The school of Basilides was apparently still active in the mid-4th century. The present writer is indebted to text anthologies and studies by W. Völker (1932), K. Rudolph (1977), R. Grant (1979), and B. Layton (1987).

A. Patristic Sources

As in the case of most original gnostic literature, the intense heresiological polemic against Basilides and his followers resulted in the effective censorship and eventual elimination of their writings from the medieval manuscript tradition. What we know of Basilides and his teaching comes down to us in the form of incomplete descriptions and quotations by the patristic heresiologists (Grant 1979:201–16). As yet, there have been no genuine Basilidean texts identified among the papyri including the Nag Hammadi codices (see NAG HAMMADI [CODICES]).

The most important patristic evidence is the description by Irenaeus (ca. 180; *Haer.* 1.24.3–7), possibly based on a now lost writing of Justin Martyr (ca. 160; Layton 1987:418), which was later reused in summary form by the 4th and 5th century heresiologists Epiphanius of Salamis (*Haer.* 24.1.1–24.10.8) and Theodoret of Cyrrhus (*Compendium* 4; Layton 1987:420–25; Rudolph 1977:309–12). Irenaeus transmits a descriptive summary of Basilides' mythological system which is in line with the contents of the fragments quoted by Clement and Origen (below) and other extant early evidences of the classic gnostic myth (see GNOSTICISM). The myth begins with the "unengendered parent" (first principle) who expands into a complex spiritual universe. This is followed by the creation of a material universe of 365

concentrically nested heavens, each of which is controlled by its own rulers (archons), and at the core center of which is the lowest point of creation: humankind's material world. The lowest heaven, that visible to humans, was created by the evil angels who populate it. According to the myth, their ruler was the minor but effectively evil creator-god of the Jews who rules over a material world and is at odds with the spiritual aspirations of humankind. Humans, whose true home is the spiritual universe, are thus spirits trapped in the material world and can only escape by bodiless spiritual ascent through the 365 levels of dominating authorities if they *know* (i.e., if they are gnostic) that the way has been opened by the descent and ascent of Christ the spiritual Savior. The Christ was not truly incarnate and did not suffer but instead escaped as Simon of Cyrene died on the cross. This Christ (the laughing Savior), having overcome the shackles of the evil god, thus ascends back to the unengendered father and so prepares the way through the heavens for human spirits to ascend. It is clear that the gnosticizing spirit-matter dualism, the inverted interpretation of Gen 1–3, and the denigration of biblical history with its good creator god, certainly put Basilides' teaching at odds with developing orthodox positions (Rudolph 1977:310–12; Layton 1987:420–25).

Clement of Alexandria (ca.200) quotes and comments on seven sections from unknown works of Basilides in Clement's famous *Stromata* 4–5 (cf. frags. A through E, G and H in Layton 1987:427–37, 440–44). Two of the fragments focus on cosmological issues (Layton 1987:428–31):the first is a quote (frag. A; *Strom.* 4.162.1) which refers to two of the constituent members of the octet in the godhead and is in agreement with Irenaeus' description (*Haer.* 1.24.3), while the other is a quote and discussion (frag. B; *Strom.* 5.74.3) refering to the Stoic concept of the uniqueness of the world. The five remaining fragments focus on ethical issues (in line with Stoic ethics; cf. Layton 1987:418, 432–44):the first (frag. C; *Strom.* 5.3.2–3) refers to Basilides' teaching on election in relation to faith and virtue; the second (frag. D; frag. 4 in Völker; *Strom.* 4.86.1) describes Basilides' teaching on the will of god (fate) to which the virtuous person aspires; the third (=frag. E; *Strom.* 4.165.3) describes Basilides' teaching that human souls retain their identity through their various incarnations and so transcend the world; the fourth (frag. G; frag. 2 in Völker; *Strom.* 4.81.2–4.83.2) is a series of lengthy quotes introduced by Clement with the statement that they are from Book 23 of Basilides' now lost *Commentaries* (the *Exegetica*), quotes which seem to be from a commentary on 1 Pet 4:12–19 in which he argues that the will of god (fate) is "all-powerful and all good" (Layton 1987:440–43); the fifth (frag. H; *Strom.* 4.153.3) is a single sentence referring to forgivable sins.

Origen, in his commentary on Romans (ca. 244), quotes a Basilidean text (frag. F; frag. 3 in Völker; Origenes, *Opera Omnia* 4) in which Basilides interprets Rom 7:7 to refer to incarnation (which Origen accepted) and a certain gnostic cosmology (which Origen rejected). This text may also come from Basilides' *Commentaries* like frag. G in Clement, suggesting that Basilides and the eastern Valentinian gnostic Heracleon (ca.150; Rudolph 1977:323–24) are the first known authors of commentaries on NT texts.

Other early and descriptive patristic refutations of Basilides' teachings are known. One is found in an extant heresiology by Hippolytus of Rome (first half of the 3d century; *Haer.* 7:20–27). But Hippolytus' report is not in tandem with the descriptions and quotations of Basilides' system which we find in the summaries and quotations in Irenaeus, Clement of Alexandria, and Origen (see discussion in Layton 1987:418 n. 2; Rudolph 1977:310). Another is the now lost *Refutation of Basilides* by the heresiologist Agrippa Castor (ca.135) mentioned by Eusebius (*Hist. Eccl.* 4.7.6–8) at the beginning of the 4th century (Rudolph 1977:309–10).

B. Basilides' Gnostic System and its Development

It is clear from the preceding survey of patristic quotes and discussions that Basilides' system was eclectically based on a variety of sources including classic gnostic teaching, Stoic ethics, and Platonic-Pythagorian soteriology. Yet through it all he employed traditional Christian scripture, language, and terminology (Rudolph 1977:310–12). This eclectic mix was quite common in Christian philosophies of 2d century Alexandria and is also found, on the more orthodox side, in Clement of Alexandria (Layton 1987:417–18).

Basilides was careful to base his teaching on broadly accepted apostolic authority like most innovative theologians of his day. While Valentinus was to base his authority on Paul (through a certain Theudas), Basilides based his authority on Peter (through a certain Glaucias), further strengthening the suggestion that the quote from Basilides' exegetical commentary (frag. G) was from a text in the Petrine tradition (1 Peter; Layton 1987:417, 440–43; Rudolph 1977:309–10).

After the death of Basilides, and in contrast to the popular reception of Valentinus' teachings, his school spread little beyond Egypt. His disciple and "son" Isidore was his most well-known disciple, developed Basilides' teachings independently, and produced at least three works *(On the Grown Soul, Ethics,* and *Expositions of the Prophet Parchor)* which are preserved only in fragmentary form in Clement of Alexandria (Rudolph 1977:309–13; cf. 258–59). At least two centuries after Basilides' death, the heresiologist Epiphanius (ca.375, *Panarion*) seems to know the movement as a relatively small gnostic group still confined to Egypt.

BASKAMA (PLACE) [Gk *Baskama* (Βασκαμα)]. The town in Gilead where Jonathan Maccabeus was executed by Trypho, the commander of the Seleucid army ca.142 B.C. (1 Macc 13:23). Josephus (*Ant* 12.6.6 §210) refers to this location as Baska.

The Maccabees after leading an extended rebellion against Seleucid control of Palestine, had come to be recognized by the parties which struggled for control of the Seleucid empire. Jonathan had been affirmed as the religious and secular leader of Judea by the faction that Trypho supported (1 Macc 11:57) and as a result militarily opposed and defeated the advance of Demetrius' forces (1 Macc 12:25–30). Trypho however, realizing the increasing independence of Jonathan, sought to depose him. Unable to defeat Jonathan militarily Trypho resorted to subterfuge. Jonathan was taken hostage in Ptolemais where he had expected to receive additional territory as a reward for his allegiance (1 Macc 12:43–45). Trypho's subsequent efforts to regain control of Judea, however, were thwarted by Simon Maccabeus, and Trypho was forced to retreat in the face of inclement winter weather via the sheltered Rift Valley route to the N. When the Seleucid forces approached firmly held Seleucid territory and Jonathan's value as a hostage was reduced, he was executed.

Baskama was located within territory where the Hasmonean forces could be effective. This is demonstrated by the fact that Simon was able to retrieve his brother's body (1 Macc 13:25).

Baskama has not been identified through archaeological research. Possible locations include Tell Bazuk and Wadi Jummeimeh (M.R. 211256) which are both located NE of the Sea of Galilee.

BASTION. See FORTIFICATIONS.

BAT. See ZOOLOGY.

BATASHI, TELL EL- (M.R. 142132). A site located in the alluvial Sorek valley 7 km W of Beth-shemesh and 9 km S of Gezer. The site is often identified with TIMNAH, the city that figures predominantly in the Samson story (Judges 14). This identification is based on the identification of Ekron with Tel Miqne to the W and of Beth-shemesh with Kh. Rumeila to the E, since Timnah is listed between the two in Josh 15:10–11 and since Tell el-Batashi is the only important mound along this line.

Excavations around the tell in 1955 revealed Neolithic, Chalcolithic, EB, and MB remains (see BATASHI, TULEILAT EL-). Excavations on the mound itself, however, began in 1977 and have clarified the history of the mound from the MB Age until the Persian period. Located in the center of a fertile valley, near the brook of Sorek, where wells easily could be dug, Timnah controlled a main road linking the region of Jabneh and Ekron in the coastal plain to the inner Shephelah near Beth-shemesh.

Timnah thus was ideally situated for agriculture and as a cultural and commercial link between the coastal plain and the hill country.

The tell itself is a 200 m square mound. The construction of a massive earthen rampart inside a protective moat during the MB Age established its symmetrical shape. This rampart created a central crater-like depression which the site retained through its final occupation at the end of the Iron Age.

Stratum	*Period*
I	Persian (6–5th cent. B.C.)
II	Iron IIC (7th cent. B.C.)
III	Iron IIB (8th cent. B.C.)
IV	Iron IC (10th cent. B.C.)
V	Iron IA–B (12–11th cent. B.C.)
VI	LB IIB (13th cent. B.C.)
VII	LB IIA (14th cent. B.C.)
VIII	LB IB (late 15th cent. B.C.)
IX	LB IA (early 15th cent. B.C.)
X	Transitional MB–LB (16th cent. B.C.)
XI	MB

The MB fortifications have been exposed in 2 sections. The massive rampart was constructed of layers of alluvial earth and pebbles and support a huge mud brick city wall on its crest. During the LB Age (strata X–VI) an unwalled Canaanite town flourished at Tell el-Batashi. The outer walls of large buildings exposed in the NE corner of the mound appear to have created a defensive line. The town appears to have suffered from continuous attacks, since each of the 5 LB strata provided evidence of extensive burning. The destruction levels contained an abundance of finds, including seals, scarabs, metal objects, and various local and imported pottery vessels. Of particular importance is a large building of stratum VII (mid-14th cent. B.C.), with its ground floor divided by two rows of wood pillars supporting its ceiling and the 2d floor. This is a unique example of the use of pillars in Canaanite architecture and may be a forerunner of the later Iron Age pillared buildings.

Exposure of the Philistine town of Timnah (stratum V) has been limited. Brick and stone structures from this period as well as wide open areas containing baking ovens and silos have been excavated. Typical Philistine pottery together with other artifacts such as seals and seal impressions have been found in this level. The site was abandoned in the late 11th century. During the period of the United Monarchy (10th century B.C.) the town was partially rebuilt. Architectural remains covered limited sections of the excavated areas. A large public building partially excavated in the S part of the mound may have been a palace of that period. In the city gate area (Area C), two massive square towers may have been built during this phase. Red-slipped and hand-burnished pottery found in this level is of types characteristic of Israelite sites in the Shephelah.

The 10th-century town may have been destroyed during the Egyptian invasion by Shishak 5 years after the division of the kingdom. After an occupational gap, probably lasting most of the 9th century B.C., the town was rebuilt in the 8th century B.C. (stratum III), perhaps when the region was part of the Kingdom of Judah during the reign of Uzziah. The newly planned city was surrounded by a massive stone city wall and was entered through a double gate consisting of outer and inner gate structures. The exterior gate was composed of a massive outer tower and inner tower flanking a well-defended approach ramp. The interior gate was composed of two pairs of guard chambers. The city suffered violent destruction which safely may be attributed to the Assyrian conquest of 701 B.C. One of the most important discoveries in this city was a store building containing over 30 storage vessels of the *lmlk* type, characteristic Judean jars with handles stamped with the Judean royal seal. One of the handles was sealed with a private impression of Safan son of Abimaas, identical to seals found at Jerusalem and Azekah. The other seals are of either the

"four-winged" or the "two-winged" type. These jars are evidence of Judean activity in Timnah, probably during Hezekiah's preparations for the war against Sennacherib.

During the 7th century B.C. (stratum II) the city was rebuilt on a grander scale. The city wall and gate were reconstructed, and new buildings were erected in the town. The use of monolithic pillars to divide courtyards of buildings is characteristic of this phase, though it probably started already in the earlier period. The buildings, forming well-defined architectural units, reflect superb urban planning. A large fort or public building in the NE quadrant of the mound and a series of houses to its W were excavated. One of these units contained a complete oil-press installation, with a large stone trough or crushing basin, two adjoining pressing vats, and stone weights and stone rollers in various sizes used to crush the olives. Parts of another oil press found nearby suggest that, as in nearby Ekron, oil production was one of the main industries of the town during this period. The houses were destroyed by intense fire ca.600 B.C., most probably during Babylonian military campaigns in the region. Rich assemblages of pottery and other finds throw light on the material culture of Timnah during that period. This culture was characterized by the combination of coastal (late "Philistine") and Judean cultural traditions. The identity of a local pottery, similar to that of Ekron, is particularly interesting, and points to the existence of a local regional culture.

Pits and some poor structures are evidence for a limited settlement during the Persian period.

BATASHI, TULEILAT EL- (M.R. 142132). A site on the N bank of Wadi Sorek, about 7 km NW of ancient Beth-shemesh and about 750 m from Tell el-Batashi (biblical Timnah?), which lies on the opposite bank of the wadi and contains remains from the Israelite period onward (see BATASHI, TELL EL-). The Tuleilat el-Batashi site, however, is characterized by two barrows (or tumuli) around which have been found remains dating to the Neolithic, Chalcolithic, EB, and MB periods, reinforcing the assumption that occupation first started in this location and then later shifted S to the site of the mound.

Excavations were conducted in three areas around the barrows during March and July–August of 1955. Area A, to the S of the larger barrow (T-1), yielded two Neolithic shelter pits, each distinguished by the same two occupation levels (IVa and IVb). The pottery of the upper level (IVa) is identical with that of Jericho IX and Kenyon's Pre-Pottery Neolithic A. The pottery of level IVb differs from that of IVa mainly in its decoration; especially common are shards of the "dark-faced burnished ware" first noted in the Amuq plain and at Mersin (Hole 1959:154; Kaplan 1969). Level III, which is above level IVa and dates to the Chalcolithic period, can be correlated with the culture of Wadi Rabah stratum II (see RABAH, WADI). The artifacts of this level included several Neolithic Yarmukian shards, thus confirming that Jericho IX preceded the Yarmukian culture, as already established by Garstang and Kenyon. Level II, dated to the EB Age, was exposed only in the NW part of area A. Level I is represented by the remains of a MB pit which had penetrated into level II.

Three Chalcolithic occupation levels were exposed in area B, also near barrow T-1. The upper two levels (IIIa and IIIb) contained Ghassulian pottery, while the lowest (IIIc), resting on virgin soil, included pottery identical to that of Wadi Rabah stratum II. This is significant insofar as it provides evidence that the Wadi Rabah culture preceded the Ghassulian.

The excavations in area C cut across the T-1 barrow and exposed two chambers (each measuring 1.7 × 1.9 m), and behind them to the S was uncovered part of a third chamber. MB II–III pottery was found on the floor, as were other artifacts including round ovens of baked clay and a Hyksos scarab. To the E of the chambers were concentric walls which decreased in height toward the edge of the barrow, the space between the walls tightly packed with small stones. This type of barrow is otherwise unattested in Israel,

although it is common in W Europe, where it is known as the "long barrow" type. Thus, in addition to the various burial types already attested for this period in Palestine must be added this "long barrow" type. The barrow is not far from area A, whose level I remains (an MB pit) are linked with the MB remains from this T-1 barrow.

BATH [Heb *bat* (בַּת)]. See WEIGHTS AND MEASURES.

BATH-RABBIM (PLACE) [Heb *bat rabbîm* (בַּת רַבִּים)]. The name of a gate of Heshbon, located near the famous pools, mentioned in Cant 7:4. Although no evidence for this gate was found during the recent excavations of Hesban (biblical Heshbon), the excavators have wondered whether or not a large 2,000,000-liter reservoir built on the S shelf and associated with Stratum 17 (9th–8th centuries) could be one of the pools referred to in this text (Geraty and Willis 1986:31). If so, the gate would probably have been located nearby.

BATHING. See UNCLEAN AND CLEAN.

BATHSHEBA (PERSON) [Heb *bat-šeba*ʿ (בַּת־שֶׁבַע)]. The daughter of Eliam and wife of Uriah the Hittite (2 Sam 11:3), who became one of David's wives (2 Sam 11:27) and mother of his son and heir, Solomon (2 Sam 12:24–25). The name may mean "daughter of abundance" (*IDB* 1:366). The story of David's adulterous affair with Bathsheba, resulting in her pregnancy, and David's stratagem to cause her husband's death and take her as wife (2 Sam 11:1–27) is one shrouded in ambiguity (Yee 1988:240–253). The character of Bathsheba and her motivations are particularly puzzling. The author gives no clues to the emotions of a woman who commits adultery, becomes pregnant, loses her husband, and marries her royal lover. From a literary perspective, according to Berlin (1983:25–27), Bathsheba is simply an agent, a person necessary for the plot, and not a full-fledged character. Since 2 Samuel 11 is a story about David's adultery, and since such a story requires a married woman, Bathsheba fulfills this function.

However, according to Bailey (1989), David and Bathsheba are co-conspirators in a political scheme to marry. Their nuptial union is similar to David's other political marriages, where he weds a woman from an influential family who will assist in either his rise to or his maintenance of power (Cf. also Levenson and Halpern 1980). In this view, Bathsheba is no longer an innocent victim, but a willing partner in the affair who wishes her own son to become David's royal successor. Her claim in 1 Kgs 1:17, that David had swore that Solomon would rule after him, suggests that David was able to convince Bathsheba to marry him by promising that her son would be his heir to the throne.

One finds a portrayal of Bathsheba in 1 Kings 1–2 which would support the view of her as a co-conspirator in the adultery. Here she a key figure in the ruthless political intrigue surrounding her son Solomon's rise to power. With the prophet Nathan, she holds David to his oath that Solomon would succeed him as king (1 Kgs 1:11–31). Moreover, she plays a vital role in Adonijah's death by personally bringing his request to Solomon to marry David's concubine, Abishag. Since such a request is equivalent to a claim to the throne, Solomon is provided with grounds to eliminate his rival (1 Kgs 2:13–24, Berlin 1983:27–30).

Bathsheba is called BATHSHUA 1 Chr 3:5.

GALE A. YEE

BATHSHUA (PERSON) [Heb *bat-šûaʿ* (בַּת־שׁוּעַ)]. The name of two women in the OT.

1. The Canaanite wife of Jacob's fourth son, Judah, and the mother of his sons Er, Onan, and Shelah (1 Chr 2:3). In Hebrew, Bathshua literally means "daughter of Shua." Hence, Bathshua may not be a proper name, but rather the familial designation of an unnamed woman (Cf. Gen 38:2). It may, however, also mean "daughter of error" (*IDB*1:366).

2. Daughter of Ammiel, wife of David, and mother of his sons Shimea, Shobab, Nathan, and Solomon, according to 1 Chr 3:5. The LXX and Vg of this text read "Bathsheba." The change of name may be due to the phonetic similarity of the consonants *bet* and *waw* in *bt-šbʿ* and *bt-šwʿ*. According to 2 Sam 11:3, the father of Bathsheba is ELIAM, which may have become Ammiel in the transposition of the consonants *lamed* and *mem.* The name changes of Eliam to Ammiel and Bathsheba to Bathshua may be due to the Chronicler's systematic efforts to eliminate any references to the David-Bathsheba-Uriah affair which he found in his sources. If the "daughter of error" translation is accepted, however, the name change becomes a moral statement.

GALE A. YEE

BAVVAI (PERSON) [Heb *bawway* (בַּוַּי)]. A Levite, the son of Henadad, and ruler of half the territory of Keilah, who was charged by Nehemiah with repairing a section of Jerusalem's walls (Neh 3:18). The evidence from various manuscripts suggests that Bavvai may be a corruption of Binnui, and therefore the same individual recorded in Neh 3:24 (see BINNUI #4).

BAWDLERIZATION. See BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

BAZAAR. See TRADE AND COMMERCE (ANE).

BAZLITH (PERSON) [Heb *baṣlît* (בַּצְלִית)]. Var. BAZLUTH. Head of a family of *nětînîm* (temple servants) (see NETHINIM) listed among those exiles returning from Babylon to Jerusalem and Judah (Neh 7:54 = Ezra 2:52; 1 Esdr 5:31). While the Greek in all three occurrences is *Basalōth,* Ezra employs the variant Heb form *baṣlût.* Noth (*IPN*, 231) believes the name derives from a plant designation, i.e., Heb *bṣl,* "onion." Zadok (1980:113) agrees by suggesting the name may be formed from the root *baṣl* (Biblical Heb plural *bĕṣālîm*—Num 11:5; late Heb *bāṣēl* or *beṣel;* Ar *baṣal;* Aram *buṣlāʾ*) and the hypocoristic suffix *ît* or *ût,* which Jastrow (1926:158a, 1384b, and perhaps 290a, 324a) shows is attached to other post-biblical names some of which may derive from vegetarian foods.

RODNEY H. SHEARER

BDELLIUM. See PERFUMES AND SPICES.

BEADS, BEADWORK. See JEWELRY.

BEALIAH (PERSON) [Heb *bĕʿalyâ* (בְּעַלְיָה)]. One of the ambidextrous warriors from the tribe of Benjamin, a kinsman of Saul; he supported David before he became king (1 Chr 12:6—Eng 12:5). The inclusion of the element baal *(bʿl)* in his name suggests that this name and the list in which it occurs come

from an early date; compounds with baal are unlikely for later periods in the history of Benjamin. (For further discussion, see Williamson *1 and 2 Chronicles* NCBC, 85, 106.)
RAYMOND B. DILLARD

BEALOTH (PLACE) [Heb *bĕʿālôt* (בְּעָלוֹת)]. A town in the S reaches of the territory of Judah in the Negeb (Josh 15:24). This is the sole reference to the town of this name in this geographical area, so its exact location is in doubt. Identification of the place with the similar name Baalah found in the same literary context (Josh 15:9, 10, 11, 29) is not satisfying. The latter is identified with Kiriath-jearim (M.R. 159135) and is located on the N side of Judah's holdings rather than the S (*MBA*, 73).

Another suggestion which is more attractive geographically is the identification of Bealoth with Baalat-beer (Josh 19:8; Woudstra *Joshua* NICOT, 244; M.R. 138043). This town is within the allotment of Simeon, which itself is included within and lies to the S of Judah's holdings (*MBA*, 82).

Some translations suggest a town of Bealoth further N in Israel. In the list of Solominic district governors and their jurisdictions, the ninth, Baana, governs "in Asher and Bealoth" (1 Kgs 4:16; RSV; NASB; *HGB*, 66). The Heb grammatical structure would favor a reading of "in Asher and in Aloth" (KJV; NEB; NASB margin), or, translating the last term, "in the highlands" (JB). The reading of LXX^{A}, "Maaloth," could also be so translated. It is probable that this verse does not indicate a second location called Bealoth.

BEATITUDES. Although "beatitudes" is frequently used as a proper noun to denote a collection of eight dominical logia at the beginning of the Matthean Sermon on the Mount (Matt 5:3–10; par. Luke 6:20b–21), the term "beatitude" properly designates a whole body of sayings with a similar literary form. Such sayings, found in Egyptian, Greek, and Jewish literature, are technically known as macarisms (from the Greek *makarios,* "blessed" or "happy"). Matthew's collection of sayings is nonetheless known as the Beatitudes, a term derived from the Latin *beati* (similarly, "blessed" or "happy"), the word with which each of the eight sayings begins in the Latin Bible.

B. Jewish Beatitudes
C. New Testament Beatitudes
1. Jesus
2. Matthew
3. Luke
4. Johannine Literature

———

A. Literary Form

In form, the macarisms begin with the adjective *makarios,* followed by a relative or personal pronoun introducing a clause which describes a particular conduct or quality which prompted the praise of the person who is pronounced blessed. Typically, macarisms are formulated in the third person, and more commonly in the singular than in the plural. The oldest known example of a macarism is found in the *Homeric Hymn to Demeter* (480–83), "Happy is he among men upon earth who has seen these mysteries."

Macarisms or beatitudes are to be distinguished from blessings, an effective pronouncement in which God himself is deemed to be the real agent. In the LXX, blessings are frequently expressed in the formulation "blessed be …," but the pertinent term is the verbal adjective *eulogētos* or the participle *eulogēmenos,* not the adjective *makarios.* In the Jewish tradition the latter term is not used of God, even though, in the Greek world, the gods were deemed to be supremely happy (*makares;* Homer, *Od.* 5, 7).

Beatitudes are expressions of praise or congratulation. As such they belong to the literary subgenre known as ascription. Four types of macarism have been identified:the secular macarism (in which one is praised on account of wealth, beauty, etc.), the macarism of the wise man (in which one is praised on account of wisdom or virtue), the satirical macarism (*1 Enoch* 103:5–6, "Blessed are the sinners; they saw all their days. And now they have died in prosperity and wealth …"), and the religious macarism (Ps 1:1, "Blessed is the man who walks not in the counsel of the wicked."; [Betz 1985:25]).

B. Jewish Beatitudes

In the Hebrew Bible "the man who" (*ʾaśrê hāʾîš*), an expression reflected in the LXX *anēr hos* or *anthrōpos hos,* is commonly cited as the object of praise. The Hebrew Bible contains 45 beatitudes, most of which are found in the wisdom literature:Deut 33:29; 1 Kgs 10:8 (twice); Isa 30:18; 32:20; 56:2; Ps 1:2; 2:12; 32:1, 2; 33:12; 34:9; 40:5; 41:2; 65:5; 84:5, 6, 13; 89:16; 94:12; 106:3; 112:1; 119:1, 2; 127:5; 128:1, 2; 137:8, 9; 144:15 (twice); 146:5; Job 5:17; Prov 3:13; 8:32, 34; 14:21; 16:20; 20:7; 28:14; 29:18; Qoh 10:17; Dan 12:12; 2 Chr 9:7 (twice). To these the LXX adds an additional 15: Sir 14:1, 2, 20; 25:8, 9; 26:1; 28:19; 31:8; 34:15; 48:11; 50:28; Tob 13:14 (twice); Wis 3:13; and Isa 31:9. Of the 45 beatitudes in the Hebrew Bible, all but 4 (Deut 33:29; Ps 128:2; Qoh 10:17, in the 2d person singular; and Isa 32:20, in the 2d person plural) are in the 3d person.

Scholars have long been debating about the original form and life setting of the beatitudes in the Hebrew tradition. Some (Käser 1970) think that the original form of the beatitude was a simple propositional statement (e.g. Ps 2:12; 34:9; 41:2; 84:13; Job 5:17; Dan 12:12), while others (Kähler 1974) think that an expanded form of the beatitude, certainly more common in the extant literature, is more faithful to the original form.

E. Lipiński (1968) argued for a cultic setting for the beatitudes, noting that the oldest biblical beatitudes are in some of the early Psalms, that many have a national and collective character (Ps 33:12), that Prov 16:20; 28:14; 29:18 are dependent on the Psalms, and that parallel Egyptian beatitudes are found in religious contexts. The dominant opinion is, nonetheless, that the biblical beatitudes are essentially wisdom sayings. Scholars who advance this view note the preponderant appearance of beatitudes in the biblical wisdom literature and often cite Job 5:17 as a significant example. In any case, the biblical beatitudes frequently assume religious or paraenetic overtones. Although the beatitude is essentially a declarative statement, its content is such that it readily functions as an implicit exhortation.

The specifically religious beatitude is typically found in apocalyptic literature (*1 En.* 58:2; 81:4; 82:4; 99:10; 103:5; *2 En.* 41:1; 42:6–14; 44:4; 48:9; 52:1–14; 61:3; 62:1; 66:7; *Sib.Or.* 3:371–372; cf. *Pss.Sol.* 4:26; 5:18; 6:1; 10:1; 17:50; 18:7; *4 Macc.* 18:9). These religious beatitudes frequently assume eschatological overtones. Typically a seer pronounces a beatitude because of his visionary experience. Prophetic knowledge enables judgment to be brought to bear upon present conditions. Apocalyptic beatitudes can occasionally function as "anti-macarisms" (Betz:33), insofar as praise is extended to those who do not measure up to traditional values.

Beatitudes typically appear as isolated sentences. The use of the isolated beatitude passed over into rabbinic literature: e.g., "Blessed are thou Aqiba, because thou wast arrested for words of Torah" (*Ber.* 61b). The collection of beatitudes (9 in *2 En.* 42:6–14; and 7 in 52:1–14) is a distinctively literary phenomenon. Although collections as such are relatively rare, isolated beatitudes frequently appear at the beginning or end of a longer body of material (Psalm 1 or Sirach 25, where 9 types of persons are praised).

Beatitudes are sometimes to be found in a variety of antithetical formulations. The one who is praised for his qualities or conduct is contrasted with one who is not to be so praised (Ps 1:1, 4; Tob 13:12, 14). Qoh 10:16 contrasts a woe with the beatitude of v 17. Because the content of some conditional sentences in Jewish literature corresponds to the content of some beatitudes (Ps 32:10; Wis 28:25), it has been occasionally suggested (Kahler 1974) that the origin of the beatitude lies in the conditional sentence. A consequent distinction can be made among Jewish beatitudes, i.e., between the beatitude which pronounces someone blessed because of a given condition or situation (Ps 33:12) and the beatitude which is conditional and thereby serves as an implicit exhortation (Ps 32:2).

C. New Testament Beatitudes

The NT contains 37 beatitudes (Matt 5:3, 4, 5, 6, 7, 8, 9, 10, 11; 11:6; 13:16; 16:17; 24:46; Luke 1:45; 6:20, 21 (twice), 22; 7:23; 10:23; 11:27, 28; 12:37, 43; 14:15; 23:29; John 20:29; Rom 4:7, 8; 14:22; Jas 1:12; Rev 1:3; 14:13; 16:15; 19:9; 20:6; 22:7). Since seven of Matthew's beatitudes have parallels in Luke (Matt 5:3=Luke 6:20b; Matt 5:4=Luke 6:21b; Matt 5:6=Luke 6:21a; Matt 5:11=Luke 6:22; Matt 11:6=Luke 7:23; Matt 13:16= Luke 10:23; Matt 24:46=Luke 12:43) and two of the Pauline beatitudes are a biblical citation (Rom 4:7–8=Ps 32:1–2), the NT adds 28 new beatitudes to the biblical collection.

1. Jesus. Seventeen of the gospel beatitudes are sayings of Jesus. Among the evangelists, Luke alone attributes a beatitude to a spokesperson other than Jesus (Luke 1:45; 11:27; 14:15). The attribution of beatitudes to Jesus represents a venerable Christian tradition. The seven beatitudes found in both Matthew and Luke undoubtedly derive from the Q source (ca.50 A.D.). Luke 12:37 seems to have been adopted by the evangelist from his unique material. Six of the NT beatitudes, including that pronounced by the woman in the crowd, appear, in a modified form, in the 2d century *Gospel of Thomas,* dated by many into the 1st century (Matt 5:3 = *Gos.Thom.* 54; Matt 5:6 = *Gos.Thom.* 69b; Matt 5:11 = *Gos.Thom.* 68–69a; Luke 11:27–28 = *Gos.Thom.* 79a–b; Luke 23:29 = *Gos.Thom.* 79c), a text which cites an additional six beatitudes as sayings of Jesus (*Gos.Thom.* 7, 18, 19, 49, 58, 103).

Given the antiquity of the tradition and the widespread distribution of beatitudes throughout the gospel material (although none are found in Mark), scholars frequently ask whether the gospel beatitudes represent authentic sayings of Jesus. The question is raised most often with regard to the beatitudes which have received a classic formulation as the beatitudes of Matthew's Sermon on the Mount (Matt 5:3–12), with a parallel in Luke's Sermon on the Plain (Luke 6:20b–23).

Although both Matthew and Luke have modified the beatitudes taken over from the Q source, it is quite likely that the substance of the four common beatitudes (Matt 5:3=Luke 6:20b; Matt 5:4=Luke 6:21b; Matt 5:6=Luke 6:21a; Matt 5:11=Luke 6:22) goes back to the proclamation of the historical Jesus. Since the Q formulation can only be reconstituted on the basis of a comparative study of the two extant gospel texts, and the Matthean beatitudes are in the third person while the Lukan beatitudes are in the second person, scholars disagree among themselves as to whether Jesus' proclamation used the form of direct address (thus akin to the Lukan form) or the form of declarative sentence (thus akin to the Matthean form).

The Q collection of four beatitudes is the result of an earlier collection of three beatitudes, similar in form, to which the longer double beatitude of Matt 5:11=Luke 6:22 was added. These three beatitudes (Matt 5:3=Luke 6:20b; Matt 5:4=Luke 6:21b; Matt 5:6=Luke 6:21a) represent a terse formulation of the gospel proclamation. They proclaim salvation, in the form of an eschatological reversal of conditions *(peripeteia)* for the dispossessed. The poor, the hungry, and those who mourn represent the entire range of the needy. The concepts are not spiritualized, nor are poverty, hunger, and sadness extolled per se. If the poor, the hungry, and those who mourn are called happy, it is because the Kingdom of God will be offered to them in their helplessness.

As proclaimed by Jesus, the Kingdom of God is an eschatological concept. God's initiative and decisiveness are the primary elements. He is to reign as king. According to the oriental understanding, the righteousness or justice of a king is manifest in his action on behalf of the weak and oppressed; thus God as the king par excellence must necessarily act on behalf of the poor, the hungry, and those who mourn. Jesus' availability to them is a sign of the future kingdom of God. Accordingly, the three common beatitudes proclaim God's initiative on their behalf and the gratuity of his grace. They constitute "an unconditional promise of salvation" and thus epitomize Jesus' good news.

The fourth beatitude of the Q collection (Matt 5:11=Luke 6:22) derives from a time when the church was undergoing persecution and most likely received its Q formulation (a community formulation) as a result of that experience. Its appearance in Q as an appended saying supports the contention that the beatitudes spoken by Jesus were originally isolated statements.

2. Matthew. Differences between the Matthean and Lukan versions of the beatitude point to the editorial activity of the respective evangelists. Editorial activity is particularly apparent in the Matthean

collection of "The Beatitudes." His eight—Matthew seems not to have considered Matt 5:11 as an integral part of the series—are formed into a unified whole by means of ring construction, i.e. the opening and closing formula, "for theirs is the kingdom of heaven." "The kingdom of heaven" is a typical Matthean expression (Matt 3:2; 4:17) as is the "righteousness" of Matt 5:6, 10 (3:15; 6:33). Isa 61:1–2 seems to have influenced the Matthean formulation of the first two beatitudes and Ps 107:5, 8–9 to have influenced the fourth, all of which begin with the letter "p" in the Greek text. Since Matthew has a predilection for seven-part compositions and Matt 5:5 has no constant position in the manuscript tradition, many scholars think that the third beatitude, influenced by Ps 36:11, is a later addition to the Matthean text. The eighth beatitude, formulated in such a way as to bring the series to a close, appears to be a Matthean adaptation of the ninth, originally independent beatitude.

Matthew's spiritualization of the traditional first and fourth beatitudes and his formulation of the fifth, sixth, and seventh, more active beatitudes, imparts to the entire collection the character of an ecclesial exhortation. Those who are praised in the Matthean beatitudes are those whose lives reflect authentic Christian existence from the viewpoint of continuing church life.

3. Luke. Luke's Sermon on the Plain has only the four beatitudes of Q (Luke 6:20b–23). The people praised in the Lukan collection of three similarly formulated beatitudes (6:20b–21) are the physically and materially deprived. Luke accentuates the social referent by the juxtaposition of parallel woes (6:24–25). The fourth woe (6:26) highlights the blessedness proclaimed for the persecuted (6:22–23). In the Lukan collection, the evangelist's editorial work is apparent in his emphasis upon the present (the sapiential "now" of 6:21a, b and "in that day" of 6:22) which stands in contrast to the eschatological future.

Among the five beatitudes proper to Luke (1:45; 11:28; 12:37; 14:15; 23:29), two emphasize the importance of belief in God's word (1:45; 11:28), and are both within a context of reflection on the mother of Jesus.

4. Johannine Literature. Faith is also the basis for praise in the Johannine beatitude (John 20:29), the final proclamation of John's Easter Jesus. In context, the beatitude extols believers of the second and subsequent Christian generations. As such, it functioned as a proclamation of praise of those who belonged to the Johannine community.

Six beatitudes appear in the Book of Revelation, in the form of isolated sayings. Two of them form a distinct pair (Rev 1:3; 22:7), lauding those who keep the words of the book. The parallel sayings function as a sort of *inclusio* unifying Revelation's collection of disparate materials. The other four beatitudes bear a distinctively eschatological stamp. Those formulated in the plural praise those who die in the Lord (Rev 14:13, with pertinent commentary in v 13b) and those invited to the marriage feast of the Lamb (Rev 19:9), while those formulated in the singular laud the vigilant (Rev 16:15), and those who share in the first resurrection (Rev 20:6). Their literary form is clearly that of the religious beatitude.

BEATTY, CHESTER (PAPYRI). See CHESTER BEATTY PAPYRI.

BEAUTIFUL GATE (PLACE) [Gk *hē hōraía pýlē* (ἡ ὡραία πύλη)]. Gate of Herod's temple where John and Peter healed a lame man (Acts 3:2, 10). The gate is not mentioned by its NT name in any of the Jewish sources. Christian tradition, and some modern scholars, identify it with the Golden or Susa (Shusan) Gate. "Golden is derived from a mistranslation of Gk *horaia,* "beautiful", and the Latin *aurea,* "golden." The Susa Gate is on the eastern wall of Old Jerusalem facing the Mount of Olives. Today it is marked by the now-closed Byzantine gate. Excavations in 1971 and 1972 revealed an earlier gate 7 to 8 feet beneath the Byzantine Gate (Mare, 1987:158). The lower gate, equal in size to the latter, was in use during Christ's time, and it would have been the very gate mentioned in Acts 3. However, the Nicanor Gate, funded by a wealthy Alexandrian Jew of that name, is a more likely candidate for the Beautiful Gate. But even the location of the Nicanor Gate cannot be identified with certainty. If its location was the gate on the east side of the Court of Women leading from the Court of Gentiles, this would have been the ideal location for beggars. The other leading candidate for the Nicanor, and possibly the Beautiful Gate, is on the west side of the Court of Women at the entrance to the Court of Israel. The designated corner for lepers was nearby—in the NW corner of the Court of Women, and it was highly likely that beggars would have frequented the facility. Also, both of the suggested locations for the Nicanor Gate coincide with *to hieron,* the NT Gk usage of "the temple." Strong support for the Nicanor Gate being the Beautiful Gate, whether on the E or W side of the Court of Women, comes from Josephus (*JW* 5.201). He describes the inner gate (on the E side of the Court of Women) as being more valuable "than those overlaid with silver or even with gold," for it was made of Corinthian bronze. But the gate on the W side was much larger, and "the decoration was more magnificent, the gold and silver plates being extremely thick." The Mishna infers that the Nicanor Gate was the inner of the two gates, and the current majority of opinion places the Beautiful Gate on the outer W wall (Mid. i.4; ii.3–6).

JERRY A. PATTENGALE

BEBAI (PERSON) [Heb *bēbāy* (בֵּבָי)]. The name of two individuals in the Hebrew Bible.

1. The eponymous ancestor of a group of returning exiles from Babylon (Ezra 2:11). Under Zerubbabel, the number of Bebai's descendants varies from 623 (Ezra 2:11) to 633 (1 Esdr 5:13, Codex Vaticanus) to 628 (Neh 7:16). In the reign of Artaxerxes, more of his descendants are said to have returned with Ezra (Ezra 8:11, 1 Esdr 8:37); these included ZECHARIAH, the chief of the family. Zechariah's father is also named Bebai; in 1 Esdr 9:37 his name reads Babi (*babi;* Var. Baier, Bemai, and Bokchei), but the underlying Hebrew name is clearly Bebai (see Ezra 8:11). Besides Zechariah, Bebai's descendants included twenty-eight other males (Ezra 8:11, 1 Esdr 8:37; of Ezra 8 reads 78). Some of his family intermarried with foreign women, e.g., JEHOHANAN, HANANIAH, ZABBAI, ATHLAI (Ezra 10:28), and Emathis (Ezra 10:28 [LXX], 1 Esdr 9:29).

2. One of the individuals who set his seal to the document of covenant renewal under Ezra and Nehemiah (Neh 10:16—Eng 10:15). He is listed as one of the "leading men" who pledged among other things to obey the Law and to keep their families from intermarriage (Neh 10:30). It is likely that the head of Bebai's descendants signed in the name of his ancestral clan; the names in Nehemiah 10 roughly coincide with the names of the clans originally returning from exile in Ezra 2:1–60 and Neh 7:6–62. There has been much discussion concerning the timing and nature of the agreement in Nehemiah 10 and the sources of the list of names (see Williamson *Ezra, Nehemiah* WBC, 325–31).

GARY S. SHOGREN

BEBAI (PLACE) [Gk *Bēbai* (Βηβαι)]. Town in the book of Judith which participates in the destruction of the "Assyrian" army after the death of Holofernes (Jdt 15:4). It has not yet been identified. According to the author of Judith, it is adjacent to Betomasthaim, a town which is placed in the north of Palestine, although its exact location is unknown. Although there is mention of a "Bebayou" in an Aramaic contract of the 2d century C.E., it throws no light on the location of Bebai, for, according to J. T. Milik, "Bebayou" was located in southern Palestine. It is probable that, like most geographical names in the book of Judith, Bebai is fictitious. See Moore *Judith* AB.

SIDNIE ANN WHITE

BECHER (PERSON) [Heb *beker* (בֶּכֶר)]. BECHERITES. The second son of Benjamin, according to two Benjaminite genealogies (Gen 46:21; 1 Chr 7:6, 8). Efforts have been made to restore Becher to the two other Benjaminite genealogies of the OT (Num 26:38; 1 Chr 8:1). Johnson (*IDB* 1:248, 372) suggests that Becher was misplaced in Numbers 26 from the Benjaminite genealogy of v 38 to the Ephraimite genealogy of v 35. In the MT he is listed as the second son of Ephraim and head of the Becherites. The LXX omits this reference to Becher among the sons of Ephraim, and the inclusion of a "Bered" as Ephraim's second son in the Ephraimite genealogy of 1 Chr 7:20 has caused some to conclude that "Becher" is a mistake for "Bered." In 1 Chr 8:1, Johnson suggests that Becher (Heb *beker*) was mistakenly treated as "his firstborn" (Heb *bĕkōrô*). Williamson is critical of attempts to emend 1 Chr 8:1 to read "Becher" as Benjamin's second son, pointing out that the series of ordinals, "the second, the third, etc.," continue through all five of Benjamin's sons, making a harmonistic emendation unlikely in this text (*Chronicles* NCBC, 83). See ASHBEL.

SIEGFRIED S. JOHNSON

BECORATH (PERSON) [Heb *bĕkôrat* (בְּכוֹרַת)]. An ancestor of Saul son of Kish (1 Sam 9:1); likewise, the son of Aphiah and father of Zeror. The name, meaning "firstborn," is feminine in form, suggesting that the individual may have been the daughter of Aphiah, rather than his son, although the LXX reads "Bakir," a masculine name formed from the same Hebrew root. The variant reading "Machir" in G^L has mistaken the initial *bet* as a *mem.*

The narrator has begun the story of Saul in 1 Sam 9:1 by employing a seven-generation genealogy as a literary device to indicate that Saul was destined to greatness from birth (Sasson 1978:185). Becorath represents the third generation in the genealogy. See also APHIAH. While meant to represent an individual in the Saulide genealogy, the name also was associated with a Benjaminite clan, and the two may ultimately be related (Luther 1901:55;-Caspari *Samuelbücher* KAT, 105; Malamat 1968:171). The gentilic form *Bichri* is used as a designation of the clan to which Shimei (2 Sam 20:1), the instigator of the northern revolt against David, belonged, while the masculine form *Becher*, displaying slightly different vocalization, appears as a clan name in the tribal genealogies for Benjamin in Gen 46:21 and 1 Chr 7:6, 8. Becorath may be the eponymous ancestress of the clan or lineage group of the same name. See also BICHRI; BECHER.

The name's absence from the Saulide genealogy in 1 Chr 8:33–40 and 1 Chr 9:39–44 can be explained in three ways. One possibility would be to argue that the name was dropped when competing factions for royal succession within the larger family no longer found it necessary to trace descent through this particular ancestor (Flanagan 1981:59). A second approach would be to posit that Bakir appears in the Chronicles' lists in 8:30 and 9:36 in the reference to the "firstborn" son of Jeiel, Abdon, and that Abdon somehow dropped out of the corresponding list in 1 Samuel (Dhorme *Samuel* EB, 74, n. 1). A third approach would be to suggest that the name was eliminated by the Chronicler along with Abiel, Zeror, and Aphiah so that he could artificially graft the Saulide family tree onto the postexilic genealogy of the inhabitants of Gibeon (see NER).

DIANA V. EDELMAN

BECTILETH (PLACE) [Gk *Bektileth* (Βεκτιλεθ)]. Unidentified plain in or near northern Cilicia (Jdt 2:21). According to the author of the book of Judith, it is located a three-days' march W of Nineveh. It is sometimes identified with Bakataïlloi, located to the south of Syrian Antioch, or with Beq›ah, a valley between Lebanon and Anti-Lebanon. The problem with these identifications is that they place Bectileth some three hundred miles from Nineveh, a rather long distance for a three-day march. Given the genre of the book of Judith, it is entirely possible that the place is fictitious.
SIDNIE ANN WHITE

BEDAD (PERSON) [Heb *bĕdad* (בְּדַד)]. The father of the Edomite "king" Hadad (Gen 36:35; 1 Chr 1:46). The root *bdd* "to separate; to be separated, isolated" produced personal names in Ugaritic (*bddn;* Gröndahl 1967:380), Epigraphic Arabian (Safaitic and Thamudic *bd,* Safaitic *bd›l,* Thamudic *bddt;* Harding 1971:96–97; note, however, that the name *bddh,* frequent in Safaitic, does not belong to *bdd*—*pace* Harding; read **Bi-Dādih* "by his uncle"), and Arabic (*Budaid;* Caskel 1966:228).

ERNST AXEL KNAUF

BEDAN (PERSON) [Heb *bĕdān* (בְּדָן)]. The name of two men in the OT.

1. The son of Ulam of the tribe of Manasseh (1 Chr 7:17). He was a member of the fifth generation of that tribe through Machir, Manasseh's son. His heredity was mixed, for he was the product of Manasseh's union with an Aramean concubine (1 Chr 7:14). A corrupt text in 1 Chr 7:14–17 renders his genealogy uncertain between Machir and his father, Ulam; for v 16 traces him through either Peresh or Sheresh, both Machir's sons, while v 17b traces him through Machir's son, Gilead. Rudolph (*Chronicles* HAT, 69–71) has attempted a reconstruction of the corrupt text based on Num 26:29–34; his results have gained considerable, though not universal, approval. If his reconstruction is correct, it illumines an obscure portion of Bedan's genealogy.

2. A judge of Israel according to the MT of 1 Sam 12:11. But his identity is unclear; the Bible contains no other reference to him. In 1 Sam 12:11 his name occurs in a list of four judges of which the other three are prominent, significant persons, familiar from the Book of Judges. The presence of the name of an unknown judge among three well-known ones has attracted the attention of students of the text. The LXX, apparently questioning the correctness of "Bedan" and treating it as a textual error, replaced "Bedan" with the familiar "Barak." One ancient version replaced it with "Deborah." An ancient interpretation contended that "Bedan" derived from "Ben-Dan" (= son of Dan) and understood it as a reference to Samson, who was from the tribe of Dan. Another more modern correction replaced "Bedan" with "Abdon." The RSV has adopted the reading of the LXX. All these corrections presuppose that "Bedan" is a textual error. But recently Zakovitch (1972:123–25) has offered an explanation which does not presuppose a textual corruption in the word "Bedan." Recalling that Bedan in #1 above is, according to 1 Chr 7:14–17, of the tribe of Manasseh, and that Jephthah is also from Manasseh, Zakovitch suggests that, like "Jerubbaal" and "Gideon," "Jephthah" and "Bedan" are two names for the same person. Accordingly, 1 Sam 12:11 originally read:"the Lord sent Jerubbaal, Bedan, and Samuel." "Jephthah" was inserted as a gloss, and a later scribe, not recognizing it as a gloss, inserted the conjunction and the object marker, *wĕ›et.* In his

quotation of 1 Sam 12:11, Josephus (*Ant* 6§90) names only Gideon and Jephthah; this supports Zakovitch's suggestion that Jephthah and Bedan are the same person. Helpful discussions of the problem and the history of suggested solutions are found in McCarter (*1 Samuel* AB, 211), and Klein (*1 Samuel* WBC).

GERALD J. PETTER

BEDEIAH (PERSON) [Heb *bēděyâ* (בֵּדְיָה)]. A descendant of Bani and one of the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:35 = 1 Esdr 9:34). *Bedeiah* might mean "Branch of Yahweh," or it might be an abbreviated form of *ʿăbēdyāh,* "Servant of Yahweh." Bedeiah was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:10). The three-month investigation of the men who had married foreign women (Ezra 10:16–17) produced a relatively short list of names, leading some scholars to believe that it includes only prominent members of the community (see discussion in Myers, *Ezra, Nehemiah* AB, 87–88). Bedeiah's position in the community, however, remains a mystery. While it seems probable that Bedeiah divorced his foreign wife (note the prior oath taken by the people [Ezra 10:2–5]), that is not certain. There is some debate whether v 19 may originally have been reported after each group. 1 Esdr 9:36 clearly states that everyone on the list did indeed divorce his foreign wife and put away his children; however, Ezra 10:44b is so corrupt that the final outcome of the investigation is left in doubt. For further discussion, see Williamson, *Ezra, Nehemiah* WBC, 157–59.

JEFFREY A. FAGER

BEDOUIN AND BEDOUIN STATES. The word "bedouin," as used in this article, comprises the notion of a stratified society of non-sedentary camel breeders. As such, bedouin are first attested in the Near East in the Iron Age. Although various features that contribute to the definition of "bedouin" —e.g., pastoral nomadism and "tribes" (versus "states")—can be traced back several millennia before the 1st millennium B.C., the emergence of the bedouin in the 1st millennium B.C. changed drastically the sociopolitical environment for pastoral tribes. Therefore, reconstructions of pastoral nomadism before 1000 B.C. should use with great care recent or contemporary ethnographic data on Near Eastern nomadism. "Being a bedouin" involves specific attitudes towards political power, which, from the very beginnings of bedouin history, lead to supra-tribal political formations, "bedouin states." The bedouin states did not, however, acquire all the attributes of real states; at best they were ephemeral, unstable, and short-lived organizations.

———

A. Terminology

Traditionally, the social landscape of the Near East is characterized by a tripartite division into "city dwellers," "peasants," and "pastoralists" (Wagstaff 1985:48–81). Within this traditional tripartite model, "pastoralists" are generally assumed to form ethnically and politically separate social organizations, i.e.

"tribes" (as opposed to the states of the settled population). It is argued in this article that the emergence of such separate pastoralist tribes presupposes the formation of a class of *specialized* pastoralists, i.e., the camel-breeding bedouin. Therefore, this tripartite division—with its double exploitation of the peasants by both the urban settlements and a specific non-sedentary element, i.e., the bedouin—cannot be uncritically assumed to have applied to the pre-Islamic period (de Planhol 1975:24–68).

The Arab bedouin described by Near Eastern travelers of the 19th century provided most biblical scholars of that time with an attractive model in terms of which the life-style of the patriarchs in Genesis could be viewed. At the same time, the notion of waves of bedouin nomads migrating into the wealthy and fertile centers of civilization from their desert homeland served as an explanation for cultural and linguistic change in the ANE, a notion that biblical scholars adopted to explain the emergence of Israel in the land of Canaan. Even though this appeal to bedouin nomadism has now been almost completely rejected by scholars, the romantic notion that the earliest Israelites were bedouin nomads still lingers behind notions that the "semi-nomadic" or "semi-bedouin" Israelites entered Canaan from the outside at the end of the Late Bronze Age (a concept still upheld by some pupils of Albrecht Alt; Thiel 1985).

1. Nonsedentary Ways of Life. Because the terms "nomad," "bedouin," and "pastoralist" are frequently used as synonyms in discussions of ANE history and society, it may be helpful to outline briefly the basic categories of non-sedentary life.

a. "Nomads." If "nomad" is understood to cover every aspect of nonsedentary life, then hunter-gatherers, migrating laborers without a permanent home, vagrant craftsmen and artists, etc., would qualify as "nomads," whereas the city-based caravan merchants of the ANE and the soldiers of all times may properly be called "semi-nomads." Although these may have spent most of their life on the roads and in tents, they usually had a permanent address. Therefore, it is best to limit our scope to those nonsedentary phenomena of the ANE that apply only to people involved in pastoral and/or agricultural production. (The term "semi-nomad" is too imprecise to be employed at all).

b. Nonsedentary Agriculturalists. The basic livestock—sheep, goat, and cattle—were domesticated by settled agricultural communities in the Pre-Pottery Neolithic period (8th and 7th millennia B.C.). With the seemingly complete breakdown of settled life in Palestine ca. 6000 B.C., these sedentary agriculturalists became non-sedentary agriculturalists. As opposed to the large villages of the Pre-Pottery Neolithic, their camps were rather small. Though unsettled, they continued to grow cereals and to herd goat and sheep (Betts 1987). Unlike pastoralists, however, these non-sedentary agriculturalists are self-sufficient in meeting their basic needs. This, for example, was the way of life that recommended itself most readily in later periods, whenever a group of peasants wanted to withdraw from the restrictions of the state. This kind of "nomadism" is either attested or assumed for the "Amorites" of EB IV Palestine and the Shasu of the LB period, most of whom never dwelt in permanent structures. In contemporary reconstructions of their respective origins, both populations are believed to have derived from the villagers of Palestine in the preceding period who had given up their sedentary way of life in the course of a natural, economic, and/or political crisis (Richard 1987; Finkelstein 1988:338–45). Furthermore, both the "Amorites" and the Shasu were not pastoralists; according to the story of Sinuhe (20th century B.C.) and Ramesside inscriptions, they practiced *both* farming and herding (Weippert 1974). (It is purely for ideological reasons that non-sedentary agriculturalists in the modern Near East—such as the people studied by Banning and Köhler-Rollefson [1986]—claim to be "bedouin.")

c. Transhumance. Part-time nomadism, or transhumance, is a common Mediterranean cultural phenomenon. Transhumance is village-based pastoralism with summer camps set up away from the village (Braudel 1972:85–102). The pastoral segment of the settled community may be recruited from an age cohort (i.e., the youth from every family), whole families or clans from the community, or even hired laborers. In the 19th century A.D., a type of such village-based transhumance was practiced by the inhabitants of northern and central Transjordan (e.g., at Umm Qais and on the Kerak plateau; Mershen and Knauf 1988). Many travelers at that time (and most archaeologists subsequently), when observing their material culture and its remains, referred to these summer camps loosely as "bedouin" or "nomadic" encampments. But tax records, contemporary oral history, and more detailed descriptions by some

observers have helped to correct this misconception. The misinterpretation, however, serves to illustrate how difficult it is to identify nomads in the historical and/or archaeological record, which usually provides scant data.

d. Pastoralists. Agriculture led to the domestication of most familiar domestic animals (with the exception of the camel) already in the course of the Neolithic. Pastoralists are people specializing in stock raising. However, they are not necessarily nomads. Judean landlords in the Iron Age, like Nabal (1 Sam 25:2, 11) or Amos (Amos 1:1; 7:14), can well be called "pastoralists" because herds seemed to have formed the major part of their wealth. Although they spend part of the year with their four-legged capital, they considered their "homes" to be towns like Maon or Tekoa (cf. also Gen 13:12). As a specialized occupation, pastoralism presupposes surplus production from both the pastoralist and the agriculturalist, and therefore a market economy. Unlike the non-sedentary agriculturalists mentioned above, pastoralists are not self-sufficient. Exploiting agriculturally marginal areas of the Near East which provide only scant nourishment for their flocks, pastoralists are forced to move frequently and therefore lead a non-sedentary or part-time sedentary life. Specialized pastoralism can be traced back to the Chalcolithic (Levy 1983), but only in the form of transhumance. From the Chalcolithic through the Bronze Age, pastoralists formed a social stratum within a society of village farming communities, or non-sedentary agriculturalists. There is no evidence of pastoral nomadic *tribes*—i.e., of a sociopolitical and/or ethnic cleavage between peasants and pastoralists—before the emergence of the bedouin. A term for "pastoral nomad" occurs only once in the Hebrew Bible, in a literary context dating to the Persian or Early Hellenistic period: *ʾohŏlê miqneh* "people of herds" (2 Chr 14:14). In this expression, *ʾhl* must be translated as "people" rather than "tent" and, therefore, regarded as an Early Arabic loanword.

e. Bedouin. Bedouin are pastoralists specialized in camel breeding. From the beginnings of bedouin life in the 1st millennium B.C., the bedouin formed a stratified society of pastoral nomads. Camel breeding was operative for the emergence of bedouinism on the sociopolitical level insofar as it facilitated the formation of purely nomadic tribes not depending upon peasant villagers. Camel breeders themselves are nearly self-sufficient:the camel provides them with food (milk, and on festive occasions, meat), fuel (dung), clothing (hair), housing (leather for round huts, which were later replaced by the "black tents" woven from goat hair), and even hair-washing lotion (urine). Furthermore, the camel provides a marketable commodity which one can trade without giving up possession of the animal:transport. Because the camel allows control over desert areas that are impenetrable by other animals or humans, it even provided their owners with power once these remote areas became commercially and/or politically important. Whereas the camel's secondary products (milk, hair, dung) provided the bedouin with the opportunity to exist somewhat independent of the settled communities, the animal's "tertiary product," transportation, increasingly became a valued commodity for those in the urban centers, who therefore had a vested interest in the incorporation of the bedouin. The camel thus constituted the bedouin's link with the urban societies of the ANE in both peaceful and belligerent ways. The influx of capital from the urban trading communities into the desert led to the social stratification and political leadership that made the bedouin increasingly aggressive and predatory. But before there can emerge a predatory society on the periphery, there must be enough surplus in the core area to be preyed upon. The more powerful, effective, and extensive the state became in controlling this core area, the more powerful, effective, and extensive the competing political organizations outside the state had to become. In terms of political evolution, the bedouin are a consequence of and reaction to the emergence of the first empire that tried to encompass the whole ANE: the Assyrian empire in the 8th and 7th centuries B.C.

As the camel herders rose to heights of power and prestige unprecedented among the nomads of earlier times, both nonsedentary agriculturalists and pastoralists who did not herd camels were affected by "bedouinization"; they either joined bedouin tribes, or organized themselves in tribes in imitation of the bedouin. From the Persian period through the Crusades, the population of Palestine appears to be ethnically and politically divided into Aramaic-speaking peasants and Arabic-speaking pastoral nomads. Even today, after modern development has reduced to nothing the significance of the camel, it still

remains a common feature among the non-sedentary and the transhumant tribes of Jordan to claim to be "bedouin" —a claim that usually is flatly rejected by the descendants of former camel breeders.

2. "Tribes" and "Tribal Organization." The notion of tribal organization is part of the concept of "bedouin." It is understood—with Fried (1967:170–74) and Price (1978:179–82)—that tribalism is one of the possible responses by a nonstate society when confronting an expansionist state. It therefore has nothing to do with nomadism *per se,* since settled villagers can also organize themselves as "tribes" to counter the power of a neighboring state organization. This can be perfectly demonstrated by the emergence of the Mari tribes (Buccellati 1988), and probably applies equally well to the Israelite tribes of the early Iron Age:in order to be politically influential (which usually entails an ability to muster a sufficient number of warriors), a tribal society needs (1) a class of potential political leaders, competing against one another for success, and (2) a functioning system of alliances between the tribal segments (usually expressed by means of a genealogy).

However, among pastoral nomads, these two features are first encountered only with the bedouin of the 1st millennium B.C. In contrast, the Shasu of the LB Age occupy the lowest order within Dostal's scheme of political evolution within pre-urban societies (Dostal 1985):local lineages without any genealogical superstructure (Weippert 1974; Fischer-Elfert 1986:168). Thus, the Shasu lacked an essential component of "tribal societies," and as such, they were politically insignificant. "Shasu" is a generic term, not an ethnonym. In the Egyptian sources, Shasu are specified by the various areas of their abode, not by tribal names. Tribal/ethnic names do not occur before the emergence of peasant tribes in the highlands of Canaan, such as Israel.

The agricultural tribes of early Iron Age Palestine, and before them the herding and farming lineages of the Shasu, were to a high degree economically independent from the outside world. Maintaining such independence is one of the major political aims of tribalism (Dostal 1985:347–49), i.e., the ideological expression for the withdrawal of population groups from the exchange network and suppressive hierarchy of state societies. Although "tribalism" may have contributed to the Shasu's abandonment of their villages in the 16th century B.C. the withdrawal does not necessarily (or immediately) lead to the formation of tribes, i.e., stratified societies with an egalitarian ideology in their upper class. The Shasu remained on the level of "ranked society" or local lineages (for these categories, see Fried 1967 and Dostal 1985). After the emergence of the camel-herding tribes, the bedouin had two possible ways of access to those basic commodities which they did not produce:trade or violence (by plunder or extortion). Thus, while the emergence of the pastoral nomad presupposes the emergence of a market economy, the emergence of the bedouin tribe (in which the tribal elite may own 10,000 camels or more) presupposes the emergence of an empire which at one time or another could use (and pay for) a large camel corps.

To summarize this lengthy excursus on terminology:"nomads" are not necessarily "pastoralists," and they are not necessarily organized as "tribes." "Tribal societies" are not necessarily "nomadic." "Bedouin" are camel herding non-sedentary tribes, pastoral nomads whose basic livestock commodity is the camel.

B. Emergence of the Bedouin

1. Early Iron Age Antecedents. The camel had been domesticated and used by sedentary farming communities in East and South Arabia in the course of the 3d and 2d millennia B.C. (Bulliet 1975; Knauf 1988:9–15). At the end of the LB Age, camels had been used both for transport, as attested at Tell Jemmeh (Wapnish 1981) and at Tell Deir ʿAllah (Knauf 1987), and as a source of meat, attested at Timnaʿ/el-Meneʿîyeh (Knauf 1988:14–15, 113–14). There can be no doubt that the Midianites (i.e. the inhabitants of NW Arabia in the LB Age) herded camels for these two purposes; at the same time it is clear that they were not pastoralists, since pastoralists prefer the by-products of their animals (their only capital and basic means of subsistence) instead of their meat (Sherratt 1983). It is unlikely that there were camel-herding tribes among the Midianites; however, camel herders may have been integrated into the existing Midianite clans or tribes as were potters, metallurgists, and traders:as specialists in a certain occupation. Undoubtedly, most Midianite tribesmen were farmers.

Like the Kenites, the Midianites became increasingly important for the economy of Palestine in the early Iron Age, when the Cyprus copper supply was interrupted and Palestine became dependent on the copper mines in Wadi Arabah (which in all likelihood were controlled by local clans and tribes; Knauf and Lenzen 1987). With the reemergence of sea trade at the end of the 11th century B.C., both Kenites and Midianites disappeared from the historical record.

The first predatory camel herders mentioned in the literary sources are the Amalekites (1 Samuel 30). It seems that the camel-herding population of the Amalekites did not exceed 400 men (1 Sam 30:17)—still a significant number for military action in the late 2d millennium B.C. (as compared to the contingents of 10 to 200 which the Egyptians sent as support to individual kings in the Amarna period; cf. Gideon's 300 and David's 600). 1 Sam 30:17 indicates why the camel had such an impact on the history of nomadism:it carried its herders beyond the political and military reach of the states they encountered. Distance and the desert (impenetrable without the camel) protected them from the villagers as efficiently as (on the other side of the social spectrum) fortified walls protected the city dwellers. If the Amalekites could already be classified as proto-bedouin, their emergence coincides with the emergence of the territorial state in Israel and Judah, which incorporated those hill country areas previously beyond the control of the Canaanite city-states. The hill country was no longer an area of retreat for populations which did not want to submit to the (often costly) claims of the state; therefore, for tribalism to survive the encroachment of the state, the desert offered a new frontier in an otherwise shrinking world.

Archaeologically, the emergence of the Amalekites in the Negeb can be dated to the very end of the 11th century B.C. Their emergence is reflected by the disappearance of the unfortified settlements which had characterized the Negeb in the early Iron Age, some of which were hamlets and farmsteads used by semi-sedentary agriculturalist and pastoralist populations that moved between the Judean hills and the central Negeb mountains (Finkelstein 1984); e.g., the Jerahmeelites, Kenites, and Aalebites. With the emergence of the state on one side and of the bedouin on the other, this social structure, typical for the non-urban societies of the 3d and 2d millennia B.C., disappeared, giving way to towns and fortresses, the architectural appurtenances of the state.

2. The Neo-Assyrian Evidence. Large, powerful, and belligerent bedouin tribes are attested in the Assyrian royal inscriptions and reliefs of the 9th through the 7th centuries B.C. (see ISHMAELITES). It was not, however, before the Persian period that Arabs were wealthy and influential enough to acquire first-class weaponry (Knauf 1989:22–23). Except for some technical details in riding styles (i.e. the use of a cushion saddle instead of the later *šadâd* saddle), these bedouin exhibit the basic characteristics of the later (full) bedouin. Their tribes must have comprised up to 10,000 people (even if the Assyrian tribute lists exaggerate). A thousand Arab camel riders participated in the battle of Qarqar in 853 B.C. (as opposed to the 400 which fled David); in the following century, Tiglath-pileser III on one occasion received 10,000 camels as tribute. The management of herds this size required slaveholding. Bedouin society, therefore, unlike earlier forms of pastoral society, was a *class society* in which wealth (in herds and in slaves) was one of the basic qualifications for leadership. Although in theory all freeborn male members of the tribe were equal, only the tribal elite actually qualified for leadership functions. The other basic qualification is *muruwwa, virtus,* manlihood (Meeker 1979; Müller 1981). The ideology of "being a bedouin" with its knightly code of conduct was fully developed only in the last centuries before Islam, when the Arabian tribal elite borrowed the garments, weapons, and attitudes of prestige from Persian (Sassanian) feudalism (Dostal 1979). However, the class structure, i.e., the differentiation of tribal lords and tribal followers, existed earlier and facilitated this later borrowing (for tribal class societies with an egalitarian ideology upheld by the ruling class, see Dostal 1985).

According to Dostal (1959) and Bulliet (1975), the transition from "proto-bedouin" to "full bedouin" is marked by the replacement of the cushion saddle with the so-called *šadâd* saddle. The new saddle provided the rider with a firm seat and enabled him to use long swords and lances. Iconographically, the *šadâd* saddle is first attested at the end of the 5th century B.C. (Knauf 1988:13, fig. 2:3). However, M. Macdonald (fc.) cautions against the overestimation of this technical development. It did not affect the social and political structure of bedouinism that resulted from large-scale camel herding. The new saddle

may still have enhanced the bedouin's belligerence which, according to the Assyrian inscriptions and Gen 16:12, barely needed enhancement.

C. Bedouin States

Since bedouinism is a political program (resisting submission to outside power while simultaneously encouraging the bedouin on both the individual and the communal level to enhance their status by exercising power against the outside world; Meeker 1979) as much as a socioeconomic way of life, we should not be surprised that by the time bedouinism had fully emerged (i.e. by the 8th and 7th centuries B.C.), we also witness the first bedouin state. According to the Assyrian annals, the central North Arabian tribal confederacy led by the tribe of Qedar had its political, economic, and religious center in the oasis city of Dûmat al-Jandal (el-Jauf; 29° 50 ´N; 39° 52 ´E). See ISHMAELITES. (The final and most recent bedouin state was the dominion of the Ibn Rashîd and the Shammar tribe around Ḥâ›il, which succumbed to the Saudis shortly after World War I; Rosenfeld 1965.)

On an internal level, the bedouin state can be defined as being based *militarily* on a bedouin tribe (or a group of tribes, which may or may not be ranked) and *economically* on a city engaged in long-distance trade (for which the camel was a prerequisite). The two would be unified by a ruling family that managed effectively to control the city and to maintain the loyalty of the tribe. The main instrument for resolving the inherent tension between the anti-urban world of the bedouin and the cosmopolitan world of the urban trader seems to have been religion, the ruling family usually assuming a leading role in religious affairs (the first Arab queens attested in history were priestesses; the Ibn Rashîd conducted their campaigns into the territory of neighboring tribes and towns in the name of wahhabism). Religion and personal loyalty to their tribal chief allowed the bedouin to overcome their ideological opposition to the city (on which, economically, their wealth and power depended). The bedouin state thus occupies an intermediate position between complex chiefdom and early state (Rosenfeld 1965).

Bedouin states tended to be unstable, and they seldom lasted for more than three generations of the ruling family. Whenever their institutions approached the point of effectiveness that may have led to the formation of a true state, the bedouin element was either forced to abandon its tribal ideology (as happened in the formation of the Islamic state, although for a limited period only, and more effectively in the formation of the Sa‹ûdi state), or break loose from its symbiosis with the city. The Nabataeans, who made the transition to statehood ca.80 B.C., lasted unusually long (nearly 200 years). Political conflict was not, as one may expect, primarily expressed by rebellions of either the tribal or the urban element, but rather by revolt and murder within and among the members of the ruling family. This is attested in the history of the Arabs in the 7th century B.C. (see ISHMAELITES), the history of the Nabataeans (see ARETAS #4), and especially the history of the Ibn Rashîd.

On an external level, the bedouin state was an example of a peripheral polity which nevertheless managed to direct the flow of capital and supplies from the urban core of the fertile crescent to its desert periphery. The steady increase in the number of camel herders as well as their increasing political complexity and power from the time of David to the time of Tiglath-pileser III coincided with the establishment of a Mediterranean-based (and soon Assyrian-controlled) world economy in which there was a rising demand for specific luxury goods such as incense. The extensive trade routes associated with the transportation of these goods were controlled by the emerging bedouin (similarly, the principality of Ḥâ›il in the 19th century drew most of its revenues from the Iraqi pilgrims' caravan to Mecca). The emergence of the bedouin and the bedouin state is, in this view, a by-product and consequence of the emergence of the large imperialistic state which alone could afford the luxury of incense, gold, and myrrh (or, in Islamic times, the luxury of a pilgrimage to Mecca).

In the Persian period the Achaemenids seem to have carefully prevented the emergence of bedouin states, preferring to deal with isolated tribal leaders, like Geshem the Arab (see KEDAR), or similar tribal leaders in Mesopotamia. They strengthened the position of the city as opposed to its surrounding tribes (as was the case with Taymâ›; see TEMA).

The rise of the Nabataeans with their religious, political, and economic center at Petra and el-Jī› (see WADI MUSA) on the periphery of Roman Syria furnishes another classic example for the economic and

cultural dependence of a bedouin state on an empire. The bedouin domination of Nabataean politics and administration surfaces in the title of the Nabataean king's representative at Damascus, who is called an *ethnarches* in 2 Cor 11:32. The title means "tribal chief" and does not imply that the city of Damascus was under Nabataean rule by the time of St. Paul's visit; quite the contrary, it implies that the Nabataean envoy (we may call him a consul) came from a non-urban social background (Sartre 1982:123–26; Knauf 1983).

Nabataea, subject to increasing agricultural investment by the Nabataean tribal elite in the course of the second half of the 1st century A.D., and being situated on the border of Roman Syria, did not return to anarchy after the demise of its ruling family, but was annexed into the empire, much to the benefit of all her inhabitants. For the following 200 years, the area experienced the greatest level of prosperity it ever reached. Nothing demonstrates better than the fate of Nabataea, the most long-living, culturally advanced, and amiable bedouin state, that a society ultimately has to cease being "bedouin" in order for it to become fully a "state."

BEE. See ZOOLOGY.

BEELIADA (PERSON) [Heb *bĕʿelyādāʿ* (בְּעֶלְיָדָע)]. One of thirteen sons of David listed as having been born in Jerusalem (1 Chr 3:5–9; 14:3–7; cf. 2 Sam 5:13–16). His mother was among the several wives and concubines whom David took in Jerusalem, but she is not named. His name—found in this form only in 1 Chr 14:7—is usually taken to mean "Baal knows." It was changed to "Eliada," meaning "God knows," in 2 Sam 5:16 and 1 Chr 3:8. Most scholars have taken this to reflect the common distaste in Israel for names incorporating that of the Canaanite deity, seen in such name pairs for the same person as Jerubbaal/Jerubbesheth, Eshbaal/Ishbosheth, or Meribbaal/Mephiboshet (e.g., Noth *IPN*, 119–22). However, the element *baʿal* may not always have been understood offensively (Fowler *TPNAH,* 54–63); rather, in some cases, it may have had the generic meaning of "lord" (McCarter *2 Samuel* AB, 85–87). It seems odd for David to have named a son after a foreign god; the name could simply mean "the Lord knows." In 1 Chr 14:7, his name is rendered in Gk as *Balliada* in Codex Alexandrinus and *Baaliada* in Codex Venetus, but as *Balegdae* in Codexes Vaticanus and Sinaiticus.
DAVID M. HOWARD, JR.

BEELZEBUL [Gk *Beelzeboul* (Βεελζεβουλ)*;* Heb *baʿal zĕbûb* (בַּעַל זְבוּב)]. Var. BEELZEBUB; BAALZEBUB. According to the synoptic accounts, Jesus was accused of expelling demons by the power of Beelzebul, a name for the "prince of demons" (*ho archōn tōn daimoniōn*), that is, SATAN (Mark 3:22–26; Matt 12:24–27; Luke 11:15–19). Matt 10:25 is the only instance of Jesus using the name *Beelzebul.* Elsewhere the gospel writers record Jesus as using the name "Satan" rather than *Beelzebul.*

Scholars have been fascinated with trying to find an etymology for this preeminent satanic being. The etymology of Beelzebul has proceeded in several directions. The variant reading *Beelzebub* (Syriac translators and Jerome) reflects a long-standing tradition of equating Beelzebul with the Philistine deity of the city of Ekron mentioned in 2 Kgs 1:2, 3, 6, 16. Baalzebub (Heb *baʿal zĕbûb*) seems to mean "lord of flies" (*HALAT,* 250, but cf. LXX^{B} *baal muian theon akkarōn,* "Baal-Fly, god of Akkaron"; *Ant* 9:2, 1 *theon muian*). Prior to the discoveries at Ras Shamra (Ugarit) the elucidation of this deity came through finding parallels in the Greek world which mentioned deities in the role of "the Averter of flies" (e.g. *Zeus Apomuios, theos muiagros;* Nilsson 1967:213). The decipherment of the Ugaritic texts brought to light the frequent epithet "Prince Baal" or "Exalted Baal" *(zbl bʿl)* or "The Prince, the Lord of the earth" (*zbl bʿl arṣ*) (Albright 1936:17–18). Armed with this new information from Ugarit, scholars almost unanimously saw in 2 Kings 1 another example of a pejorative rendering of an original *baʿal zĕbûl* with *baʿal zĕbûb,* "Lord of *flies*," similar to the well-known euphemistic substitution of *bōšet,* "shame," for an original *baʿal* in such personal names as Mephiboshet and Ishboshet (McCarter *2 Samuel* AB, 124–25, 128). Some scholars have also suggested that *zbl bʿl* may underlie the tribal name ZEBULUN (Ringgren 1966:21), the personal name ZEBUL in Judg 9:28, and JEZEBEL (cf. the Phoenician PN *bʿlʾzbl* in *CIS* I 158), the daughter of Ethbaal (1 Kgs 16:31).

An alternative suggested by many is to connect *zĕbûl* with a noun meaning " (exalted) abode." Prior to the discoveries at Ugarit and Qumran, Aitken argued that the four biblical occurrences of *zĕbûl* (1 Kgs 8:13; Isa 63:15; Hab 3:11; Ps 49:15) as well as the respective rabbinical and medieval commentaries proved that the meaning of *zĕbûl* was "dwelling" and often the exalted dwelling of *par excellence* of God, i.e., heaven. Aitken (1912:34–53) suggested that Beelzebul as "lord of the heaven" was in fact a sky god. Gaston (1962:247–55), who had the advantage of working with the new material from Ugarit as well as the four occurrences of *zĕbûl* in the Dead Sea Scrolls (1QM 12:1–2; 1QS 10:3; 1QpHab 3:34), arrived at a similar conclusion stressing that *zĕbûl* can mean either "the temple" or "heaven." Gaston (1962:252) further noted that the chief rival of Yahweh in the Hellenistic period was the heavenly Baal (Gk *Zeus Olumpios,* Aram *bʿlšmyn*). The word *zĕbûl,* argued Gaston, was used in place of the more common

synonyms for heaven because Christians were most likely included in the group of those who "stretched out their hands against the temple *(zĕbûl)*" (*t. Sanh.* 13:5; Gaston 1962:253–54).

Matthew 10:25 refers to "the master of the house (*ton oikodespotēn*) Beelzebul." Aitken (1912:51) pointed out what seems to be a wordplay in which *ton oikodespotēn* could be a translation of the Semitic word *Beelzebul* which follows. This has been the favored view of the majority of NT scholars (cf. the various commentaries on the synoptics as well as MacLaurin 1978:156–60). This wordplay is also clearly reflected in the Hebrew Matthew extracted from Shem-Tob ben-Shaprut's *Even Bohan* which has *bʿl hbyt—bʿl zbwb* (Howard 1987:46, 195). On the other hand, a wordplay, like a folk etymology, may not reflect a historically accurate etymology.

A third alternative analysis has seen Beelzebul as "lord of the dung" based on conjectural cognates in postbiblical Hebrew, Aramaic/Syriac, and Arabic. While this view may have been popular in the past, it finds few adherents among modern scholars (see Gaston's critique 1962:251–52). Albright went so far as to say that "it has been given up by most competent scholars" (1932:191 n.20).

Some scholars have argued that *Beelzebul* should be connected with the Aram *bĕʿēl dĕbābāʾ* "enemy, adversary" (cf. Matt 13:39, where the *diabolos* is called the *ekthros*). This etymology has not found many adherents in the past (e.g. Schlatter:1957:343), yet it has recently been advocated by Day (1988:151–59), who argues that it provides a more plausible reason for the equation of Beelzebub/Beelzebul with Satan. Day (1988:157) would see another wordplay going on between Aram *bĕʿēl dîbābāʾ* "lord of flies," and Aram *bĕʿēl dĕbābāʾ* "enemy, adversary." On the connection of this expression with Akk *bēl dabābi* see Day (1988:158), who argues that the accuser role of this expression is primitive. In contrast, see Kaufman (1974:42–43) who argues that Akk *bēl dabābi* has to do with an adversarial role, which is to be kept distinct from the role of an accuser in court, which was expressed by *bʿl dynʾ*. Aram *dîbābāʾ* and Akk *dabābi* reflect Proto-Semitic **d* which would come into Heb as *d* and not *z*. Thus Heb *zĕbûb* cannot be cognate with these two words. A folk etymology is another question.

Fensham (1967:361–64) suggests that Baalzebub should be translated "Baal, the Flame." This suggestion would fit nicely with the fire motif in the Elijah narratives, as Fensham points out, yet it rests on the scanty evidence of only one text (*CTA* 3.3.43 = *KTU* 1.3.3.46) where *ḏbb* parallels *išt,* "fire." It may even be that we are dealing with a scribal error of *ḏbb* for *šbb* (cf. Heb. *šābîb* "spark") in the Ugaritic text.

Finally, de Moor (1987:179, 183) argues that *Baalzebub* "Fly Lord" recalls Baal's victory over monstrous flies (= demons) and compares the "flies of death" in Qoh 10:1. Both de Moor and Saracino (1982:338–43) interpret an extremely difficult text from Ras Ibn Hani (78/20) to be an apotropaic ritual where Baal drives out "harmful agents (demon-flies)" called *dbbm* which are causing a patient's illness (cf. also the connection of Ugaritic *zbl* with sickness as noted by Held 1968:93). These scholars suggest that *Baalzebub* need not have been a pejorative change from an original *Baalzebul.* In fact, de Moor argues that this description of Baal's exorcism of evil spirits is directly parallel to Matt 12:24 (=Mark 3:22; =Luke 11:15) which has the Pharisees stating that it is only through Beelzebul that Jesus casts out demons. Yet so far, the divine name *Baalzebub* is unattested in extrabiblical documents, including the Ugaritic texts (cf. the god named *ḏbb* mentioned above in *CTA* 3.3.43 = *KTU* 1.3.3.46).

BEER (PLACE) [Heb *bĕ›ēr* (בְּאֵר)]. **1.** An unidentified site in Moab N of the river Arnon (Num 21:13) at which the people of Israel encamped before traveling to Mattanah (Num 21:16). At Beer, which means "well," the princes and nobles dug a well. The ease with which the water was obtained may have inspired the couplet of Num 21:17–18. The prevailing opinion is that Beer should be located in NE Moab in the *Wâdī eth-Themed,* a tributary of the *Wâdī el-Wāle* where there is an adequate water supply for a large number of people close to the surface (e.g. *GP,* 461; Glueck 1933–1934:13; *GTTOT,* 262; van Zyl 1960:85–86). It is commonly assumed that Beer-elim mentioned in Isa 15:8 is identical with the Beer of Num 21:16 (see also BEER-ELIM).

2. The locality to which Jotham, youngest son of Jerubbaal (i.e. Gideon) fled from his brother Abimelech after reciting a parable from the top of Mount Gerizim to the citizens of Shechem (Judg 9:21). In antiquity Eusebius (Lagarde 1966:238, 73) identified Beer with a village in the S named *Bēra* (Gk) about 7.5 miles N of Eleutheropolis in the neighborhood of Beth-shemesh (cf. *RNAB,* 84). Though the position of Beer remains uncertain some modern scholars suggest a N location and tentatively identify it with *el-Bîreh* in the vicinity of Ophrah about 7 miles NW of Beth-shean (e.g., *GTTOT* 581; *RNAB,* 129).

BEER-ELIM (PLACE) [Heb *bĕ›ēr-›êlîm* (בְּאֵר־אֵילִים)]. An unidentified site in Moab (Isa 15:8) which has been tentatively equated with Beer of Num 21:16 (e.g. Kaiser *Isaiah 13–39* OTL, 69). Beer-elim, meaning "well of chiefs" or "well of terebinths," may be an abbreviated form of Beer, which has been located north of the river Arnon in the *Wâdī eth-Themed* (see also BEER). The equation of these two locations is based on the notions that (1) *Themed* means "waterhole," as does Beer; (2) terebinths grow in this *Wâdī;* and (3) this is the only location north of the Arnon where water is close to the surface as described in Num 21:16–18.

Objections to the identification of Beer-elim with Beer include the facts that there are other sites prefixed by the name Beer and valleys in which terebinths grow (Wildberger *Isaiah BKAT,* 617). Wildberger suggests that Beer-elim may have been south of the Arnon in the vicinity of *el-Kerak.*
ARTHUR J. FERCH

BEER-LAHAI-ROI (PLACE) [Heb *bĕ›ēr laḥay ro›î* (בְּאֵר לַחַי רֹאִי)]. A location in S Palestine associated with the birth of Ishmael (Gen 16:14) and mentioned twice (Gen 24:62; 25:11) as a residence of the patriarch Isaac. The name is introduced in an etiological narrative of a vision experienced at the site by the pregnant HAGAR, who is promised the birth of a son whom she is told to name ISHMAEL (Gen 16:7–12). In response to the vision, Hagar names the deity who appeared to her "a God of seeing" (Heb *›el rŏ›î;* Gen 16:13), and utters another statement concerning seeing. The name of the site is referred to Hagar's utterance (16:14).

Both Hagar's statement and the name of the site Beer-lahai-roi are difficult to interpret, and have engendered speculative solutions of various kinds. The rendering of Gen 16:14, *phrear hou enopion eidon* "well of him whom I have plainly seen," is a midrashic interpretation rather than a translation. The Vulgate's Latin, *Puteum Viventis Videntis me* "Well of the Living One, the One who Sees me," has the semblance of a literal translation. Rabbinic interpretations are variations on the theme of seeing and living. Many modern interpreters separate the toponym from the etiology in which it is embedded. Thus

Wellhausen (*WPHI,* 326) interpreted the Hebrew consonants *l-ḥ-y* as the word "jawbone" and *r-ʾ-y* as a kind of antelope (not attested in Hebrew).

The location of Beer-lahai-roi is placed between KADESH and BERED (Gen 16:14), that is, in the Negeb (so Gen 24:62). The water source which gave rise to the name was located "on the way to Shur" (Gen 16:7; see SHUR, WILDERNESS OF).

HENRY O. THOMPSON

BEER-RESISIM (M.R. 109206). A small EB site of ca. 3 acres situated on the S bank of the Naḥal Resisim, a tributary of the Naḥal Niṣṣana, in the W Negeb highlands near Beerotayim on the Israel-Sinai border. Lying at an altitude of 1500 feet, the site receives less than 4 inches of annual rainfall and is in an area suitable only for pastoralism. Even marginal dry farming is possible only with some form of runoff irrigation.

Beʾer Resisim (Arabic *BĦr er-Resīsiyeh,* "Well of the Morning Dew") was discovered by kibbutzniks in the 1950s.

Excavations were carried out for three seasons in 1978, 1979, and 1980 by William G. Dever and Rudolph Cohen. The project was multidisciplinary and designed to carry out newer experimental techniques in order to study the site in its larger regional context and environmental setting. Specialists in the natural sciences therefore conducted geological and geomorphological surveys, palynological and paleozoological analyses, and climatic investigations, in addition to the more traditional stratigraphic and ceramic studies. At the time no site of the period had yet been excavated extensively or with modern multidisciplinary methods.

Beʾer Resisim is one of a group of several hundred known one-period villages and encampments in the Negeb largely belonging to the EB IV period (ca. 2400–2000 B.C.). These sites are related in turn to an even larger complex in the semiarid marginal zone extending from S Transjordan clear across the Negeb into the W Sinai. They represent the maximum extent of the non-nucleated, seminomadic culture that replaced the urban EB I–III culture of Palestine after its collapse ca. 2600–2400 B.C. Many of these sites, however, reveal a scattering of EB II shards (ca. 3200–2600 B.C.), indicating sporadic earlier use by pastoral nomads (Dever 1980).

Nearly all of the builtup area of Beʾer Resisim—the second largest EB IV site in the Negeb—was investigated or cleared. The excavation revealed about 80 small, circular stone sleeping huts, several open-air communal food preparation areas, and several animal enclosures. The nearly complete village plan thus recovered is the only such yet published from any EB IV site in Palestine or Transjordan. There was no trace of an enclosure wall, cult installations, or elite structures of any kind. Based on the usual methods of calculation, the population may have numbered about 100 or so. The form and layout of the structures strongly suggest a small clan or tribal unit, probably polygamous, and socially unstratified. The paleobotanical and paleozoological investigations showed that the subsistence system was based on a mixed economy, principally the herding of sheep and goats (over 90 percent of all bones), with some possible dry farming in good years. In addition, small-scale trade in copper and exotic raw materials from the Sinai seems to have played a minor role in the economy (Dever 1985).

The overall picture at Beʾer Resisim, as elsewhere in the EB IV settlements of the Negeb, is that of seasonal encampments of pastoral nomads. The pottery and copper implements are closely related to "Family S," typical of the Hebron hills (Dever 1980). Since there are numerous EB IV shaft-tomb cemeteries but very few settlements there, we may reconstruct a seasonal pattern of pastoral migrations between winter pasturages in the Negeb and summer pasturages and burying grounds in the higher and cooler altitudes in the hill country (see QAʿAQĪR, JEBEL). All these arid-zone Negeb encampments disappear with the beginning of the reurbanized MB Age, ca. 2000 B.C., and most are never again occupied.

BEER-SHEBA (PLACE) [Heb *bĕ›ēr šeba‹* (בְּאֵר שֶׁבַע)]. A town in the S Judean desert best known for its association with the biblical patriarchs, and as the S extreme of Israelite territory as delineated in the formula "from Dan to Beer-sheba" (Judg 20:1; 1 Sam 3:20; etc.). The Hebrew name means "well of seven" or "well of oath." Both Hebrew words, "to swear" and "oath," are derived from the word "seven."

The Bible offers two patriarchal traditions to explain the significance of the name. One describes a conflict between Abraham and Abimelech over water rights to a well, which is resolved when Abraham gives Abimelech seven ewe lambs as witness of Abraham's rights to the well (Gen 21:28–31). Another account similarly involves disputes over water rights, but between Isaac and Abimelech:after an agreement is struck between the disputants, Isaac's servants successfully dig a new well, which Isaac named, *šib‹â,* a form of the number seven. This account concludes by noting that the city was consequently named Beer-sheba (Gen 26:33).

A. Identification
B. Chalcolithic Sites
C. Iron Age Sites
1. Bir es-Seba‹
2. Tell es-Seba‹
3. Post-Iron Age

———

A. Identification

The ancient name is preserved in the Arabic Bîr es-Seba‹, which referred to the area near the bend of Wadi es-Seba‹ (located in the industrial center of modern Beer-sheba). G. L. Robinson (1901) reported seeing seven wells at the site. The *SWP* mentions Bī'âr es-Seba‹, "the wells of Seba‹, " and gives the name of the accompanying ruins as Kh. Bîr es-Seba‹; it also notes Tell es-Seba‹, a mound 4 km to the E at the junction of Wadi el-Khalil (Nahal Hebron) and Wadi es-Seba‹, although the surveyors did not identify it as biblical Beer-sheba. Apparently E. W. G. Masterman (*ISBE* [1929 ed.] 1:424–25) was the first to propose identifying Tell es-Seba‹ with the OT town.

Modern understanding of tell formation and site location led to the assumption that the mound of Tell es-Seba‹ (M.R. 134072) was the ancient Israelite town, and that Bîr es-Seba‹ to the W (M.R. 130072) was the site of the Roman-Byzantine city of Berosabe, although Glueck (1968:40–41), among others, disagreed. Excavations in the 1960s at Kh. Bîr es-Seba‹ revealed an Iron Age occupation in addition to the Roman-Byzantine ruins, but the topography is ill suited for a fortified center, and no significant fortifications were uncovered (Gophna and Yisraeli 1973).

Alternatively, the excavations at Tell es-Seba‹ from 1969–1974, and in 1976 (under the direction of Y. Aharoni and Z. Herzog, respectively) have uncovered a well-planned administrative center with several strata spanning the 10th through the 8th centuries B.C. A letter found at Arad (ca. 7th century) refers to Beer-sheba, but probably does not refer to the fortress, which then lay in ruins (if the chronological attribution of the Arad ostraca is accurate); the letter may instead refer to the settlement at Bîr es-Seba‹ 4 km W of the tell. Beer-sheba may have been a dual site consisting of the royal city (i.e., the tell) along with a civilian settlement further W on the banks of the wadi (where the modern city now stands). This could explain the doublet in the ledger of Simeon's towns:Beer-sheba and Sheba/Shema (Josh 19:3; cf. also Josh 15:26 and 1 Chr 4:28).

B. Chalcolithic Sites

A significant and flourishing Chalcolithic culture (*EAEHL* 1:153–58) has been discovered along the banks of the wadi—Abu Matar (Perrot 1955a), Bîr es-Ṣafadi (Perrot 1955b; 1956; 1959; 1960), and Kh. Beitar (Dothan 1959). These sites show 3 to 4 phases of occupation spanning the early- to mid-4th millennium B.C. Since the discovery of these sites in the 1950s, other sites with similar assemblages have been discovered further afield along the banks of the wadi (e.g., Shiqmim, Ze‘elim, Nevatim), indicating the existence of a regional Beer-sheba basin culture (Levy 1986). This cultural horizon, in turn, exhibits similarities with the remains of Tuleilat Ghassul. See GHASSUL, TULEILAT EL-. Some of the Beer-sheba settlements seem to have engaged in craft specialization, such as metalworking (e.g., Abu Matar) and ivory/bone carving (e.g., Bir es-Ṣafadi). These early sites, however, have no association with events recorded in the Bible.

C. Iron Age Sites

1. Bîr es-Seba‘. Alt's (*KlSchr* 3:409–35) and Glueck's (1968:40–41) suggestion that biblical Beer-sheba should be sought at Bîr es-Seba received some corroboration with the discovery of Iron Age remains directly beneath the floors of the Roman/Byzantine occupation (Gophna and Yisraeli 1973). Most of the evidence is from the Iron Age IIC, with some from the 10th century (Iron Age IC).

2. Tell es-Seba‘. In 1969, Aharoni initiated eight seasons of excavations which have identified nine Iron Age strata, with additional evidence for the Persian, Hellenistic, and Herodian periods. The presentation here generally follows the major summary of the expedition team, but strives to point out along the way some of the questions and issues that have been raised by others.

Stratum IX. The earliest strata were located only on the SE section of the tell (these occupational levels probably existed in other areas, but were apparently obliterated in the stratum V leveling and construction operations). The earliest settlement consisted of caves and pits dug into the hill. These pits were not of uniform shape, and some apparently were used for grain storage, while others were for occupation (as inferred from the presence of beaten earth occupational surfaces). Some of these pits and caves have subdividing walls, and terraces indicating specific activity areas. The ceramic collection associated with this level (including some shards of Philistine pottery, and red-slipped and hand-burnished wares) implies a date at the end of the 12th century or early 11th century B.C. (Herzog 1984:42–43).

Stratum VIII. While the ceramic collection of stratum VIII is small, the wares appear more closely related to those of stratum IX than to those of the later periods (Herzog 1984:46). The excavators therefore date this stratum to the mid-late 11th century B.C. The inhabitants began to build more substantial buildings on stone foundations (actually only one building and part of another have been found from this stratum), but most of the remains show a continued use of the pits and caves from the earlier period.

Stratum VII. A significantly larger area of stratum VII was uncovered and shows evidence of an organized site plan—the buildings (typically four-room house variations) were built encircling the perimeter of the mound with their rear walls connected and facing outward to form a basic security system. The houses opened inward toward an open area where the flocks and herds might be penned at night (Fig. BEE.01). Other buildings surrounded a well shaft outside the gate and perimeter wall. The direct-access gate consisted of two chambers attached to the corners of the houses on either side, and a drainage channel passed through the gate, but there is no evidence that it directed waters toward the well (cf. Herzog 1984:26). The pottery suggests a date in the late 11th or early 10th century B.C.

It is not possible to determine when the well was dug, although it appears from the building that surrounded the well in stratum VII, and the fact that the well stood almost exactly in the center of the courtyard of this building, that the well existed during stratum VII. Because the stratigraphy of the well area has been disrupted in antiquity (due to the collapse of the upper walls of the shaft), it is impossible to determine stratigraphically the date of the well. The only possibility available to determine its date is to excavate to the bottom of the well, but after excavating through 28 m of accumulation without reaching bottom, it was deemed necessary to abort the operation. On the basis of the orientation of nearby stratum IX architectural features, the excavators suggest that the well was dug in stratum IX (Herzog 1984:4–6). There is, however, no evidence to attribute any part of this well to the patriarchal period.

Stratum VI. This stratum differs significantly from the previous one. The four-room house plan is evident in only one building of the excavated area. Otherwise the buildings are poorly built, and look as if they were arranged randomly. Some of the buildings reused portions of the ruins from the earlier stratum. The fairly large ceramic collection of stratum VI indicates a date in the 10th century.

Stratum V. Major changes in stratum V consisted of a leveling operation on the tell and the construction of a solid, 4-m thick, offset-inset city wall. The wall stood on a stone foundation (preserved in places 1.5 m high) on top of which the mud-brick superstructure rested. The wall system was protected with a glacis constructed of layers of soil, small stones, and soil mixed with ash and shards, which was then stabilized with a 1.5–2.0-m thick layer of brick material mixed with ash. The slope of the glacis was ca. 20°. At the foot of the system, a fosse was dug at least 3–4 m deep (it was not fully excavated). The three-entry city gate (similar to the gate at Dan) was located on the SE side and measured ca. 21 by 21 m. On the basis of the ceramic collection, Aharoni parallels this stratum with Megiddo V–IV and therefore dates the stratum to the 10th century. This stratum was destroyed by fire, which Aharoni suggests occurred during Shishak's campaign into S Judah (1973:106).

The absence of reference to Beer-sheba in the Karnak inscription listing the cities that Shishak conquered may result from the fact that the inscription is damaged in the sections referring to the Negeb. However, the reconstruction by the excavators poses some intriguing questions. Two architectural features that Aharoni dates to the 10th century seem unusual for this period—namely, the solid fortification wall and the three-entry gate. The normal fortification system in the Solomonic period consisted of a casemate wall and a four-entry gate (cf. Hazor X, Megiddo VA-IVB, Gezer VIII). After the discovery of the three-entry gate at Beer-sheba, Aharoni (1974) redated the defensive system at Beer-sheba V (as well as the gate at Dan) to the time of David. While the normal pattern in the United Monarchy does not preclude the use of a different system at Beer-sheba, the features that Aharoni describes are typical of 9th-century defensive systems in Israel and Judah. Furthermore, Biran (*EAEHL* 1:320) dates the construction of the city gate at Dan (to which Aharoni appeals as a parallel) to the reign of Jeroboam I (for further discussion see Yadin 1976; and Herzog, Rainey, and Moshkovitz 1977).

Stratum IV. A new city was soon rebuilt on the ruins of stratum V, which reused the solid fortification walls. Aharoni suggests (1973:106) that because of the similarity of the ceramic collection of stratum IV with that of stratum V, stratum IV was destroyed soon after the end of V. This he dates to the beginning of the 9th century, and places it in the historical context of the middle of Asa's reign (ca. 910–865 B.C.).

Strata III–II. The last major city consisted of two phases—stratum III, with isolated areas of repair and rebuild in stratum II (see site plan in CITIES, Fig. CIT.08). No severe destruction separated them. The fortress of strata III–II consisted of a casemate wall on the ruins of the earlier solid wall. The wall thicknesses were ca. 1.6 m for the outer wall and ca. 1.4 m for the inner wall. The increased elevation of the city wall required also that the glacis be raised, however, a level area ca. 3.0–3.5 m wide extended from outside the wall to the top of the downward slope of the glacis.

A new three-entry city gate (ca. 17 m wide × 14 m deep) stood above the ruins of the earlier one. The access through the gate was 4.2 m wide. Benches (ca. 30 cm high) lined the inside of one of the chambers in the stratum III gate, but these were eliminated in stratum II. A new drain channel (associated with strata III–II) collected water from the interior of the city and directed it through the gate to the well which had existed in the earlier strata (Herzog 1984:4–5).

Since a well is usually a preferred water source because it is relatively free of surface contaminants, it is curious that the people of the city would channel contaminated waters from inside the city to the well. It is therefore possible that the shaft by this time functioned more as a cistern than as a well, especially if an alternative independent water system existed. Indeed, the expedition discovered in the NE corner of the city what appears to have been such a system (although it has not yet been completely excavated).

A plaza area (ca. 12 × 20 m) stood inside the gate from which a street concentric with the city wall circled through the town. This street was flanked on each side by buildings. At least two other streets passed directly from the plaza across the site to the other side where they again intersected the concentric street. The predominant building plan was of the four-room house variety. Immediately to the left after

entering the gate were apparently administrative buildings, while three storehouses stood just to the right. The plan and construction of these storehouses are similar to the stables found at Megiddo and Hazor, but the ones at Beer-sheba had huge collections of ceramics, including storage jars, pithoi, holemouth jars, and an array of domestic vessels—cooking pots, kraters, dipper juglets, jugs, lamps, flasks, etc.

Integrated into the walls of the storehouses of stratum II were stones clearly in secondary use. Some of these were of calcareous sandstone, in contrast to the typical limestone otherwise used. Three of the sandstone blocks preserved the shape of large horns typical of four-horned altars, while a fourth showed evidence that the horn had been broken off. The other sandstone blocks apparently had been originally associated with the altar which had been dismantled and its stones reused in the construction of the storehouses. Another of the stones bore the image of a deeply incised serpent. Additional stones, which also had apparently been part of the altar, were later found in a fill associated with the repair of the glacis of stratum II; some of these had evidence of fire on their surfaces (Herzog, Rainey, and Moshkovitz 1977:57, fig. 4). The postulated reconstruction of the altar (see Fig. BEE.02) measures ca. 63 inches high (from bottom to top of a horn; it is unclear what the length and width were, but Aharoni [1974a:4] suggests that it conformed to the 5 × 5 cubit dimensions of the Arad altar).

A significant element in Aharoni's plan to excavate Beer-sheba had been to find a temple similar to the one he had earlier discovered at Arad (Aharoni 1968:32; 1973:14), and the discovery of a dismantled altar naturally fueled his efforts to locate where the altar had originally stood. See ARAD. An area in the NW section of the town has been suggested as the location of the temple, even though it has yielded no architectural remains from stratum III (except a chalk pavement, which the excavators suggest was part of the temple courtyard; Herzog, Rainey, and Moshkovitz 1977:58). Several other factors have been offered to substantiate the claim that the NW corner was the site of a temple: (1) the area is easily accessible from the gate and plaza; (2) it is a prominent section in the town; (3) it is the only area (thus far excavated) where a large building could be built with a E–W orientation; (4) a subterranean passage extends from the area to the outside of the city; and (5) numerous cultic objects from later periods have been found in the area, perhaps continuing the reverence for the site (Herzog, Rainey, and Moshkovitz 1977:56–57; Aharoni 1974b:271). The failure to find architectural features is explained by postulating that the building had been totally dismantled (similar to the fate of the altar) and "razed to its foundations" (Herzog, Rainey, and Moshkovitz 1977:57; cf. Aharoni 1974b:271).

Recognizing that this proposal is largely an argument from silence supported by relatively circumstantial evidence, Yadin (1976) postulated an alternative location for the altar based largely on the statement in 2 Kgs 23:8 which describes the existence of an altar just inside and to the left of the city gate (which he suggests applied to Beer-sheba and not Jerusalem). He argued that the altar originally stood in the courtyard of the building just to the left of the gate and that the rooms associated with it were intended to house animals that were to be offered. The excavators have responded that the placement of an altar in this location would restrict access to the rest of the building, and that the building in which Yadin proposed to place the altar was built in stratum II, *after* the altar had been dismantled (Herzog, Rainey, and Moshkovitz 1977:56, 58).

Aharoni contends (1974a:6; 1974b:271) that the altar and temple were dismantled as part of the reforms of Hezekiah (i.e., 8th century; cf. 2 Kgs 18:22; Isa 36:7; 2 Chr 31:1; 32:12), and Amos 5:4–5 implies some sort of cultic significance connected with Beer-sheba in the decades prior to Hezekiah (see also Amos 8:14). The excavators point out parallels between stratum II pottery and the pottery from Lachish III and Arad VIII and argue that Beer-sheba II was destroyed by Sennacherib (ca. 701 B.C.). In the ruins of the stratum II gate was found a royal stamped store jar handle *(lmlk zyp).* One should not necessarily expect a reference in the annals of Sennacherib to the capture of Beer-sheba, since he summarizes his campaign by saying that he captured 46 fortified cities in Judah (*ANET,* 288), most of which remain unnamed.

Yadin, however, dates the end of stratum II a hundred years later. He points out some significant similarities between the Beer-sheba II ceramics and those of Lachish II (but see M. Aharoni 1977), which

is attributed to the campaigns of Nebuchadnezzar in 586 B.C. (cf. also Holladay 1977). Kenyon (1976) suggests stratum II was destroyed sometime *between* the campaigns of Sennacherib and Nebuchadnezzar.

While it seems likely that Aharoni is correct in attributing the dismantling of the altar to the reforms of Hezekiah, a tension exists between the treatment of the temples at Beer-sheba and Arad. Aharoni describes an extensive dismantling operation in association with a temple at Beer-sheba, while for Arad, he (*ISBE* 1:229) and others (Herzog, Aharoni, Rainey, and Moshkovitz 1984) affirm that only the sacrificial altar was buried—not only did the temple building at Arad escape a systematic dismantling in stratum VIII, but the "main hall and the 'Holy of Holies' of the temple continued to exist" (Herzog, Aharoni, Rainey, and Moshkovitz 1984:19). One explanation might be that the "regional" site of Beer-sheba would deserve a more thorough reform than the site of Arad with its more localized shrine/temple. Another explanation might be that the Beer-sheba altar was not necessarily associated with a temple:it may simply have been an altar standing inside the city gate (similar to Yadin's suggestion) or elsewhere. It is of course possible that the temple with which the altar was associated was located elsewhere on the site and has simply not yet been discovered.

Regardless of the date and the agent, the Israelite city ended with a massive conflagration in which the buildings collapsed, burying hundreds of whole vessels and objects in the debris.

Stratum I. After its destruction, the site was refortified by repairing part of the casemate wall with a wall consisting of alternating layers of soil and small stones. Since no interior buildings have been found whose floors or walls join the wall system, questions are raised as to why the site was refortified. The excavators date this to the 7th century B.C. (Aharoni, ed. 1973:8). Perhaps the main elements of the settlement at this time had moved W to the site along the wadi (i.e., Bîr es-Seba‘), to which the Arad ostracon may refer (see above).

3. Post–Iron Age. The remains of Persian period Beer-sheba, as with most sites in Palestine, consisted of pits and silos, which have yielded some Aramaic ostraca dating from the mid-4th century. These refer to staple grains, while some also list Jewish, Edomite, and Arabic names.

Two centuries later, a small Hellenistic fort was constructed on the site. During the Herodian period, a large palace-like structure with accompanying service buildings (e.g., bathhouse) were built on the site. In the resurface of a courtyard of one of these Herodian buildings was found a coin of Caesar Augustus. During the 2d century A.D., a Roman fortress measuring ca. 30 by 30 m occupied the center of the tell. The site was essentially abandoned after the Roman period.

DALE W. MANOR

BEERA (PERSON) [Heb *bĕʿērāʿ* (בְּאֵרָא)]. One of the descendants of Asher listed in the select genealogy which appears in 1 Chr 7:30–40. He is not included in the abbreviated genealogy of Asher found in Gen 46:17 and Num 26:44. Beera, whose name means "well" or "fountain," is mentioned nowhere else in Scripture. In fact, one-third of the names listed in Asher's genealogy in 1 Chronicles 7 are found only here, perhaps since Asher was a lesser tribe originating from the Jacob-Zilpah union. The Chronicler is content to give the names of Beera's brothers, father (Zopha), and grandfathers. Beyond this limited information little is known except that he is described as one of the "heads of fathers' houses, approved, mighty warriors, chief of the princes," in the line of Asher (7:40).
J. RANDALL O'BRIEN

BEERAH (PERSON) [Heb *bĕʿērâ* (בְּאֵרָה)]. A Reubenite leader who was exiled by the Assyrians under Tiglath-pileser III (1 Chr 5:6). His name is cognate with a Hebrew word for "well" or "pit" *(bĕʿēr).* The genealogy in 1 Chr 5:1–10 begins with the names of Reuben's four sons, just as they are listed elsewhere (Gen 46:9; Exod 6:14; Num 26:5), but then it extends the genealogy with the names of Reubenites who are not mentioned elsewhere in the Bible. The additional names are set in two groups, and both are traced to Joel, whose relation to Reuben is not specified. In the Syriac and Arabic versions, however, this problem is resolved by replacing "Joel" with "Carmi," the name of one of Reuben's four sons.

The first list of names ends with Beerah, who occupies the seventh place in the sequence of Joel's descendants. This position in biblical genealogies is an important one (Sasson 1978), and in the present list Beerah is distinguished from the others by the comment that he was a leader in the tribe and was carried into exile by the Assyrians. The contrast between Reuben and Judah is striking in this passage:a "ruler" *(nāgîd),* viz., David, came from Judah (5:2), the favored tribe in Chronicles, but a "prince" *(nāśîʾ)* went away (into exile) from Reuben (5:6).

The kinsmen ("brothers") of Beerah comprise the second list of Joel's descendants (1 Chr 5:7–8), and it may be that the last of them (Jeiel, if not Zechariah and Bela as well) was regarded as a contemporary of Beerah. If this is the case, however, it is unclear why Jeiel was called "the chief" *(hārōʾš),* but Beerah "the prince" *(nāśîʾ).* Rudolph (*Chronikbücher* HAT, 44) resolves this difficulty by emending "his brothers" (*ʾeḥāyw*) to "later" *(ʾaḥar)* in v 7. It is also unclear, however, why the list of generations between Joel and Jeiel (5:7–8) is so much shorter (perhaps by as much as one-half) than that from Joel to Beerah (5:4–6).

Those who argue for the historical accuracy of the genealogy in 1 Chr 5:4–8 point to three considerations. First, the appearance of "Baal" as the name of Beerah's father (5:5) indicates an early date (8th century B.C.E.) and possibly an Israelite provenance for the genealogy. Second, the statement that Beerah was exiled by Tiglath-pileser III (5:6) is consistent with what is known about the history of the region during the Syro-Ephraimite War. Since Reubenite tribal lands were in Transjordan, probably extending north into Gilead, it is reasonable to believe that they were affected by the Assyrian capture of Galilee and Gilead ca. 733 B.C.E. (2 Kgs 15:29; 1 Chr 5:26). Third, the claim that Reubenites dwelt "in Aroer, as far as Nebo, and Baal-meon" reflects accurate knowledge of the period before Moab's conquest of the area, viz., before 850 B.C.E. (Myers *1 Chronicles* AB, 36–37).

Nevertheless, it should be remembered that Beerah's genealogy is fragmentary (it goes back only to Joel and is not attached to Reuben or his sons), has internal inconsistencies (Beerah's relationship to Jeiel), and may reflect more of the author's theology than accurate historical recollection (the reference to the

exile of Beerah and the Reubenites by the Assyrians may be an expression of the later idea that all ten northern tribes were exiled [Coggins *1 and 2 Chronicles* CBC, 36; Braun *1 Chronicles* WBC, 70–75]).

M. PATRICK GRAHAM

BEERI (PERSON) [Heb *bĕʾērî* (בְּאֵרִי)]. The name of two men mentioned in the OT. "Beeri" is most often understood to mean "of a well" or (taking the ending as a pronominal suffix) "my well" (*IPN*, 224).

1. The Hittite father of Esau's wife Judith (Gen 26:34).
2. The father of the prophet Hosea (Hos 1:1). The Rabbis identified him with Beerah, a Reubenite chief whom Tiglath-Pileser sent into exile (1 Chr 5:6). However, there is no evidence to support the identification, nor do we have any other information about Hosea's father.

CAROLYN J. PRESSLER

BEEROTH (PLACE) [Heb *bĕʾērôt* (בְּאֵרוֹת)]. BEEROTHITE. A town in the territory of Benjamin (Josh 18:25). Beeroth was one of the four Hivite cities whose inhabitants deceived Israel, making peace with Joshua on the pretense that they were from a distant land (Josh 9:17). The inhabitants of Beeroth and the other three Hivite towns (Gibeon, Kiriath-jearim, and Chephirah) were thus spared annihilation and were allowed to live among the Israelites as woodcutters and water carriers (Josh 9:26–27). All four towns were incorporated into the tribal territory of Benjamin (Josh 18:25–28; 2 Sam 4:2). Later, Saul, a Benjaminite himself, attempted to eliminate the non-Israelite population living within the territory of Benjamin, specifically the Gibeonites, and presumably the inhabitants of Beeroth as well (2 Sam 21:2, 5). It was probably at this time that many of the people of Beeroth fled to Gittaim (2 Sam 4:3). This persecution may explain why it was two Beerothites, Recab and Baanah, who assassinated Saul's son Ish-bosheth (2 Sam 4:2–7; contra McCarter, *2 Sam* AB, 127–28). Another Beerothite, Naharai (perhaps one of those who were "in distress or in debt or discontented" under Saul's oppressive rule; 1 Sam 22:2), joined David and became a soldier in David's elite unit of fighting men, "The Thirty," serving as Joab's armor bearer (2 Sam 23:37; 1 Chr 11:39). The inhabitants of Beeroth and the other Hivite cities appear to have eventually assimilated into the population; they represent a significant percentage of the Jews who returned from exile (Ezra 2:25; Neh 7:29).

Whether biblical Beeroth is identical with the site known from 1 Macc 9:4 and from later Arabic and Crusader sources as Bereth, Berea, and el-Bireh is uncertain (see Goldstein *1 Macc* AB, 372–74; Avi-Yonah 1949:89 and map; 1977:123; ed-Dîn, 1897 ed. 394; Le Strange 1965:423).

The location of Beeroth is disputed. The confusion goes back at least as early as Eusebius, who in his *Onomasticon* (48.9–10) mentions a village of his day named Beeroth, which he identifies with the OT town that was "under [Gk *hypo*] Gibeon." He states that the village is reached from the 7th milestone on the road from Jerusalem to Nicopolis (Emmaus). This statement would seem to place Beeroth either in the general vicinity of Kiriath-jearim, W of Jerusalem, or near el-Jib, NW of Jerusalem. Jerome, however, in his Latin translation of the *Onomasticon* (49.8–9), records "Neapolis" instead of "Nicopolis," which would place Beeroth between Ramah and el-Bireh, N of Jerusalem. He also renders Eusebius' description *sub colle Gabaon* "under the hill of Gibeon," which seems to miss the political intention of Eusebius' expression (cf. the same phrase under *Chepheira, Chefira* [172.15; 173.22], which Jerome renders *vicus ad civitatem pertinens Gabaon;* see Abel *GP* 2, 262).

Edward Robinson (1867:452–53) was the first modern scholar to propose that Beeroth be identified with el-Bireh (M.R. 170146), the town E of Ramallah dominating the road from Jerusalem to Nablus at the point where the road reaches the N ridge of the Benjamin plateau. He argued that this site not only has toponymic support but fits Eusebius' description:"el-Bireh can be seen on the right at about 7 miles distance from Jerusalem as one travels to Emmaus via el-Jib." Albright (1923:114ff.; 1924:90–111) suggested that T. en-Nasbeh (M.R. 170143), S of el-Bireh, is a better candidate because it is closer to Jerome's mileage from Jerusalem. After Elihu Grant (1926:187ff.) found walls and pottery from the

Bronze Age at el-Bireh (at Ras et-Tahuneh, in the center of town), however, scholars returned to Robinson's identification despite the fact that el-Bireh is 9 Roman miles, not 7, from Jerusalem (Alt 1926; Beyer 1930; Elliger 1935:62; O'Callaghan 1951; cf. Avi-Yonah 1949:89 and map; *EncMiqr* 2:8–9; 1977:123). Subsequently, the 1967–68 survey (Kochavi 1972:178) confirmed the archaeological significance of el-Bireh, finding EB, MB, and much Iron Age I–II pottery there.

Aharoni (1962:183), still troubled by the discrepancy with Eusebius' mileage, suggested (and then abandoned) an identification with Nebi Samwil (M.R. 167137), NW of Jerusalem. Noth (1971:143–44), on the other hand, placed Beeroth at el-Jib (M.R. 167139), thus satisfying Eusebius' specifications, and then transferred Gibeon to el-Bireh.

Yeivin (1971:142–44) has suggested an identification at Kh. el-Burj (M.R. 167136), a small site just S of Nebi Samwil. His main argument is topographical and geometrical: with Beeroth here, the four Hivite cities would form an almost perfect rectangle situated on the border between Benjamin and Judah (the latter part of this assertion is not actually correct). Yeivin found Iron Age (but no Bronze Age) pottery at the site. He suggests that the name *Beeroth* is preserved at nearby Kh. el-Biyar (M.R. 169137), a later Roman and Byzantine site about a mile E of Kh. el-Burj (Arabic *biyar,* like Hebrew *bĕʿērôt,* can mean "wells"); instances of Arabic place names that are translations of earlier Hebrew toponyms, though rare, are attested elsewhere. Yeivin's identification has been accepted by a number of scholars (Aharoni *LBHG,* 431; McCarter, *2 Sam* AB, 123; et al.).

The most serious weakness of this latter identification is that it does not conform to Eusebius' description; Kh. el-Burj and Kh. el-Biyar are located about 4 Roman miles from Jerusalem, not 7. The 7th milestone would have been in the area between el-Jib and the top of the Beth-horon descent, far beyond any logical turnoff for Kh. el-Biyar (although this might be explained by the fact that Eusebius was working with a schematized and thus partially distorted road map). Moreover, Kh. el-Burj is a surprisingly small ruin (just over an acre) to represent a relatively important Iron Age town. Additionally, the nearby place name "Khirbet el-Biyar" is not necessarily significant; it is a very common designation for ruins throughout Palestine. *Yalqut Hapirsumim* (Biran 1964) lists at least six ancient sites so named within pre-1967 Israel alone; and in fact the British surveyors (Conder and Kitchener 1880) recorded a site by the same name E of el-Jib (and none in the vicinity of Khirbet el-Burj).

A number of other sites have been proposed but have not received a wide following (see the list in Press 1951, I:59–60, n. 2).

At present, therefore, the site of biblical Beeroth remains a matter of dispute. The most likely candidate would still seem to be the one originally proposed by Robinson, i.e., el-Bireh.

BEEROTH BENE-JAAKAN (PLACE) [Heb *bĕʿērōt bĕnĕ yaʿăqān* (בְּאֵרֹת בְּנֵי יַעֲקָן)].

Translated as the "wells of the sons of Jaakan," this is a place where the people of Israel camped during the wilderness period (Deut 10:6). The claim to water rights for a particular clan is not unusual among tribesmen in the arid zone. This site is said to be near the border of Edom (Jaakan's appearance in the genealogical clan list of Seir the Horite in 1 Chr 1:42 strengthens this identification) and may possibly be associated with Birein, about 6 miles S of el-ʿAuja (or Nessana, M.R. 095031). Aaron is said to have died and been buried while they camped here. An orderly succession of the priesthood is also noted with Aaron's son Eleasar ministering "in his stead." The site is simply referred to as Bene-Jaakan in Num 33:31–32.
VICTOR H. MATTHEWS

BEESHTERAH (PLACE) [Heb *bĕʿĕštĕrâ* (בְּעֶסְתְּרָה)]. Var. ASHTAROTH. A town located in the tribal territory of Manasseh, listed as one of the Levitical cities (Josh 21:27). However, in the parallel passage in 1 Chr 6:56 (—Eng 6:71) there is a city named Ashtaroth (Heb *ʿaštārṯ*), which may perhaps have been the same place as Beeshterah. See ASHTAROTH (PLACE). The discrepancy between the Joshua list and the Chronicles list must be interpreted as variations on the same name. The *ʿštr* element is common to both, and there is little doubt that the Chronicler has correctly preserved the name of this Levitical city, which was named after the Canaanite fertility goddess, Ashtart.

Beeshterah/Ashtaroth has been identified with Tell ʿAshtarah (M.R. 243244), although there are some difficulties with this identification. About 6 km to the S of Tell ʿAshtarah is Tell el-Ashʿari. Albright (1925) argued that there was no connection between the names ʿAshtaroth and Ashʿari; however, there continue to be suggestions of possible identity.

Tell ʿAshtarah is located on the King's Highway, known in the N as "The Way of Bashan." Another great trade route, the Via Maris, joins the King's Highway at Tell ʿAshtarah. They have been no excavations at Tell ʿAshtarah, and only a surface survey was conducted by Albright in the 1920s. He identified there pottery from the EB, MB, LB periods, as well as from the first two phases of the Iron Age (1200–900 B.C.). In the 1930s A. Biran applied the principles of textual criticism to the problem of the identification of the site, and argued that even at the height of the Solomonic empire, the N boundary in Transjordan did not extend beyond the Yarmuk (Bergman 1936). While the 9th-century Israelite king, Ahab, did not rule any further N than Ramoth-gilead (1 Kings 22), Jeroboam did control the N Transjordan area (2 Kgs 14:23; Amos 6:13) during his reign in the 8th century.

BEIT MIRSIM, TELL (M.R. 141096). An 8-acre mound in the S Hebron hills, just at the juncture of the hill country and the N Shephelah, 15 miles SW of Hebron. It lies at almost 500 m above sea level, rising steeply to dominate the small wadi.

Tell Beit Mirsim was identified by Albright with biblical Debir/Kiriath-sepher, largely on the basis of the reference in Josh 15:16–19 (= Judg 1:11–15), especially the mention of *gullôt mayîm.* Albright rendered this not as "springs," much less "wells," but as "water basins," i.e., underground reservoirs, which he thought characterized Tell Beit Mirsim, but no other site in the vicinity (cf. Albright 1967; *EAEHL* 1:171–78). When his own excavations in the years 1926–1932 revealed a late 13th century B.C.

destruction, he connected this with Joshua's conquest of Debir (Josh 10:38) and regarded this as confirmation of his identification. More recently, however, M. Kochavi, A. Rainey, Y. Aharoni, and others have revived Galling's proposal that Khirbet Rabûd (M.R. 151093), seven miles SW of Hebron, is a better candidate for Debir/Kiriath-sepher (Kochavi 1974). Not only does Khirbet Rabûd suit the biblical references to the Judaean hill country better, it also has *gullôt* (i.e., "cisterns," contra Albright) in abundance. Finally it was a major LB Canaanite site, with an Israelite reoccupation (although no destruction) in the Iron Age. If Tell Beit Mirsim is thus not Debir/Kiriath-sepher, its identification remains unknown.

Albright's excavations at Tell Beit Mirsim, although small-scale, were far in advance of most archaeological fieldwork in Palestine up to that time, due largely to his own unparalleled mastery of ceramic chronology and the breadth of his scholarship. The prompt publication of the final reports volumes (Albright 1932, 1933, 1938, 1943) made Tell Beit Mirsim the "type-site" for both Palestinian and "biblical" archaeology from the 1930s well into the 1980s. Although later advances in stratigraphic methods revealed that Albright's excavation techniques were more intuitive and more ceramically influenced than formerly supposed, the chronological scheme that he worked out at Tell Beit Mirsim was amazingly precise for that period. Indeed, it still provides our basic framework for Palestinian archaeology.

Since the Tell Beit Mirsim excavations were relatively well done, and the results have been summarized elsewhere many times (i.e., Albright 1967; *EAEHL* 1:111–78), we shall focus here only on the highlights and on more recent scholarship.

Albright had dated the site's founding in stratum J to his "Early Bronze IIIB" period, ca. 2300 B.C. (our current EB IVA). Thus he thought it a unique settlement site in an otherwise non-urban period when most Palestinian tells were abandoned. However, more recent analysis of the unpublished pottery (Dever and Richard 1977) has shown that the basal stratum J materials are mixed and that the earliest occupation must extend from our present EB II into EB III, ca. 3000–2400 B.C. However, the later phase of our EB IV period, phase C (Albright's old "Middle Bronze I"; cf. Dever 1980; now ca. 2200–2000 B.C.), is well represented in strata I–H. Two occupied caves in area H produced good quantities of EB IVC pottery (Dever's "Family S" repertoire; 1980). Albright's claim that a city wall must have existed, even though he had not found one, must be rejected in light of our current knowledge of the overwhelmingly non-urban EB IV period. He was undoubtedly influenced by the notion that his "Middle Bronze I" was the precursor of the Middle Bronze Age proper.

The true Middle Bronze Age (Albright's MB IIA–C, our current MB I–III) is well documented in three main phases at Tell Beit Mirsim, strata G–F, E, and D. Albright had originally placed the *terre pisé* embankment and subsequent (?) masonry "battered wall" in strata G–F, which he dated ca. 1900–1750 B.C. (see Albright 1967). This has been challenged by Yadin, who sought to place *all* the characteristic Middle Bronze defenses in the second phase, Albright's Middle Bronze IIB (i.e., stratum E at Tell Beit Mirsim; Yadin 1973). Most authorities of today nevertheless hold that city walls and gates begin at many sites early in the period, in our MB I, but the exact date of the Tell Beit Mirsim fortifications remains a problem. In his last treatment (EAEHL 1, published 1975, written before 1971), Albright seems to hesitate between a strata G–F and an early stratum E assignment.

In any case, the MB strata, especially stratum D (the latest), exhibit a strongly urban character, with a well laid-out town plan, successive phases of building and rebuilding, and several fine "patrician villas." The cemetery of this (and other periods) has not been located, but good quantities of domestic pottery and other objects testify to a significant degree of technological and aesthetic sophistication. A destruction marks the end of stratum D, as at most sites, no doubt connected with the Egyptian campaigns following the expulsion of the Hyksos from Egypt ca. 1540 B.C. Albright's date of ca. 1540 needs to be lowered only slightly. A gap in occupation follows throughout LB I.

Stratum $C_{1–2}$ belongs to the LB II, ca. 1400–1200 B.C. Albright's reconstruction of a town in decline, destroyed toward the end, needs no major revision. The city wall is poorly rebuilt. Mycenaean and Cypriot imports are attested in the pottery but cease at the end of the period, as elsewhere in Palestine.

Albright posited an Israelite destruction at the end of stratum C, dating it ca. 1220 B.C. on the basis of what he held was the contemporary fall of Lachish just after the "fourth year of Merneptah." But today the destruction of Lachish VI must be dated to the time of Rameses III or later (ca. 1150 B.C.); and if Tell Beit Mirsim is not Debir/Kiriath-sepher (above) the biblical tradition of destruction there is irrelevant. Information on the destruction is scant, in any case.

It is clear, however, that stratum B, with three successive phases (B_1, B_2, B_3), belongs to Iron I, ca. 1200–900 B.C. Albright always made much of this sequence and adopted it for nearly the whole of Palestine. He understood the Tell Beit Mirsim phasing as follows:

Str. B_1: Brief "squatter occupation," marked only by pits and silos, with degenerate local LB/Iron I pottery, ca. 1225–1175 B.C.; *early Israelite* occupation following the destruction.

Str. B_2: Quantities of Philistine Bichrome ware; *Philistine occupation,* ca. 1175–1020 B.C., during their rise to power.

Str. B_3: Casemate city wall, predominance of red-slipped and hand-burnished pottery; *Israelite reoccupation,* ca. 1020–920 B.C., specifically Davidic-Solomonic; possibly destroyed by Shishak ca. 918 B.C.

It seems obvious that this reconstruction is largely based on presuppositions regarding ceramic sequences and distributions, notions of biblical tradition and early Israelite history, and factors in cultural change, all of which might be (and have been) challenged more recently (Greenberg 1987). Few scholars would be so sanguine today, and Albright himself made some adjustments in his last résumé (i.e., 1975). All that is clear is that by the mid–late 10th century B.C., Tell Beit Mirsim was a rather typical Israelite site. Certainly the B_1–B_3 sequence is no longer adaptable to the majority of Iron I sites in Palestine.

Stratum $A_{1–2}$ dates to the period of the Divided Monarchy, ca. 918–587 B.C. Albright thought that stratum A_1, poorly attested because of the continuous occupational buildup into A_2, might have been destroyed in the raid of Sennacherib in 701 B.C. Str. A_2, the surface stratum, was cleared extensively in the W and SE quadrants, so that we have a substantial town plan, with many "four-room" houses, a casemate wall, and (apparently) an offset-entrance two-entryway gate. A "west gate and tower" structure has been compared to the Assyrian-style *bit ḫilani,* although this is uncertain. Also found were several buildings containing pierced stone drums that Albright interpreted as "dying vats" and took as evidence for a local textile industry, but they might as easily be connected with olive oil pressing.

Albright dated the destruction of stratum A_2 to the Babylonian conquest in 587 B.C., citing in particular a seal impression of "Eliakim, Steward of Yaukin" and assuming that this was the same person as Jehoiachin the penultimate king of Judah. He also compared the pottery to stratum III at Lachish, which he dated not to ca. 701 (with Tufnell and others) but to ca. 598 B.C. Today, however, the almost universal consensus is that Lachish III was indeed destroyed by Sennacherib (Ussishkin 1977). So presumably the date of Tell Beit Mirsim A_2—and therefore all other "late Judean" levels dated by comparisons with Tell Beit Mirsim A_2—must be raised by about a century, even though that leaves the 7th century B.C. largely unattested on present evidence. As though to corroborate the higher date, Cross has now shown that the proper context of the famous "Yaukin" impression is during the reign of Hezekiah in the 8th century B.C.

In conclusion, many of Albright's confident assertions about Tell Beit Mirsim's history and its implications for Palestinian archaeology and biblical history (thus 1967:218, 219; *EAEHL* 1:178) have had to be modified. That does not, however, lessen the importance of the site or minimize Albright's pioneering achievements there.

BEIT RAS (M.R. 230222). One of the cities of the DECAPOLIS, known in Roman times as Capitolias.

A. Name and Identification
B. History of Research
C. History of Settlement

A. Name and Identification

The modern village of Beit Ras, Roman Capitolias, is located five km N of Irbid in Jordan. The *ras* ("peak," "hilltop") is the highest point (ca. 600 m above sea level) N of the ʿAjlun mountain range. From the *ras*, the Wadi ʿArab, its tributaries, and fertile agricultural lands are clearly seen to the W. The Romans founded a city around the *ras* and named it after Jupiter Capitolinus. The Latin name is a Roman adaptation of the Semitic name which already existed and matched the geographical situation of the settlement: *Bayt Râs*, the "settlement on/of the hilltop." The Semitic name is not attested before the middle of the 6th century A.D. (Lenzen and Knauf 1987). It is inconceivable that the site had no name prior to the foundation of Capitolias—the two words *bayt* and *ras* are Aramaic as well as Arabic.

The identification of Beit Ras with the Decapolis city of Capitolias was established by F. Kruse and H. L. Fleischer (1859:185–87). U. J. Seetzen, one of the earliest 19th-century explorers in N Jordan, visited Beit Ras in 1806. While he was specifically looking for the ruins of Capitolias, he failed to identify Beit Ras with Capitolias.

B. History of Research

After Seetzen (1854:371), Beit Ras was visited by Buckingham (in 1816), who described it as a permanently occupied settlement (1827:350). The first plan of the site and its ruins was drawn and published by Schumacher in 1878–79 (1890:154). S. Merrill, N. Glueck, and S. Mittmann each visited the site and recorded inscriptions and surface finds (Merrill 1881; Glueck 1951; Mittmann 1970). Archaeological excavations have been conducted at the site since the 1960s by the Department of Antiquities of Jordan, and are currently being conducted by a joint group (Lenzen fc.; Lenzen and Gordon fc.; Lenzen, Gordon, and McQuitty 1985; Lenzen and Knauf 1986; 1987; Shraideh and Lenzen 1985).

C. History of Settlement

There is minimal archaeological evidence for occupation before the 1st century A.D. The 1984 survey produced only two shards which could be dated to the 2d–1st centuries B.C. Excavations have provided some body shards which may date to pre-300 B.C.; i.e., the end of the Iron Age. However, all these shards have been found in post-Iron Age contexts. It is unlikely that there was an earlier city, but it may have been used as a lookout.

According to coins issued from 165/6 through 218/19 A.D., it can be calculated that the city was founded in 97/98. It is unclear, however, whether Nerva or Trajan was responsible for its establishment. The main temple of the city, which is represented on coins, was dedicated to Jupiter Capitolinus (Piccirillo and Spijkerman 1978:96–97). Claudius Ptolemaeus, a mid-2d century A.D. Alexandrian geographer, mentioned Capitolias as belonging to the Decapolis (Lenzen and Knauf 1987). With the establishment of Provincia Arabia in 106 A.D., Capitolias was included in Palaestina Secunda. This did not change until the end of the 6th century.

The Roman city was walled and, according to the numismatic and epigraphic evidence, reached the peak of its prosperity in the 2d–3d centuries. A Nabatean inscription attests to the presence of a non-Greek acculturated population group. Archaeological evidence of Roman occupation includes massive

foundation walls for large public buildings (at least one of them a temple), vaults, and a large cistern system surrounding the site.

From ca. 300 to 525, Beit Ras/Capitolias grew in importance within its own region as well as within the larger Byzantine world. The city was represented at the Council of Nicea (325) and at the Council of Chalcedon (451). The complex identified as a "church" by Schumacher was, based on the 1985 excavations, a market area *(suq).* Archaeological data points to an intensive buildup of the central part of the village from the 4th century through the present, with a possible hiatus in the mid-9th to mid-10th centuries.

According to Hierocles (535) and Georgius Cyprius (575) Beit Ras remained part of Palaestina Secunda. But according to the deacon or archdeacon Theodosius, who compiled a Latin pilgrim's guide to Palestine during the reign of Anastasius (491–518 A.D.) or shortly after that, it belonged to Arabia (Lenzen and Knauf 1987). Beit Ras/Capitolias was integrated into Arabia in the course of the 6th century. It is tempting to identify the *suq* mentioned by the poet an-Nabigha adh-Dhubyani (569) with the recently excavated vaulted area, used as a center of commerce from the 6th through the 9th centuries. The special quality of the Beit Ras wine was well known in Medinah in the days of Mohammad, as is attested by two lines from Mohammad's poet laureate, Hassan b. Thabit. The integration of the Jadar-Beit Ras region into Arabia at the end of the 6th and the beginning of the 7th century meant that the Islamic conquest was not a major affair from the point of view of the inhabitants. According to tradition Beit Ras capitulated to Shurahbil b. Hasana at the beginning of the conquests (Hitti 1914). The flourishing economy of the city continued throughout the Umayyad period.

BEITIN, TELL (M.R. 172148). Since Edward Robinson's proposal in 1938 (based both on linguistic grounds and biblical references [Gen 12:8; Judg 2:19; etc.]), biblical Bethel has been identified with Beitin, 8 miles N of Jerusalem.

The full extent of the ancient site, now largely covered by the modern village, is unknown, but some four acres were available for soundings when the site was first investigated by W. F. Albright in 1927. Following that, Albright directed excavations in 1934, followed by campaigns under James L. Kelso in 1954, 1957, and 1960.

The preliminary reports (Albright 1934a, 1934b, 1935, 1939; Kelso 1955, 1958, 1961) and final reports (Kelso 1968), the final volume in particular, offer some far ranging conclusions, but little of the evidence on which they are presumably based. There are, for example, few complete plans, no usable sections, no stratum numbers—in short, little real data. Therefore the following summary must be brief and very tentative.

Although there are scattered Late Chalcolithic-EB I–III sherds, the real occupational history of Bethel begins in the EB IV, ca. 2200–2000 B.C. (Albright's "Middle Bronze I"). The published pottery is rather late in the period, belonging to Dever's "Family S" (= southern/sedentary; 1980). Kelso (1968:20–23) claimed to have found a "temple" belonging to the EB IV, associated with "butchering flints" and "bloodstains"; he even ventured to connect this with the biblical traditions concerning the Patriarchs at Bethel. Yet a closer examination of the evidence as published shows that the EB IV "temple" is nothing other than the foundation courses of an MB structure described as a "city gate" (below), the "butchering flints" are simply typical degenerate Canaanean blades of the period. In fact, Bethel was no more than a typical pastoral nomadic encampment in EB IV (Dever 1971; 1980).

The MB (ca. 2000–1500 B.C.) is said to be represented by a city wall and gate, but the details of both are unclear. The published plan of the "gate" is incomprehensible, and the city walls are scarcely even described. A so-called "sanctuary" and "temple" are obviously well-constructed buildings, but their function is far from certain. The range of MB occupation seems to extend throughout MB I–III (Albright's MB IIA–C), but the published pottery is mostly from the last phase of the period, suggesting that most of the structures should be placed there. A destruction is claimed at the end of the MB, ca. 1550 B.C., but again little evidence is presented.

After a gap in occupation in LB I, Bethel was reoccupied in LB II (ca. 1400–1200 B.C.). The final reports and summaries describe "patrician houses," flagstone pavements, and elaborate drainage systems—"the finest architectural phase in the city's history" (Kelso *EAEHL* 1:192). A severe destruction at the end of the LB is attributed to the Israelites (based on the biblical tradition), but no justification for this conclusion is offered. Indeed, the published description (Kelso 1968:30, 31; 47–49) does not offer much direct, detailed evidence for such a destruction, beyond such unsupported statements as "a terrific conflagration completely wiped out the Canaanite city …"; or "points where the Israelites had breached the walls"; or "the thickest ash levels yet reported in Palestine." Much has been made of the "Israelite destruction" at Bethel, perhaps now one of only two possible candidates for evidence of an Israelite invasion (the other being Hazor; see ISRAEL, HISTORY OF [ARCHAEOLOGY AND THE ISRAELITE "CONQUEST"]). But the historian or biblical scholar seeking to check the evidence will find the final report unuseable (indeed almost a parade example of the interpretative problems typical of the "Biblical archaeology" movement, especially Kelso 1968:47–49).

The four Iron I levels are said to represent a cultural decline compared to the LB period. The most characteristic feature is probably the typical "four-room" or pillar-courtyard house, but no complete structure is published, much less any indication of the village plan. The Iron I village appears to have been unfortified and possibly built over part of the abandoned Bronze Age city wall. The pottery as published suggests that phases 1–4 date to the 12th–late 10th centuries B.C. The earliest phases have few Philistine shards, the ceramic repertoire being more typical of what we would now regard as the initial "Israelite occupation" of the central hill country. Particularly diagnostic are collar-rim storejars, cooking pots with short triangular rims, carinated bowls, and everted-rim kraters.

The full range of the Iron II period (ca. 900–600 B.C.) is apparently represented, but the few published building remains of phases 1–3 are unexceptional. No defenses are reported. A 9th century B.C. "South Arabian" stamp impression is used as evidence for trade, but questions have been raised as to its authenticity (cf. Van Beek and Jamme 1970, and references there). Bethel seems to have escaped destruction in the early 6th century B.C. Babylonian campaigns. Indeed, its relatively large quantity of 6th century B.C. pottery constitutes a rare corpus for the "Iron III" or early Persian period in Palestine (see L. A. Sinclair in Kelso 1968:70–76; and cf. J. S. Holladay in Dever 1971).

The Hellenistic, Roman, and Byzantine periods are known from literary sources. Three phases of Hellenistic occupation were found in the excavations, said to range from the late 4th–2d centuries B.C. But P. W. Lapp's publication of the pottery (in Kelso 1968:77–80) narrows this to late 3d–2d centuries B.C. Ptolemaic and Seleucid coins confirm these dates in general.

For the Roman period, Herodian shards, but no coins, provide evidence, as do domestic remains and numerous cisterns. Byzantine and Islamic shards attest to still later occupation, but only the former is

characterized by substantial architecture, including a street, a city gate, a church, and a large reservoir. Bethel's occupation seems to end early in the Islamic period.

Bethel was probably one of the more prominent Bronze-Iron Age towns in central Palestine, and it is also significant in biblical history. Yet the excavations as carried out and published allow us to do no more than sketch the archaeological history of the site, and even that with little precision or confidence in any single detail. The exposure was inadequate, the results of the various seasons are poorly coordinated (there are no stratum numbers), and the description of the successive phases is minimal and sparsely illustrated. Still more serious is the lack of any research design, save the apparent notion of "illuminating the Bible" in some way or another. Albright's early work in 1934 may have been adequate for the time, but the later excavations (and the final publication) are marred by transparent biases, as well as by an embarrassing naïveté. Fact and interpretation are so entangled throughout the final report that few real data emerge for the archaeologist, historian, or biblical scholar (cf. Dever 1971).

BEKA [Heb *beka*› (בֶּכַא)]. See WEIGHTS AND MEASURES.

BEL (DEITY) [Heb *bēl* (בֵּל)]. Essentially a title:"lord" or "master". Akk *bēlu,* "lord," when applied to the gods, was fairly synonymous with the Hebrew. The Akkadian term might also be a theophoric element in divine names, or even a DN itself; it may have reference to the potencies and functions of deity (CAD B 191b–194a; *WbMyth* 1:46).

A. The Title Bel

The honorific title *Bēlu* is of ancient vintage and was used as an exalted appellation in regard to a number of Akkadian deities. However, it concentrated upon the Sumerian god Enlil until this patron deity of Nippur, who was recognized by the Akkadians as the king of the pantheon, became *de facto* the *bēlu,* eclipsing even the theoretical ultimacy of father Anu. Enlil assumed the role as the lord of heaven and earth, the determiner of the destinies of the land, so that all other gods paled before him (Kramer 1963:118; Streck 1916/3:740, 742).

B. The Emergence of Bel Marduk

The foregoing situation continued until the beginning of the 2d millennium B.C., when Marduk, the patron deity of Babylon, succeeded Enlil as the supreme deity of the pantheon. Two important texts will substantiate this rise to power. The first is the *enuma eliš,* a composition dated to the early 2d millennium (so *ANET,* 60; but see also Lambert 1964), wherein the investment of Marduk as the lord of the pantheon is graphically portrayed. When Tiamat threatened the assembly of the gods with chaos, and bestowed upon her deputy Kingu the control of the tablets of destiny, Marduk alone of all the gods challenged and utterly defeated the frightful opposition. For this he was unanimously acclaimed king of the gods by the appreciative assembly of the deities and duly invested in that regal office. The fifty gods of the assembly granted to him their authority (*lit.,* name), and Enlil, in a dramatically staged climax, acknowledged Marduk to be his legitimate successor by naming him *Bēl mātāti,* "Lord of the Lands" (7.136).

The second text to indicate the transfer of the title and power from Enlil to Marduk is the Prologue of the Code of Hammurabi (ca. 18th century B.C.; *FSAC,* 15), where a portion of the prelude reads:"… the lofty Anum … and Enlil, lord of heaven and earth, the determiner of the destinies of the land, determined for Marduk, the first-born of Enki (=Ea), the Enlil functions [the Enlilship] over all mankind …" (*ANET,* 164a). The rise of Marduk as the head of the pantheon was concomitant with the supremacy of the city of Babylon, where Marduk was titular deity, until many of the predicates of Enlil were absorbed by Bel Marduk or, simply, Bel.

C. The Spread of the Cult of Bel

The prestige of the universal implication of Marduk's acts as creator of the universe, maker and sustainer of mankind, controller of the destinies of the world, of history, of the individual, of fate locked tightly in his hands, quite transcended the contemporary religious scene and endured and survived with amazing attraction the fortunes of history from the OB regime through the Assyrian and NB eras and Hellenistic period until well into the Roman world. The tenacity of Belism to endure was equally manifest in its appeal to the whole of the Fertile Crescent.

Bel Marduk was well received by the Assyrian regime and accorded honor shared only with Asshur. Personal names in Assyria during this period, compounded with the element of Bel, were legion (Tallqvist 1914:53–63). As may be anticipated, Bel was supreme in the NB era with Nabu, his son, the city god of Borsippa, augmenting the supremacy of Belism (Stamm 1939:330–31; Unger 1931:207–11).

In the far distant Egyptian colony of Elephantine, in the 5th century B.C., it appears that Bel had accompanied the mercenary colonists from Syria. In the surviving texts Bel is included as a litigant with three other prominent Mesopotamian gods; in a letter of that period Bel is coupled with Nabu, Shamash, and Nergal in a prefatory invocation (*ArchEleph* 159; *ANET,* 491).

In Syria the cult of Bel flourished. The treaty between KTK and Arpad (ca. 750 B.C.) indicates that in the region of Harran Marduk was one of the deities used to witness treaty negotiations (*ANET,* 659). This is confirmed by the presence of Bel at Palmyra, an oasis trade outpost some 376 miles WNW of Babylon. Here it appears that the pre-Hellenistic god Bol was transformed to Bel sometime before the 3d century B.C. (Teixidor 1979:1–18 *et passim*). The considerable archaeological evidence including eikons and expansive ruins of a temple indicates how firm the Bel cult had been adopted by the Palmyrians (*ibid.,* 128). This religious devotion continued unto the early Christian centuries.

D. Bel in the Biblical Data.

There are three instances in the prophetic literature where the name Bel occurs. (1) In Isaiah 46:1 the Judean prophet of the Exile issued, no doubt to the underground exiles, his satire on the Bel processions in Babylon. The prophet predicts that these elaborate displays of religious icons, the procession of the kingly vested gods and priestly officials, will have their nemesis when the same servitors and religious divinities strive frantically to effect an escape with their chief gods, Bel (Marduk) and his son Nabu from the enemy storming at the Babylonian gates. The attempt to elude the foe is vain hope; the weary beasts stumble and are overloaded with the weight of the gods; the very gods sway back and forth on the trotting beasts. A superb satire, a daring prophecy, a questionable hope to the exiles. (2) In the tradition of Jeremiah a kindred prophet forecasts the fall of Babylon and the shame and dismay that will be the lot of the chief god of the pantheon, Bel and Marduk (Jer 50:2). The date of the composition (Jer 50:2–3) would appear to be in the late years of the Babylonian exile, when the internal strength of the empire was rapidly waning and when the external foes were rapidly gaining frightening victories surrounding Babylon. (3) The third occurrence of Bel is Jer 51:44 in the long multiform composition with prophecies of woe mingled with promises of hope with imprecatory passages and satire. In a section of this long composition a prophet forecasts in the language of the lament the capture of Babylon and the praise of the whole earth (Jer 51:41), and immediately indicates that it is Yahweh who is about to punish Bel in Babylon and release those whom he has devoured. The imminent fall of Babylon is the sign for the Judeans to make good their escape from the city under besiegement.

It is true that Bel-Marduk must have suffered the degradation of being defeated by the foe, but it is also true that the Persian conqueror dealt kindly with religious concerns so that Bel, though shamed by his

impotence in the Babylonian debacle, survived and passed his legacy on to the Hellenistic and Roman world. But the overthrow of Babylonian idolatry signified to perceptive Israel an unmistakable sign that anaconic Yahweh was truly lord of all.

In the Apocrypha of the OT, Bel appears once in the Letter of Jeremiah (v 41; in the Vulgate and KJV: Baruch 6:40). The Letter of Jeremiah has the literary form of a constructive satire in which idolatry is rationally examined as a worthless pursuit, yet the subject is not handled offensively so as to irritate the idolater. The satire has such parallels as Jer 10:25, 8–11, 13b–15; 11; Psalm 115:3–8, and 125:6, 7, 15–17. Such compositions are not tirades, they are didactic, written for a purpose, reasonable, and negatively persuasive. The same analysis will generally fit the apocryphal Story of Bel (vv 3–22) and the Story of the Snake (Beast?) (vv 23–42) in the additions to the Hebrew Book of Daniel. The Story of Bel relates the disclosure of the deceitful servants of Bel who represented the god Bel as the one who consumed the rich quantity of food set daily before him. The seer Daniel exposed this fraud to the shame of Bel, but to the glory of the God of Daniel. The Story of the "Dragon" is another fictional tale designed to expose the fallacious nature of the cult of the "dragon," and to exalt the worship of the god of Daniel. The story borrows some of its motifs from chapter 6 of the Book of Daniel and has the same general didactic purpose as its object. Both of these apocryphal stores are tracts for the times when idolatry had a fascination for many Jews, say, in the last centuries before the Christian era. These three booklets witness the temptation of idolatry among the scattered Jews of the exile, but equally strong is the testimony to a staid orthodoxy that totally rejected idolatry in its contemporary forms and had studied reasons for such a repudiation.

EDWARD R. DALGLISH

BEL AND THE DRAGON. See DANIEL, ADDITIONS TO.

BELA (PERSON) [Heb *bela‹* (בֶּלַע)]. The name of three persons mentioned in the OT.

1. Bela the son of Beor (Gen 36:32 = 1 Chr 1:43) is the first ruler listed in the Edomite King List, Gen 36:31–39. Opinions vary as far as the date of the "Edomite King List" is concerned. Suggestions range from the 11th century B.C. (Weippert 1982:155) through the 8th to 6th centuries B.C. (Bennett 1983:16) to the 6th–5th centuries B.C. (Knauf 1985a). Scholars tend to agree, however, that the succession scheme of this list is artificial and that in all likelihood the rulers listed in it were contemporary with each other (Bartlett 1972:27; Weippert 1982:155). The name of this king and his father's name can be Canaanite or Arabic (Knauf 1985a:246). Since names from both *BL‹,* "to spoil, devour," and *BLĠ,* "to be eloquent," do exist in Arabic, the name Bela can be explained by both roots. Bela son of Beor has been equated with the prophet Balaam ben Beor in *Targum Yerushalmi II* and by some modern authors (Weippert 1971:595f., n. 812). This was never very likely (if one does not choose to regard Gen 36:31–39 as wholly fictitious) and is finally disproven by the Balaam texts from Tell Deir ‹Alla, which attest the seer as a local figure of N Transjordan prior to ca. 700 B.C. (Knauf 1985b). The capital of Bela, Dinhabah, has not yet been identified (Knauf 1985a:250, n. 27).

2. Bela son of Azaz is an ancestor of Beerah from the clan of Joel (1 Chr 5:8), living four generations before Beerah, who was exiled by Tiglathpileser (1 Chr 5:6), obviously when the Assyrian province of *Gal›adda/Gilead* was established in 734 B.C. It can be assumed, then, that the "clan of Joel" was one of the major landowning families in Israelite Transjordan in the 9th and 8th centuries B.C. Its incorporation in Reuben in 1 Chr 5:4–8 is, of course, fictitious, since the tribe of Reuben does not figure in the historical

record after the 10th century B.C. and did not inhabitate those parts of Israelite Transjordan that remained Israelite after King Mesha‘ of Moab conquered "the land of Medaba" in the middle of the 9th century B.C. (Wüst 1975:244–46). This, however, does not discredit this peculiar piece of information about the clan of Joel in Transjordan.

3. According to Gen 46:21; Num 26:38, 40; 1 Chr 7:6f; 8:1, 3, Bela was one of the Sons (i.e., clans) of the tribe of Benjamin.

BELA (PLACE) [Heb *bela‘* (בֶּלַע)]. One of the "five cities of the plain," identified with Zoar (Gen 14:2, 8). This identification is clearly a later gloss. Zoar (Byzantine Zoara, Arabic aṣ-Ṣughar) is an historical city; however, it is doubtful whether any of the "five cities" (Sodom, Gomorrah, Admah, Zeboiim, and Bela) ever existed. The nature of the biblical texts dealing with those cities (Genesis 14, 18–19) does not speak in favor of their historicity (Weippert 1971:93–101). However, as a toponym, Bela has a parallel in Arabia: *Bula‘ (Yāqūt* n.d., I:485).

BELIAL [Heb *bĕliyya‘al* (בְּלִיַּעַל)]. *Bĕliyya‘al* in Hebrew means wickedness and is often found in compounds expressing evil people (e.g., "man of *bĕliyya‘al,* " "sons of *bĕliyya‘al*"). The use of *bĕliyya‘al* as a proper name for Satan is not found in the Hebrew Bible, but Belial as the leader of the forces of darkness is ubiquitous in the pseudepigraphic and Qumran material. The term (Gk *belial/beliar*) is also found once in the New Testament as a term for the devil (2 Cor 6:15).

———

A. Etymological Considerations
B. In the Hebrew Bible
C. In the Pseudepigraphic Literature
D. At Qumran
E. In the New Testament

———

A. Etymological Considerations

According to the rabbis, the corrupt individuals known as *bĕliyya‘al* had cast off the yoke *(‘ôl)* of God and, being yokeless *(bĕlî ‘ôl*), they were uncontrollably lawless (*Sanh.* 111b; cf. *paranomos, anomia, anomos* LXX Deut 13:14; 2 Sam 22:5 = Ps 18:5; Ps 41:9; 1 Sam 25:17; 30:22). Since then many wide-ranging etymologies have been proposed for Heb *bĕliyya‘al.* Discussions of the various proposals are provided by Otzen (*TDOT,* 2.131–33) and Thomas (1963:11–17). Of the numerous suggestions, two avenues of research have gained the most favor among modern scholars.

One approach favored by scholars is to analyze *bĕliyya‘al* as being made up of Heb *bĕlî* (a negative) plus one of two roots. The traditional folk etymology found in many lexica renders *bĕliyya‘al* as

"worthlessness" (*bĕlî* plus the root *ya‹al,* "to profit, to be of worth;" cf. *Hip‹il*). Pedersen (1926:539) found this etymology so agreeable that he asserted "there is no reason to look for other explanations." Yet folk etymologies may not accurately reflect historically correct etymologies. Compare Heb *ṣalmāwet,* "darkness," which was most likely vocalized differently (*ṣalmût › ẓlm*, "to be dark") in its original form before the folk etymology "shadow of death" *(ṣēl + māwet)* arose (Lewis 1989:11–12). The other proposal incorporating Heb *bĕlî* is to combine it with some form of the Heb root *‹ālâ,* "to go up." This proposal has long been suggested by earlier scholars with the implication that "that which does not come up" = "unsuccessful" (cf. Qimḥi *bal ya‹ăleh ʾbal yaṣlîaḥ*). The best formulation of this proposed analysis is that of Cross and Freedman (1953:22 n.6) who argue that Heb *bĕliyya‹al = *bal (i) ya‹l (ê),* " (place from which) none arises, a euphemism for Hades or Sheol." Compare Job 7:9 *yôrēd šĕ›ôl lō› ya‹ăleh,* "he who goes down to Sheol does not come up." A well-known Akkadian expression for the underworld is *māt la ṯri,* "the land of no return." Hence Cross and Freedman state that "*bny bly‹l* are simply 'hellions'." Compare Boling's (*Judges* AB, 276) translation of *bĕnê bĕliyya‹al* in Judg 19:22 as "the local hell raisers." However, Emerton (1987:214–17) correctly cautions against implying that Sheol is the abode of only the wicked.

The second approach to solving the etymology of *bĕliyya‹al* which has found favor with modern scholars associates it with the root *bl‹*. The word *bl‹* means "to swallow" in Heb and is well attested in the comparative Semitic languages (cf. Ar, Aram, Akk, Eth, etc.). Several scholars (e.g., Thomas 1963:18–19; Dahood *Psalms* AB, 105; Tromp 1969:125–28) have emphasized how the notion of Belial as "the swallower" or "the swallowing abyss" would fit nicely with what we know of the underworld and the descriptions of Sheol and Mot (cf. Ps 18:5—Eng 18:4).

Driver's (1934:52–53) argument that Heb *bl‹* can mean "to be confused" (< Arb *balaġa* = "slander"?) and hence *bêliyya‹al* with a suffixed *lamed* = "confusion" is very unlikely.

In the Gk *beliar* is the equivalent of *belial* being the result of a dissimilation of the two liquid consonants (2 Cor 6:15; see P. E. Hughes *2 Corinthians* NICNT, 248–50 n.12; W. Foerster *TDNT,* 1.607).

B. In the Hebrew Bible

The word *bĕliyya‹al* occurs 27 times in the Hebrew Bible (see Thomas 1963:14 for suggested additional occurrences resulting from conjectural emendations). Scholars have long recognized the mythological background underlying references to *bĕliyya‹al* often citing Ps 18:5–6—Eng 18:4–5 (= 2 Sam 22:5–6) where the "torrents of *bĕliyya‹al*" (cf. Ps 41:9—Eng 41:8) are used in parallelism to the "cords/snares/breakers of Death" (see MOT) and the "cords of Sheol" (see DEAD, ABODE OF THE). It is easy to understand how the association with Sheol and Death colored *bĕliyya‹al* as it was used to describe "hellions" in biblical narrative. Parallel terms include "man of iniquity" (*›îš›āwen* in Prov 6:12), "evil person" (*›îš rā‹* in 1 Sam 30:22), "man of blood" (*›îš haddāmîm* in 2 Sam 16:7, cf. 2 Sam 12:5), and "the wicked" (*rĕšā‹îm* in Prov 19:28). Yet, more specifically, Maag (1965:294–95) and Otzen (*TDOT,* 2.134–35) have pointed out how the chaotic nature of *bĕliyya‹al* was often used to denote those who played roles which were detrimental to the maintenance of social order. Graphic examples of this type of unrestrained behavior would include the wicked men responsible for the tragic crime at Gibeah (Judg 19:22; 20:13) and the two "scoundrels" who gave false witness against Naboth (1 Kgs 21:10–13; cf. the *‹ēd bĕliyya‹al yālîṣ mišpāṭ,* "the *bĕliyya‹al* witness who mocks justice" in Prov 19:28). *bĕliyya‹al* type individuals subverted the institution of the monarchy (cf. 1 Sam 10:27; 2 Sam 20:1; 2 Chr 13:7). According to royal ideology, the Davidic king stood as the very antithesis to such behavior (*TDNT,* 2.135; cf. 2 Sam 23:6; Ps 101:3). The expression "sons of *bĕliyya‹al*" is also attested, albeit briefly, with reference to the cult. The wicked who seduce Israel away to worship other gods are described as "sons of *bĕliyya‹al*" (Deut 13:14—Eng 13:13) as are the evil sons of Eli "who do not know Yahweh" (1 Sam 2:12).

C. In the Pseudepigraphic Literature

Belial (Beliar) is amply attested in the pseudepigraphic material. The many occurrences include *Jubilees* (1:20; 15:33), the *Testament of the Twelve Patriarchs* (Reuben 4:7, 11; 6:3; Simeon 5:3; Levi 3:3; 18:12; 19:1; Judah 25:3; Issachar 6:1; 7:7; Zebulun 9:8; Dan 1:7; 4:7; 5:1, 10–11; Napthali 2:6; 3:1; Asher 1:8;

3:2; 6:4; Joseph 7:4; 20:2; Benjamin 3:3–4, 8; 6:1, 7; 7:1–2), the *Sibylline Oracles* (3:63–74); the *Martyrdom* and *Ascension of Isaiah* (1:8–9; 2:4; 3:11, 13; 4:2, 4, 16, 18; 5:1, [4], 15) and the *Lives of the Prophets* (Daniel 4:6, 20; Nathan 17:2). For translations and introductions to these texts, see *OTP*.

Belial is called the angel of wickedness, the ruler of this world (*Mart. Is.* 2:4; 4:2). He is the head of the demonic powers (*Mart. Is.* 1:8). In dualistic fashion, his law and will are described as being set over against the law and will of the Lord (*T. Naph.* 2:6, 3:1). His way is one of darkness as opposed to light (*T. Levi* 19:1; cf. *T. Jos.* 20:2). Belial's angels are set over against the angels of the Lord (*T. Ash.* 6:4). He is master of the spirits of error (*T. Jud.* 25:3; *T. Zeb.* 9:8; *T. Levi* 3:3; cf. the spirit of truth and the spirit of error in *T. Jud.* 20:1).

Belial accuses and ensnares people from the path of righteousness (*Jub.* 1:20) causing them to stumble (*T. Reu.* 4:7). Those who belong to him become "like an ox under the yoke" (*Liv. Pro.* 4:6). Chief among his works is sexual promiscuity, "the plague of Belial," which separates one from God (*T. Reu.* 6:3; *T. Sim.* 5:3). Belial is associated with the most wicked of humanity. Being angry at Isaiah due to his prophecy (*Mart. Is.* 3:13; 5:1), he is said to have dwelt in Manasseh's heart and was ultimately responsible, according to tradition, for Manasseh's sawing the prophet in half (*Mart. Is.* 1:8–9; 5:1–16). *Sibylline Oracles* 3:63–74 records a description of the advent of Belial, the signs he will perform (e.g., raising the dead, leading men astray), and his ultimate demise. Belial here seems to be a reference to Nero (cf. *Mart. Is.* 4:1–2; Collins in *OTP*, 1.360; Knibb in *OTP*, 2.161 n.4d). In addition, Belial is said to have tempted Dan to kill Joseph with a sword (*T. Dan* 1:7), hindered the prophet Nathan on his way to David (*Liv. Pro.* 17:2), troubled Potiphar's wife (*T. Jos.* 7:4), etc. In eschatological imagery, Belial's slaughter is described as taking place on the earth when blood pours forth from a mountain (*Liv. Pro.* 4:20).

Moses intercedes in *Jub.* 1:19ff. with a prayer that the spirit of Belial may not rule over God's people to accuse them and ensnare them from every path of righteousness. In *T. Benj.* 7:1, the faithful are instructed to flee from Belial because he offers a sword which turns out to be the mother of the seven deadly sins. Yet even though Belial may be the ruler of the world, the righteous can resist him in the present age (*T. Reu.* 4:11). *T. Dan* 5:1 exhorts, "Observe the Lord's commandments … that Belial may flee from you" (cf. *T. Iss.* 7:7; *T. Ash.* 3:1–2).

The length of Belial's reign has been predetermined (*Mart. Is.* 4:12; see comment on Nero above). He will be overcome in the last days by God's anointed agents (*T. Levi* 3:3; 18:12; *T. Dan* 5:10–11). His demise is described in various ways including being trampled down (*T. Zeb.* 9:8), bound (*T. Levi* 18:12), and cast into the fire (*T. Jud.* 25:3; cf. *Sib. Or.* 3:71–74). Those who have been captives of Belial will be liberated by God (*T. Zeb.* 9:8; *T. Dan* 5:10–11).

D. At Qumran

Belial is the most frequently used title for the leader of the forces of darkness in the Qumran material, occurring especially often in the *War Scroll* (1QM; Yadin 1962: 232–34) and the *Thanksgiving Hymns* (1QH). The references to Belial in the Qumran material parallel what we have seen in the pseudepigraphic literature. Similar to the titles used in the pseudepigraphic material, he is called the angel of enmity (CD 16:5; 1QM 13:11) who is the prince of the kingdom of wickedness (1QM 17:5–6). He heads the forces of darkness, often called "the army/troops or lot of Belial," against the Sons of Light or "the lot of God" (1QM 1:1, 13; 11:8; 15:3; 1QS 2:2, 5; Collins 1984:127–32). "All the spirits of his lot, the angels of destruction, walk according to the precepts of darkness, and towards them is their desire all together" (1QM 13:12). As in the pseudepigraphic sources mentioned above (e.g., *Jub.* 10:8), the word *maśṭemah*, "hatred, malevolence," is often associated with Belial and his purposes (1QM 13:4, 11; 14:9; CD 16:5; 1QS 3:23).

1QM 13:11 points out that it was God who appointed Belial for the task of corruption. It is because of the angel of darkness that all sons of righteousness go astray (1QS 3:21). It was Belial, according to CD 5:18, who raised up Jannes and Jambres, the names of the Egyptian magicians, in order to oppose Moses and Aaron (cf. Exod 7:11; 2 Tim 3:8). Several times we find references to the cursing of Belial and his lot for the wicked plans of hatred which they engender. This cursing is carried out by the levites in 1QS

2:4b–10 (cf. Deut 27:14) and by the priests, levites, and elders in 1QM 13:1–6 (cf. 4Q286–87; 4Q280–82; 4Q175:23).

The reign or dominion of Belial *(mmš lt blyʿl)* occurs frequently in the Qumran material (e.g., 1QM 14:9; 18:1; 1QS 1:18, 24; 2:19; 3:21–22; CD 12:2). It was believed that the present age was under his control (cf. 1QS 2:19 "year by year as long as the dominion of Belial endures"). This is also supported by CD 4:12–19 which describes the loosening of Belial against Israel. Mention is also made in this same passage of the three nets of Belial with which he ensnares humans (cf. Kosmala 1965:91–113; Knibb 1987:40–43).

The present age of wickedness brought about trials which would test the faithful members of the community (1QS 1:17–18a). Yet this age was not to continue for long. In the near future God would intervene and destroy the forces of Belial, as foretold by the seers (1QM 11:8). The great eschatological war will be fierce, with the tide of battle swaying back and forth between the Sons of Light and the Sons of Darkness, the army of Belial. Yet in the end, at the appointed time, the great hand of God will subdue and totally annihilate Belial and all the angels of his dominion and all the men of his lot (1QM 1:4–5, 13–16; 18:1–3; cf. 4QFlor 1:7–9). The divine inauguration of the new age follows where injustice will be no more (1QS 4:18b–23a).

The *Thanksgiving Hymns* are known for their characteristic use of material from the Hebrew Bible, and this is true of the Belial imagery as well. This is most clearly seen in 1QH 3:28b–32 which uses the imagery of the fiery "torrents of Belial" from Ps 18:5–6—Eng 18:4–5 (= 2 Sam 22:5) to describe his personal sufferings which are likened to the eschatological battle at the final consummation ("the period of wrath for all Belial"). On the ambiguity of this eschatological language, see Collins (1984:137–38).

E. In the New Testament

In light of the extensive use of Belial above, it is surprising to find only one occurrence of Belial in the NT. "What accord has Christ with Belial?" occurs in 2 Cor 6:15. Interestingly, this phrase is preceded by the expression "what fellowship has light with darkness" which reminds us of the dualistic use of Belial and the forces of Darkness fighting God and the forces of light mentioned above in both the pseudepigraphic and Qumran material. The use of Belial here as well as other vocabulary and concepts has led some to conjecture that 2 Cor 6:14–7:1 was taken over by Paul from Qumran or some other form of Jewish Christianity (see Kümmel 1975:287f.).

THEODORE J. LEWIS

BELIEF, BELIEVERS (NT). In Christian history "believer" is one of the most common terms used to designate individuals who have "believed" in Jesus Christ as their Savior and Lord. In response to the Philippian jailor's query "What must I do to be saved?" Paul and Silas replied, "Believe in the Lord Jesus, and you shall be saved" (Acts 16:30–31). NT Greek does not have a separate noun for the word "believers"; rather, "believers" is the rendering given by various translations for (1) substantival participial constructions formed from the verb "believe" (*hoi pisteuontes,* e.g. Acts 5:14; Rom 1:16; 1 Thess 1:7, 2:10; cf. *Herm. Sim.* 9:19, 1–2) or (2) substantives formed from the adjective "faithful, reliable" (*hoi pistoi,* Acts 10:45; 2 Cor 6:15; 1 Tim 6:2).

The use of "believer" is especially prominent in the post-resurrection community. During the earthly life of Jesus the primary term used to designate his followers was "disciple" (Gk *mathētes*). While there were many different forms of master/disciple relationships in Israel, Jesus' disciples were distinguished from others by their response to his call, by following him only, and by listening to and obeying his teaching (Hengel 1981:61). Once Jesus passed from the scene his disciples could no longer physically follow him. The term "disciple" began to recede in usage, so that in the epistolary literature, "disciple" does not occur at all. Other terms were used to describe the followers of the risen Christ (e.g., "Christians," "brothers/sisters" "saints," "imitators"). For the early church, one phrase which naturally expressed the new relationship with the risen Lord was "believer." Since they could no longer physically follow Jesus, the early church now focused on "belief" as one of the chief characteristics of their relationship with him in the new age.

This transition is recognized in the conclusion to the gospel of John. Thomas, who had followed Jesus as his disciple, gives a great confession upon seeing the risen Lord (Jesus is "Lord and God"), but Jesus pronounces blessing on those who will believe without seeing (John 20:24–30). Paul also recognizes "belief" to be the chief characteristic of the new age. In the oft-disputed phrase where Paul says that he no longer knows Christ "after the flesh" (2 Cor 5:16), Paul decries his former "worldly" attitude toward Jesus, which has now passed away by being "in Christ" (Martin 1981:59–60). The transition from "disciple" to "believer" may be one indication of the way in which the developing Christian tradition allowed room for both the tradition of the historical Jesus and Paul's proclamation of the risen Christ:the follower of Jesus has passed from being a "disciple" who follows Jesus in a physical sense to being a "believer" who is a new creation in Christ (2 Cor 5:17).

Paul also expands the focus from "belief in Jesus" to "belief of the truth" (2 Thess 2:13), which for him essentially means belief in all that comprises apostolic Christianity. Elsewhere the noun "faith" *(pistis)* has the additional objective nuance "belief" and means simply "Christianity" (1 Tim 4:1, 6; Tit 1:4; *BTNT* 1:90; Guthrie 1981:593–94). Hence the true believer is one who, although no longer able to follow Jesus physically, focuses belief on the reality of a risen Lord and Savior, exercises personal faith unto salvation, and is characterized by a lifestyle consistent with apostolic teaching concerning the Christian life.

MICHAEL J. WILKINS

BELLS [Heb *paʿamōn* (פַּעֲמֹן)*; mesîllôt* (מְסִילוֹת)]. Hollow, cup-shaped or conical objects made of metal that produce a sound when struck by a metal clapper suspended within (mentioned in the tabernacle texts of Exodus [28:33–34; 39:25–26] and in Zech 14:20). The sound is produced by the movement of the object itself. Bells, like rattles, therefore belong to the class of musical instruments known as idiophones.

Most of the bells found in archaeological contexts are quite small, some under 2 cm in height and others 4 to 5 cm in height (see catalog in Bayer 1963:8–12). They are typically made with small metal rings or loops placed on the top and often connected to the inside attachment for the clapper. The small size of the bells and the fact that they nearly all have rings or loops indicates that they were not hand-held bells but

rather were meant to be fastened to an item of clothing or jewelry, or even to animal trappings. Most examples of bells are made of bronze, with iron clappers. Presumably they could also be made of iron or of precious metals.

"Bells" as used in Exodus (Exod 28:33–34; 39:25–26) refer to small objects made of "pure gold" and attached alternately with pomegranates made of dyed wool and linen around the skirts of the "robe of the ephod," which is one of four special overgarments worn only by the high priest. These items of high priestly apparel were not garments in the usual sense. Rather, they had ritual significance in their own right; they were part of a complex of ritual acts performed by the chief priest "before Yahweh," that is, within the tabernacle itself and not in its outer precincts (Haran 1978:214–18). Those ritual acts consisted of two sets:three acts the priest performed with incense, lamps, and "show bread," and three acts represented by three special items of high priestly apparel, with the bells attached to one of these.

The meaning of the bells' sound, to be heard when the priest entered and exited the sanctuary, cannot be determined exactly. In many cultures the ringing of bells has a prophylactic or apotropaic function, to ward away or drive away demonic spirits. Some scholars feel there is a primitive remnant of such a function in the priestly use, since the phrase "lest he die" follows the injunction in Exod 28:35 for Aaron to wear the robe with bells. However, that warning may also be considered a summation of the seriousness with which all the items in that section of Exodus should be regarded. It is more useful to note that the "bells" garment is sandwiched between two other items of apparel, the diadem and the ephod with breastplate, that have symbolic significance for the priest's role in connecting the people of Israel to their God. In this context, the bells perhaps help stimulate the attention of the deity, which is the object of the other two ritual garments.

The other biblical word for bells, *meṣîllôt,* found in Zech 14:20, refers to bells associated with horses, apparently attached to their trappings. While the appearance of bells on royal or priestly garb is virtually unattested in Near Eastern art, examples of horses wearing bells can be seen in Assyrian art. The bells on Zechariah's horses are special in that they carry the inscription "Holy to Yahweh," a standard formula denoting sanctity. The prophet's eschatological vision sees a time when even horses, animals of war, will become holy, thus symbolizing the utter holiness and peace of the new age.

CAROL MEYERS

BELMAIN (PLACE) [Gk *Belmain* (Βελμαιν)]. A site mentioned in the book of Judith whose exact location is unknown (Jdt 4:4). The many variant spellings attested in the Greek manuscripts suggest that the name is corrupt. It is also possible that other variants of the name occur at 7:3 and 8:3 (BALBAIM, BALAMON), although this is unclear. Aharoni and Avi-Yonah (MBA) identify the site with Abel-maim (M.R. 204296), some thirteen miles south of Scythopolis. Of course, given the genre of the book of Judith, it is possible that the town is entirely fictitious. See also JUDITH.

D. BD and Peter
E. BD and the Composition of the Fourth Gospel
F. BD and the History of the Johannine Community
G. Conclusion

A. Introduction

At the Last Supper the beloved disciple (henceforth BD) has a position of intimacy and privilege close to the breast of Jesus. Through him Peter seeks information from Jesus concerning the identity of the betrayer (John 13:23–25). The disciple stands along with the mother of Jesus at the cross. Both are commended to each other by the Lord, and the disciple takes her to his own home (19:26–27). Following Mary Magdalene's report, the disciple outruns Peter in a race to the empty tomb. Prompted by the distinctive arrangement of the grave clothes, he "sees and believes" (20:2–10). The disciple, involved with Peter in the miraculous catch of fish, recognizes the stranger on the shore as the risen Lord (21:7). He later follows Jesus and hears his fate discussed by Peter and the Lord in a way that gives rise to a false rumor that he was not to die (21:20–23). Though not explicitly mentioned, this disciple is clearly meant in the subsequent reference to the one who "witnesses and has written these things" (21:24). Following the death of Jesus and piercing of his side, there is a similar indication of sure witness given by "one who has seen." This witness must be the BD, since he is the only male disciple indicated as present at the crucifixion. More controversial is a reference in 18:15–16 to "another disciple," who accompanies Peter to Jesus' trial and who, on the strength of being known to the high priest, is able to gain access to the proceedings for himself and Peter. The association with Peter and certain links with 20:2–10 (cf. 20:2:"the other disciple whom Jesus loved"; 20:3:"the other disciple") suggest that here too the BD is meant (Neirynck 1975). Some scholars have also seen a reference to the BD in the unnamed disciple who along with Andrew leaves John the Baptist to become a disciple of Jesus in 1:35–40. However, readers of the gospel could hardly be expected to pick up such an elusive hint of the BD's presence.

Following the indication of authorship apparently provided in 21:24, church tradition saw in the unnamed BD the author of the fourth gospel and identified him as one of the Twelve, John, son of Zebedee, not otherwise mentioned by name in the gospel (note, however, "sons of Zebedee" in 21:2). This apostolic identification, though not uncontested in the early centuries, appears towards the end of the 2d century and undoubtedly played a large role in securing for this controversial gospel a place within the canon.

Since the early 19th century, historical-critical scholarship has increasingly questioned both the traditional identification of the BD as John, son of Zebedee, and the concomitant recognition of this apostle as author of the fourth gospel. Some scholars have seen in the BD a literary fiction, lacking all historical identity and playing a purely symbolic role as representative of perfect discipleship (Loisy), of Gentile Christianity (Bultmann), of the more prophetic, spirit-directed church order of Johannine Christianity, in distinction to the more institutional order represented by Peter (Kragerud 1959), or as the embodiment of the ideal witness (Käseman). That the BD is an idealized figure and has a symbolic function within the gospel is beyond doubt. But a lack of any corresponding historical identity would severely undermine his leading role as witness and guarantor of the gospel. Detached from historical plausibility, the remarks of 19:35 and 21:4, whether written by the evangelist or redactor, lose all force. In fact, the dialogue in 21:20–23 concerning the fate of the BD seems to have been prompted precisely by his recent death. Moreover, the BD is constantly set over against historical figures such as Peter and the mother of Jesus, the latter remaining, like the BD, unidentified by name. These considerations incline contemporary scholarship to hold together both the historical and the symbolic aspects of the BD and to see in this figure a genuine historical personage who is presented in the fourth gospel in a symbolic and idealized way.

Within this basic consensus, discussion concerning the BD has chiefly focused upon the following issues:

1. Identifying the historical personage underlying the symbolic character.
2. Delineating the literary/theological/symbolic role he plays.
3. Clarifying his role and status with respect to Peter.
4. Assessing the stage and nature of his contribution to the composition of the gospel.

5. Determining his position and role within the developing and ultimately divisive history of the Johannine community.

B. Historical Personage Underlying the BD

The external evidence for identifying the BD with the apostle John, son of Zebedee, begins in the late 2d century and centers chiefly on the testimony of Irenaeus. However, critical scholarship has encountered grave difficulties in determining any foundation for this testimony of Irenaeus in an earlier period (Barrett 1978:100–105). Also, the gospel would hardly have had such a battle for acceptance had its authorship by a leading apostle been widely accepted. The chief internal grounds in favor of John, son of Zebedee, would be the nonappearance otherwise in the gospel of this significant disciple and subsequent Christian leader. Moreover, the constant pairing off of the BD with Peter corresponds closely to the picture of John in the Synoptic tradition.

Several factors, however, speak strongly against this identification: (1) the whole presentation of the gospel is not such as can easily be credited to a Galilean fisherman; (2) its symbolic nature and tendency to blend narrative and lengthy discourse does not suggest an eyewitness account; (3) it is inexplicable that an eyewitness disciple from Galilee would omit the bulk of Jesus' ministry in that region to concentrate so heavily upon Jerusalem; (4) the gospel omits important incidents of Jesus' life (e.g., the raising of the daughter of Jairus, the transfiguration, the agony in the garden) at which the Synoptic tradition records the presence of John; (5) incidents in which the BD does appear, such as the scene at the foot of the cross and the race to the tomb, are of dubious historical value. There are, then, no compelling grounds for identifying the BD with John, the son of Zebedee (though this does not exclude the possibility of a relationship between the two figures on the literary level of the gospel; see Conclusion below).

Other historical candidates proposed include: (1) *Lazarus* (F. V. Filson, J. N. Sanders), the only other person in the gospel of whom it is specifically stated that Jesus loved him (John 11:3, 11, 36). But it is hard to explain why a significant character mentioned by name in chaps. 11–12 becomes anonymous in the so-called "Book of Glory" (chaps. 13–20, 21); (2) *John Mark* (B. Weiss; L. Johnson) whose family, according to Acts 12:12, had a house in Jerusalem and who on this interpretation is supposed to have acted as host at the Last Supper; (3) *Matthias,* or (4) a *blood brother of Jesus* (J. J. Gunther). But all these identifications remain highly speculative. Most scholars abandon the quest for a name and see beneath the BD a well-educated disciple of Jesus, in all likelihood not one of the Twelve. Further specification, such as Jerusalem provenance (Schnackenburg 1982) or former disciple of John the Baptist (Brown 1979), rests on questionable harmonizations of the Synoptic and Johannine traditions.

From chap. 21 it seems indisputable that the BD was a historical person who had played a significant role in the life of the Johannine community and whose recent death had occasioned widespread dismay (v 23). We should probably see in him the founder and head of the Johannine "school" during the period of its consolidation (Culpepper 1975:264–66). In this role he comes very close to the similarly unidentified "Teacher of Righteousness" at Qumran (Roloff 1968). Though well recognizable under his epithet to the members of community, the BD may not in fact have been a well-known figure outside the Johannine circle (Thyen 1977). If he had been in fact an eyewitness disciple of Jesus, his testimony as recorded in the gospel has evidently gone through a long process of narrative expansion and development along symbolic lines. Clearly, however, the later community believed that its distinctive faith rested upon his sure witness to the Lord.

C. BD as Literary/Theological Symbol

The BD is present at all the key events of the "Book of Glory" —the supper, trial (?), crucifixion, empty tomb, and appearances of the risen Lord. As the comments in 19:35 and 21:24 make clear, he is there precisely as *witness.* As a sure witness present at all these key events the BD offers the community a guaranteed testimony. Beyond the role of witness, however, his position of intimacy "close to the bosom" of Jesus (13:23–25), which echoes Jesus' own being "in the bosom" of the Father (1:18), suggests a parallel between his role vis à vis Jesus and that of Jesus vis à vis the Father. That is, he is a *medium of revelation* between Jesus and the disciples—as shown by Peter's attempt to solicit through him information from Jesus concerning the betrayal. The presence of the BD in such scenes clearly has

proleptic significance with respect to his function in the Johannine community. His later role as witness, teacher, and reminder of what he has seen is thereby foreshadowed and guaranteed. In this respect, as many scholars have noted, there is a notable convergence between the role of the BD and that of the Paraclete as depicted in chaps. 13–17 (Culpepper 1975:267–70). Indeed, the otherwise curious reference to "another Paraclete" in 14:16 may be explained in the sense that after the departure of Jesus the BD would be "Paraclete" of the community, a role which, after his own death, would be carried on by the spirit (see also PARACLETE).

But, along with this role over and against the community, the BD is clearly also a *paradigmatic and representational* figure, and this too in a proleptic way. His faithful following of Jesus (at the trial, at the cross, in the risen life), a following that contrasts favorably with the flight of the other disciples, sets a pattern of perfect *discipleship* in response to Jesus' intimate love. Moreover, in his coming to faith in the resurrection simply on the basis of the signs of the grave clothes and the miraculous catch of fish, without having seen the risen Lord, the BD foreshadows the *faith* of subsequent believers in that they also believe without having seen and because of this come under the blessing pronounced by Jesus (20:29). In this way the disciple functions for later generations as a *point of insertion* into the pivotal events and experiences connected with the "glorification" of Jesus (Byrne 1985). Though separated in time, the later Johannine community has the same relationship to Jesus as the BD has in the gospel. The replacement of his personal name by the simple epithet functions as an invitation to each member to identify with his status of being specially loved by Jesus, his response in faith and his perfect discipleship (Wilckens 1980). Finally, the community is doubtless intended to understand Jesus' bequest from the cross (19:26–27) as an assurance that the faith of its representative (the BD) is now fused with the perfect faith of Jesus' mother, a faith which at Cana (2:5) prompted the first sign and revelation of Jesus' glory. Henceforth, every believer belongs to the family of Jesus, human and divine (20:17). Thus the figure of the BD sums up and embodies the promise held out by the gospel that believers should receive the power "to become children of God" (1:11–12).

D. BD and Peter

In all passages featuring the BD in the Gospel of John, the scene at the cross (19:26–27) alone excepted, Peter also appears. Moreover, wherever the two appear together there is a constant pattern whereby the BD upstages Peter in some key respect:at the supper (13:23–25) he has a position of closer intimacy with Jesus and it is through him that Peter must request information; he arranges for Peter to have access to the trial (18:15–16); he arrives first at the tomb (20:4) and only of him is it said that he "saw and believed" (20:8); after the catch of fish it is the BD who recognizes the stranger on the shore as the risen Lord and communicates this knowledge to Peter (21:7); the latter's threefold protestation of love (21:15–17) inevitably brings to mind the earlier denial that contrasts so unfavorably with the BD's unsullied loyalty. Finally, Peter receives something of a rebuke in response to his question to Jesus concerning the disciple's fate (21:20–22).

Does this pattern of competition with respect to Peter reflect a real anti-Petrine polemic in the Johannine community and an attempt to replace his preeminence with that of the BD? Or is it simply a vigorous attempt to win recognition and status for the BD and the kind of Christianity he represents within the more established movement that looked to Peter? In the passages occurring in chaps. 13–20 the upstaging of Peter seems deliberate and unrelieved (though the scene at the tomb, [20:2–10] implies some recognition of him as prime resurrection witness). Chap. 21, however, provides a more balanced perspective:the spiritual insight of the BD (v 7) is set in relationship to Peter's acknowledged pastoral role (vv 15–17); his "following" of Jesus has involved a "remaining" rather than a glorious martyr death (vv 18–19, 22). It may well be that chap. 21 represents an attempt on the part of the community to soften an earlier polemic in the interests of gaining wider acceptance following the death of the BD (Maynard 1984). The gospel as a whole leaves the impression of a "defensive rather than an offensive polemic against the Petrine claims" (Culpepper 1983:122). The dual picture of the BD and Peter in the Gospel of John serves notice that the necessary institutional structures of authority and office in the Christian

community must in the end be subservient to the supreme dignity shared by all:that of "belonging to the community of the beloved disciples of Jesus" (Brown 1979:164).

E. BD and the Composition of the Fourth Gospel

Despite the designation of him as "the one who has written these things" (21:24a), the BD is hardly the literal author of the Gospel of John. That an early Christian leader would write himself into the gospel under such a pretentious title as "beloved disciple" is scarcely to be imagined. It is far more likely that the community, which revered him as founder and guide, conferred the epithet upon him (perhaps posthumously) and that in due course their representative in the shape of the Evangelist wrote him into the gospel. It could be that the BD was responsible for a collection of traditions in distinctly Johannine form which served as the Evangelist's primary source. But the Greek phrase *ho grapsas tauta* need not imply any written activity on the part of the BD, since it can be taken in the causative sense and understood simply as designating the BD's witness as the ultimate source and authority for the written gospel.

Though most striking in the case of the "witness" statements of 19:35 and 21:4, all the passages featuring the BD present an aspect of some intrusiveness in their immediate contexts. It is highly likely that they represent insertions by the Evangelist into more traditional material. Some scholars would ascribe their composition entirely to a Redactor seen as responsible for the addition of chap. 21 and other material to the original gospel. The nature of chap. 21, however, does not so much suggest a separate author as fresh circumstances which might have prompted the original Evangelist to compose an appendix. Central among these circumstances would appear to be the death of the BD, clearly alluded to in 21:20–23. Apart from a more general sense of loss, this event would seem to have caused particular dismay in the community because of a pervasive understanding of a "word" of the Lord to the effect that the BD was not to die before the Parousia. The author of chap. 21 clarifies the matter by distinguishing between "not dying" and "remaining" until the Lord comes. The "remaining" of the BD is not incompatible with his death, since his distinctive witness "remains" in the community's life and in the gospel which he ultimately has caused to be written.

In this respect the Gospel of John represents a distinctive case of pseudonymous NT writing. Whereas other late NT authors wrote in the name of well-known early Christian identities (Paul, Peter, James, etc.), the fourth evangelist, for the representational and symbolic purposes discussed above, chose to rest his authority upon an unnamed yet authoritative disciple of Jesus.

The more recent, literary approach to the gospel steps aside from the historical questions to study the way in which the BD figure operates as a literary device. From this perspective, which pays attention to the role of narrator throughout, 21:24 is understood as designating the BD as "implied author" of the work (Culpepper 1983:44–48).

F. BD and the History of the Johannine Community

Many attempts have been made in recent decades to reconstruct the history of the community that gave rise to the Johannine literature (the gospel and the three letters). While the gospel reflects the tensions that accompanied the emergence of the community's distinctive self-identity and theology, the letters seem to evidence outright separation and schism. It is not easy to relate the somewhat shadowy figure of the BD to particular reconstructions with any degree of confidence, save that his central founding role must be preserved. In effect there may have been a struggle over the correct interpretation of the BD's inheritance. More precisely, some would see the insertion of the BD's witness into the community tradition, in particular the comment recorded in 19:35, as part of a campaign against the tendencies of a docetic nature which seem to have played a role in the later division (1 John 4:1–3). A recent suggestion wishes to identify the BD with the author of 2–3 John, who names himself "the presbyter" and struggles against the (more institutionalizing?) leadership claims of one Diotrephes (Thyen 1977:296–99). But an identification with such a late figure effectively excludes the possibility that the BD was both founder and original witness of the community.

G. Conclusion

In the figure of the BD we should see the head of the Johannine school in its formative period, the person chiefly responsible for the distinctive cast of its particular brand of Christianity. Whether he was in

fact a disciple of Jesus remains obscure. In any case the BD was not widely known or recognized outside his own movement. Towards the end of his life or shortly after his death the Evangelist sought to guarantee the community's gospel by depicting its founder as an eyewitness disciple of Jesus, in fact, as the disciple *par excellence.* Though this depiction may not have been literally accurate in a historical sense, within the framework of Johannine theology it retained a deeper validity because of the central tenet of the community that in its life and witness it gave immediate access to Jesus in a way completely comparable to the intimacy enjoyed by the historical disciples. Insertion of the BD into the gospel as a literary device served both as guarantee and vehicle of that access.

It may well be that the Evangelist found a place for the BD in the gospel tradition by "suppressing" the figure of John, son of Zebedee, and casting his own mentor, anonymously and with much embellishment, in the now vacant role. If this was in fact the case, then the traditional identification of the BD with that particular disciple of Jesus has, in a roundabout way, a certain justification. In the late 2d century John reentered the role from which he had been removed, thereby, with an irony worthy of the gospel itself, winning for it a place within the Christian canon.

BRENDAN BYRNE

BELSHAZZAR (PERSON) [Aram *bēlša*ʿ*ṣar* (בֵּלְשַׁאְצַר); Akk *Bēl-šarra-uṣur*]. Son of Nabonidus (556–539 B.C.), the last king of Babylonia prior to the Persian conquest, Belshazzar ruled as co-regent for at least three years while his father was in Arabia. This arrangement in itself is important, since it has no parallel in any other period of Mesopotamian history. There is no direct evidence that he altered conditions in southern Mesopotamia in any way during his father's absence. Belshazzar's name occurs in a number of contract tablets and letters datable to the first fourteen years of Nabonidus' reign. These comment on his business dealings with certain prominent banking houses or "families," most notably those of Nur-Sin and Egibi. In addition, they document Belshazzar's rise to power prior to Nabonidus' 11th year and outline some of his official duties as co-regent after 545 B.C. He appears to have had ample authority to give orders to temple officials in Uruk and Sippar and could even lease out temple land. His name disappears from the contract tablets in Nabonidus' thirteenth year; it has been suggested that this coincides with Nabonidus' return to Babylonia from Tema.

Belshazzar turns up in a number of Greek and Latin sources, in the rabbinic commentaries, and (along with Nebuchadnezzar) in the Book of Daniel. The *Gen. Rab.* contains one of the earliest references in any source to Belshazzar as a "cosmocrator," possessed of a kingdom whose boundaries extend from one end

of the world to the other. It also characterizes him beside Nebuchadnezzar as one of "two wicked men, two destroyers." The story of Belshazzar's feast in Daniel 5 is generally regarded as an attempt by its author(s) to superimpose source material related to Nabonidus' reign on a hostile image of Nebuchadnezzar. The Jews of the postexilic period were acquainted with both favorable and unfavorable characterizations of Nabonidus and Belshazzar in their contemporary cuneiform sources. They nevertheless placed more emphasis on the negative aspects because they were tailor-made for the didactic materials incorporated into the Book of Daniel.

Belshazzar commanded Babylonian troops in the vicinity of Sippar when Cyrus of Persia conquered Anatolia (545 B.C.). Nothing is known of his activities after 543 B.C.

BELT. See DRESS AND ORNAMENTATION.

BELTESHAZZAR (PERSON) [Heb, Aram *bēlṭĕša›ṣṣar* (בֶּלְטְשַׁאצַּר)]. Babylonian name given to Daniel by Nebuchadnezzar's chief eunuch Ashpenaz in the exilic period when a group of Jewish noblemen were similarly renamed (Dan 1:7). See SHADRACH, MESHACH, ABEDNEGO. Belteshazzar is the Akkadian name *balāṭsu-uṣur,* "guard his life," and is a shortened form of a name that originally consisted of an Ÿ invocation of a god, namely " (may Marduk) guard his life." The Hebrew and Aramaic spellings reflect a faulty vocalization of the original Babylonian and are designed to incorporate the title or name of Nebuchadnezzar's god (Dan 4:5; see BELSHAZZAR, which genuinely contains the name of the god Bel.) A few mss render the name *bēlṭĕšaṣar,* and one ms each gives the name *bēlṭ›ašṣar* and *bēlṭĕšaṣa›r.* The bestowal of a new name portended a new destiny *(nomen omen)* and finds a parallel in Pharaoh's renaming of Joseph (Gen 41:45) and Nebuchadnezzar's renaming the last crowned head of preexilic Jerusalem (2 Kgs 24:17). Daniel's new name is found predominantly in Dan 4 and always in close association with the spoken works of Nebuchadnezzar. The ironic overtones in the story of the King's dream of the great tree thus extends to the nomenclature. It is not Marduk who guards Belteshazzar's life as his name implies, but the Most High God (Dan 3:32) who alone has the power to protect those who put their trust in Him (Dan 3:17). For further discussion see *Daniel*.

PETER W. COXON

BELTETHMUS (PERSON) [Gk *Beeltethmos* (Βεελτεθμος)]. In 1 Esdras 2, Beltethmus occurs as the proper name of a Persian official living in Palestine at the time of Artaxerxes (1 Esdr 2:12—Eng v 16; 2:19—Eng v 25). However, evidence from the parallel text in Ezra 4 indicates that this is not a proper name, but a Greek transliteration of *bĕ‹ēl-ṭĕ‹ēm,* the Aramaic title of the Persian official REHUM (4:8, 9, 17; *baaltam*). The meaning of the title is debated, variously rendered "chancellor" (Schüpphaus *TDOT* 5:346), "commander," "commissioner" (Snell 1980:33), "postmaster," "lord of official intelligence," and "recorder of happenings" (cf. Josephus *Ant*. 11.26). Further indication that the meaning of this term was uncertain to the author of 1 Esdras 2 is indicated by the presence of both the title, *tō graphonti ta prospiptonta* ("the recorder" [RSV]), and the proper name, Beltethmus, together in the same verse (2:19—Eng v 25).

CRAIG D. BOWMAN

BEN-ABINADAB (PERSON) [Heb *ben-›abînādāb* (בֶּן־אֲבִינָדָב)]. A Solomonic prefect responsible for supplying provisions for the court for one month per year from the area of Naphath-dor; also the husband of Solomon's daughter Taphath (1 Kgs 4:11). Ben-abinadab's territory included the area of the Sharon Plain surrounding the port city of Dor. It apparently extended the length of the plain to the Yarkon River; some scholars, however, draw its S boundary between Dor and Socoh. The debate hinges on

whether the third district (Ben-hesed's) was also in the plain (see *HGB* 57–61 for discussion). Explanations of the word "Naphath-" *(nāpâ),* found only in conjunction with Dor, as "region," "height," or "yoke" are all unsatisfactory. Possibly, since Dor was "a town of the Tjekker" according to the 11th-century Wen-Amun account, *nāpâ* is a "Sea People" term cognate with Homeric Greek *napē,* "wooded valley," a reference to the wooded Sharon (Ben-Dov 1976).

The name Ben-abinadab ("Son of Abinadab"), a patronym, may be a title indicating that its bearer held a hereditary office (Alt 1950:22). Alternately, the personal names of Ben-abinadab and four other Solomonic prefects may have been lost at an early stage of the text's history. Lucian appears to preserve the oldest form of the Greek corresponding to Ben-abinadab. Beginning with the last word of 1 Kgs 4:10, if the Greek is divided as *(... phar) achinanadab*—Heb *([ḥ]pr) [bn] ʾḥyndb*—or *(... phara) chinanadab,* both with dittography of Gk *na,* it suggests Heb *ʾḥyndb* as in v 14. One may also divide, however, as *(... phara) chin anadab* (Heb *([ḥ]pr) kn ʾ[by]ndb*), reflecting *kap* for MT *bet* (Rahlfs 1911:228).

FREDERICK W. KNOBLOCH

BEN-AMMI (PERSON) [Heb *ben-ʿammî* (בֶּן־עַמִּי)]. The son of Lot's younger daughter and ancestor of the Ammonites (Gen 19:38). According to Hebrew tradition, the Genesis narrative (19:30–38) explains the origin of Ammon and Moab, but more accurately it underscores the intense contempt and disdain that Israel had for these two nations. H. Gunkel (1895:190) suggests that the narrative was originally a Moabite folktale, similar to many ancient deluge stories, that traced the common origin of Ammon and Moab to Lot. Rather than the less distinctive meaning "son of my people," a more distinctive "son of my near kinsman" (i.e., his father being his mother's near relation) is preferred. The meaning of the name in the narrative is not necessarily an attempt to explain the origin of Ammon, but to remind Israel of the Ammonites. According to Sayce (1895:22), "Ammi" or "Ammo" was the name of the god who gave his name to the nation. The name "ammi" is found in cuneiform inscriptions as part of the title of Ammonite kings and deities. While the common origin of the two nations is generally accepted (Judg 10:6; 11:15, 18, 25; Deut 2:19), the etymology of the name is questionable. For further discussion, see Speiser *Genesis* AB, 144–46; Westermann *Genesis 12–36* BK, 383).

JOEL C. SLAYTON

BEN-DEKER (PERSON) [Heb *ben-deqer* (בֶּן־דֶּקֶר)]. One of Solomon's twelve prefects, Ben-deker was responsible for providing supplies for the king from the second administrative district, which included the towns of Makaz, Shaalbim, Beth-Shemesh, and Elonbeth-hanan (1 Kgs 4:9).

Ben-deker's district consisted of land only recently taken from the Philistines. Its boundaries are thought to correspond in general to those of the original allotment of Dan (Josh 19:40–46), which included Shaalbim (Shaalabbin), Ir- (= Beth-) Shemesh, Aijalon, and Elon. One of the latter two sites is probably merged in the place name Elonbeth-hanan (1 Kgs 4:9), a location otherwise unknown and better read as "Elon/Aijalon [both spelled *ʾylwn*] *and* Beth-hanan" (with some Heb MSS) or "*as far as* Beth-hanan" (LXX). Makaz (Heb *māqaṣ*) does not appear elsewhere in the Bible and may be a defective spelling of *mqṣh* "from the end of" or the like, a phrase used in border descriptions (Naʾaman 1986:114–15). The Greek reading corresponding to Makaz, *mach (e)mas,* is found elsewhere for Heb *mkmš/s* "Michmas (h)," otherwise known only as a town in Benjamin. Greek *mach (e)mas* here may derive from Heb *mqṣ*, with *chi* standing for Heb *qop* (Rahlfs 1911:226).

Ben-deker's name (meaning "Son of Deker") is patronymic in form and may be a title indicating that he held a hereditary office (Alt 1950:22). The name Bidkar (Heb *bdqr*) in 2 Kgs 9:25 has been seen as a shortened form of Ben-deker (see, however, *IPN*, 149–50 n. 1; and Montgomery *Kings* ICC, 406). The name "Deker" is paralleled by the Ugaritic personal name *dqry*, which appears in census and quota lists (*KTU* 4.63:II:33 and 4.108:4 [probably the same individual in both texts]; *KTU* 4.116:17). The name is apparently related to Heb *dqr* "to stab, pierce." Noth (*IPN*, 241) compares Talmudic Aramaic *dqrʾ* "pick, mattock" from the same root. Possible parallels from cuneiform sources include the names *Bi-in-di-qí-ri* and *Da-qí-ru-um* (Tallqvist 1914:64). However, since *qí* may be read also as *ki*, one or both of these names may be related to Heb *zkr* (Aramaic *dkr*) "remember" rather than to Heb *dqr* "stab."

The oldest extant Greek rendering corresponding to Ben-deker appears to be Lucianic *huios rēchab* (Rahlfs 1911:226), which in 2 Kgs 10:15, 23 and elsewhere reflects Heb *bn-rkb* "Ben-rechab," a well-known patronym. Of the two readings, Heb *deqer* and Gk *rēchab,* the Heb seems preferable since the Gk tradition may be explained as resulting from a confusion of Heb *dalet* and *reš,* with Gk *chi* representing Heb *qop* (as in *mach (e)mas* for Heb *mqṣ,* Rahlfs 1911:226), and with assimilation to the well-known patronym Ben-rechab.

FREDERICK W. KNOBLOCH

BEN-DOSA, HANINA (PERSON). See HANINA BEN-DOSA (PERSON).

BEN-GEBER (PERSON) [Heb *ben-geber* (בֶּן־גֶּבֶר)]. The officer in charge of the sixth administrative district in Solomon's kingdom (1 Kgs 4:13). This district encompassed central Transjordan with its headquarters at Ramoth-Gilead. Each district was required to supply food for the royal court one month out of the year (1 Kgs 4:6).

A major point of discussion has been the similarities between 1 Kings 4:13 and 4:19. The text in 1 Kgs 4:19 lists Geber, son of Uri, as being in charge of Gilead. Some scholars take v 13 as referring to N Transjordan while v 19 refers to south Transjordan. W. F. Albright and others believe that the two verses originally referred to the same person. According to Albright, a later editor has mistakenly changed a reference to one officer and one district into two people and two separate districts. A third possibility is suggested by a Septuagint reading and is supported by Roland de Vaux (*AncIsr* 134). In place of Gilead in 1 Kgs 4:19, the Septuagint reads Gad (a change which involves only one consonant in the Hebrew text). If the original reading was Gad, as de Vaux argues, then there is no overlapping of territory, and two distinct references to Ben-Geber and Geber are to be understood.

PHILLIP E. MCMILLION

BEN-HADAD (PERSON) [Heb *ben-hădad* (בֶּן־הֲדַד)]. The name of at least two kings of Aram-Damascus in the 9th and 8th centuries B.C.E. The name Ben-Hadad is a Hebraized version of the original Aramaic name, Bir-Hadad, meaning "son of (the god) Hadad." The two certain Ben-Hadads are Ben-Hadad, son of Tab-Rimmon (early 9th century B.C.E., see 1 Kgs 15:18–20), and Ben-Hadad son of Hazael (early 8th century, see 2 Kgs 3:3, 24–25). There are serious questions about whether the Ben-Hadad of 1 Kings 20, 22, and 2 Kings 6–8 is a distinct king. Current studies have argued that this Ben-Hadad should be identified with Ben-Hadad son of Hazael and that these stories have been misattributed to the times of King Ahab of Israel and his sons (ca. 875–842 B.C.E.), when they originally described the times of Kings

Joahaz and Joash (ca. 814–782). This article will discuss the known kings of this name first and then turn to the problem of 1 Kings 20–2 Kings 8.

1. Ben-Hadad I, son of Tab-Rimmon, son of Hezion, was king of Aram-Damascus early in the 9th century and is known only from 1 Kgs 15:16–22 = 2 Chr 16:1–6. He is mentioned here in the context of a boundary conflict between Baasha of Israel and Asa of Judah. When Baasha attempted to fortify Ramah, at the border between Israel and Judah, so as to control movement in and out of Jerusalem, Asa sent a substantial gift to Ben-Hadad of Aram-Damascus to urge him to attack Israel on its northern flank. Ben-Hadad did so, conquering several towns of N Israel: "Iyyon, Dan, Abel-Beth-Maacah, and all of Kinneroth, as far as all the land of Naphtali" (1 Kgs 15:20). By invading this area, Ben-Hadad gained control of an important part of the major trade routes to the coastal cities of Tyre, Sidon, Acco, and Achzib. Asa's plan worked, since Baasha was forced to withdraw immediately from Ramah and deal with the Aramaean threat. It is unknown what settlement Baasha and Ben-Hadad reached. However, it does not appear that Aram kept control of the northern region of Israel for long, since Dan and Hazor (the latter located in Naphtali) were certainly back in Israelite hands by the reign of Ahab (ca. 875–853 B.C.E.).

2. Ben-Hadad, son of Hazael, ruled in Damascus at the very end of the 9th and the early years of the 8th centuries B.C.E. The son of Aram's most powerful king (see HAZAEL), Ben-Hadad saw much of the empire of his father crumble in a series of misfortunes known from biblical and extrabiblical sources. Clear references to his reign occur in 2 Kgs 13:3–7 and 22–25, but, as discussed below, 1 Kings 20, 22, and 2 Kings 5–7 may also deal with this king. Two extrabiblical sources are also known: (1) the inscription of Zakkur, king of Hamath and Luash in the early 8th century, and (2) a number of inscriptions of King Adad-nirari III of Assyria (ca. 810–783 B.C.E.), in which Ben-Hadad appears under the name Mar›i ("my lord"). All of these sources concern defeats suffered by Ben-Hadad.

The order in which the known events of Ben-Hadad's reign occurred is not certain, but the general flow of events suggests the severe decline in the political power of Aram-Damascus during his years. The Zakkur inscription describes a coalition that he led against Zakkur, king of the combined lands of Hamath and Luash. The latter was besieged in the city of Hazrak by Ben-Hadad and the armies of several N Syrian states, but the siege was broken, according to Zakkur, by divine intervention (although many scholars [see Pitard 1987:174] suggest that this may be an oblique reference to intervention by the Assyrian army on Zakkur's behalf). Nothing is said in the stela concerning the cause of this attack, but most scholars suspect that Hamath's pro-Assyrian stance was at the root of the problem. Whatever the case, Ben-Hadad was unsuccessful in overthrowing Zakkur.

The inscriptions of Adad-nirari III describe an Assyrian assault on Damascus itself as a result of which Mar›i, its king, surrendered and Adad-nirari entered the city to receive a heavy tribute at the royal palace. Recent studies of these inscriptions have tended to argue for dating this attack on Damascus in 796 B.C.E., and if they are correct, the king called Mar›i in these texts is certainly Ben-Hadad.

The third source of information is the biblical account of Ben-Hadad's relations with Joash in 2 Kings 13. During the reign of Ben-Hadad's father, Israel had been reduced to the status of a vassal state under Aram (2 Kgs 10:32–33). But 2 Kings 13:25 briefly describes how Joash of Israel fought with Ben-Hadad, threw off Aramaean domination and regained the Israelite cities that Aram had annexed during the reigns of his predecessors, Jehu and Joahaz. This was done in three critical battles, and 2 Kgs 13:17 suggests that the key battle took place at Aphek (probably located E of the Sea of Galilee).

Thus it appears that during his reign, Ben-Hadad suffered a major defeat against Hamath to the N, lost his vassal territories in Israel to the S, and was plundered by the Assyrian army in his capital city. Aram appears to have continued to decline over the decades following Ben-Hadad's reign.

3. The identity of the Ben-Hadad of 1 Kings 20–2 Kings 8 is problematic. 1 Kings 20 and 22 describe a major conflict between Israel and Aram-Damascus during the reign of Ahab, and 2 Kings 5–8 ostensibly concern themselves with various dealings between Aram and Israel during the reigns of Ahab's sons, Ahaziah and Joram. In four of these chapters the name of the king of Aram is given as Ben-Hadad (1 Kings 20; 22; 2 Kgs 6:24–7:20; and 8:7–15), and during the past half-century controversy has raged concerning the identity of this king. W. F. Albright (1942) argued that he was Ben-Hadad son of Tab-

rimmon, to whom he attributed a reign of over forty years. Others (cf. Mazar 1962) identified him as a successor to the latter and designated him as Ben-Hadad II (thus making the son of Hazael Ben-Hadad III). Other scholars (cf. Jepsen 1948; Miller 1966; Lipiński 1969; Pitard 1987) have noted a large number of apparent discrepancies between the portrait of Ahab in 1 Kings 20 and what is said about him elsewhere in Kings and in the extrabiblical records of his reign. See also AHAB.

Assyrian and Moabite sources, as well as other biblical passages, suggest that both Omri and Ahab were powerful kings of Israel who were on a political par with Aram-Damascus (see the Monolith Inscription of Shalmaneser III [*ANET,* 278–79] and the Moabite Stone [*ANET,* 320–21]). This view is also supported by archaeological evidence which shows that the Omride period was one of significant wealth and architectural achievement in Israel (cf. Samaria, Hazor, Megiddo, Dan). This is quite at odds with the portrayal in 1 Kings 20, where the king of Israel and his father (1 Kgs 20:34) are depicted as weak and completely dominated by Aram. It has also been noted that while the king of Aram is regularly called Ben-Hadad, literary analysis of the passage shows that the king of Israel was not originally named at all in the text (Pitard 1987:117–18). In addition, Assyrian sources give the name of the king of Aram who was contemporary with Ahab as Adad-idri (= Aramaic, *Hadad-ʿiḏr*), never Ben-Hadad. It has become increasingly clear that the later identification of the king of Israel in these chapters with Ahab was a mistake. The position of Israel as a weak vassal to Aram, the account of successful battles against a Ben-Hadad which climax with a victory at Aphek (1 Kgs 20:26), and the return of Israelite cities which had previously been captured by Aram, fit exactly into the preserved information available concerning the reign of Joash of Israel (2 Kgs 13:14–25). If the stories of 1 Kings 20 (and a somewhat different version 22:1–38) are to be redated to the early 8th century, then the Ben-Hadad of these stories must be identified as the son of Hazael. In addition, there is nothing in the stories of 2 Kings 5–7 which would argue against identifying their period as that of the Jehu rather than the Omride dynasty.

The only story in this entire section with a Ben-Hadad that cannot be identified with the son of Hazael is 2 Kgs 8:7–15, the account of Hazael's murder of King Ben-Hadad and his usurpation of the throne. Assuming the correctness of the above proposal, two possible interpretations of this passage can be suggested: (1) the name Ben-Hadad here may be a secondary addition placed in this passage after all the other Ben-Hadad stories had been wrongly attributed to the Omride dynasty. In this case the name of the king assassinated by Hazael should be Hadad-ʿidr. See ARAM (PLACE). (2) It is slightly possible that Hadad-ʿiḏr was briefly succeeded by a son, Ben-Hadad, and that this is the person Hazael murdered. The former proposal seems more likely.

If this argument is sound, then there are only two attested Ben-Hadads who ruled over Aram-Damascus, and the Ben-Hadad of 1 Kings 20–2 Kings 7 should be identified as the son of Hazael, and not a distinct king.

4. Brief reference should be made to a stela with a relief of the god Melqart found near Aleppo in the 1930s. It possesses an inscription which identifies the donor of the stela as a Bir-Hadad (= Heb Ben-Hadad), apparently a king of Aram. This Bir-Hadad has usually been identified with the royal house of Damascus, and the stela has been used extensively in attempts to reconstruct the succession to the throne of Aram. Bir-Hadad has been identified with Ben-Hadad son of Tab-Rimmon (Albright 1942), Ben-Hadad "II," the supposed contemporary of Ahab and his sons (Mazar 1962), Ben-Hadad son of Hazael (Dearman and Miller 1983) as well as a son of Ben-Hadad "II" (Cross 1972), and an otherwise unknown brother of Hazael (Lipiński 1975:15–19). The major reason for the uncertainty in identifying Bir-Hadad has been the difficulty in reading the name of his father, which is badly worn on the stela. A recent reading of the inscription, however, suggests that the name of the stela's donor was Bir-Hadad son of ʿAttar-hamek, king of Aram. This reading now eliminates the possibility of identifying Bir-Hadad with either the son of Tab-Rimmon or the son of Hazael, while the evidence discussed above argues against the existence of Ben-Hadad "II". Because the name Aram was used to designate other Aramaean kingdoms in N Syria, and because the stela was found in the N, it now seems best not to relate this stela to Aram-Damascus at all (Pitard 1988). For further discussion see *CAH* 3/1:372–441.

BEN-HAIL (PERSON) [Heb *ben-ḥayil* (בֶּן־חַיִל)]. (Literally "son of strength.") An officer under Jehoshophat who was sent with a team of four other secular leaders, eight Levites, and two priests to teach in the towns of Israel (2 Chr 17:7). The context implies that their mission was to instruct the people in both their religious duties as well as their civic ones as a part of the king's religious reforms (*2 Chronicles* AB, 99; *AncIsr* 2:344, 394). The LXX and Peshitta read the plural *běnê-ḥayil* ("men of strength or valor") and interpret the phrase adjectivally, rather than as a personal name. But while the name is not attested elsewhere, the pattern is found in 1 Kgs 4:9 (*ben-deqer,* "son of chisel [?], spear [?]") and 1 Kgs 4:10 4 (*ben-ḥesed,* "son of piety"). The Hebrew idiom "son of …" denotes the inheritance of characteristics from the father. This is abstracted in the case of Ben-hail to mean "the strong or valorous one."
KIRK E. LOWERY

BEN-HANAN (PERSON) [Heb *ben-ḥānān* (בֶּן־חָנָן)]. Individual of the tribe of Judah, the son of Shimon (1 Chr 4:20). His name appears to mean "son of gracious, favored one."
DAVID C. SMITH

BEN-HESED (PERSON) [Heb *ben-ḥesed* (בֶּן־חֶסֶד)]. A prefect charged with supplying provisions for palace use one month per year from Solomon's third administrative district (1 Kgs 4:10).

Ben-hesed's district included Arubboth, Socoh, and the Hepher region. Scholars agree in locating Socoh at Eš-Šuweikeh at the E edge of the Sharon Plain, about 16 km NW of Samaria. Some, however, place Arubboth and Hepher in the Sharon Plain (map, Aharoni *LBHG* 308), while others place them in the hill country east of Socoh. Evidence from the Samaria Ostraca and recent archaeological work support the latter view (Zertal 1984), so Ben-hesed's area probably corresponded to the core area of Cisjordanian Manasseh.

Ben-hesed means "son of Hesed." Hesed was probably a hypocoristic form of Hesediah (meaning "Yahweh has been true to his own") or the like (*IPN,* 183). The patronymic form of the name Ben-hesed has been variously explained. Alt believed that Solomon's prefects whose names began with "Ben-" corresponded to districts of predominantly Canaanite population; based on parallels from Ugarit and elsewhere, he suggested that these prefects were of Canaanite extraction and filled hereditary posts named for the individual who first held them (1950:22). Alternately, an early mishap may have destroyed part of the text of 1 Kings 4, leaving only patronyms in five cases. In accordance with this theory, some modern translations render *ben-ḥesed* as "[…] son of Hesed."

The Septuagint translator appears to have had difficulty at 1 Kgs 4:10, since much of the verse, including common Hebrew prepositions, is transliterated, not translated. The possibility that the translator's Vorlage was corrupt casts doubt upon the text-critical value of the Greek at this point. Opposite Heb *ben-ḥesed* LXX^{B} reads "son of *esōth,* " while Lucian has "*machei* son of *echō (bēr)*" (see further Rahlfs 1911:227–29).

BEN-HINNOM, VALLEY OF (PLACE). See HINNOM VALLEY.

BEN-HUR (PERSON) [Heb *ben-ḥûr* (בֶּן־חוּר)]. The prefect of the first of Solomon's 12 administrative districts (1 Kgs 4:8), responsible for supplying, from the hill country of Ephraim, the provisions needed by the royal court for one month per year. Ben-hur means "son of Hur"; in view of parallels like the widely attested *bn ʿnt,* "Son of Anath," Hur (re-vocalized as *ḥr*) could refer to a deity, the Egyptian Horus. More likely, however, is the meaning "free; noble," related to the Heb root *ḥrr;* cf. personal names like Ugaritic *ḥry* and Arabic *ḥurr*, "free (born)."

The fact that Ben-hur and four others in the list of Solomon's prefects (1 Kgs 4:7–19) have names of patronymic form has been explained as resulting from a textual mishap by which the personal names of these individuals were lost. Alt, on the other hand, saw these prefects as filling hereditary posts named for the first officeholder (1950:22).

Alt (1913:14) viewed "the hill country of Ephraim" as a geographical term embracing the original core of the tribal territories of both Ephraim and Manasseh. It appears, however, that the third district (Ben-hesed's) corresponded to Manasseh's portion of the hill country, meaning that Ben-hur's district was restricted to the Ephraimite part of the mountains (Zertal 1984).

The earliest form of the Greek text corresponding to Ben-hur is apparently *bainōr* (= MT), although B and Lucian read *baiōr* (Rahlfs 1911:225–26).

BEN-ONI (PERSON) [Heb *ben-ʾônî* (בֶּן־אוֹנִי)]. The name given by Rachel at the moment of her death to her newborn son (Gen 35:18). Jacob later changed the name to Benjamin, "son of the right hand," which can also mean "son of good fortune" (Westermann *Genesis 12–36* BK, 555). Though the meaning of Ben-oni is somewhat obscure, the context and tradition take "oni" to mean "my misfortune or suffering" rather than "my vigor." (See Speiser *Genesis* AB, 274). The meaning of *yamin,* "son of good fortune", has been complicated by the occurrence of the tribal term *DUMU,* (sons of) *-yamin,* in the Mari documents; there *yamin* as Yemen refers to geographical distribution, "south" or "southerner." However, this distinction, though applied to southern Amorites as opposed to northern dwellers, may be coincidental. The context almost demands that Ben-oni be understood as "son of my suffering or misfortune" from the Heb *ʾānâ,* "to be in sorrow." Therefore, Jacob, to avoid an evil harbinger, changed the name to correspond to the son who now had completed the twelve.

BEN-ZOHETH (PERSON) [Heb *ben-zôḥēt* (בֶּן־זוֹחֵת)]. Individual of the tribe of Judah, the son of Ishi (1 Chr 4:20). The LXX exhibits a variant reading of the text from "Ben-Zoheth" to "the sons of Zoheth" (Heb *bĕnê-zôḥēt*) with the names of those sons left wanting. See ZOHETH.
DAVID C. SMITH

BENAIAH (PERSON) [Heb *bĕnāyâ* (בְּנָיָה)*; bĕnāyāhû* (בְּנָיָהוּ)]. The name Benaiah means "Yahweh has made (a child)," with *bānâ* meaning "make" as in Gen 2:22, where God makes Eve from Adam's rib (see also Gen 16:2; Ruth 4:11). Parallels in the Semitic onomasticon include Akk *Ibni-Marduk,* Ug *Ybn›il,* and Amorite *Ya-ab-ni [d]Da-gan:* "Marduk/El/Dagan has made (a child)"; cf. also Ashurbanipal (*Aššur-bāni-apli* "Ashur is the heir's Maker"). The name Bani is thought to be a shortened form of Benaiah (*IPN,* 172–73).

1. Son of Jehoiada and commander of Solomon's army. Benaiah's career was marked by unwavering loyalty to David and his successor Solomon. He first appears as commander of the Cherethites and Pelethites (2 Sam 8:18; 20:23), probably mercenaries of Cretan and Philistine background who acted independently of the regular army as David's personal bodyguard (cf. 2 Sam 23:23 = 1 Chr 11:25). By backing Solomon's coronation (1 Kgs 1:32–49), Benaiah and his men played a decisive role in the power struggle between Solomon and his older brother Adonijah. Later (1 Kgs 2:13–46), it was Benaiah who executed Adonijah, Joab (who as commander of the army had supported Adonijah's bid for power), and Shimei the son of Gera, who had accused David of illegitimately seizing the throne from the House of Saul (2 Sam 16:5–14). The result of these executions is summed up by 1 Kgs 2:46:"Thus the kingdom was firmly established in Solomon's hands." Following Joab's death, Benaiah replaced him as commander of the army.

Chronicles contains information concerning Benaiah's duties under David which is not found in Samuel. According to 1 Chr 27:5–6, Benaiah was head of a 24, 000-man division of the regular army which served the king in the third month of every year. The last part of v 6, where the text is unclear, perhaps indicates that a son of Benaiah, Ammizabad, also occupied this post.

Many elements in 1 Chronicles 27, however, appear to have had their origin in the Chronicler's own time, not in that of Benaiah. The figure of 288, 000 men, 12 groups of 24, 000, should be compared to the claim, also found in Chronicles, that David appointed 24, 000 Levites for work in the Temple (1 Chronicles 23) and that he organized the priests into 24 divisions (chap. 24) and the 288 musicians into 24 groups of 12 (chap. 25). The term *maḥălōqet* "division (of men)," prominent in chap. 27, is not clearly attested in this sense in preexilic literature. Furthermore, the names of Benaiah and the other 11 leaders could have been taken from the list of David's heroes (1 Chr 11:11–47 = 2 Sam 23:8–39).

Benaiah is credited with heroic deeds and is called *bn ›yš ḥyl* "a worthy/able man" (2 Sam 23:20, reading *ḥyl* for *ḥy* with the Qere and 1 Chr 11:22, and following Talmon 1960:165–66 in seeing here the conflation of *bn ḥyl* and *›yš ḥyl*). He smote the "two *›r›l*" (2 Sam 23:20; *›ry›l* in 1 Chr 11:22) of Moab, which is a difficult expression. A translation of "altar-hearth" (cf. Ezek 43:14–16) for *›r (y)›l* would leave Benaiah with a deed which seems less than heroic. Taking *›r (y)›l* as Ariel or Uriel, a personal name (cf. Ezra 8:16; 1 Chr 6:9, etc.), the expression could mean "two [sons] of A/Uriel," with *bny,* "sons", of an original *šny bny* lost via homoioteleuton (cf. LXX *dyo huious ariēl* "two sons of Ariel"). In this case "Moab" would not be a genitive (since it is preceded by a proper noun), but rather a locative accusative "in Moab" (cf. Joüon 1923:§ 126h; GKC § 118g); alternately *bmw›b* should be read. One may also explain the word as "mighty lion" (cf. *›rzy ›l* "mighty cedars," etc.), either literally, as the end of 2 Sam 23:20 suggests, or as a figurative term for "champion." The word *›r›l* appears in line 12 of the Mesha Stela (or Moabite Stone), but there too its interpretation is unsure.

Two other incidents relate to Benaiah's valor. On one snowy day he went down into a pit and killed a lion; on another occasion he fought a better-armed Egyptian warrior, snatched the latter's spear away from him, and killed him with it (2 Sam 23:21). The Egyptian is described as *›yš mr›h* (according to the Qere; Ketib:*›šr mr›h*), perhaps meaning "a handsome man." In 1 Chr 11:23, however, the Eg is *›yš mdh,* "a huge man," further described as five cubits tall and (in terms reminiscent of Goliath, 1 Sam 17:7, etc.) carrying a spear like a weaver's beam. Many commentators follow Wellhausen in regarding *›îš midḏ* of Chronicles as original, with *mdh* corrupted to *mrh* and "corrected" to *mr›h* (e.g., McCarter *2 Samuel* AB, 491). Some scholars have seen parallels to Benaiah's exploits in Egyptian literature, but the similarities are of dubious import and are far outweighed by differences between the accounts.

Several passages treat Benaiah's relation to David's select rosters of warriors:the Three and the Thirty. Benaiah is not one of the Three named in 2 Sam 23:8–12. He did not attain to membership in the Three according to 2 Sam 23:22–23 = 1 Chr 11:24–25; these same two passages, however, say *wlw-šm bšl (w)šh,* "and he had a name among the Three," (not, as RSV, "beside the Three"). Most commentators have proposed emendations such as *šlšym* "Thirty" for *šlšh* "Three;" *kšlšh* "like the Three" for *bšlšh* "among the Three;" and *wl› šm lw* "he didn't have a name" or *wl› śm* "he was not placed" for *wlw-šm* "he had a name" (*NHT,* 369; BHS at 1 Chr 11:24).

The position of Benaiah vis-à-vis the Thirty is ambiguous in 2 Samuel 23 = 1 Chronicles 11. He is said to have been honored above (but possibly:"honored among") the Thirty. His name does not appear among the 30 names in 2 Sam 23:24–39, but the section dealing with him immediately precedes this list. It is likely that more than 30 men could claim to have been at some point members of the Thirty (through replacement of dead members, etc.), and it is not impossible that an exceptional member would receive separate treatment, especially if he were the group's leader. This was precisely the case, according to 1 Chr 27:6, which also states explicitly that Benaiah was one of the Thirty. We are given pause, however, by 2 Sam 23:18, which says (if, as it seems, *hšlšym* "The Thirty" should be read for MT Ketib, *hšlšy* or Qere *hšlšh*) that Joab's brother Abishai was the leader of the Thirty. Possibly the two led the group at different times, but it may well be that 1 Chr 27:6 is based only upon an interpretation of 2 Samuel 23, and that Benaiah's status was intermediate between the Three and the Thirty.

The unusual prominence accorded to Benaiah in the list of David's warriors (2 Sam 23:8–39), his placement between two brothers of Joab, and Joab's absence from the lists suggest redactional activity in the time of Solomon, after Joab was replaced by Benaiah (Zeron 1978).

Benaiah's hometown was Kabzeel (2 Sam 23:20; called Jekabzeel in Neh 11:25), a town in S Judah near the Edomite border (Josh 15:21). According to 1 Chronicles 27, Benaiah's father, Jehoiada, was the chief priest (v 5; cf. the Jehoiada mentioned in 1 Chr 12:28—Eng 12:27 as a descendant of Aaron). It mentions a son Ammizabad (v 6), and possibly another son Jehoiada (v 34, thus named for his grandfather), but perhaps this should be read "Benaiah son of Jehoiada," not the reverse.

2. One of the Thirty, an honor roll of David's warriors (2 Sam 23:30=1 Chr 11:31). Benaiah was an Ephraimite from Pirathon (1 Chr 27:14). For a discussion of his command of 24, 000 men in the 11th month of the year, see Benaiah 1.

3. According to 1 Chr 15:18, 20, and 16:5, one of the Levites commissioned to play the harp before the Ark of the Covenant in the time of David. He is probably to be seen as identical to Benaiah the grandfather of Jahaziel, a Levite and prophet of Jehoshaphat's day (2 Chr 20:14).

4. One of the priests of David's day appointed to blow the trumpet before the Ark of the Covenant (1 Chr 15:24; 16:6).

5. A Simeonite chief of Hezekiah's time said in 1 Chr 4:34–41 to have settled in Gedor (or Gerar; cf. LXX).

6. A Levite overseer who helped to manage contributions to the temple in Hezekiah's time (2 Chr 31:13).

7. The father of Pelatiah, a leader in early 6th-century B.C. Jerusalem (Ezek 11:1, 13).

8–11. Four Israelites who married foreign women in Ezra's day. They include a descendant of Parosh (Ezra 10:25; 1 Esdr 9:26 [Gk *Bannaias*]); of Pahath-moab (Ezra 10:30); of Bani (Ezra 10:35); and of Nebo (Ezra 10:43; 1 Esdr 9:35:[Gk *Banaias*]).

BENE-BERAK (PLACE) [Heb *bĕnê-beraq* (בְּנֵי־בָרַק)]. One of the towns included in the inheritance of the tribe of Dan, before the tribe migrated N (Josh 19:45). The annals of Sennacherib

indicate that Bene-berak (Akk *banai-barqa*) was located near Joppa, Beth-dagon, and Azor (*ANET*, 287). The town was also known as the home of Rabbi Akiba.

Biblical Bene-berak is currently identified with el-Kheirîyah (M.R. 133160), an Arab village located ca. 4 km S of the modern Israeli town of Bene-baraq. In the center of el-Kheirîyah stood the tomb of the Muslim saint Ibn-Ibraq. Surface pottery finds dating from the Iron II and the Roman period tend to confirm the site's identification with the biblical town.

Five archaeological sites have been excavated further N in the area surrounding modern Bene-baraq (M.R. 134166). These are, from N to S, (1) Tell Abu-Zeitun, (2) Pardess Katz, (3) Givat ha-Radar, (4) the hill of the Weisnitz Yeshiva, and (5) Modi'in Street. The ancient names of these sites are not known.

Tell Abu-Zeitun. This small mound is located in the Yarkon valley on the main route from Joppa via Tell Jarisha to Aphek. Abel (*GP*, 53) suggested that Tell Abu-Zeitun should be identified with the levitical city of Gath-Rimmon, mentioned together with Jehud and Bene-berak in the territory of the tribe of Dan (Josh 19:45; 21:24), but against this Mazar (*IEJ* 1:63) identified it with Tell Jerisha (M.R. 132166; cf. also *LBHG*, 45). Tell Abu-Zeitun was excavated in 1957, and two occupation levels (Ia and Ib), dating from the Persian period, were uncovered. The finds from level Ia date to the 5th century B.C. and include shards of imported Attic ware and an ostracon with the name "Hasshub" inscribed. This name appears 5 times in the Bible, in contexts related to the postexilic period (1 Chr 9:14; Neh 11:15).

Pardes Katz. In 1961 excavations here uncovered the foundations of a hexagonal structure that could be dated to early in the 1st century B.C. on the basis of a coin of Alexander Jannaeus discovered among the ruins. This structure is similar in design to a larger hexagonal structure partially excavated over a decade earlier on Arlosoroff Street in downtown Tel Aviv (whose finds also dated to the Hellenistic period). The Arlosoroff structure appears to have been related to a rectangular structure (13.5 by 9 m) excavated further W on Hayarkon Street in front of the Hilton Hotel in downtown Tel Aviv (*EAEHL* 4:1167), which also yielded a coin of Alexander Jannaeus. It appears, then, that the Pardes Katz structure near Bene-Beraq was probably part of a fortification line that, in the W, terminated near the Mediterranean Sea with the two downtown Tel Aviv structures. Presumably the E terminus of this line was Ras el-ʿAin (biblical ANTIPATRIS), since Josephus (*Ant* 13.390) reports that Alexander Jannaeus built the fortification line "from the mountainside above Antipatris to the seacoast of Joppa" (see map, *EAEHL* 4:1163).

Givat ha-Radar (Bab el-Hawwah). Excavations on the NW side of this hill were first carried out in 1942, and some 12 caves and pits with Chalcolithic burials in baked clay ossuaries were discovered (Ory 1946). These ossuaries were similar to those found in Hederah and Tel Aviv (*EAEHL* 2:496; 4:1163). In 1952, the NE section of the hill was excavated, yielding two more Chalcolithic burial caves. One (2 m in diameter) was completely empty; apparently the inhabitants of the site had no time to make use of it. The ceiling of the other cave (7 m in diameter) had collapsed, crushing most of the pottery and ossuaries inside, although the entrance of the cave was undisturbed. The ossuaries, containing human remains, were placed in the corners of the cave on stone-slab benches, while the pottery and incense burners lay in the center. Most of the ossuaries were shaped like rectangular houses within the opening placed high on the short ends (see *EAEHL*, 185). The largest ossuary was 60 by 25 by 40 cm, while the smaller ones were only 15 cm in diameter.

The Weisnitz Yeshiva. Artifacts were uncovered while the foundations of a modern synagogue were being dug at the Weisnitz Yeshiva on a high hill E of Bene-Beraq. Excavations in 1953 uncovered the remains of four building levels, all dating to the 3d and 2d centuries B.C. and all using dressed kurkar stones, rough stones, and *pise de terre.* Other finds included several bronze coins, potshards, and fragments of lamps. Apparently this had been part of a Hellenistic fort which served as an observation point overlooking the road running E from the Yarkon basin to the Ono valley.

Modi'in Street. Modi'in Street serves as the municipal boundary between the modern towns of Bene-Baraq and Ramat-Gan, and ancient remains have been found scattered over the hills on both sides of the street. Excavations there—first by Ory, then by Kaplan—uncovered a number of burial caves, the remains of a mosaic floor, and the floor of a winepress, all dating between the 1st century B.C. and the 5th century A.D.

BENE QEDEM. See EAST, PEOPLE OF THE.

BENE-JAAKAN (PLACE) [Heb *bĕnê ya꞉ăqān* (בְּנֵי יַעֲקָן)]. A campsite for the people of Israel during the wilderness period (Num 33:31–32). It is described as being near the border of Edom. The name Jaakan is also associated with this region as one of the Horite clans in the genealogy of Seir (1 Chr 1:42). The movements of the people in the Numbers passage suggest a regular migration route with their herds from one grazing area and water source to another. Elsewhere (Deut 10:6) this site is called BEEROTH BENE-JAAKAN.
VICTOR H. MATTHEWS

BENEDICTUS. The prophetic poem in praise of God ascribed to Zachariah in Luke 1:67–79. God's redemptive concern for the people of Israel is the dominant theme, which in turn invites consideration of the people's appropriate response.

Within the total structure of Luke 1, the poem serves as counterpoint to the angel Gabriel's announcement (vv 30–33) and the Magnificat (vv 46–55). The poem is carefully crafted. Although it contains numerous Hebraic features, Luke is conscious of his Greco-Roman public and shapes the poem in a pattern of preamble (vv 68–75), in which he features the goodness of God, and of resolution (vv 76–79), in which he sets forth John's assignment, with vv 74–75 serving as transition.

Linking the beginning and the end is the term *episkeptomai* (visit, vv 68, 78). The theme of rescue is expressed in a variety of ways and pervades the whole, with the specific term *soteria* (salvation) sounding the thematic beat with special force at intervals (vv 69, 71, 77). In a corresponding manner, there is dramatic interplay of people's expectations and apparent delay of divine action, a tension that is relieved by assurance of God's fidelity as exhibited in history's present hour (vv 70, 72–73). A further contributing factor to the dramatic impact of the poem are the two varieties of hostilities. On the one hand, the people are oppressed by their enemies (vv 71–73), and on the other, the people through sin are in opposition to God. Salvation in its deepest reality means that God rescues the people from their sins so that they may serve God "without fear in holiness and righteousness … all the days of" their lives (vv 74–75). The implication is that God will in turn resolve hostilities from other directions, and it is the function of John the Baptist to prepare the people for the entrance of Jesus (vv 76–77). The poem therefore appropriately ends on the note of "peace" (v 79), for God offers in Jesus the ultimate definition of peace. Within the total structure of Luke's gospel, echoes of the Benedictus are to be heard (especially at 7:16 and, in dramatic contrast to Jesus' reaction in the face of Jerusalem's negative response, at 19:41–44).

Zachariah's words amplify the promises of the Magnificat (Luke 1:46–55). Among its other functions in Luke's total work are introduction of the principal christological issues, especially in reference to Jesus' role as a Davidide (cf. 6:3; 18:38–39; Acts 2, 4, 13), relation to Abraham and moral responsibility (Luke 3:8; 13:16, 28; 16:19–37), and the mission of the Servant of the Lord, with emphasis on the gift of peace. Since Luke's auditors know how the story of Jesus ends, the optimistic tone of the poem evokes awareness of the bleak reality soon to be expressed in Simeon's warning addressed to Mary (2:34).

The poem appears to have originated in Jewish-Christian Palestinian circles, before the fall of Jerusalem. It is a blend of terms and phrases drawn for the most part from the Old Testament, with themes that are reminiscent of the Psalms of Solomon, and in a form that parallels poems in praise of God from Qumran (1 QM 14). Whether Luke edited a Semitic original or a Greek translation cannot be determined with certainty, but vv 73–75 include Hellenistic chancery phrasing, some of which parallels philosophical terminology ("oath which he swore" [cf. *SIG³* 1917: no. 736.135–37]) and "in holiness and righteousness" [*SIG* no. 800.21; Pl. *Prt.* 329c]). That he composed the entire poem is not generally considered probable, but vv 70 and 76–77 may well owe their origin to his editorial pen.

The Benedictus is used in the Office of Lauds in Eastern and Western liturgies. (See Fitzmyer *Luke* AB, 374–90; Pirot *DBSup* 4:956–62.)

FREDERICK W. DANKER

BENEFACTOR. A person or deity who is considered to be of singular merit (Gk *areté*) because of benefits conferred on others. The infrequency of the term "benefactor" and cognates in translations of the Bible does not adequately reflect the historical context in which especially the Greek NT and the LXX and related literature took shape. As indicated below, the word *euergetēs* (one who does good; Luke 22:25; also Esth 8:12c, n; Wis 19:14; 2 Macc 4:2), is but one of many terms used in reference to benefactors (cf. Pollux 5.140) whether deities or human beings, from heads of state to secretaries of small clubs (see Jessen and Oehler PW 6:978–81; Willrich PW 6:981–82).

Literature from the time of Homer attests the prestige enjoyed by those who were noted for their *aretē* and displays a democratizing procesq from recognition of military prowess (Achilles, Hector) to emphasis on moral virtue. Plato's dialogues are mainly discourses on *aretē* and the essence of beneficence (*Meno* 96e). The truly public-spirited citizen or benefactor is one who aspires to the highest virtues, including, especially, uprightness *(dikaiosynē).* Stoic philosophers encouraged the democratizing process, and some of the terminology they helped popularize became a formulaic element in bureaucratic and sacral documents, principally epigraphic, in praise of benefactors, divine and human. Some of Paul's diction (*dikaiosynē* and *charis* [beneficence]) would be especially meaningful to Greco-Roman addressees.

Recognition of *aretē* and beneficence cuts across boundaries of gender. Luke's recognition of a number of women (Luke 8:1–3), and of Lydia (Acts 16:14) shows accurate cultural awareness (see also ASSOCIATIONS). Women benefactors cited in inscriptions include, for example, Manto, daughter of Bion and wife of Chaireas, who was honored by youth associations for her contributions (*CIG* no. 3101); and at Atalaia a woman gymnasiarch named Kaikilia Tertylla headed elders, young men, and boys (*SEG* no. 696).

Among the terms used in the Greek Bible either to describe those who qualify for special recognition or to express their beneficent actions are:extraordinary merit (*aretē*Phil 4:8; 1 Pet 2:9; 2 Pet 1:3, 5); a good person (*anēr agathos,* Luke 23:50; Acts 11:24); one who exhibits nobility, "fine and good" (*kalos kai agathos* or *kalokagathos,* 2 Macc 15:12; Luke 8:15); one who serves with total devotion, gives oneself (*didous heauton* and related expressions, 1 Macc 2:50; 11:23; Gal 1:4; Titus 2:14; Acts 15:26; 20:24; 2 Cor 8:5; 12:15; 1 Thess 2:8); one engaged in public service (*leitourgos,* Rom 13:6; 15:16; Phil 2:25; verb, *leitourgeō,* Rom 15:27; *leitourgia,* 2 Cor 9:12; Phil 2:17, 30); one who is generously kind (*chrēstos,* frequently of God in the Psalms; 1 Macc 6:11; 2 Macc 1:24; Luke 6:35; Rom 2:4; Eph 4:32; 1 Pet 2:3; *chrēstotēs,* Rom 2:4; 11:22; 2 Cor 6:6; Eph 2:7; Tit 3:4); one who exhibits goodwill (*eunoeō,* Esth 8:12u; *eunoia,* Esth 2:23; 3:13c; 6:4; 1 Macc 11:33, 53; 2 Maccabees passim; Eph 6:7); one who functions as savior (*sōtēr,* passim); one distinguished "in word and deed" (*logō kai ergō,* Luke 24:19; Acts 7:22); one offering friendly help to people in need (*philanthrōpia,* Esth 8:121; 2 Macc 6:22; 14:9; Acts 28:2; Tit 3:4; adj., 1 Esdr 8:10; Wis 1:6; 7:23; 12:19; 2 Macc 4:11; verb, 2 Macc 13:23; adverb, 2 Macc 9:27; Acts 27:3); one who is noted for righteousness (*dikaiosynē,* passim) or piety (*eusebeia,* passim) or both; one eager to render service (*philotimeomai,* Rom 15:20; 2 Cor 5:9; 1 Thess 4:11; adv. *philotimōs,* 2 Macc 2:21); one who does good works (verbs, *euergeteō,* Ps 12[13]:6; 56[57]:3; 114[116]:7; Wis 3:5; 11:5; 16:2; 2 Macc 10:38; Acts 10:38; nouns, *euergetēs,* Esth 8:12c, n; Wis 19:14; 2 Macc 4:2; Lk 22:25; *euergesia,* Ps 77[78]:11; Wis 16:11, 24; 2 Macc 6:13; 9:26; Acts 4:9; 1 Tim 6:2; *euergetikos,* Wis 7:22; *euergetēma,* 2 Macc 5:20; and one who carries out obligations "freely"; *dórean,* Rom 3:24; 2 Cor 11:7). Of the 22 occurrences of the *euerg-* word family relating to beneficence in the Greek Bible, 14 have God as their referent, directly or indirectly:Ps 12(13):6; 56 (57):3; 77(78):11; 114(116):7; Wis 3:5; 7:23; 11:5; 16:2, 11; 2 Macc 5:20; 6:13; 10:38; Luke 22:25; Acts 4:9; 1 Tim 6:2. The balance span a variety of

benefactors:Esth 8:12c 2x (unspecified); 8:12n (Mordecai); Wis 16:24 (creation); 19:14 (Jews in Egypt); 2 Macc 4:2 (Onias); 9:26 Antiochos Epiphanes; Luke 22:25 (false claimants to the title).

Apart from conventional terminology, praise for a specific service that has been rendered may identify one as a benefactor. Such is the case in Luke 7:1–10. So also Titus and an unnamed "brother" receive commendation from Paul for their valued services (2 Cor 8:16–24), and Onesiphoros is singled out in 2 Tim 1:15–18.

Since the very notion of deity implies beneficent concern, recitals in praise of such deities as Isis and Sarapis have been called aretalogies, but when used in such a narrow sense the term lacks scientific precision and is therefore best applied to all recitals of exceptional merit, whether of deities or human beings. Much of the Book of Wisdom is an aretalogy of wisdom, and Sirach 24 parallels the autobiographical aretalogy of Isis found at Kyme. Various additions to the Hebrew text of Esther (LXX Rahlfs, 3:13a–g and 8:12a–x, 13) bear the impress of benefactor themes and diction. The version of Jesus' sermon in Luke 6:20–49 is a mosaic of benefactor motifs with emphasis on pandemic divine generosity (6:35). Luke 22:24–27 is not an attack on the term "benefactor," but on distortion of the concept by selfish egotists. Indeed, Acts 4:8–10, with its use of the term *euergesis* in v 9, shows that Luke approves of the diction when understood properly and shows that the disciples finally absorbed their lesson. Luke also makes effective use of the antonym *kakourgos* (malefactor, Luke 23:32, 33, 39) to highlight the contrasting role of Jesus as the Great Benefactor.

At Lystra, Barnabas and Paul describe God as the "benefactor who bestows rain and fruitful seasons, and in rich measure provides you with food and contentment" (Acts 14:17; cf. Xenophon *Mem.* 4.3). Paul repeats the words in slightly altered form at Athens (Acts 17:25–26). Jesus Christ is identified as "one who went about as a benefactor, healing all who were oppressed by the devil" (Acts 10:38). This description encapsulates Luke's portrayal of Jesus in the Gospel, where the evangelist's editorial treatment of tradition depicts Jesus as the Great Benefactor, with the climactic observation of Kleopas:"powerful in deed and word" (Luke 24:19). Like Greco-Roman heads of state who surmounted a variety of perils in behalf of their constituencies, Jesus is an endangered benefactor who endures even death in commitment to responsibility. Instead of pronouncing Jesus to be God's Son (Mark 15:39), the centurion at the cross in Luke's account declares him to be "upright" (Luke 23:47), an outstanding mark of the benefactor.

The ultimate reward for extraordinary beneficence is immortality. According to Greco-Roman legends, some of the most notable recipients of such honor include Herakles, Asklepios, Empedokles, Alexander the Great, Romulus, Julius Caesar, and Caesar Augustus. Through resurrection Jesus becomes the immortal of immortals, restored to Israel and the world as God's unique gift (Acts 10:39–43).

Invitations to imitate benefactors are common in honorary inscriptions, and Paul makes frequent use of the topic in his ethical appeals and in descriptions of his own lifestyle. Indeed, 2 Corinthians owes much of its dramatic coloration to Paul's projection of himself, occasionally with tongue in cheek, as a person of exceptional merit and benefactor of the Corinthian Christians. Hence he emphasizes his total commitment to the gospel of divine beneficence that he brought to Corinth. A dominant feature is the apostle's use of a formulation known as *peristasis* or recital of personal hardships (2 Cor 4:7–12; 6:3–10; 11:22–29). Greco-Romans prized endurance in their heads of state, and the theme frequently appears in documents honoring benefactors.

In Luke's writings the Isaianic Servant of the Lord is partly interpreted through use of the Greco-Roman benefactor model (see NUNC DIMITTIS). In the Book of Revelation both God and Jesus Christ are the recipients of numerous accolades that display a blend of Semitic and Greco-Roman formulation, with references to creation or salvation (Rev 4:11; 5:9–14; 7:10–17; 11:16–18; 12:10–12; 19:1–8).

FREDERICK W. DANKER

BENINU (PERSON) [Heb *bĕnînû* (בְּנִינוּ)]. A Levite and a signatory to the code of Nehemiah (Neh 10:13). The name may mean "our son," but some scholars have suggested that the names of other Levites, Chenani (9:4), Bani (Ezra 2:10), and Binnui (Ezra 8:33), may have originally stood here in the list, since Beninu receives only a single mention (Brockington *Ezra, Nehemiah, Esther* NCBC, 180).
FREDERICK W. SCHMIDT

BENJAMIN (PERSON) [Heb *binyāmîn* (בִּנְיָמִין)*; binyāmin* (בִּנְיָמִן)]. BENJAMINITE. **1.** The youngest son of Jacob (Gen 35:18) and, as such, a designation for an Israelite tribe and its territory. Accordingly, the tribe's members or the inhabitants of the tribal region are called Benjaminites.

A. Name

Since all of Jacob's sons should be understood as *heroes eponymi* of the corresponding Israelite tribes, the use of the name Benjamin to refer to Jacob's youngest son should be seen as a secondary application dependent on the tribal name Benjamin. All other instances of Benjamin as a personal name should be understood similarly (1 Chr 7:10; Ezra 10:32; Neh 3:23). Thus the use of the name Benjamin as a tribal designation represents the primary witness to the Israelite name Benjamin.

The tribe of Benjamin and its territory, as well as the personal name based on them, are always designated in the OT by the Hebrew word *bnymyn.* Alongside of this, the construction *bn-ymyny (bny)* serves as a name for the members of the tribe of Benjamin. Appearing occasionally, the word *bnymyn* composed with *bn (bny)* or *ʾyš (ʾnšy)* (Judg 1:21; 1 Sam 4:12; Ezra 10:9) represents a subsequent stage of development, since the word *bnymyn* itself already contains the word *bn.* This composition was created by analogy with the verbal construction *bn-ymyny (bny)* or *ʾyš ymyn (ʾnšy).*

A comparison of the word forms *bnymyn* and *bn-ymyny* shows clearly that both have the same meaning and also that the word *ymyn* ("the right side," "the south side") provides the key word for explaining the name Benjamin. Therefore, this name signifies "son of the right-hand side" or "son of the south," that is, the one dwelling on the right or to the south. This designation for the tribe of Benjamin (or its members) can be understood only from the geographical perspective of this tribe in relationship to another geographical or ethnic entity. It is very probable that this name reflects the close connection between the tribe of Benjamin and the influential tribe of Ephraim settled to its immediate north. Since Ephraim, together with the tribe of Manasseh, was subsumed under the rubric "house of Joseph" during the monarchy, it is also clear why Benjamin usually appears alongside Joseph in the tribal lists (Gen 35:24; 46:19, 21; 1 Chr 2:2) and why the fictive tribal ancestor is Joseph's only full brother who receives special treatment; thus Benjamin plays a special role in the Joseph novella (Gen 42:4, 36; 43:14–16, 29, 34; 44:12; 45:12, 14, 22).

In the story of the birth of Benjamin (Gen 35:16–20), which refers back to the birth of Joseph (30:24) and therefore represents Benjamin as the second son of Rachel by Jacob, Rachel gives this son the name Ben-Oni (Heb *ben-ʾ̃nî*). After her death, Jacob changed this name (which means "son of my pain/sorrow") to Benjamin, understood as "child of happiness/fortune" (compare the same doubling of the Arabic "Yemen" ("land of the south" and "Arabia Felix"). The point of this unhistorical narrative (elucidating an itinerary reference; Westermann *Genesis* BKAT, 675) was to elaborate literarily on the death of Jacob's favorite wife at the time his youngest son was born.

B. Tribal History

1. Premonarchic Period. Often attempts have been made to derive the name Benjamin from the historical situation of nomadic groups in the first half of the 2d millennium B.C.E., which witness both *Banū-śimʿal,* "son of the north," and *Banū-yamīna,* "son of the south" (cuneiform texts of King Zimrilim of Mari). Primarily because of the great temporal and geographical discrepancies between the actual appearance of the tribe of Benjamin and the depiction of this emergence in Canaan, such a connection is quite uncertain. This does not exclude the possibility, however, that clans forming the tribe of Benjamin may have originated outside of the land of Canaan. According to the so-called Benjaminite conquest

tradition (Joshua 2–9), which was expanded to form a pan-Israelite presentation only at a second stage, these clans shortly before 1200 B.C.E. forged their way from the E across the Jordan at Jericho into the small land mass between Luz-Bethel and Jerusalem. At this time the old Canaanite city Gibeon (Joshua 9) formed the W boundary. Although the figure Rachel is associated especially with Benjamin in the OT traditions (Gen 35:19 emendation; 1 Sam 10:2; Jer 31:15), it remains an open question whether she was the leader of these clans. In any case, Joshua probably played a leading role in the establishment of the Benjaminite clans in Cisjordan. Since he was an Ephraimite (Josh 24:29–30), one can assume that there was a close connection between the Benjaminite and Ephraimite clans even before the conquest, perhaps in the form of a military coalition. This is impressively confirmed by the boundary line between the Benjaminite and Ephraimite settlements in the area around the sanctuary at Gilgal (Joshua 4–5). The territories of the Benjaminite and Ephraimite clans were divided up so that this initial sanctuary to Yahweh, built by Joshua where an older cultic place had once stood, lay almost exactly on the border between the Benjaminite and Ephraimite regions. The traditions of a Benjaminite-Ephraimite military coalition entering Canaan from the E may be confirmed by the archaeological evidence at Benjaminite sites. For example, the excavations at Gibeah, Mizpah, and Ai attest new, small settlements at the beginning of the Iron I period, and field surveys at Anathoth, Geba, and Ramah confirm this picture. Nevertheless some archaeologists suspect that the Iron Age inhabitants of Ai came there not from the E but from the lowlands to the W and N. See also AI (PLACE).

Because of the small size of the Benjaminite clans and their territory compared with those of the Ephraimite clans, Benjamin soon became increasingly dependent on Ephraim. This seems to be the case already in the Song of Deborah, which presents a leaderless Benjamin associated closely with Ephraim (Judg 5:14). The smallness of this tribe also explains how King Eglon of Moab could force it to render tribute for eighteen years, until Ehud the Benjaminite again was able to dissolve this dependence (Judg 3:12–30). When, on the other hand, Benjamin is compared in Jacob's blessing with a rapacious wolf that rips up and devours its prey (Gen 49:27), an allusion is being made to attacks on merchant caravanners traveling through the land. No doubt the Benjaminites were very skilled in the use of weapons and were feared for that reason, particularly because many of them were left-handed (Judg 3:21; 20:16) and practiced an unorthodox style of combat. It was this moment of unbridled warfare that led the Benjaminites to the brink of destruction, especially when they turned on members of their own people Israel. In a battle against other Israelite tribes, above all Ephraim (Judges 19–21), Benjamin was almost totally destroyed. Its continued existence was made possible only because the men who were not killed were permitted to acquire new wives from non-Benjaminite areas (Judges 21).

2. The Early Monarchic Period. The tribe of Benjamin achieved its historical zenith, exerting a great influence on the other tribes, in the establishment of the monarchy under King Saul, who was himself a Benjaminite (1 Sam 9:1–2, 21; 10:20–21; 2 Sam 21:14; Acts 13:21). Actions taken by him and his oldest son Jonathan against the Philistines (1 Sam 13:2–4, 15–23; 14:16) in the tribal area of Benjamin, signaled Israel's liberation from Philistine occupation. After consolidating his strong position, he expanded the Benjaminite tribal territory to the west. He did this by conquering the old Canaanite cities Gibeon and Beeroth, and perhaps even Chephirah. When he captured Gibeon, he was probably pursuing the concurrent goal of establishing for the young kingdom a capital that was independent of the other tribes. At the same time he was able to build a royal sanctuary on the "great height" located in the immediate vicinity of Gibeon, which took on a special significance even during the reign of King Solomon (1 Kgs 3:4–15).

After the death of King Saul and his three oldest sons in the Philistine defeat of the Israelites (1 Samuel 31), the tribe of Benjamin acknowledged Saul's youngest son, Ish-baal, as his successor (2 Sam 2:9). Soon afterward, encouraged by Abner, it transferred its allegiance to David (2 Sam 2:19). Since Abner's decision was kindled by entirely personal motives, the majority of Benjaminites continued to reject David. Accordingly, Absalom's revolt against David was probably welcomed, as the behavior of Shimei the Benjaminite in this affair indicates (2 Sam 16:11). The rebellion of the Benjaminite Sheba against David also reveals this as well (2 Samuel 20).

When King Solomon parceled out the tribes N of Judah into twelve districts, the tribal territory of Benjamin became an independent district with its own governor, Shimei (1 Kgs 4:18). The division of the kingdom after Solomon's death again neutralized this action, and Benjamin chose an alliance with Judah, forming a kingdom bearing the name Judah ruled by King Rehoboam (1 Kgs 12:20 [LXX], 21–24). The boundary list in Josh 16:1–3, which should be understood as a document supplementing the list in Josh 15:2–12a from the Davidic period, represents the border that had emerged between the fraternal kingdoms of Israel and Judah. By combining these two lists, a Deuteronomistic redactor probably in the exilic period created the Benjaminite boundary list in Josh 18:12–20.

3. The Later Monarchic Period. As a consequence of the battles that were soon to begin between Israel and Judah, in the subsequent decades the boundary between these two kingdoms was shifted repeatedly. This led at the same time to a division of the tribal territory of Benjamin. Initially, Judah was even able to annex the regions beyond Benjamin's N border, in particular, those of Bethel, Jeshanah, and Ephron (2 Chr 13:19). Then, probably still under Jeroboam I, Israel was able to take the offensive and during the reign of Baasha pushed forward as far as Ramah, where a defensive fortification was installed at the border (1 Kgs 15:17). Even if that might have meant the Israelite occupation of Benjamin's N territory, the Judean king Asa soon afterward effected a withdrawal of the N kingdom beyond Geba and Mizpah (1 Kgs 15:22), thereby regaining almost the entire central section of the tribal territory of Benjamin as a possession of the S kingdom. The NE part of Benjamin remained Israelite territory, however, as Jericho's resettlement by Ephraimites from Bethel shows (1 Kgs 16:34). Also Geba and Parah were probably annexed to the Benjaminite territory in the N kingdom during the reign of King Amaziah of Judah (cf. 2 Kgs 14:8–14). For a short time during the Syro-Ephraimite war, Israel eventually occupied the entire region of Benjamin as far as its S border (cf. Hos 5:8).

After the Assyrian destruction of the N kingdom, King Josiah was the first person able to reunite the N part of Benjamin and the districts of Bethel, Ophrah, and Zemaraim with the kingdom of Judah, as indicated by Josh 18:21–24 (which forms a supplement to the list of Benjaminite place names from this time). This additional listing supplements the list of place names for the Kingdom of Judah (probably compiled already during the reign of King Uzziah or even earlier), according to which the S kingdom was divided into twelve districts and the Benjaminite territory that belonged to Judah formed a separate district (Josh 18:25–28a).

In the years immediately before and after the demise of the Kingdom of Judah in 587 B.C.E., Benjamin took on a special significance once again. Apparently not touched by Nebuchadrezzar's reduction of the Kingdom of Judah in 597 B.C.E. (cf. Jer 32:8; 37:12), Benjamin probably served as a center of opposition to the policies of the last Judean king, Zedekiah. The prophet Jeremiah, who spoke vehemently against the anti-Babylonian policies of Zedekiah, came from Anathoth in Benjamin (Jer 1:1). Undoubtedly, Benjaminite territory remained unscathed in the destruction of 587 B.C.E. because of this disposition within Benjaminite circles. It was therefore only a matter of course that the Benjaminite city Mizpah became the administrative seat of the highest ranking, native official installed by the Babylonians over the annexed area (2 Kgs 25:22–23; Jer 40:6) after the dissolution of the kingdom of Judah. That also had the consequence that other officials, scribes, and priests settled here. The sanctuary at Mizpah acquired a special status (Jer 41:5), and the Deuteronomistic History (Dtr) probably even came into existence here soon afterward.

4. The Postexilic Period. In the postexilic period the tribal area of Benjamin remained in close association with Judah. Along with Judah, Benjamin was initially put under the command of the Persian governor in Samaria. Those returning from Babylonian exile considered their destination to be both Judah proper and Benjamin, and Benjaminites participated in various ways in the subsequent restoration. Perhaps already under the leadership of Zerubbabel, but certainly at the time of Nehemiah, Benjamin and Judah achieved the status of an independent subprovince in the Persian satrapy Beyond-the-River (Neh 5:14). The archaeological record attests to the destruction of numerous Benjaminite towns (Bethel, Gibeon, Gibeah) in the first quarter of the 5th century B.C.E. The precise significance of this is debated, although it seems to indicate some disturbances between the Judaean community in Jerusalem and

Samaria to its north, possibly related to the political tensions described in Ezra 4 (Widengren *IJH*, 502, 525–26).

Afterwards both Benjamin and Judah were incorporated as *Youdaia* into the kingdom of Alexander the Great and in the kingdoms of the Hellenistic Diadochi. The postexilic literature knows Benjamin as a completely independent tribe, almost always named along with Ephraim and Manasseh or Joseph. Chronicles provides a plethora of genealogical material (1 Chr 7:6–12; 8; 9:3, 7–9) as well as some special traditions (1 Chr 12:2–7, 16–18; 21:6) on this subject. Furthermore, the knowledge that Benjamin was an independent entity was not lost in the Roman period. Even the apostle Paul is acutely aware of his heritage as a Benjaminite (Rom 11:1; Phil 3:5).

TRANS. PHILLIP R. CALLAWAY

2. A son of Bilhan (1 Chr 7:10), which according to the genealogy of 1 Chr 7:6–12 (which was probably based on a postexilic list), was a great grandson of the patriarch Benjamin (#1 above). Some scholars have suggested that this genealogy probably belongs to the patriarch Zebulun, but Williamson (*Ezra, Nehemiah, Esther* NCBC, 78) finds the proposed emendations unconvincing.

3. A son of Harim (Ezra 10:31–32), who is listed among those who had married a foreign woman, possibly the Benjamin of Neh 3:23. Since his name appears in the third list, following the lists of priests (Ezra 10:18–22) and Levites (Ezra 10:23–24), this Benjamin must have been a layman.

4. A man who, along with Hasshub (a man who shared a house with Benjamin), repaired part of Jerusalem's wall (Neh 3:23). Although many involved in the repairs were priests and Levites, it is not clear if the Benjamin named here was of levitical descent. Benjamin is not a priestly name. If he was the Benjamin of Ezra 10:31–32, then he was a layman. (A lay Hasshub is mentioned in Neh 3:11; but it is a levitical Hasshub in Neh 11:15.) Is he the Benjamin mentioned in Neh 12:34? His name is given as one of the "princes of Judah" (Neh 12:31) involved in the dedication of the wall (vv. 27–43). But there is some textual uncertainty. Clines (*Chronicles* NCBC, 231) suspects that Benjamin is a minor corruption of Miniamin (cf. vv 5, 17), but both the Vulgate and the LXX read "Beniamin." However since the LXX, but not the Vulgate, reads Beniamin in v 17 as well, Cline's suspicion may be correct.

CRAIG A. EVANS

BENJAMIN GATE (PLACE) (Heb *ša*ʿ*ar binyāmîn* (שַׁעַר בִּנְיָמִין)). Gate of pre-exilic Jerusalem.

In Jer 37:13, Jeremiah tried to leave the city for the territory of Benjamin by way of the Benjamin Gate; and in Jer 38:7, King Zedekiah was sitting in the Benjamin Gate. The fact that Jeremiah was heading N for Anathoth (Jer 1:1) by means of the Benjamin Gate argues that this gate was in the northeast part of the city, not far from the temple courts. This no doubt was the gate of the people described in Jer 17:19 where the kings of Judah went in and out. In postexilic times, this gate may have been called the Muster/Inspection Gate (Neh 3:31) located at the N end of the E wall, or, as others suggest, the Sheep

Gate (Neh 3:32), at the upper end of the E wall. Some argue that the Upper Benjamin Gate (Jer 20:2) leading into the temple, rebuilt by King Jotham (2 Kgs 15:35), is the same as the Benjamin Gate, while others argue that the Benjamin Gate located in the city wall is to be distinguished from the Upper Benjamin Gate, the "north gate of the inner [temple] court" (Ezek 8:3).
W. HAROLD MARE

BENO (PERSON) [Heb *bĕnô* (בְּנוֹ)]. One of the "remaining Levites" who, according to the Chronicler, casts lots before David, Zadok, and Ahimelek in order to receive his place among the levitical household leaders (1 Chr 24:27). The Chronicler grants Beno a levitical lineage as the son of Jaaziah, a descendant of Merari, along with his brothers, Shoham, Zaccur, and Ibri (1 Chr 24:27). However, complex textual problems abound in the two verses of 1 Chronicles where Beno appears. The LXX contains variations on MT's *benô,* yet its readings are also problematic. Two text-critical solutions seem most plausible. The first solution, based primarily on the MT, asserts that *benô* did not originally represent a personal name; instead, it was meant to convey its literal meaning—"his son" (Myers *1 Chronicles* AB, 163). The second solution, following the LXX, argues that *benô* in 1 Chr 24:27 most likely represents a corruption of BANI (Heb *bānî*), a popular name in postexilic Judah (Curtis and Madsen *Chronicles* ICC, 274). In either case, it seems unlikely that *benô* ultimately refers to an historical person. Instead, its presence in the MT highlights the vicissitudes of the textual transmission of names in the OT.
JOHN W. WRIGHT

BEON (PLACE) [Heb *bĕʿōn* (בְּעֹן)]. A site in N Moab allotted to the tribe of Reuben for pasture (Num 32:3). It is generally identified with BAAL-MEON. The critical apparatus of *BHS* conjectures that MT's *bʿn* is corrupt, and should be read **bt mʿn,* that is, Beth Meon (as in Jer 48:23).
C. GILBERT ROMERO

BEOR (PERSON) [Heb *bĕʿōr* (בְּעֹר)]. **1.** The father of the Edomite "king" Bela (Gen 36:32; 1 Chr 1:43). See BELA.

2. The father of the prophet Balaam (Num 22:5; 24:3, 15; 31:8; Deut 23:5; Josh 13:22; 24:9; Mic 6:5) also attested in the Balaam Text from Tell Deir 'Alla (Weippert and Weippert 1982; Hackett 1984).

As a personal name, *bʿr* is attested in Safaitic (Harding 1971:111); Ar *Baʿr* in Ibn Hisham supposedly is a clerical error (Caskel 1966:224). Safaitic *bʿr,* however, is most easily vocalized **Baʿīr* "camel"; this noun signified "cattle" in more ancient West Semitic languages (viz. Heb and Sabaic). The Heb personal name *bʿrʾ,* Baara (1 Chr 8:8), does not furnish a parallel either, since this can easily be explained as an hypocoristic formation of *bʿl + rm/rʾh/rʿh.* Albright's attempt (1944:232) to explain Beor as a similar formation does not agree with the vowel pattern, and the absence of any hypocoristic ending, in Beor. The Edomite and Transjordanian name Beor is, therefore, best regarded as unexplained (see Knauf 1985 for the language of the Tell Deir 'Allah text).

ERNST AXEL KNAUF

BERA (PERSON) [Heb *beraʿ* (בֶּרַע)]. King of Sodom, Gen 14:2. Elsewhere in the chap (vv 8, 10, 17, 21, 22), he appears simply as "the king of Sodom." Together with four other kings (of Gomorrah, Admah, Zeboim, and Bela, that is, Zoar), Bera served Chedorlaomer for twelve years. In their thirteenth year, these kings rebelled and were defeated in the following year by Chedorlaomer and his allies in the Valley

of SIDDIM. As the kings of Sodom and Gomorrah fled, they fell into bitumen pits, which certainly means that they perished. Therefore the verses 17, 21–22, in which the king of Sodom reappears alive and well, must be considered an interpolation (see ANER). The name *Bera,* like those of his allies (BIRSHA, SHINAB, SHEMEBER, and originally Bela), is a "speaking name," as was already perceived by the Targum of Pseudo-Jonathan; it means "in evil," alluding to the wickedness of Sodom.
MICHAEL C. ASTOUR

BERACAH (PERSON) [Heb *bĕrākâ* (בְּרָכָה)]. A kinsman of Saul; one of the ambidextrous warriors from the tribe of Benjamin (1 Chr 12:3). In this list (1 Chr 12:1–8—Eng 12:1–7) the Chronicler is emphasizing the extensive support David enjoyed among Saul's kin before David became king.
RAYMOND B. DILLARD

BERACAH, VALLEY OF (PLACE) [Heb *ʿēmek bĕrākâ* (עֵמֶק בְּרָכָה)]. A valley near Tekoa where Jehoshaphat and his people gathered to bless Yahweh for their marvelous victory over a coalition of invading Moabites, Ammonites, and Meunites (2 Chr 20:26). As prophesied by Jahaziel, the enemy was destroyed when they began fighting among themselves in the wilderness of Jeruel (2 Chr 20:14–23). The sensational nature of this story, however, has raised questions about its historicity (*HAIJ,* 223). Edward Robinson (1941, 3:275) and other early 19th-century explorers suggested that the biblical name was preserved in the ruin of Kh. Bereikut (M.R. 164117), next to modern-day Migdal ʿOz and adjacent to the main highway between Bethlehem and Hebron. Just S of Kh. Bereikut lies Wadi el-Arrub (=N. Mevorach) with its many springs and fertile valley (M.R. 163114). During NT times, an acqueduct directed water from these springs to Solomon's Pools, and from there on to Jerusalem. The majority of scholars who have noticed the similarity between *bĕrākâ* ("blessing") and *bĕrēkâ* ("pool") have thus preferred to locate the biblical site here, rather than in the small valley where Kh. Bereikut itself sits. Biqʿat Horeqanya (= Buqeiʿah Valley), ca. 6–8 km/4–5 miles NW of the Dead Sea has also been proposed, but this seems too far N to be a likely candidate. A more plausible suggestion is the wide valley of el-Baqʿah (M.R. 170116) NW of Kh. et-Tuqu (Markus and Amit 1989:124–25). The likelihood of this valley being the biblical one is derived from its proximity to the wilderness of Tekoa (2 Chr 20:20), and from its strategic position adjacent to the ridge route between En-gedi and Bethlehem. The traditional identification with Wadi el-Arrub falls out of line with this more natural route of ascent into the Judean hills. It is possible that the apocalyptic Valley of Jehoshaphat mentioned in Joel 4:12—Eng 3:12 is an allusion to the same valley where Jehoshaphat was delivered.

R. A. MULLINS

BERAIAH (PERSON) [Heb *bĕrāʾyâ* (בְּרָאיָה)]. One of the sons of Shimei, according to the longer Benjaminite genealogy of the Chronicler (1 Chr 8:21). The name means "Yahweh created." Regarding the list of names of Benjaminites in this section (vv 13–27), Myers (*1 Chronicles* AB, 61) suggests that little historical importance can be derived from them, except that they are described in v 28 as "chief men" (Heb *rāʾšîm*) who dwelled in Jerusalem. This is taken as evidence of the tendency of Benjaminites and Judahites to mix during the period of the divided monarchy. Williamson disconnects v 28 from vv 13–27, understanding it instead as the beginning of the section vv 28–40 (*1 and 2 Chronicles* NCBC, 85). Verse 28 is paralleled at 9:34.
SIEGFRIED S. JOHNSON

BEREA (PLACE) [Gk *Beréa* (Βερέα)]. Var. BEROEA. **1.** A Macedonian town on the Egnatian Way (40°31´N; 22°14´E) which Paul and Silas visited (Acts 17:10–15). Beroea, "a place of many waters," is located near natural springs, 24 miles inland from the Gulf of Thermai, just below Mt. Bermius. The

abundance of streams, the 600-ft. altitude, the scenic view of the Haliacmon plains, and its out-of-the-way location (Cic. *Pis.* 36) make Beroea one of the more desirable towns of the district of Emathia in southwestern Macedonia—modern Verria. Acts 17 identifies the Beroean Jews as nobler than the Thessalonicans. And Paul's language implies that his audience was of high social standing. Numerous extant inscriptions attest to the town's ancient prominence. Beroea's role in military engagements is noted by the classicists (Polybius 27. 8; 28. 8; Livy 44. 45; 45. 29). Pompey chose Beroea as his winter home (49–48 B.C.) before the battle of Pharsalus. The city fell for the last time to the Turks in 1374. Beroea's bishopric status also highlights its prominence. Andronicus II (1283–1328) made the town a metropolis after it had already realized bishopric status under the metropolitan of Thessalonica.

2. A town in the vicinity of Jerusalem, most likely on the Nablus-Jerusalem road. Bacchides took 20, 000 infantry and 2, 000 cavalry to Berea, which was near Elasa (M.R. 169144) 1 Macc 7.8ff.; 9.4–5; *Ant* 12. 10.2). Before being slain by Bacchides' forces, Judah the Maccabee encamped at Elasa (161 B.C.)—probably located on the Sharon-Jerusalem road between the two Beth-horons. Bireth, situated ten miles north of Jerusalem (M.R. 170149) on the road to Nablus, is the best possibility for Berea. Beeroth (Bireth) is a Hivite town in Benjamin (Beeroth in Josh 9:17; Beroth in 1 Esdr 5:19). Josephus lists a Beerzetho, thus making a candidate of Beerzeth, located four miles N-NW of Bireth (*Ant* 12. 11.1).

3. Northern Syrian city between the Euphrates and the Orontes rivers, lying about midway between Hierapolis and Antioch (36°10´N; 37°0´E). Originally Aleppo (Halab), later renamed after the Macedonian Beroea by Seleucus Nicator (312–280), and then returned to the Semitic name Aleppo during the Middle Ages, this city became a stop on the important trade route between Persia and Europe. Aleppo houses the Mosque Zakariyah, supposedly the tomb of Zechariah, John the Baptist's father, and it formerly hosted the Aleppo Codex of the OT. It was at Beroea where Antiochus Eupator executed Menelaus, the ex-high priest. A vivid account of Menelaus' death is recorded in 2 Macc 13:1–8:the Beroeans pushed Menelaus into a tower fifty cubits high, "full of ashes, with a rotating device descending steeply from every direction into the ashes … he did not even reach the ground."

JERRY A. PATTENGALE

BERECHIAH (PERSON) [Heb *berekyâ* (בְּרֶכְיָה)*, berekyāhû* (בְּרֶכְיָהוּ)]. Var. BERACAH. **1.** A son of Zerubbabel (1 Chr 3:20) and descendant of David. The list of Zerubbabel's offspring consists of two sections. Berechiah is one of five names occurring after a listing of two other sons and a daughter. Why Berechiah and his four brothers are isolated in this way is not clear. Two possibilities are that they have the same mother or that they were born in Judah upon Zerubbabel's migration there. Berechiah means "Yahweh blesses" and in this case participates in a list of names expressing an optimism centered around the Jews' return to Judah; Meshullam meaning "recompensed," Hasadiah, "Yahweh is loyal," Jushabhesed, "loyalty returns," etc.

2. The father of Asaph, the latter being designated as a musician in the preexilic temple (1 Chr 6:39; 15:17) along with Heman and Ethan. All three are noted as descendants of Levi. In the noted passages the name Berechiah occurs in one of three lists anachronistically placing Heman, Asaph, and Ethan in the time of David. Historically the lists belong to the postexilic era; they presuppose a stage in the temple liturgy when Levites and singers were not distinguished as Ezra 2:41 and Neh 7:44 indicates they once were. Complicated questions concerning identity arise regarding references to Berechiah in 1 Chr 6:39; 9:16; and 15:17, 23. Questions of identity are treated below in numbers 3 and 4.

3. A gatekeeper for the ark (1 Chr 15:23). This Berechiah has been identified with the postexilic Berechiah of number 4 below. Because the cultic figures mentioned in 1 Chronicles 15 are anachronistically portrayed as living in the time of David and are historically more at home in the postexilic period, an identification is possible. The identification should probably be extended to include Berechiah in 1 Chr 6:39 and 15:17. In the light of the close narrative proximity of the references to Berechiah in 1 Chronicles 15, might one assume that if distinction were intended, a patronymic or filial reference would have indicated such a difference in 15:23? The fact that in 1 Chr 15:23 Berechiah is noted as a gatekeeper for the ark while in 1 Chr 6:39 and 9:16 the same is noted as a musician does not

militate against an identification. Indeed, 1 Chr 15:21, 24 cities Obededom as both musician and gatekeeper (1 Chr 15:21, 24).

4. A postexilic Levite who is listed as among the first Jews to return to Judah (1 Chr 9:16). Note the possible identifications discussed in number 3 above. If they are correct, then 1 Chr 6:39, 9:16, 15:17, 23 refer to the same Berechiah. Neh 11:15–18 contains a parallel list of Levites, but Berechiah's name does not occur there. Curtis and Madsen (*Chronicles* ICC, 172) views the Chronicles text as corrupt. Neither list is a copy of the other since there are significant differences. Instead of one list being a corruption of the other, they both probably stem from a common archival source (Myers *Ezra-Nehemiah* AB, 185) and were edited with regard to the specific intent of the redactor. Whether Berechiah's name was even part of the original archival source cannot be known.

5. A son of Iddo and father of Zechariah the prophet (Zech 1:1, 7; Matt 23:35). Ezra 5:1; 6:14; and Neh 12:16 list Iddo as Zechariah's father. The proposal that Berechiah was inserted in Zech 1:1, 7 due to the influence of Isa 8:2 lacks a basis. First, Isa 8:2 has the form Jeberechiah whereas Zech 1:1, 7 uses the form Berechiah. Assuming influence from Isa 8:2, the change in form begs an explanation. Second, does the Zechariah tradent identify the two Zechariahs, and if so, what would have led to an identification of two persons who obviously lived some two centuries apart? In short, the nature of the alleged influence is ambiguous and lacks explanation. A further consideration lies in the lack of textual evidence indicating that Berechiah is a later addition in the book of Zechariah. Available data do not admit a solution to the problem. That Berechiah was added to the Zechariah text is less likely than that the name simply was not part of the traditions used by the Ezra-Nehemiah writer or that the latter omitted Berechiah in order to enhance Zechariah's prestige by observing his immediate relationship to the venerable Iddo.

6. One of the chiefs of the Ephraimites (2 Chr 28:12) who supported and assisted in repatriating Judahite captives after the Israelite invasion of Judah during the reign of Ahaz. The Chronicler interpreted Israel's invasion of Judah as Yahweh's punishment on the latter. Berechiah's aid to the Judahite captives is a response to the prophet Oded's warning to Israel not to go beyond Yahweh's intent of chastisement. In this context the term "chief" *(rōʾš)* designates a military leader (Muller *THAT* 2:706).

7. The father of Meshullam and son of Mesheshabel (Neh 3:4, 30; 6:18). His son Meshullam worked on the refortification of Jerusalem under Nehemiah.

8. The name Berechiah occurs on a bulla from the City of David which reads *lbrkyhw // on nryhw // hspr*, "belonging to Berekyahu ben Neriah, the scribe," and is likely a reference to Jeremiah's scribe, Baruch, the latter form being a hypocoristicon for Berechiah.

JAMES M. KENNEDY

BERED (PERSON) [Heb *bered* (בֶּרֶד)]. Grandson (1 Chr 7:20) or son (Num 26:35–36) of Ephraim, the younger son of Joseph. According to the Ephraimite genealogy in 1 Chronicles, Bered is the grandson of Ephraim as well as son of Shuthelah and father of Tahath. The significance of the 1 Chronicles passage is to point toward Joshua (v 27), an Ephraimite, the hero of the conquest. Braun (*1 Chronicles* WBC, 114) speculates that the present list in 1 Chronicles 7 could be a combination of two earlier lists due to the repetition of various names (Shuthelah, Tahath), similarity of others (Bered, v 20 and Zabad, v 21; Eleadah, v 20 and Ladan, v 26; Tahath, v 20 twice and Tahan, v 25), and length of the genealogy.

Num 26:35–36 is the only other OT listing of the Ephraimite clan. However, the LXX has an Ephraimite genealogy in Genesis 46. Based on the Numbers passage, Bered should perhaps be read Becher because it lists three brothers as sons of Ephraim:Shuthelah, Becher (Bered), and Tahan. The Peshitta even has Becher in place of Bered in 1 Chr 7:20.

Hogg (1900–1:148–49) suggests that Bered should be deleted from 1 Chr 7:20. First, Bered is not found in G^B. Second, Becher (Bered) found its way into the Numbers passage through scribal error. Third, he notes that Greek manuscripts which include the Ephraimite genealogy in Genesis 46 know nothing of Bered-Becher.

M. STEPHEN DAVIS

BERED (PLACE) [Heb *bered* (בֶּרֶד)]. A place in the Negeb mentioned in connection with the story of Hagar (Gen 16:14). The well of Beer-lahai-roi is said to be located between Kadesh and Bered, but it is unclear in which direction it is located with respect to Kadesh. On the one hand, Simons (*GTTOT* 217) identifies it with Jebel umm el-Bared, SE of Kadesh. On the other hand, *Targum Onqelos* here renders *Ḥagrā',* and the *Targum Yerušalmi* renders *Ḥaluṣâ,* each of which are also used respectively for Shur (Exod 15:22). Thus there seems to have been a tradition identifying Bered either with Shur (i.e., NW Sinai) or with the Way to Shur, therefore somewhere N of Kadesh. However, if *Ḥaluṣâ* refers specifically to Elusa—a town that has been identified with el-Khalasa (M.R. 117056) and that was occupied in Byzantine times (*EAEHL* 359)—then there appears to have been a tradition locating Bered ca. 55 km NE of Kadesh (and 20 km SW of Beersheba). See also BEER-LAHAI-ROI.

GARY A. HERION

BERI (PERSON) [Heb *bērî* (בֵּרִי)]. Fourth of the eleven named sons of Zophah of the tribe of Asher (1 Chr 7:36). The genealogical list of Chronicles appears to be extraordinarily full, since Beri's name is not mentioned in the parallel genealogies of Asher (Gen 46:17, 18; Num 26:44–47). In light of this, Rudolf (*Chronikbücher* HAT 1st ser., 74) emends the text from *ûbērî wĕyimrâ,* "and Beri and Imrah," a continuation of the sequence of Zophah's sons, to *ûbĕnê yimnāʿ* "and the sons of Imna," which begins a new list of sons (see 1 Chr 7:35). He has no connection with the Berites (Num 26:44). Moreover, the Berites of 2 Sam 20:14 can be understood to be Bichrites, by grammatical construction, allies of Sheba who is called "the son of Bichri" (2 Sam 20:1).

JOEL C. SLAYTON

BERIAH (PERSON) [Heb *bĕrîʿâ* (בְּרִיעָה)]. BERIITES. 1. The fourth son of Asher and the father of Heber and Malchiel (Gen 46:17; 1 Chr 7:30–31). He went down to Egypt with his father when Jacob and his family migrated from Canaan to Goshen. Beriah was the grandson of Jacob and Zilpah, the maid whom Laban gave to his daughter Leah. Beriah was the ancestral leader of the family of the Beriites (Num 26:44).

2. A man from the tribe of Benjamin. Beriah was the father of Zebadiah, Arad, Eder, Michael, Ishpah, and Joha (1 Chr 8:13, 16). According to Curtis and Madsen (*Chronicles* ICC, 161), Beriah was the son of Shaharaim (1 Chr 8:8) and Hushim (1 Chr 8:11). Curtis believes that 1 Chr 8:12 is a parenthetical explanation of the genealogy of Elpaal and that 8:13 continues the genealogy of Shaharaim and Hushim. According to Hicks (*IDB* 1:386) he was the fourth son of Elpaal. Hicks believes that 8:13 continues the genealogy of Elpaal presented in 8:12 (so RSV). Other scholars (Keil 1950:147; Myers *1 Chronicles* AB, 57), noting that Beriah is not listed as a son of Elpaal in 1 Chr 8:17–18, believe that 1 Chr 8:13 begins an independent list of Benjaminite leaders (so JB). Thus, Beriah would be neither the son of Shaharaim nor the son of Elpaal. The context, however, seems to favor Curtis and Madsen's view.

Beriah and his brother Shema were two clan leaders who fought against the inhabitants of Gath (1 Chr 8:13). The location of this Gath has been disputed by scholars. Keil (1950:146) believed that it was the Gath of the Philistines, but Mazar (1954:227–30) has shown that this Gath should be identified with Gittaim, a city in the Shephelah. Beriah and his brother Shema settled in the city of Aijalon. In 2 Chr 11:10, Aijalon is listed as belonging to both Judah and Benjamin.

3. A Levite from the family of the Gershonites and the fourth son of Shimei (1 Chr 23:10–11). When the Levites were organized for the service in the temple, they were grouped by families (1 Chr 23:2–32). The Gershonites were represented by Ladan and Shimei. Shimei had four sons but had only three representations. Because his sons Beriah and Jeush did not have many male sons, they were counted as one family (1 Chr 23:11).

4. A son of Ephraim (1 Chr 7:23). Ephraim named his son Beriah because of the misfortune that had befallen his family. The sons of Ephraim had raided the city of Gath to take the cattle from its inhabitants and in the struggle the sons of Ephraim were killed. Ephraim mourned the death of his sons for many days. Later, Ephraim and his wife had a son whom they called Beriah, because "evil had befallen his house."

The etymology of the name is doubtful. Some take the name Beriah as coming from a Hebrew word for evil (*BDB,* 140), others from a word for gift (Gesenius 1849:174), and others from a word meaning "prominent" (Noth *IPN,* 224). The explanation of the name should be considered an etiology (Lung 1968:38) or a midrashic commentary (Mulder 1975:141–66).

CLAUDE F. MARIOTTINI

BERLIN GNOSTIC CODEX. See CODEX (BERLIN GNOSTIC).

BERNICE (PERSON) [Gk *bernikē* (βερνικη)*; berenikē* (βερενικη)]. Var. BERENICE. The daughter of Agrippa I and Cypros born in A.D. 28. Bernice was present when the apostle Paul presented his defense to her brother Agrippa II (Acts 25:13, 23; 26:30). Like the other Herods, Bernice had inherited Roman citizenship, as indicated by her full name—Julia Berenice. In A.D. 41 she married Marcus Julius Alexander, son of Alexander the alabarch. Ostraca from Egypt give some insight into Marcus' commercial activities (Fuks 1951). Upon Marcus' death shortly after the marriage, Bernice married her uncle, Herod of Chalcis before the end of A.D. 44; by him she had two sons, Berenicianus and Hyrcanus (Jos. *JW* 2.221; cf. *Ant* 19.276ff.; 20.104).

After the death of Herod of Chalcis in A.D. 48, Bernice lived as a widow for a long time with her brother Agrippa II, who received her husband's kingdom from the emperor Claudius (*Ant* 20.104). Rumors of incest with her brother are said to have led her to marry Polemo of Cilicia (cf., Braund 1984a:42), who seems to have undergone circumcision and at least superficial conversion to Judaism. Polemo's incentive seems to have been Bernice's wealth (or her dead husbands' perhaps), which later evoked a strong attraction in Vespasian also (*Ant* 20.146; cf. Tac. *Hist.* 2.81). However, Bernice soon left Polemo to return to Agrippa (*Ant* 20.146), and was present when he heard Paul's defense in A.D. 60 (Acts 25:13–26:32). Bernice was in Jerusalem to fulfill a vow when the Jewish revolt began in A.D. 66. She sought to intercede with the Roman procurator, Gessius Florus, on behalf of the Jews, but she was ignored; in fact, she herself barely escaped the ravages of Florus' rampaging troops (*JW* 2.310ff.). She wrote to Cestius, the Roman governor of Syria, complaining of Florus' maladministration. In response to her and to others' letters, Cestius sent an emissary who joined Agrippa, who was on his way to Jerusalem from Alexandria (*JW* 2.333ff.). Bernice and Agrippa made strenuous efforts to dissuade the revolutionaries, but their efforts met with only temporary success (*JW* 2.402ff.):their residence in Jerusalem was burnt down (*JW* 2.426).

She and her brother had little choice but to withdraw, and it may have been at this time that they refurbished a building in Berytus which Herod the Great, their great-grandfather, had built (*Année épigraphique* 1928, 82). Bernice subsequently contributed to the financing of Vespasian's bid for power in A.D. 68, while her beauty appealed to his son, Titus, who was some ten years her junior (Tac. *Hist.* 2.81). From the start her relationship with Titus seems to have been the subject of gossip, as was her relationship with her brother. It was even said that Titus' return to the East while en route to Rome was the result of his passion for Bernice, as Tacitus reports and denies (*Hist.*2.2).

Upon the success of Vespasian's cause, Titus finally joined his father in Rome in A.D. 71 after suppressing what remained of the Jewish revolt. But Bernice did not come with him to Rome, and not until A.D. 75 did she and Agrippa arrive in the capital. The delay may have been necessitated by power politics among Vespasian's followers, or Vespasian and Titus may simply have wished to avoid scandal

until they had established their control; Vespasian was, after all, the fourth emperor of A.D. 69 and did not want to go the way of his predecessors (Crook 1951; Braund 1984b). Certainly Titus' relationship with Bernice did damage to his reputation at Rome, where queens by nature were suspect (Suet. *Tit.* 7). Rumor held that she was to become Titus' wife, and she already had begun to act as such. Two Cynics denounced Titus in the theater, for which one was flogged and the other beheaded (Dio Cass. 66.15.4–5). It may well have been at this time that Quintilian presented a case before her in which she had some personal interest (Quint. *Inst.* 4.1.9). When Titus became emperor upon his father's death in A.D. 79, people feared that he would be a tyrant. Titus took steps to improve his reputation, including the immediate (if reluctant) dismissal of Bernice from Rome (Suet. *Tit.* 7), though later she seems to have returned before Titus' death in A.D. 81, at no cost to his reputation (Dio Cass. 66.18.1).

Bernice's biography is beset by rumors and gossip of a more or less scurrilous nature. She is even said to have had another lover among Vespasian's followers, who is said to have lost his life on that account (*Epit. de caes.* 10.4). The Romans expected such behavior from queens and would even have created it where it did not exist (Braund 1984b). Bernice is regularly given the title of queen.

DAVID C. BRAUND

BEROEA (PLACE) [Gk *Berōia* (Βερωια)]. Var. BEREA. **1.** A city (modern Verria) located in the SW section of the Roman province of Macedonia (40°31´N; 22°14´E—in modern Greece) in the district of Emathia (Ptolemy 3.12). It is located near the base of Mount Bermius (Strabo 7.26) along a tributary of the Haliacmon river some 50 miles from Thessalonica. It is several miles south of the main road of the region, the Egnatian Way, which may account for Cicero's comment that it is a "town off the beaten track" (*In Pisonem* 36.89).

Paul and Silas traveled by night to Beroea (Acts 17:10–15) after they were driven out of Thessalonica by Jews who were angered by their teachings. Timothy seems to have rejoined Paul and Silas here after a short stay in Philippi. They were well received by the Beroeans, who are described as being "more noble than the Thessalonians." Paul taught them for several days and as a result many Jews and prominent Greeks were converted.

Soon the Jews of Thessalonica heard that Paul and his companions were in Beroea. They traveled to the city and upon arrival they incited the crowds to oppose Paul. Some of the local Christians guided Paul to the coast and on to Athens. Timothy and Silas remained in Beroea and later rejoined Paul in Corinth (Acts 18:5). It is not clear if Paul sailed to Athens from a nearby port (possibly Dium) or followed the road which traced the coastline to Athens. Paul is later accompanied by Sopater of Beroea (Acts 20:4) who may have been converted during Paul's brief stay in the city. It is likely that Sopater was sent as delegate of the local congregation to accompany the money they gave to help the needy of Judea.

It is unclear when the city of Beroea was founded, but it was certainly prosperous by the end of the 4th century B.C. as attested by an inscription (*IG,* 2/5). Polybius mentions Beroea twice (27.8; 28.8) and it was the first city to surrender to Rome after the Battle of Pindar in 168 B.C. It was assigned to the third of the four districts of Macedonia (Livy 44.45; 45.29). According to tradition Onesimus was the first bishop of the city. The bishopric of Beroea was under the metropolitan of Thessalonica and was later assigned its own metropolitan by Andronicus II (1283–1328). The Turks captured the city in 1373/74. Few remains of the ancient city remain except the walls and several inscriptions which have been found at the site. See Jackson and Lake 1965:206–8; Leake 1835:290–92.

2. Hellenistic name assigned to the city of Aleppo located (36°10´N; 37°0´E) in northern Syria (2 Macc 13:4). It was renamed in honor of the Macedonia city by Seleucus Nicator (312–280). The Seleucid king Antiochus Eupator, who was marching with a large contingent of soldiers to Judea, had former high priest

Menelaus put to death at Beroea (2 Macc 13:1–8). The death sentence was ordered after the king was informed by Lysias of the treason of Menelaus. The execution was carried out according to local customs, with the accused dropped into a lofty tower (about 88 ft high) filled with hot ashes. Josephus records the death of Menelaus but assigns it to the end of the war between Judas and Lysias (*Ant* 12.9.7).

The name of the city reverted to its Semitic origins (Haleb) when it came under Muslim control. The name Aleppo was derived from a distortion of the name Haleb by Venetian merchants. Aleppo grew in importance during the medieval period when it was an important link in the caravan trade route linking Europe with the East. Its prosperity waned when an alternate sea route was discovered. Aleppo, one of the largest cities in Syria today, is noted for its impressive ruins of a medieval castle which sits on top of a steep glacis 150 ft above the center of the city.

3. Berea was the camp of the soldiers led by Bacchides and Alcimus who moved after encamping against Jerusalem and just prior to the battle with Judas Maccabeus (1 Macc 9:4). The exact location of the city is debated with two possible options:al-Bireh, a city located 8 miles N of Jerusalem; and Bir ez-Zait, a town located 13 miles N of Jerusalem.

JOHN D. WINELAND

BEROLINENSIS, CODEX. See CODEX (BERLIN GNOSTIC).

BEROTHAH (PLACE) [Heb *bērôtâ* (בֵּרוֹתָה)]. One of the places which mark part of the N boundary of Israel as envisioned by Ezek 47:15–16. The LXX places Berothah at the beginning of the verse and immediately after Zedad. Although it is difficult to determine whether the final *he* is a directional marker or an original part of the name, the place may be identical with the Berothai mentioned in 2 Sam 8:8. Accordingly, Berothah may be located on the site of modern Bereitan (33°55′N; 36°08′E) in the Beqaʿ Valley of Lebanon. As noted by Zimmerli (*Ezekiel* 2 HermeneiaA.Hermeneia, 517–543), the extent to which Berothah and other places in Ezek 47:15–16 marked actual boundaries of Israel at some point in its history has provoked much discussion by M. Noth, K. Elliger, and other scholars.

HECTOR AVALOS

BEROTHAI (PLACE) [Heb *bērōtay* (בֵּרֹתַי)]. City from which David took much bronze (2 Sam 8:8), and a principal city of the kingdom of Zobah at the time of its conquest by David. It may be located on the site of modern Bereitan (33°55′N; 36°08′E) in the Beqaʿ Valley of Lebanon. Instead of Berothai, the parallel passage in 1 Chr 18:8 mentions Cun, a place about seven miles to the N. Berothai may be identical with the Berothah mentioned in Ezek 47:16.

HECTOR AVALOS

BERRIES. See FLORA.

BESAI (PERSON) [Heb *bēsay* (בֵּסַי)]. The head of a family of *nĕtînîm* (temple servants) (see NETHINIM) which is listed among those exiles returning from Babylon to Jerusalem and Judah (Neh 7:52 = Ezra 2:49; 1 Esdr 5:31). The Greek spelling of the name differs in all three occurrences:*Bēsi* (Nehemiah), *Basi* (Ezra), *Basthai* (1 Esdras). Although Zadok (1980:113) believes the name remains unexplained by using onomastic criteria, others, such as Myers (*Ezra-Nehemiah* 14) and Clines (*Ezra, Nehemiah, Esther* NCBC, 57), believe it to be Babylonian. It has been suggested that the name is a possible contraction of the name *bĕsôdĕyāh* found in Neh 3:6 (Gehman *NWDB,* 105).

RODNEY H. SHEARER

BESCASPASMYS (PERSON) [Gk *Beskaspasmys* (Βεσκασπασμυς)]. In 1 Esdr 9:31, this name is possibly an alternate form of Mattaniah.

BESODEIAH (PERSON) [Heb *bĕsōdyâ* (בְּסֹדְיָה)]. The father of Meshullam, the latter having assisted in the refortification of Jerusalem under the leadership of Nehemiah (Neh 3:6). This name is made up of a preposition, a noun, and the theophoric element representing Yahweh. It presumably means "in Yahweh's council." Speculation is not out of place regarding the possibility that the name recalls the prophetic experience of being admitted to the divine council (1 Kgs 22:19–23; Isaiah 6; Jer 23:18, 22).
JAMES M. KENNEDY

BESOR, THE BROOK (PLACE) [Heb *naḥal bĕśôr* (נַחַל בְּשׂוֹר)]. A brook or wadi David and four hundred of his men crossed in pursuit of the Amalekites following the Amalekite raid on the town of Ziklag (1 Sam 30:9, 10, 21). The Brook Besor, Wadi Shalleh, or Ghazzeh, along with the Valley of Gerar, Wadi esh-Shari, has been described as one of the two major wadis of the western Negeb (*LBHG,* 26–27).

Because of the flooding waters during the rainy season and the large area for which the Besor provided drainage, the bed of the wadi was extremely wide, approximately 100–150 meters, a width which started near Beer-sheba and continued to the coast (Orni and Efrat 1973:45). The towns along the Besor from the coast eastward include Tell el-Ajjul, Tell Jemmeh, Tell el-Farah (south), Beer-sheba, and Arad (Oren 1982:155). Ziklag was located near the wadi (Borowski 1988:24). The numerous ancient mounds in the area provide evidence of the strategic and economic importance of the area in ancient times. In the Middle Bronze Age, the heavily fortified cities along the Wadi Besor and Wadi Gerar provided a defense system for the southern border of the land (Oren 1982:156–57). The fortifications in this region were responsible for the failure of the Israelites to penetrate the land of Canaan from the south, through the Negeb, at the time of the conquest (*LBHG,* 200–201). The Wadi Besor was the scene of many confrontations in ancient times as the nomads from the south sought grazing lands for their flocks to the north, a region comprised of settled communities (Oren 1982:157).

LAMOINE F. DEVRIES

BESTIALITY. See PUNISHMENTS AND CRIMES; SEX AND SEXUALITY.

BET. The second letter of the Hebrew alphabet.

BETA. The second letter of the Greek alphabet.

BETAH (PLACE) [Heb *beṭaḥ* (בֶּטַח)]. A city belonging to Hadadezer, king of Zobah in Syria, from which David took a large amount of bronze (2 Sam 8:8). The name of this N Syrian town is problematic. The Syriac reads *ṭbḥ* and the Lucianic mss of the LXX read *(ma)tebak,* both apparently referring to the well-attested N Syrian town of TIBHATH (cf. the 1 Chr 18:8 parallel). The MT in 2 Sam 8:8 thus reflects an erroneous metathesis of the first two consonants. See also TEBAH (PERSON).

BETEN (PLACE) [Heb *beṭen* (בֶּטֶן)]. A town appearing only once in the Bible, in the opening verse of the description of the territory of Asher (Josh 19:25). Beten is therefore to be sought in the S part of the coastal plain N of the Carmel. Eusebius seems to include a reference to this town in his note that "Batnai [is] today called Bethbeten, at the eighth mile east of Ptolemais" (Kosterman 1904:52, lines 19–20). Abel (*GP,* 2:264) pointed out that the name had survived in the modern Kh. Ibtin (M.R. 160241), 18 km SE of Acco. Sherds from the relevant periods have not been found at that site, therefore Beten should be located at one of the sites in the vicinity (*EncMiq* 2:50), probably at Tell al-Far less than a km NW of Kh. Ibtin

(*HGB*, 430). The discrepancy with Eusebius' distances is to be explained in that the point where the road to Bethbeten turned off from the Ptolemais-Sepphoris road was at the eighth mile stone.

RAFAEL FRANKEL

BETH-ANATH (PLACE) [Heb *bêt ʿanat* (בֵּית עֲנַת)]. A Canaanite designation for a city, comprised of Beth, "house of" (in modern Heb *bêt* and in Ar *beit*) and the name of the famous goddess Anath, known also as *btlt ʿnt,*"the virgin *ʿanat*" (*UT* 19.1889). The adoration of the goddess Anath was already popular in Canaan prior to the Israelite conquest and settlement, and her sanctuary is the town's focal point.

Beth-anath, according to the tribal allotments cited in the Bible, is located among the fortified towns under the control of Naphtali (Josh 19:32–39). The Naphtalites settled among the Canaanite inhabitants without driving them out, and the latter became tributaries to the former (Judg 1:33). The precise location of the city, however, has not been determined. Geographical identifications advanced by Guérin (1880:374), Albright (1923:18–20), and Alt (1926:55) are discredited by Aharoni (1957:70) as lacking suitable archaeological support. The locations do not seem to yield any evidence of a *tell*, nor are they identified with a location resembling a fortified Canaanite city resisting the Israelite incursions. Even Garstang (*Joshua, Judges*, 102; 244–45) who offers a mound as the site of Beth-anath is unable to substantiate it satisfactorily (Aharoni 1957:97).

Two places remain as possible candidates for the geographical location of Beth-anath,?Hîneh and?Safed el-Battikh (M.R. 190289). Klein (1933:5–7; 1939:16) stated that the talmudic *byt ʿnh* (*b. Kil.* 2.16) was a border city along N Transjordan, and identified it with the modern town of Hîneh, SW of Damascus. The same city is mentioned in the Talmud as *bʾynh* (j. *ʿOr.* 3.7). It is also assumed that *rwm byt ʿnt* (t. *Miqw.* 6.3) and *rmt bny ʿnt* (*ʾAbot R.Nat.* 27) refer to the same place. The Sages describe it as a city whose population is partly gentile, but which is within Israelite biblical borders (Rashi *mwblʾwt* b. *Giṭ* 4a). Grintz (1964:67), who accepted Klein's identification, proposed that this city is the biblical Beth-anath. He relied on the account of Josephus (*Ant* 5.86) which depicted the territory of the Naphtalites as extending E to Damascus and thus he placed the city along the E Israelite border of Naphtali.

There is, however, another claimant for the ancient city of Beth-anath, the modern place of Safed el-Battikh (Aharoni 1987:330; Boling, *Joshua* AB, 406). The city appears in Egyptian inscriptions, perhaps as early as LB I and explicitly in LB II. The topographical lists of Thutmose III cite N locations captured by the great Pharaoh (Simons 1937:113, 118) and the records of King Seti I enumerate *b-t ʿ-n-t or b- (y)-t ʿ-n-t* (Simons 1937:144–46) situated along the route connecting Hazor and Tyre, and passing next to Kedesh. The city is mentioned again during the campaigns of Rameses II:"*k-r-p* the town which his majesty obliterated on the mount of *b-t ʿ-n-t*" (Simons 1937:149, 152–53, 160–61). Beth-anath was apparently in a mountainous region and the area took its name from the city.

Zenon papyri (PSI 554; 594) mention the estate of a Greek officer in Baitanatois which Tcherikover (1933:234–36) equates with Beth-anath in the Galilee. Aharoni goes one step further and identifies it with the biblical Beth-anath (1957:71–72) and fixes the geographical location in the region NW of Kedesh (Aharoni, *MBA*, 113, map 177). While analyzing Zenon's itinerary, Aharoni dismisses Klein's identification of the talmudical *byt ʿnh= (ʿnt)* (1957:72).

The name of *rwm byt ʿnt* in rabbinic sources seems to support Aharoni's view. The terminology resembles the old Egyptian nomenclature, mount *b-y-t ʿ-n-t* identified in the upper Galilee, NW of Kedesh. Moreover, the Sages testify to the mixed population of the city and tell of a permanent pool in which more than two thousand *kor* of water was aggregated, a fact which is substantiated by Conder (SWP 1:95, 104) who surveyed the region and found a warm spring forming a pool next to Safed el-Battikh situated in the heights. Further, Eusebius (*Onomast.* 52) identifies Beth-anath in the tribe of Naphtali, as the village Batanaia, 15 miles from Caesarea where it is told that healing bathhouses were located. It is possible that the reference of Eusebius parallels the talmudic *rwm byt ʿnh= (ʿnt),* and

Caesarea, as Aharoni suggests, is Caesarea Philippi (1957:73). This would put Batanaia in the vicinity of Safed el-Battikh in the upper Galilee.

The site of Beth-anath cannot be established unequivocally until an archaeological survey of the region is taken. Many mounds in N Israel still await excavation, and among them, no doubt, will be found the precise location of Beth-anath.

MEIR LUBETSKI

BETH-ANOTH (PLACE) [Heb *bêt ʿănôt* (בֵּית עֲנוֹת)]. One of the cities in the hill country of the tribe of Judah (Josh 15:59). Beth Anoth is listed fifth in a list of six cities after Halhul (modern Ar Ḥalḥûl, M.R. 160109), Beth Zur (Kh. eṭ-Ṭubeiqeh, M.R. 159110), Gedor (Kh. Jedûr, M.R. 158115), and Maarath, and before Eltekon. The cities in this list that have been identified all lie in a line N of Hebron. Eusebius (Klosterman ed., 24, 94) connected Gk *Bethanin* or *Bethenim* with a place 2 miles from the Terebinthos (Oaks of Mamre—modern Ramat el-Khalil, M.R. 160107) and 4 miles from Hebron. Kallai (*HGB,* 391) connects the LXX^B (Codex Vaticanus) *Baithanam* and A (Codex Alexandrinus) *Baithanōm* renderings of Beth Anoth with Eusebius' site and with modern Kh. Beit ʿAnûn (M.R. 162107). As with most ancient names containing the word *bêt* (house), Beth Anoth may be related to the temple of a god which gave its name to the locale (*LBHG,* 108). Frank (1972:84) claimed that Beth Anoth, along with Beth Anath and Anathoth, was a place name that was derived from the name Anath, an active goddess of fertility.

SUSAN E. MCGARRY

BETH-ARABAH (PLACE) [Heb *bêt hāʿărābâ* (בֵּית הָעֲרָבָה)]. ARABATHITE. A city on the boundary between Judah and Benjamin, near Jericho. It is mentioned four times in the OT, twice each in the boundary descriptions in Joshua 15 (vv 6, 61) and 18 (vv 18, 22). The name might mean "place of the depression" (BDB, 112) or "House of the Desert Rift" (Boling and Wright *Joshua* AB, 366).

There is a similar discrepancy between each of the two pairs of occurrences of the name. According to Josh 15:6, the boundary of Judah passes N of Beth-arabah, while v 61 includes it as one of six cities of Judah in the wilderness. Likewise Josh 18:18 describes the border of Benjamin as "passing on to the north of the shoulder of Beth-arabah" (MT's *mĕl-hāʿărābâ* is regularly emended to *bêt-hāʿărābâ*), while v 22 includes Beth-arabah as one of 12 cities of Benjamin. The discrepancy suggests to some commentators that the city belonged to Benjamin at one time, but later changed hands (see *HGB,* 337, 343, 373). Beth-arabah has been identified with ʿAin el-Gharbeh (M.R. 197139) on the N bank of the Wadi Qelt, about 3 miles SE of Jericho and about the same distance W of the Jordan river. Simons (*GTTOT,* 173) observes, however, that the unemended MT of Josh 18:18 suggests a location further W in the hills (see also the reservations expressed by Kallai *HGB,* 396, 400). One would expect the border to be the bed of the wadi, but this is only one of several uncertainties of this border.

One of the thirty champions associated with King David was Abi-albon the Arabathite (2 Sam 23:31; in 1 Chr 11:32 the name is Abiel). The gentilic "Arabathite" is usually taken to refer to Beth-arabah.

HENRY O. THOMPSON

BETH-ARBEL (PLACE) [Heb *bêt ʾarbēʾl* (בֵּית אַרְבֵּאל)]. A town razed by Shalman (Hos 10:14).

Its defeat must have been particularly brutal (cf. Hos 10:14b) and well known. The prophet Hosea cites Beth-Arbel as an example of the massive destruction facing Israel.

Both Beth-Arbel and Shalman are mentioned only in Hos 10:14; neither can be identified with certainty. Beth-Arbel is most often identified with Arbela of the Transjordan (modern IRBID, M.R. 229218), located near Pella. Arbela, mentioned by Eusebius (*Onomast.* 14:18), was located at an economically and militarily important crossroad (Glueck 1951:153–54). Its destruction would have been a significant and well-remembered event. However, we do not have records of atrocities at modern Irbid in Jordan (Andersen and Freedman *Hosea* AB, 571). Josephus (*Ant* 12.11.1 §421) and 1 Macc 9:2 refer to a second town named Arbela, located just W of the Sea of Galilee. This Arbela has also been identified as Beth-Arbel. However, it is questionable whether the Galilean Arbela was important enough for its defeat to become a byword for violent and large-scale devastation.

CAROLYN J. PRESSLER

BETH-ASHBEA (PLACE) [Heb *bêt ʾašbēaʿ* (בֵּית אַשְׁבֵּעַ)]. Location of a family or guild of linen

workers descended from Shelah, son of Judah (1 Chr 4:21). Although older translations (e.g. KJV) understood Ashbea as referring to the family of the linen workers it is now accepted that the name refers to their place of residence and should more properly be called Beth-ashbea (cf. RSV and NJV). It was located in the Shephelah district of Judah's settlement, probably in the region of Mareshah, mentioned in the same verse. Noth (1932:123) speculated that there may have been some connection between the linen factory (about which term see Demsky 1966:214) at Beth-ashbea and the weaving and dyeing works found by Albright at Tell Beit-Mirsim. The mention of the linen factory at Beth-ashbea adds greatly to our scanty knowledge of guilds and craftsmen in ancient Israel (see Mendelsohn 1940 and de Vaux *AncIsr* 1:76–78).

CARL S. EHRLICH

BETH-AVEN (PLACE) [Heb *bêt ʾāwen* (בֵּית אָוֶן); *bêt ʾôn* (בֵּית אוֹן)]. **1.** A city of Benjamin

located near the Ephraimite border between Jericho and Bethel/Luz (Josh 18:12). 1 Sam 13:5 locates Michmash E of Beth-aven, while 14:23 narrates that Israelites under Jonathan pursued Philistine soldiers from Michmash past Beth-aven, presumably toward their home country to the W. In the late 8th century B.C., Hosea (5:8) seems to have warned Gibeah, Ramah, and Beth-aven of an imminent military invasion.

The modern identity of the site is disputed. M. Noth (1935) argued that the toponym was merely a derogatory term for Bethel (see below). J. Grintz (1961:212–15) identified Beth-aven with et-Tell, but this location does not match information from the above-mentioned texts. Rejecting Albright's proposal of Burqa, Z. Kallai-Kleinmann (1956) suggested that Tell Maryam (M.R. 175141), a mound in the Wadi es-Swenît 1 km W of Mukhmas, best suits the biblical information regarding Beth-aven for two reasons. First, its location in the valley, almost certainly part of the ancient Benjamin-Ephraim border, fits the requirements of Josh 18:12. Second, Tell Maryam's location to the W of Mukhmas (see MICHMASH) is consonant with the situation of Beth-aven reported in 1 Sam 13:5 and 14:23. A recent archaeological survey (Kochavi 1972) found Iron Age remains at Tell Maryam to support of Kallai-Kleinmann's proposal.

Beth-aven's close proximity to ancient Gibeah (Jaba‹?) and Ramah (er-Ram) also might suggest that Hosea's war-alarm did not refer to Judah's hypothesized counterattack against Israel along the watershed highway after the Syro-Ephraimite invasion (Alt 1959), but rather to the original Syro-Ephraimite attack itself, cf. 2 Kgs 16:5 and Isa 10:27–32 (Arnold 1987:241–49).

2. A derogatory term (Heb. *bêt ›āwen,* "house of wickedness") for the Israelite shrine at Bethel (Amos 5:5; Hos 4:15; 10:5). The Hebrew root *›wn* can be vocalized to mean either "wealth" or "wickedness" (Coote 1971:392–94); Amos and Hosea seem to have ridiculed Bethel by creating a pun on the name of the nearby Benjaminite city of Beth-on. This confusion may explain the gloss on the MT of Josh 7:2, which associates Beth-aven with Bethel/Ai, as well as the entire MT vocalization of *beth ›wn* to mean "house of wickedness."

PATRICK M. ARNOLD

BETH-AZMAVETH (PLACE) [Heb *bêt-‹azmawet* (בֵּית־עַזְמָוֶת)]. An alternate form of Azmaveth.

BETH-BAAL-MEON (PLACE) [Heb *bêt ba‹al mă‹ôn* (בֵּית בַּעַל מָעוֹן)]. A northern Moabite town more commonly called Baal-meon, also known as Beth-meon and, probably, Beon. After the Hebrew victory over the Amorites, this settlement was assigned to the tribe of Reuben (Num 32:3, 38; Josh 13:17; 1 Chr 5:8). The alternative names Beth-baal-meon/Baal-meon appear in the Mesha Inscription (lines 9, 30), where the Moabite king says he rebuilt the town and made a reservoir in it. Jeremiah (48:23) and Ezekiel (25:9) mention this place name in their oracles against Moab. Samaria ostracon 27 contains a reference to "Baala the Baalmeonite." The village of Ma‹in (M.R. 219120), located ca. four miles southwest of Medeba, is the probable location of ancient Beth-baal-meon, though archaeological confirmation is lacking. See also BAAL-MEON; MAON; MEUNIM.

GERALD L. MATTINGLY

BETH-BARAH (PLACE) [Heb *bêt bārâ* (בֵּית בָּרָה)]. An undetermined location thought to be near the Jordan river (Judg 7:24). Here the Ephraimites, under the direction of Gideon, cut off the fleeing Midianites by seizing the area around the Jordan up to this point. The precise meaning of the place name is obscure, leading some to postulate a textual corruption from an original *bēt ‹ăbārâ* (meaning place of ford), which would associate the locale with a river crossing. One might place it among the streams in the Wadi Far‹ah, W of the river, but there is a general skepticism about identifying it with Bethabarah of the NT (John 1:28). See also BETHANY BEYOND THE JORDAN.

JEFFREY K. LOTT

BETH-BIRI (PLACE) [Heb *bêt-bir›î* (בֵּית־בִּרְאִי)]. A town in which the sons of Simeon dwelt prior to the reign of David (1 Chr 4:31). Apparently the same place is named BETH-LEBAOTH in Josh 19:6. The name may be preserved in Jebel el-Biri, 10 km SW of el-Khalasa (M.R. 117056).

GARY A. HERION

BETH-CAR (PLACE) [Heb *bêt-kār* (בֵּית־כָּר)]. A village in the territory of Benjamin near MIZPAH where the Israelites defeated the Philistines under the direction of Samuel (1 Sam 7:11). After being

thrown into confusion by Yahweh, the Philistines fled and were pursued by the Israelites as far as an area below Beth-Car. The location of the site is unknown, though ʿAin Karim and Beth-horon have been proposed (see McCarter *1 Samuel* 146). Several scholars have noted the similarities between the battle described here and the one recounted in 1 Sam 4 and have suggested that this narrative was written with the intention of wiping out the dishonor created by that earlier defeat (McCarter *1 Samuel* 149–50; Garsiel 1983:41–44). Beth-Car figures into the relationship between these two chapters in that the narrative apparently places the erection of the monument stone called Ebenezer here (cf. 1 Sam 7:12, translating *ʿad-hēnnāh* with McCarter (*1 Samuel* 146–47) as "to this point" rather than "hitherto" with RSV). Ebenezer, in turn, is where the Israelites were defeated and the ark taken by the Philistines in 1 Sam 4. A. Weiser (1959) is the most notable of those who see at least part of 1 Samuel 7 as containing a historical account which predates the composition of 1 Samuel. This means that the parallels with the battle described in chap. 4 are reflections of historical coincidence and not the design of the narrator.

JEFFRIES M. HAMILTON

BETH-DAGON (PLACE) [Heb *bêt-dāqôn* (בֵּית־דָּגוֹן)]. 1. A town situated in the Shephelah, or lowlands, of Judah (Josh 15:41), within the same district as LIBNAH and MARESHAH. The only OT reference to this settlement, whose name apparently means "House/Temple of Dagon," occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster compiled under the Judean Monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72; see also JOSHUA, BOOK OF). This Judean settlement has often been identified with a town of the same name in the vicinity of Jaffa which the Annals of Sennacherib claim was captured during the campaign of 701 B.C. (*ANET*, 257). If this suggestion is accepted, the ancient settlement is probably to be found in the vicinity of modern Beit Dajan (*LBHG*, 374; M.R. 134156), located approximately 9 km southeast of Jaffa. However, such an identification seems doubtful, considering the fact that the remainder of the identifiable towns in this lowland district are located approximately 40 km to the southeast. The location of the ancient town remains uncertain.

2. A town situated on the southern border of the tribal allotment of Asher (Josh 19:27). The historical and editorial context of the boundary lists of the northern tribes is a subject of continued controversy. One viewpoint suggests that the boundary lists of Joshua 19 are based on ancient documents describing either tribal claims from the period of the old tribal league (Alt 1953), or (excluding Simeon) the official internal boundaries of the Kingdom of Israel (*LBHG*, 233–34). An alternative perspective (Noth 1935) argues that these boundary lists, rather than being authentic border descriptions, are based on a partial list of border stations to which an editor added a series of connecting verbs. That many scholars (*LBHG*, 235–39; Boling and Wright *Joshua* AB, 442–67) have found it possible to trace the path indicated by these connecting verbs with a great deal of precision strongly suggests that they stem from actual boundary descriptions rather than mere editorial approximations. Although the exact location of the ancient town remains unclear, a recent proposal to identify it with Tell Regeb (Boling and Wright *Joshua* AB, 454; M.R. 159240), about 8 km SE of Haifa is attractive in both geographical and archaeological terms.

WADE R. KOTTER

BETH-DIBLATHAIM (PLACE) [Heb *bêt diblātāyim* (בֵּית דִּבְלָתָיִם)]. A town mentioned in Jeremiah's oracle against Moab (48:22). According to this verse, "judgment has come upon the tableland," i.e., God's wrath was unleashed against a number of Moabite settlements, including Beth-diblathaim. The Mesha Inscription (line 30) reports that King Mesha of Moab rebuilt Medeba and Beth-diblathaim, among other towns. The same line of this Moabite text mentions Beth-diblathaim between Medeba and Beth-baal-meon, possibly indicating that this town was positioned on the Moabite plateau in the vicinity of the other two sites.

Beth-diblathaim is perhaps identical with Almon-diblathaim, one of the stops on the Israelites' route between Mt. Hor and the plains of Moab. According to Num 33:46–47, Almon-diblathaim was situated between Dibon and the mountains of Abarim, on the Moabite tableland. Assuming that Beth- and Almon-diblathaim are alternative biblical names, both the OT and the Mesha Inscription allow for identification with a site somewhere in the tableland north of the Wādī el-Mūjib. Many scholars associate the ancient place name in question with Khirbet Deleilât esh-Sherqîyeh (M.R. 228116), located ca. ten miles north-northeast of Dhiban. Recently, Khirbet Libb, which is located on the King's Highway ca. eight miles north of Dhiban, has been linked with ancient Beth- and Almon- diblathaim. Neither of these site identifications is certain.

GERALD L. MATTINGLY

BETH-EDEN (PLACE) [Heb *bêt ʿeden* (בֵּית עֶדֶן)]. Var. EDEN. Aramean kingdom in the upper bend of the Euphrates 200 miles NE of Israel, attested in 9th–8th century B.C. texts (Amos 1:5). It is first mentioned by this name in 884 B.C. in Assyrian inscriptions relating rebellion among other Aramean kingdoms (*GARI* II §547). Although subdued by Assurnasirpal II seven years later (*GARI* II §582–83), the first three years of Shalmaneser III's reign were again occupied with the subjugation of Beth-Eden (857–585 B.C.; *LAR* §559–61, 599–601), after which he renamed the kingdom's major cities (the capital Til-Barsip on the east bank of the Euphrates becoming Kar-Shalmaneser). Because the kingdom does not subsequently figure prominently as an independent political entity, some locate the Beth-Eden of Amos 1:5 elsewhere (written at least a century after the above events), noting that a mid-7th century Aramaic letter (*KAI* 233.14–15) points to a similarly named locale in southern Mesopotamia. But Tiglath–Pileser III in the latter half of the 8th century does refer to certain Syrian cities by the old designation Beth-Eden (*LAR* §821). In later texts the conquered "people of Eden" (2 Kgs 19:12 = Isa 37:12) and simple "Eden" (Ezek 27:23) are probably connected with this formerly independent kingdom, for it is named in conjunction with other Euphrates locales, while Ezekiel associates Eden with Lebanon (Ezekiel 31).

SAMUEL A. MEIER

BETH-EGLAIM (PLACE) [Gk *Bēthaglaim* (Βηθαγλαιμ)]. A village eight Roman miles from Gaza, according to Eusebius (*Onomast.* 48.19). Beth-eglaim is not mentioned in the Scriptures. By analogy with EN-EGLAIM (Ezek 47:10) it has been Hebraicized as *bêt ʿeglayim.*

Conder (1896:235) was the first to suggest identifying Beth-eglaim with TELL EL-ʿAJJUL (M.R. 093097), about four miles SW of Gaza. Petrie (1931–34) excavated Tell el-ʿAjjul as ancient Gaza, choosing the name on the basis of the mention of *palaia Gaza* in Diodorus Siculus (19.80) as the site of a battle between Ptolemy and Demetrius in 312 B.C.E. (19.81–84). However after the appearance of Maisler's 1933 article it has been common to equate Beth-eglaim and Tell el-ʿAjjul (for modern dissenters see below). Major components of the argument for the identification of the two lie in Beth-eglaim's situation at the coast according to Eusebius and in the similarity of their names, Beth-eglaim meaning "house/temple of the two calves" in Hebrew ("cattle farm," according to Kempinski 1974:146),

and Tell el-ʿAjjul, meaning "mound of the little calf" in Arabic. The name may refer to a temple of Baal or Hadad with an iconography of twin bullocks (see Albright 1938:337 n. 1 and Stinespring *IDB* 1:389).

Tell el-ʿAjjul is a major site of 28–32 acres. It lies on the N bank of Nahal Besor (Wadi Ghazzeh, see BESOR, THE BROOK), near its estuary into the Mediterranean Sea and along the Via Maris, "way of the sea," one of the major routes leading from Egypt into Palestine.

Petrie personally excavated at ʿAjjul from 1931–1934, while a team under his direction excavated there one additional short season in 1938 (Petrie, MacKay, and Murray 1952). Petrie's interpretation of his finds proved suspect, and most studies follow the lines of interpretation and chronology first laid out by Albright in 1938 (see also Stewart 1974:9–14, 59–61 and Tufnell *EAEHL* 1:52–61.

Although earlier periods were represented on the S bank of the Nahal Besor, the earliest finds at ʿAjjul date to EB IV (Kenyon's Intermediate Early Bronze–Middle Bronze Age; see Kenyon 1956). These consist of two cemeteries, one to the NW (1500) and one to the E (100–200) of the tell.

The earliest remains found on the tell itself come from the Courtyard Cemetery on the N and have been dated to MB I. A number of scarabs bearing the names of Egyptian officials, as well as a small statue and a carnelian bead bearing names found at the S end of the tell, could indicate the presence of a contemporaneous settlement, although no structural remains have been found.

ʿAjjul became a city of major proportions in MB II–III. This great expansion took place during the so-called "Hyksos" period of Egyptian history (Dyn. 15–16), when Egyptian and Canaanite relations were particularly close. Tell el-ʿAjjul, situated at the junction of the major N–S route from Egypt into Canaan and of a major inland route along the Nahal Besor, as well as being a port city, was in a perfect position to take advantage of growing international commercial contacts. This finds graphic expression in the wealth of gold objects recovered from the tell. Evidence of Tell ʿAjjul's position as a center of international trade is also indicated by the early and rich appearance of Bichrome Ware at the site starting with the final phase of Palace I and increasing during the succeeding period (LB I; see Epstein 1966:174–185; and Artzy, Asaro, and Perlman 1973).

Construction of the MB city appears to have followed a well-thought-out plan. The fosse surrounding the tell on three sides was deepened (presumably the slope on the SW side facing Nahal Besor was sufficient for defensive purposes), and debris from it was used to heighten the slope on the top of the tell. Sandstone from this quarrying was also used to lay the foundations of the large Palace I on the N. Inside the walls, the city was laid out according to careful plan (see Yassine 1974). City III on the S was most probably contemporary with Palace I. Both were covered by a thick destruction layer which Albright dated to the period of the anti-Hyksos campaigns of the 18th Dynasty shortly after 1570 B.C.E.

After a brief interval, the palace was rebuilt. Palace II was a more modest structure constructed entirely of bricks. It was contemporary with the early phase of City II. Palace II was eventually succeeded by the fortress-like Palace III, whose appearance was followed in the construction of Palaces IV and V. It would appear that ʿAjjul progressively lost importance as a city and became an Egyptian military outpost (Palaces III–V). This was most likely related to the concurrent rise of the importance of nearby Gaza. Eventually Egypt lost control over the area to the Philistines, and the site was virtually abandoned.

Although Tell el-ʿAjjul has most often been identified with Beth-eglaim, and indeed that has become the name of the site in modern Hebrew, in recent years strong arguments have been raised against this identification.

Kempinski (1974) has argued that ʿAjjul should be identified with Sharuhen, the site of the Hyksos' last stand after their expulsion from Egypt. First, Tell el-ʿAjjul lies too close to Gaza to be the Beth-eglaim mentioned by Eusebius. Second, the finds from the tell do not indicate settlement there at the time of Eusebius. He would therefore seek Beth-eglaim in the vicinity of Deir el-Balah, roughly twice as far from Gaza. Third, he has redated the architectural remains from the tell, pushing their dates back in time from those proposed by Albright. Palace II/City II would then be the one destroyed shortly after 1570, pursuant to which the New Kingdom administrative center in SW Canaan shifted to Gaza. Finally the identification of Sharuhen at Tell el-ʿAjjul, rather than at Tell Farah (South), is based on ʿAjjul's being the largest city in the region in the Middle Bronze Age. In Kempinski's opinion also the situation directly on the coastal

road, rather than twenty additional kms farther inland along the Nahal Besor, would be more fitting for the great Hyksos stronghold which took three years to conquer. Stewart (1974:63) had previously arrived at the same conclusion regarding the identification of ʿAjjul. In this they have been followed by Naʾaman (1980:147–48) and Weinstein (1981:4, 6; who, however, sees no need to redate Palace II/Level II to the end of the Hyksos period rather than to the period afterward).

Aḥituv has argued against the attempt to sever Tell el-ʿAjjul from its identification as Beth-eglaim and to identify it instead with Sharuhen (1984:171–73). Although conceding that ʿAjjul would fit the history of Sharuhen in the Hyksos and New Kingdom periods, Aḥituv feels that it departs from what is known of Sharuhen in its lack of habitation at the time of Shishak's campaign in the late 10th century, if one follows Kempinski's dating of Palace V to the 12th century. As regards the location of the tell, Aḥituv feels that if ʿAjjul were to be identified as Sharuhen, it would lie too far to the SW to be included in the Simeonite geographical lists (Josh 19:6). Also in his opinion an inland location of Sharuhen at Tell el-Farah (South) would not be inconsistent with its location on the Via Maris. He concludes that ʿAjjul is to be identified with Beth-eglaim, and that its location at the time of Eusebius is to be sought at one of the small sites in the vicinity, perhaps at Tell es-Sanam, on the S side of Nahal Besor and hence slightly farther from Gaza and more in keeping with the geographical information contained in Eusebius.

Resolution of the identification of Beth-eglaim must await further archaeological investigation.

CARL S. EHRLICH

BETH-EKED (PLACE) [Heb *bêt ʿēqed* (בֵּית עֵקֶד)]. A town on the road from Jezreel to Samaria (2 Kgs 10:12–14) where Jehu encountered forty-two kinsmen of Ahaziah, the late king of Judah. Jehu seized the men and had them all killed in a pit at Beth-Eked as a part of his campaign against the rulers of Israel and Judah.

The toponym, which can be translated as "house of binding," occurs once (2 Kgs 10:12) with the appellation "of the shepherds" (Heb *hāroʿîm*). The LXX interprets Beth-eked as a proper noun, while the Targum translates the name as "meetinghouse."

Many scholars (*GP,* 271) have located the town at Beit Qad (M.R. 208192) in part due to the similarity between the ancient and modern names. However, as Simons (1959:363) has pointed out, Beit Qad, which is located about three miles east of Jenin (M.R. 178207), is well to the east of any reasonable route between Jezreel (M.R. 181218) and Samaria (M.R. 168187). Others (*GTTOT,* 363) have suggested the village of Kafr Ro' i (M.R. 165198) as the location of Beth-Eked, based upon both the location of the town on a hill above the disused rail tracks between Jenin and Samaria and the similarity of the name to the appellation *hāroʿîm,* used in reference to Beth-Eked. While this identification is more in keeping with the context of the story, neither identification is entirely convincing.

MELVIN HUNT

BETH-EMEK (PLACE) [Heb *bêt hā‹ēmeq* (בֵּית הָעֵמֶק)]. A town that appears only once in the description of the territory of the tribe of Asher (Josh 19:27). Robinson (1857:134) pointed out the similarity of the name to that of ‹Amqa (M.R. 166264), eleven km NE of Acco, and Guerin (1880:23) identified Beth-emek with this site. This is almost certainly the "Kefar Amiko" of Talmudic literature (*t. B. Qam.* 8, 10 = p. 362; *b. Ta‹an.* 21A), but no antiquities of the Iron Age or earlier were found at the site. Saarisalo, who had initially also identified Beth-emek at ‹Amqa, later suggested Tel Mimas (M.R. 164263), two km SW of ‹Amqa (1929:36 n. 1; 1930:6). He found Iron Age pottery at the site, and since then LB pottery has also been found. Consequently, the neighboring kibbutz has been named Beth Ha'emek.

The territory of Asher is, in Joshua, clearly described from south to north, and Beth-emek is listed before Cabul (Josh 19:27). The latter can almost certainly be identified at the modern village of Kabul or in its immediate vicinity. See CABUL. Tel Mimas, however, is not south but north of Kabul. If it is presumed that the place names appear in exact geographical order, the identification with Tel Mimas is untenable; thus, Gal (1985) has recently suggested locating Beth-emek at Kh. Mudawer Tamra (M.R. 169250), five km S of Kabul.

Zadok (1985:157), however, has shown ‹Amqa to have the same denotation as Beth-emek. There is also every indication that many of the place names in the description of the territory of Asher are not in exact geographical order, and many scholars regard some of these as part of a town list inserted between sections of the border description (Alt 1927:68–71), thus allowing for the identification of Beth-emek with Tel Mimas (*LBHG,* 376).

RAFAEL FRANKEL

BETH-EZEL (PLACE) [Heb *bêt hā›ēṣel* (בֵּית הָאֵצֶל)]. An unknown location in the Shephelah (Mic 1:11). The LXX Symmachus, the OL versions, and the Vg translated the phrase along the lines of "the house next door" (so van Hoonacker 1908:360; cf. Zech 14:5). But the substantive *›ēṣel,* "proximity, conjunction," is otherwise used in the Hebrew Bible only as a preposition, "beside, in proximity to;" and "the house next door" does not help with the sense of the passage. In the paronomastic poem of Mic 1:10–16, the pun stems from the verbal root *(›ṣl)* meaning "withdraw, withhold, take away," a conceptual wordplay on the "take away from" (Heb *yiqqaḥ min*) in the following colon. Thus, an appropriate translation might be, "mourning in 'Withholdon' (Beth-ezel) will keep its support (Heb *‹emdâ;* cf. van Hoonacker 1908:361–62; Allen *Joel, Obadiah* … NICOT, 276) from you."

LAMONTTE M. LUKER

BETH GADER (PLACE) [Heb *bêt-gādēr* (בֵּית־גָּדֵר)]. One of the references to a geographical name within a genealogical framework (*LBHG,* 246), Beth Gader is listed as the son of Hareph, son of Hur, within the tribe of Judah (1 Chr 2:51). Though its exact location has not been identified, Beth Gader was probably an important border city in the vicinity of Bethlehem (M.R. 169123) and Kiriath-jearim (modern

Dier el-ʿÂzar, M.R. 159135), which appear with it in the genealogy (*EncMiqr* 2:70). Aharoni, who claims the name derives from the cities fortifications (from Heb *gādēr,* "wall" or "enclosure"), suggests that Beth Gader, along with the other towns in its genealogical list, lies in the NE section of the Shephelah near the Valley of Elah (*LBHG,* 109, 248) which begins M.R. 149121 and runs to the Mediterranean coastal region.

SUSAN E. MCGARRY

BETH-GAMUL (PLACE) [Heb *bêt gāmûl* (בֵּית גָּמוּל)]. A town located in Moab's tableland, named in Jer 48:23 along with a number of other settlements in this region that were the objects of God's wrath. Since the town is not mentioned anywhere else in the Bible, it has been suggested that Beth-gamul was founded relatively late in history. Such an explanation is not necessary, however, since it is likely that Jeremiah's list of place names included some that were unimportant. Beth-gamul has been equated with Khirbet el-Jemeil, a site with extensive Iron Age ruins that is located ca. eight miles east of Dhiban, but this identification is uncertain.

GERALD L. MATTINGLY

BETH-GILGAL (PLACE) [Heb *bêt gilgāl* (בֵּית גִּלְגָּל)]. A town in the general vicinity of Jerusalem, where levitical singers had been established and from which they were summoned to participate in the dedication of Jerusalem's rebuilt walls (Neh 12:29). It is often suggested that it be identified with the more famous Gilgal situated near Jericho, but since *gilgāl* was a common place name in Israel and the text presumes its proximity to Jerusalem for the Levites functioning in the temple, it is preferable to locate the town in the environs of Jerusalem. See also GILGAL.

JEFFREY K. LOTT

BETH-HACCHEREM (PLACE) [Heb *bêt hakkerem* (בֵּית הַכֶּרֶם)]. One of five districts, or district capitals, of the province of Judah during the Persian Period. Neh 3:14 indicates it was ruled by Malchijah, son of Rechab. According to Jer 6:1, a fire signal station was located there.

Both 3QInv (3Q15) and 1QapGen mention a Beth-haccherem in conjunction with the King's Valley where the tomb of Absalom was located (2 Sam 18:18). Some scholars believe that the *Karem* which the LXX adds to the list of places in Joshua 15:59 may be the same as Beth-haccherem.

Based on Jeremiah's association of Tekoa with Beth-haccherem (Jer 6:1), as well as Jerome's comment that it could be seen from Bethlehem, the proposal has been made that Beth-haccherem be identified with the Herodium (M.R. 173119), although this view has gained little support. Others have suggested that the village of ʿAin Karim, ca. 6.5 km W of Jerusalem (M.R. 165130), preserves the name of the ancient site. It has further been suggested that cairns located on top of Jebel Ali, which overlooks ʿAin Karim, could have served as the beacons for Beth-haccherem. The most recent proposal for Beth-haccherem is RAMAT RAHEL, ca. 4 km S of Jerusalem (M.R. 170127; Aharoni, *LBHG,* 432). This location can be harmonized with the ancient sources, and it also would have been ideal for a fire signal station. The recovery of ancient remains from the last years of the kingdom of Judah would also tend to support such an identification.

RANDALL W. YOUNKER

BETH-HAGGAN (PLACE) [Heb *bêt haggān* (בֵּית הַגָּן)]. A place toward which Ahaziah king of Judah fled when attacked by Jehu king of Israel (2 Kgs 9:27). Ahaziah was fleeing S from Jezreel (v 15) toward Samaria and Jerusalem. Thus he should have taken the main road going SW from Jezreel to modern Jenin, where the natural pass from the Jezreel valley into the Samaria mountains is located. Knowing the road, Jehu ordered an ambush to kill the king of Judah in the narrow pass of GUR leading to

the Dothan valley. After being mortally wounded, Ahaziah abruptly changed direction and headed to Megiddo, where he died.

The identification of Beth-haggan must, therefore, be connected to modern Jenin (M.R. 178207), where the name—lit. "house of the enclosure" *(gan)*—was well-preserved in the Roman period as Ginaea, marking the border between Galilee and Samaria and described as "a village situated in the great plain" (*JW* 3.48). In 1968 Porath discovered in the center of modern Jenin a tell of 30 dunams in area, upon which the central bus station was later built. The pottery collected proved that the site existed in the EB I, MB I, LB I–II, Iron I–II, Persian, Hellenistic, Roman, Byzantine, medieval, and Ottoman periods. This discovery enabled the identification, on the same place, of *Kn* (E7 of the later Execration Texts), as suggested by Mazar (1974:25). It seems as well that this is "kur-Gina" of EA 250, mentioned in connection to the events which took place after the death of Labayu, prince of Shechem. With the identification of Harabu (EA 250) with el-Hurab in the Dothan valley (Zertal 1984:59–65), it seems even more probable that "kur-Gina" and Beth-haggan were indeed located at Jenin.

ADAM ZERTAL

BETH-HARAM (PLACE) [Heb *bêt hārām* (בֵּית הָרָם)]. Var. BETH-HARAN. A valley allotted by Moses to the tribe of Gad on the east side of the Jordan (Josh 13:27), which includes the city of Beth-nimrah, among others. However Num 32:36 reports that Beth-haran (modern Beit Harran?) and Beth-nimrah (M.R. 210146) are both specific towns controlled by Gad. The discrepancy between a comprehensive territory and a locality is explained by Loewenstamm (1972) and later Kallai (1983) who define various stages in the report of the conquest of the Transjordan. These places were apparently fortified holding pens for livestock and were useful as staging points for persons crossing the Jericho into Canaan.

After working from surveys made in the nineteenth century, Glueck (1951) concludes that both Beth-haram and Beth-haran refer to the same Tell Iktanu (Ikhtenu, M.R. 214136) on the southern side of wadi er-Rameh. Excavations (Prag 1974:97) have not determined which biblical town is found during the Middle Bronze Age at Tell Iktanu.

PAUL NIMRAH FRANKLYN

BETH-HOGLAH (PLACE) [Heb *bêt-hoglâ* (בֵּית־הָגְלָה)]. A village that was on the border between the territories of the tribes of Judah and Benjamin (Josh 15:6; 18:19). It is also listed as one of the cities in the territory of Benjamin (Josh 18:21). The border descriptions place Beth-hoglah and its companion village Beth-arabah just N of the bay on the northern shore of the Dead Sea at the mouth of the Jordan River. Beth-hoglah, one of the villages that may be named after an animal (partridge—Heb *hoglâ; LBHG,* 255), was identified by Eusebius (Klosterman ed., 48) with what was in his time called Agla. Today it is identified as modern Dier Hajlah (M.R. 197136), a site near ʿAin Hajlah SE of Jericho. Its companion village of Beth-arabah (modern ʿAin el-Gharabeh, M.R. 197139) lies just to the N. Though the linguistic evidence for this identification is very strong, the artifacts recovered from this area do not preceed the Byzantine period. Beth-hoglah and its companion village Beth-arabah have played an important part in the study of the historical development of the biblical text. Beth-arabah appears in both the city lists of the tribe of Judah (Josh 15:61) and the lists of the tribe of Benjamin (Josh 18:22). While Beth-hoglah only appears in the list of Benjaminite cities (Josh 18:21), it clearly appears, along with

Beth-arabah, S of the border (in Judah) in the border description of the S border of Benjamin (Josh 18:19). Beth-arabah is also clearly S of the border in the description of Judah's N boundary (Josh 15:6). These discrepancies have led scholars to conclude that the borders between the tribes shifted over time and that cities may have belonged to different territories in different periods. Kallai (1960:48) wrote that the N border description of the tribe of Judah (Josh 15:5–11) represented the border after the conquests of David. He claimed the list of Judean cities (Josh 15:21–61) was part of Solomon's second district (*HGB*, 373) but also showed signs of later editing (Hezekiah's time). He concluded that the list of the cities in Benjamin (Joshua 21–17), dating after the division of the kingdoms, could only represent the historical situation during the period between Abijah's conquest and Judah's expulsion from Mt. Ephraim during Asa's war with Baasha (*HGB*, 404).

SUSAN E. MCGARRY

BETH-HORON (PLACE) [Heb *bêt-horôn* (בֵּית־חוֹרֹן)]. A levitical city assigned to the tribe of Ephraim. The earliest records indicate that there were two cities known as Beth-horon, the one Lower Beth-horon and the other Upper Beth-horon, each situated on the "ascent of Beth-horon." The later writer of Chronicles reveals that the Beth-horons were built by Sheerah (1 Chr 7:24), the daughter of Beriah, who was one of the sons of Ephraim. According to Joshua Beth-horon came under the control of the Hebrews at the time of the Conquest. In this battle (Josh 10:10–11) many of the Amorites were slaughtered at Gibeon, and the remaining Amorites were chased to the ascent of Beth-horon. At the time of the allotment, Lower Beth-horon was given to the descendants of Joseph, that is to say, the Ephraimites (Josh 16:3), while Upper Beth-horon was on the border between Ephraim (16:5) and Benjamin (18:13–14).

During the Philistine wars when the Israelites had been scattered, one of three companies of Philistine "raiders" assaulted Beth-horon, while Saul and Jonathan stayed in Geba (1 Sam 13:18). Later, as a result of the Egyptian capture and burning of Lower Beth-horon (1 Kgs 9:15–17), this site was one of the rebuilding projects of Solomon along with Jerusalem, Hazor, Megiddo, Gezer, Baalath, and Tamar. In a parallel Chronicles text (2 Chr 8:5–6) both Upper and Lower Beth-horon are mentioned as having been fortified with walls, gates, and bars (cf. Myers *2 Chronicles* AB, 13, 48). The final reference to Beth-horon is in the account of a raid by disbanded Israelite troops who killed 3000 in Judah, from Samaria to Beth-horon (2 Chr 25:13).

Outside the OT the only references to the Beth-horons are in the intertestamental literature and in the Church Fathers. During the Maccabean Wars Beth-horon was the site of two revolts under the leadership of Judas (1 Macc 3:16, 24; 7:39). The cities were later fortified by Bacchides after the battle with Jonathan (1 Macc 9:50). In *Jubilees* 34:4 the king of Beth-horon during the time of Jacob is mentioned. Beth-horon was also one of the villages held by the Jews against Holofernes (Jdt 4:4).

Beth-horon is a twin city:Upper Beth-horon has been identified with Beit ʿUr el-Foqaʾ (M.R. 16143), while Lower Beth-horon has been associated with Beit ʿUr et-Tahta (M.R. 158144). These identifications are uncontested. The Beth-horons are located in the mountains of Judah in the valley of Aijalon, the most important of all the routes in the hill country from the coastal plain. Beit ʿUr et-Tahta sits on a hill, not dissimilar in height, size, vegetation, or form from its environs. High hills are visible to the N, E, and S, while the deep valley of Aijalon is preserved in two parallel faults, making an easy approach to the mountains from the W. Beit ʿUr et-Tahta has a commanding view of the coastal plain below; it thus occupies a central position of communication between the hill country and the plain. Beit ʿUr el-Foqaʾ, ca. 2.5 km SE, sits on a hilltop site similar in structure to many others in the area. The most important things about these two sites were their role in the security of Judah and their significant impact on commerce. Beth-horon was one of the major cities on the route from Joppa, Lydda, Bethel, and Jericho crossing over to Rammoth-ammon.

A question regards which Beth-horon is referred to in the Hebrew Bible. This is a debated, unresolved problem. Without presenting any evidence, Simons (*GTTOT,* 204) identifies the Beth-horon of Joshua 21 with Beit ʿUr el-Foqaʾ; but others like Albright (1929:6) have argued for Beit ʿUr et-Tahta. Central to the question is Ephraim's border. According to Josh 16:5 the border of Ephraim goes as far as Upper Beth-horon, while in Josh 16:3 the allotment to Joseph extends "as far as the territory of Lower Beth-horon." Traditionally geographers have wanted to separate these two cities, but that option is not as attractive as it appears on the surface. In the first place, there are references to the "ascent of Beth-horon" and to the "going down of Beth-horon." Garstang (*Joshua, Judges,* 179) first suggested that this distinction "may possibly trace its origins to the fact that two different routes led from the plains of Gibeon towards the coast, but Aharoni (*LBHG,* 59) has proposed that "ascent" and "descent" simply depend on one's direction. Both points have credibility. When one approaches Beth-horon from el-Jîb, one has the feeling of climbing to Lower Beth-horon and then on to Upper Beth-horon. However, when coming from the coastal plain, the same perception is had; but the approach is from the opposite direction. The biblical narrative often is not clear whether the approach is from el-Jîb (E) or from the coastal plain (W).

Garstang's "two route" theory has been supported by recent surveys at both Beth-horons (Peterson 1977:281). When Beit ʿUr et-Tahta was surveyed, the tell was sterile with the exception of its N face. The S face was only slightly terraced. However, the N side, facing the valley, was covered with shards. Just the opposite was found at ʿUr el-Foqaʾ. The only part of the tell not sterile at el-Foqaʾ was the S face toward the deep valley. This suggests that et-Tahta's population overlooked and protected the valley and trade routes along its N side, while the ancient occupation at el-Foqaʾ overlooked and protected the valley and trade routes along its S side. Some communication system could easily have been developed between the fortified cities. Pottery supports occupation at both sites as early as Iron II.

Robinson (1841:62) presents an examination of all the literature written on Beth-horon until his June 9, 1838 visit. He identified the site as Beth-horon, and all geographers since have accepted Robinson's identification.

Since 1926 there have been many surveys at both el-Foqaʾ and et-Tahta. The surveys have shown that the pottery chronologies at el-Foqaʾ begin with LB, while at et-Tahta the earliest is Iron II. However, what is most interesting is that from Iron II forward each period is represented at both sites, giving more credibility to the "twin cities" thesis. Earlier geographers had failed to recognize the antiquity of the pottery at el-Foqaʾ, perhaps because of the many references to Lower Beth-horon in the Bible. The conclusion that can be drawn from the archaeological evidence is a close occupational relationship between the two cities. It is only when one city is specifically mentioned that the other is excluded. Given the occupational history and settlements of both cities, the Beth-horon of Josh 21:22 and of 1 Chr 6:68 must be *both* Beit ʿUr el-Foqaʾ and Beit ʿUr et-Tahta.

JOHN L. PETERSON

BETH-JESHIMOTH (PLACE) [Heb *bêt hayĕšimôt* (בֵּית הַיְשִׁמוֹת)]. A place in the Shittim valley N of the Dead Sea and E of the Jordan River mentioned in four biblical passages (Num 33:49; Josh 12:3; 13:20; Ezek 25:9). The first of these is part of a larger passage (Num 33:5–49) giving the itinerary of the Israelites in their journey from Egypt to the plains of Moab. Beth-jeshimoth is mentioned twice in Joshua, first (12:3) as a point of reference in a delineation of the boundaries of the Amorite kingdom of Sihon, and next (13:20) in Moses' allocation of that defeated kingdom to the Reubenites (on the implied linking of Exodus and Conquest traditions, see Soggin *Joshua* OTL, 154–55; Boling *Joshua* AB, 340–

41). In a brief oracle against Moab, Ezekiel (25:9) lists the city as one of the three principal sites of that region.

The second element of the same occurs in Hebrew with the definite article (noted by Aharoni *LBHG* 109), but the first element (Heb *bêt,* lit. "house") is variously interpreted or omitted by LXX translators (see *LBHG* 98). The ancient name can be detected in that of Khirbet es-Suweimeh, although the view of Glueck (1943:23–26) that nearby Tell ʿAzeimeh was the actual ancient site is generally followed (Ottosson 1969:124; *LBHG* 113; Miller 1989:582 n. 8).

C. GILBERT ROMERO

BETH-LE-APHRAH (PLACE) [Heb *bêt lĕʿaprâ* (בֵּית לְעַפְרָה)]. A town, otherwise unknown, mentioned only in Mic 1:10 within a paronomastic dirge lamenting the fall of the Shephelah cities, which formed the military bulwark for Jerusalem. Through a pun on the following Hebrew word, *ʿapar,* 'dust, 'the poet obviously wishes to convey the sense of "house of dust." The grammatical problem is the preposition *l,* which normally does not occur after a construct. The exegete might omit the *l* with the support of the Targum, Syriac, and Theodocian, to find possible reference to one of two attested Ophrahs (Heb *ʿoprâ*), but one of these towns lies in Benjamin and the other in Manasseh, both inappropriate localities for the Micah text. An alternative is to understand the *l* as possessive (Williams 1976:30, 270; *GKC,* 130a), so that *bêt lĕ* (van Hoonacker 1908:359 reads *mibbêt lĕ,* but MT *bĕbêt* is better, given the parallelism with *bĕgat,* "in Gath" in 10a; cf. BDB, 110b; *GKC,* 130aN) carries the sense of "within" Ophrah/Aphrah (see Rudolph *Micah* KAT, 9, 12). But simplest, and in this case best, is to accept Beth-le-aphrah and the difficult Beth-ezel alongside Shaphir, Zaanan (v 11), and Maroth (v 12) as currently unknown localities named in the Micah 1 text. Given the ancient Hebrew custom of lamenting in dust and ashes, a plausible translation of v 10 would be, "In Gath, tell it not! Weep not at all! In 'Ashton' (Beth-le-aphrah) roll round in the dust!"

LAMONTTE M. LUKER

BETH-LEBAOTH (PLACE) [Heb *bêt lĕbāʾôt* (בֵּית לְבָאוֹת)]. Var. LEBAOTH. Simeonite town located in the Judean NEGEB and listed between HAZAR-SUSAH and SHARUHEN (Josh 19:6). In the list of towns in the Negeb district of Judah, it appears in its abbreviated form as LEBAOTH between SANSANNAH and SHILHIM (Josh 15:32). However, in the Simeonite genealogy in 1 Chr 4:31 its place is taken by BETH-BIRI between HAZAR-SUSIM and SHAARAIM. The relationship between Beth-lebaoth and Beth-biri is unclear. It is possible that they were one and the same place, in which case Beth-lebaoth could have been the site's preexilic and Beth-biri its postexilic name (see "Beth-biri" in *IDB* 1:389). Or they may have been two separate sites located in the same general area (implicit in Abel *GP 2:* 269, 368). Rudolph (*Chronikbücher* HAT, 38) has conjectured that Beth-biri (Heb consonantal *byt brʾy*) and Beth-lebaoth (Heb *byt lbʾwt*) may be biforms of the same name, drawing on different Heb word roots for lion *(ʾry* and *lbʾ)* respectively (in which case he would emend Beth-biri to Beth-ari *byt ʾry*). The site of Beth-lebaoth has not been identified, although it was probably located in the vicinity of Sharuhen.

CARL S. EHRLICH

BETH-MAACAH (PLACE). See ABEL-BETH-MAACAH (PLACE).

BETH-MARCABOTH (PLACE) [Heb *bêt hammarkābôt* (בֵּית הַמַּרְכָּבוֹת), *bêt markābôt* (בֵּית מַרְכָּבוֹת)]. Beth-marcaboth is listed in Josh 19:5 and in 1 Chr 4:31 as one of the settlements occupied by the tribe of Simeon in the aftermath of the Conquest. Since the tribe of Simeon was assimilated to that of Judah at an early date, and most of the Simeonite towns are listed again clearly in the record of the Judean settlements in Josh 15:21–32, an explanation for its absence there is necessary.

In Josh 19:5–6a the text reads:Ziklag, Beth-marcaboth, Hazar-susah, Beth-lebaoth; the parallel passage in Josh 15:31–32a has:Ziklag, Madmannah, Sansannah, Lebaoth. Since these short sections of the list begin and end with the same towns (Lebaoth being a variant for Beth-lebaoth), it is likely that the towns in between are also to be equated. An explanation for this difference is that Madmannah is the earlier name for the site. The name Beth-marcaboth, meaning "the house of the chariots," may have been given to it under Solomon, who is known to have trafficked in chariots and horses (1 Kgs 10:28–29). The older name of the site may be preserved at Khirbet Umm ed-Deimneh though no Iron Age remains have been found there (Abel *GP* 2:372). The nearby site of Khirbet Tatrit (M.R. 143084), 18.5 km NE of Beersheba, has yielded Iron Age pottery (Kochavi 1972:80–81; Aharoni, *LBHG* 431).

JEFFREY R. ZORN

BETH-MEON (PLACE) [Heb *bêt măʿôn* (בֵּית מָעוֹן)]. A N Moabite town more commonly called Baal-meon, also known as Beth-baal-meon and, probably, Beon. After the Hebrew victory over the Amorites, this settlement was assigned to the tribe of Reuben (Num 32:3, 38; Josh 13:17; 1 Chr 5:8). The alternative names Beth-baal-meon/Baal-meon appear in the Mesha Inscription (lines 9, 30), where the Moabite king says he rebuilt the town and made a reservoir in it. Jer 48:23 and Ezek 25:9 mention this place name in their oracles against Moab. Samaria Ostracon 27 contains a reference to "Baala the Baalmeonite." The village of Maʿin (M.R. 219120), located ca. 4 miles SW of Medeba, is the probable location of ancient Beth-baal-meon, though archaeological confirmation is lacking.

GERALD L. MATTINGLY

BETH-MILLO (PLACE) [Heb *bêt millôʾ* (בֵּית מִלּוֹא)]. An otherwise unattested place mentioned together with the "citizens of Shechem" as part of an assembly responsible for the enthronement of Abimelech, king of Shechem (Judg 9:6, 20 [2 times]). The passage seems to be earlier than the surrounding narrative (Richter 1963:305) and may reflect a secondary interpretation of a traditional description of the environment of Shechem.

Several identifications of Beth-millo have been offered (Soggin 1973). The term has been taken to refer to the acropolis of Shechem, presumed to be identical with the *migdal* "tower" mentioned in Judg 9:46. Most who follow this line of interpretation identify the site as an important part of the urban defense system; others consider it to have been an area outside the city (either connected with or separate from the *migdal*).

If the second element of the name Beth-millo means "filling" (from Heb *mlʾ* 'to fill'), it may refer to the foundation of the upper city (so Boling *Judges* AB, 171). This has generally been presumed to be the meaning of the (identically spelled) word *millʾ* 'Millo'designating an area of fill on the E slope of the city of David (2 Sam 5:9; 1 Kgs 9:15, 24; 11:27; 1 Chr 11:8; 32:5). See MILLO (PLACE). A *bêt millôʾ* is referred to in this area also (2 Kgs 12:21), perhaps "a prominent building in the Millo" (Cogan and Tadmor *II Kings* AB, 139). Beth-millo would then be related to the later function of the urban acropolis as

a part of the defense system which included the priests, other temple personnel, and soldiers who inhabited the area (Soggin 1973).

The etymology of the word *millôʾ* remains rather doubtful. It is possible that the word is a borrowing from Eg *m3rw,* which designates a part of the king's court (Görg 1985:60). Beth-millo may thus be a term for the residential area of the king at Shechem (and Jerusalem, respectively) and may designate the administrative center of the city.

BETH-NIMRAH (PLACE) [Heb *bêt nimrâ* (בֵּית נִמְרָה)]. One of the towns built by Gadites E of the Jordan valley in land wrested from the Amorite king Sihon and given to them by Moses (Num 32:36; Josh 13:27). The name is found at Num 32:3 without the initial element (Heb *bêt,* lit. "house"), and LXX omits it at Num 32:36 (Gk *Nambra*). The name of the site persists at Tell Nimrin (on the Wâdī Nimrin), although the ancient site was Tell Bleibil nearby (Aharoni *LBHG* 112–14). The "waters of Nimrim" (Isa 15:6; Jer 48:34) are perhaps to be associated with this location. See NIMRIM, THE WATERS OF (PLACE).

C. GILBERT ROMERO

BETH-PAZZEZ (PLACE) [Heb *bêt paṣṣēṣ* (בֵּית פַּצֵּץ)]. A town in the territory of the tribe of Issachar mentioned only in Josh 19:21. From the position of Beth-pazzez in the list of tribal towns, it should be located to the E of Mt. Tabor (M.R. 187232). Although Abel (*GP 2:* 62) suggested an identification with Kerm el-Haditeh (M.R. 196232), there is not sufficient evidence to establish an identification with any site.

MELVIN HUNT

BETH-PELET (PLACE) [Heb *bêt-peleṭ* (בֵּית־פֶּלֶט)]. A town in Judah located in the extreme S (Negeb) near Beersheba and toward the boundary of Edom (Josh 15:27). It was one of the towns reoccupied by Judeans when they returned from exile (Neh 11:26). Petrie (1930:15) identified it with the S Tell el-Fara (M.R. 100076), 18 miles S of Gaza, although now that site is identified with Sharuhen. The location of Beth-pelet thus remains unknown.

GARY A. HERION

BETH-PEOR (PLACE) [Heb *bêt pĕʿôr* (בֵּית פְּעוֹר)]. Heb for "house" or "temple of Peor," a Transjordanian site the biblical importance of which is based on events that took place prior to the Hebrew conquest of Canaan. Its theophoric name probably indicates that the god Peor, or Baal of Peor, was worshiped in its environs. This place name, Beth-peor, is, in fact, related to a group of proper nouns that occur in the OT and are sometimes a cause of confusion: (1) Baal-peor, the name of a god, a local manifestation of Baal (i.e., Baal of Peor), who was worshiped in NW Moab; (2) Peor, the name of a mountain in NW Moab and a shortened name for the god of Mt. Peor, Baal-peor, whose name was derived from the mountain's designation; and (3) Beth-peor, the place name under discussion in this entry, a town which probably served as the cultic center of Baal-peor (perhaps known as Beth-baal-peor in antiquity).

According to Josh 13:20, Beth-peor was in the territory assigned to the tribe of Reuben, an area that included the Moabite tableland (i.e., Heb *mîšōr*) and the slopes down to the Jordan. Prior to their invasion of Canaan, the Hebrews camped among these hills above the Ghor, "in the valley opposite Beth-peor" (Deut 3:29); here Moses recounted the journey from Egypt and reminded Israel about their covenant obligations (Deut 4:44–45). Still in the vicinity of Beth-peor, Moses viewed the promised land from "the top of Pisgah," died "in the land of Moab," and was buried "in the valley in the land of Moab opposite Beth-peor" (Deut 34:1–6).

In agreement with the forenamed passages that mention Beth-peor, the biblical references to Peor, including those that narrate Balaam's experience in this area (Num 23:28) and the infamous episode at Shittim (Numbers 25), also point to NW Moab as the location of Beth-peor. Though Deut 34:6 says that the location of Moses' burial was unknown in ancient times, this text indicates that it was somewhere "opposite Beth-peor." The lack of information noted by the biblical writer has been compounded in modern times, because the locations of Peor and Beth-peor remain uncertain (these names could refer to the same locale, of course). Clearly, all of the available evidence points to a location somewhere below the massif on which Mt. Nebo and Mt. Pisgah (Ras Siyagha) are found, probably in Wâdī ʿAyun Musa, but identification with a particular site must remain tentative for the time being.

Two sites have emerged from the scholarly discussion as possible candidates for ancient Beth-peor. According to Eusebius Bethphogor (biblical Beth-peor) and Mt. Phogor were located 6 Roman miles E of Livias (OT Beth-haram), on the road to Esbus. Furthermore, Egeria said she could see the site of Fogor (Peor) when looking N from Siyagha. This position corresponds to Khirbet el-Meḥaṭṭa on the Mushaqqar ridge, as identified by a survey party from the Heshbon Expedition. While many scholars suggest that Beth-peor was located at the Roman fort of Khirbet esh-Sheikh Jayil, Henke concludes that what Musil identified with the latter actually corresponds to Khirbet el-Meḥaṭṭa. Other scholars identify Khirbet ʿAyun Musa, located ca. 1 mile N of Mt. Nebo, with Beth-peor.

GERALD L. MATTINGLY

BETH-RAPHA (PERSON) [Heb *bêt-rāpâ* (בֵּית־רָפָה)]. Name attributed to an individual from the tribe of Judah mentioned in 1 Chr 4:12. The form of the name is strange, since it is the only time a personal name collocated with *bēt* appears in the OT. This has led some to suggest that a place name was intended (Odelain and Séguineau 1981:72; Aharoni *LBHG* 108 [but see the list of persons on 248]). However, both the MT and the versions are unanimous in rendering this as a person, along with the other individuals mentioned. It is quite likely that he was either named after a city, or that the city was viewed as going back to one ancestor/founder. He is said to be one of the men of Recah (which Codex Vaticanus and the Lucianic Recension of the LXX render as Recab). Interestingly enough, in an almost midrashic fashion, the Targum to Chronicles identifies this person, as well as the other individuals mentioned in 1 Chr 4:12, as being "the men of the great synagogue" (my translation). There is some difficulty in identifying the connotation of the word *bêt-rāpâ.* It means either "house of the healer," "house of the ghost," "house of the giant" or "house of Rapha" (a Canaanite deity attested at Ugarit and perhaps in several Heb inscriptions. See REPHAIM.). The latter possibility is rejected by Tigay in his discussion of personal names (1986:79), but if polytheism was more widespread in Israelite society than many would allow, there may well be a reference to a Canaanite deity here. The represents this name as *bathrephan* (or *bathraian* in Codex Vaticanus), which would mean "daughter of Rephan" (or Raian according to Codex Vaticanus). The Vulgate sides with the MT in rendering *bethrapa,* as does the Aramaic *bayta rāpā* (as would be expected). The Peshitta omits the difficult *bêt* (presumably because it sounded like a place name), rendering the name as *řpā*ʾ.

H. ELDON CLEM

BETH-REHOB (PLACE) [Heb *bêt rĕḥôb* (בֵּית רְחוֹב)]. Var. REHOB. A Syrian town along the S border of Hamath, from which mercenaries came to join the Ammonites in war against King David (2 Sam 10:6–8). Beth-rehob is mentioned in close connection with Zobah, and it is possible that Hadadezer, king of Zobah, was a native of (Beth-)Rehob (cf. 2 Sam 8:3, 12). See also REHOB (PLACE). This town perhaps marked the ideal N border of the promised land; in the days of Moses "Rehob near the entrance of Hamath" marked the N extent of the spies' journey (Num 13:21). In the book of Judges the Israelite city of Dan is said to have been located in the valley, which (at the time of the redactor) belonged to Beth-rehob (18:28). Thus, Beth-rehob should be located somewhere in the region where the Huleh valley connects with the Bekaa valley of Lebanon. Its exact location remains unknown, and Thomson's (1882:547) identification with Baniyas (M.R. 215294) must be rejected since no pre-Hellenistic remains have been found there. Thutmose III refers to a *rḥbw* in his topographic list (*ANET* 243, no. 87), but if it is to be identified with the (Beth-)Rehob near Dan and the entrance to Hamath, then it cannot be identified with Tell el-Balaṭ (M.R. 177280) or Tell er-Raḥb (M.R. 180275). See REHOB (PLACE).

GARY A. HERION

BETH-SAIDA (PLACE) [Gk *Bēthsaida* (Βηθσαιδα)]. A city mentioned in the NT as the home town of several of Jesus' disciples—Philip, Andrew, and Peter (John 1:44; 12:21).

Beth-saida was already a village on the shores of the Sea of Galilee (M.R. 208255) when Herod Philip, son and heir of Herod the Great, advanced its status to that of a city. He enlarged its population, built it up grandly, and called it Julias to honor the daughter of Augustus Caesar (*Ant* 18.2.1 §28). Philip also built his capital of Paneas-Caesarea Philippi nearly 24 miles to the N, but he decreed that he was to be buried at Beth-saida. Upon his death, which took place at Beth-saida-Julias in 33 C.E., he apparently was buried in the city in his own funeral monument, which he had commissioned beforehand (*Ant* 18.4.6 §108).

Josephus records that Beth-saida-Julias was in the lower Gaulanitis, which would place it in the rich, alluvial plain W of the hills and cliffs of the Golan Heights (*JW* 2.9.1 §168; *Life* 73). He noted that the Jordan passed the city on the way to the Sea of Galilee (*JW* 3.10.7 §57). He implies elsewhere that the Jordan was about one furlong away from Beth-saida, or one-eighth of a mile (*Life* 72). Mark 6:45 adds the detail that Jesus and his disciples sailed from the site of the feeding of the 5000, which Luke 9:10 places in Beth-saida. Therefore Beth-saida had a port or anchorage on the lake (cf. *Life* 73). Josephus also explains that King Agrippa's region of Trachonitis extended to Julias at its S extent (*JW* 3.3.5 §57). Pliny the Elder (*Naturalis Historia* 5.21) and Ptolemy (*Geog.* 5.15.3) also knew its location on the E side of the lake. According to Mark 8:22 the territory of the city of Caesarea Philippi could be reached from Beth-saida-Julias on foot, suggesting the existence of a road between the two cities.

John 12:21 locates Beth-saida in Galilee, but probably that is to be understood as an informal designation for the geographical rather than for the political area; for Pliny says the same thing (*Naturalis Historia* 5.21). Later Eusebius and Jerome also repeated "of Galilee," even though politically Beth-saida belonged to Gaulanitis or Trachonitis (*Onomast.* 58.11; 59.12).

Nineteenth-century scholarship identified Beth-saida with the two sites of et-Tell and el-Araj. El-Araj lies on the shore of the lake, while et-Tell stands about 1.7 miles to the NNE. El-Araj should be Beth-saida, the original fishermen's village on the shore, which had an anchorage still usable early in this century. The ancient anchorage was located during a period of low water level. Julias, on the other hand, was identified with the site of et-Tell, at which have been found an aqueduct, a city wall, a mosaic, and a road connecting with el-Araj.

Recently new surveys in the region of the two proposed sites and the discovery of a third site have rounded out the picture without substantively altering the original proposal. See Fig. BET.01. Et-Tell (also known as el-Amiriyye from the nearby village) is now known to cover about 45,000 m^2 (Urman 1985:120–21). This is too small for an ancient city, but could be the acropolis of the city. El-Araj (el-

Hasel or Beith ha-Beq), SSW of et-Tell and on the shore of the lake, is now largely underwater, but has produced architectural fragments that closely resemble those of synagogues excavated in the region. Furthermore, el-Araj and el-Mis›adiyye, about one-half mile E of el-Araj, feature foundations of buildings and pottery from the Early Roman period to the time of the Arab conquest (Urman 1985:121; 1971:14). In 1982, 24 m of paved road or jetty extending into the lake were found at el-Araj. El-Araj and el-Mes›adiyye may together be regarded as the remnants of the large fishing village of Beth-saida, while et-Tell would form the acropolis of the city of Julias, founded by Herod Philip.

According to John 1:44 Philip, Andrew, and Peter came from Beth-saida. Their origin there helps explain Jesus' relationship to the village or city—he healed a blind man at Beth-saida (Mark 8:22–26) and fed 5000 in a deserted place nearby (Luke 9:25). Yet his ministry was evidently not well received, for Matthew 11:21 (cf. Luke 10:13) records his lament over the lack of repentence in Chorazin and Beth-saida.

JAMES F. STRANGE

BETH-SHAN (PLACE) [Heb *bêt šan* (בֵּית שַׁן), *bêt šĕ›ān* (בֵּית שְׁאָן)]. Var. BETH-SHEAN; SCYTHOPOLIS. An ancient city standing sentinel over the junction of the Jezreel and Jordan valleys (M.R. 197212). The town was given to Manasseh (Josh 17:11), but that tribe was unable to secure the site because of the iron chariotry that the Canaanites had in their arsenal (Josh 17:16; Judg 1:27). It remained in non-Israelite control until after the reign of Saul, and it was at Beth-shan where Saul's decapitated body was put on display in the temple of Ashtaroth (1 Sam 31:10–12). During the reign of Solomon, however, it was listed as part of the administrative district belonging to Megiddo/Ta‹anach (1 Kgs 4:12). The site is frequently mentioned in Hellenistic, Roman, and Byzantine times, when it became known as Scythopolis or Nysa Scythopolis. It was reported in the Maccabean conflicts as the scene of some confrontations (1 Macc 5:52; 12:40–42), and its inhabitants were spared massacre because of their hospitality to the local Jewish population (2 Macc 12:29–31). It then became the chief city of the DECAPOLIS, even though it was the only one on the W side of the Jordan river. During the Decapolis period the city expanded beyond the tell to its maximum area of almost 100 hectares, all of which was enclosed with a wall. The significance of Beth-shan is marked by the fact that the Islamic conquest of A.D. 636 was described by the victors as the "day of Beisan." The latter name, Beisan, derived from the ancient one ("house of Shan," Shan being possibly a deity worshiped at the site), continues to be used and now refers to a village SE of the tell.

———

A. Environmental Setting
B. History of Excavations
C. Archaeological Sequence

———

A. Environmental Setting

Ancient Beth-shan (identified with Tell el-Husn) is strategically located in inland N Palestine where the Jezreel and Jordan valleys meet. The site is at the E terminus of the main route from the coast, the Via Maris, and roads branched out from there to Syria and Transjordan. Arable land, fish and other animal resources nearby, and a perennial water source (from the Wâdī Jalud, biblical Herod, on the S bank of

which the site was founded) also encouraged human occupation. Consequently, Beth-shan was almost continuously settled from at least the Chalcolithic period up to modern times.

B. History of Excavations

The tell of Beth-shan, including a large cemetery (the Northern Cemetery) on the N bank of the Wâdī Jalud, was excavated from 1921 to 1933, first under the direction of C. S. Fisher (1921–1923), then under A. Rowe (1925–1928) and G. M. FitzGerald (1930–1931, 1933). This undertaking was one of the large American archaeological expeditions after World War I, a period during which excavation techniques were still in their formative stages. Almost the whole of the top five levels of the highest point of the tell on the SE were cleared; and only by reworking the limited stratigraphic evidence and pottery data, based on current knowledge, can the archaeological sequence be reconstructed (see James 1966; Oren 1973). FitzGerald carried out a deep sounding on the citadel, penetrating to the basal levels, the areal extents of which were so limited that the results were very equivocal and as yet have not been reworked. More recent archaeological work on the tell and in its environs (e.g., Yadin and Geva 1984) has also helped to clarify the findings of the early expedition.

C. Archaeological Sequence

The earliest evidence for occupation on the tell at Beth-shan is represented only by pit deposits in the lowest level (XVIII; above virgin soil) of FitzGerald's deep sounding, which contained pottery dating to the Chalcolithic period (ca. 4500–3300 B.C.) or possibly to the terminal phase of the Neolithic period (Yarmukian). Many other Chalcolithic sites, however, were identified by N. Tzori in the immediate vicinity of the tell.

The Esdraelon culture, which has been identified as either a late Chalcolithic phase or an initial phase of the EB (ca. 3400–3100 B.C.), is attested by gray burnished and "grain wash ware" (i.e., pottery decorated with streaky red paint) from level XVI. Streets and multiroomed structures appeared in the immediately succeeding levels (XV–XI) of the deep sounding, encompassing the main period of urban expansion, down to ca. 2400 B.C. Khirbet Kerak pottery, a distinctive, highly burnished black and red ware with stylistic affinities to E Anatolian types, is very prevalent in level XI (although it was found in mixed contexts with MB material). This pottery is dated to a late phase of EB III and is possibly related to contemporaneous disruptions throughout the Near East that contributed to a weakening of the Palestinian city-state system.

The transitional EB IV period (ca. 2400–1950 B.C.), as elsewhere in Palestine, is primarily attested by shaft tombs in the Northern Cemetery; relatively little evidence for occupation was found on the tell. A reconsolidation of urban life, however, is evidenced by large houses with central courtyards in level X and by tombs with rich deposits (e.g., duckbill-shaped axheads and scarabs) both on the tell and in the Northern Cemetery. Although the stratigraphy of the deep sounding is problematic and has not been reworked, the artifactual material appears to cover most if not the entirety of MB I–III (ca. 1950–1550 B.C.).

Level IX, which also has not yet been reworked, dates primarily to the LB I period (ca. 1550–1400 B.C.); an admixture of earlier and later materials occurs in some contexts. Based on scarabs, Rowe assigned this stratum to Thutmose III, but scarabs of this pharaoh are poor chronological indicators since they continued to be made after his reign and were often retained as heirlooms. The architectural layout of the level on the acropolis is quite different from underlying level X, and included a large, open courtyard bordering a thick-walled rectangular building (possibly a *migdal*-type temple) and a complex of rooms with an altar to the E. A basalt relief showing a lion and dog in combat was a notable find; Palestinian artifacts predominated in the level, although some Egyptian-style artifacts were also recovered.

Egyptian presence was intensified in levels VII and VIII (dating to LB IIB, 13th century B.C. although previously assigned to the late 15th–14th centuries by Rowe on the basis of scarabs), in which the citadel was again laid out on along completely different architectural lines. The buildings (a so-called commandant's house with two large rooms along one side of the structure; a heavily bastioned *migdal;* a large silo; the SE sector with rooms and center hall buildings to either side of a N-S street; and, most significantly, a temple with a columned forecourt and a back altar room approached by a stairway) are

analogous to specific Egyptian New Kingdom architectural types. The levels produced more Egyptian-style artifacts than any other LB site in Palestine:scarabs of 19th-Dyn. pharaohs, duck-head bowls, cobra figurines, zoomorphic stands, "flower pots," jewelry, etc., as well as inscriptions (e.g., a stele of Amenemopet the architect, dedicated to "Mekal, the god, the lord of Beth-shan"). The combined evidence leaves little doubt that the Egyptians restructured the site to be a military garrison along the N frontier of Palestine, from which they could protect their interests in the area and participate in trade with major empires to the N. Palestinian artifacts still predominated at the site, and many of the basic industries (pottery, silicates, metals, alabaster, boneworking, goldworking, etc.) continued to function as they had in the past. Nevertheless, as shown by scientific analyses, Egyptian-style artifacts were generally produced locally (one exception being glass and faience vessels); and Egyptian craftsmen must have been present at the site to manufacture such items or to tutor Palestinian craftsmen. A syncretistic Palestinian-Egyptian cult is implied by the representation of Egyptian deities (Hathor and minor gods, such as Bes, Taurt, and Sekhmet) and Palestinian deities (a principal female and male god).

Even though serious disruptions in the Palestinian city-state system occurred at the end of the LB (ca. 1200 B.C.), Beth-shan continued to be occupied by the Egyptians in the early Iron Age. No destruction level was noted between levels VII and VI. With minor refurbishing the level VI temple is identical to that of level VII and located directly above it, and the general layout of the SE sector is the same in both levels; only the commandant's house and *migdal* were totally dismantled, to be replaced by probable storehouses. Egyptian-style artifacts, including scarabs of later Ramesside pharaohs (in particular, Rameses III of the 12th century B.C.), numerous limestone door fragments from central-hall buildings with hieroglyphic inscriptions referring to the "commander of the troops" (Ramessesweserkhephesh) during the reign of Rameses III, and pottery and small objects similar to those in level VII are still very prevalent. A group of tombs in the Northern Cemetery contained large anthropoid coffins, several of which had grotesque faces and were shown wearing high head/hairdresses. Because of the similarity of the latter with depictions of the SEA PEOPLES in Egyptian reliefs, it has been proposed that one or more groups of Sea Peoples (the Denyen, Tjekker, and/or Peleset [Philistines]) were resident at the site, perhaps as mercenaries. Although it is possible that some Sea Peoples lived there, their numbers must have been quite small, since very little characteristic artifactual material, such as is common at coastal sites, has been found at the site (only one Philistine shard was recovered from the site). Earlier and later phases of level VI (lower and upper, respectively) broadly date to ca. 1200–1000 B.C. The inscriptional evidence from lower level VI indicates that Rameses III was primarily responsible for consolidating Egyptian control at the site. The possibility of a destruction layer between lower and upper level VI, as well as the sparse remains from the latter phase, suggests that Egyptian power waned during the later Ramesside period.

Architecturally, level V, dated to Iron IC–IIA (ca. 1000–800 B.C.) according to the pottery evidence, represents a significant departure from the plan of the Egyptian garrison. Two long E-W buildings, one in the area of the level VIII–VI temple and another located farther N, have been identified as temples. This interpretation is well supported by the finds from the building's forecourt (a seated statue of Rameses III and monumental steles of Seti I and Rameses II dedicated to Ra-Hamarchis and Amun-Re) and by its interior (a stele dedicated to "Antit," probably the local equivalent of a principal Canaanite goddess). Indeed, the presence of the monumental steles and statue suggests that an imperial cult existed here that had its beginning in the LB (this area in levels VIII–VI was extensively disturbed, but wall lines are directly below those of the level V building). The steles describe in some detail the military defense of the Beth-shan area by the pharaohs against belligerent neighboring city-states and peoples (e.g., the *ʿapiru* [see HABIRU, HAPIRU]; possibly connected with the Hebrews). Since the historical data of the steles accord with other texts of the pharaohs, they most likely originated in their reigns and were moved up from one level to the next as buildings were successively renovated or rebuilt by the Egyptians. Like storehouses of the period, a double row of columns ran the length of the S building. Based on the biblical tradition (1 Chr 10:10), Rowe denoted the building the "Temple of Dagon," the primary male deity of the Philistines; no inscriptions, however, were recovered from the building, and it is doubtful that the site was ever controlled by the Philistines. Both N and S temples yielded numerous cylindrical and houselike

stands, which were decorated with snakes and birds and which were probably used in the cult. See Fig. BET.02. In the later phase of level V, a gate existed on the NW side of the tell, which was approached by a gentle earthen slope from the valley (earlier gates may have been located here as well). Unfortunately, the gate's overall plan is unclear, but its architectural and masonry style (interior buttresses, header-and-stretcher arrangement of ashlar blocks, and an attached double wall) is similar to that of other gates in N Israel (e.g., Megiddo and Hazor) fortified by Solomon (cf. 1 Kgs 9:15). It is uncertain how the site was taken by the Israelites.

After a possible hiatus in occupation, level IV was rebuilt along different architectural lines from level V. The very poorly preserved stratum is dated according to the pottery to ca. 800–600 B.C.

Another gap in settlement followed level IV, although late Iron Age and Persian period tombs were found by Tzori east of the tell. The site was reoccupied in the Hellenistic (363–332 B.C.) and Roman (63 B.C.–A.D. 324) periods—levels III and II. The Hellenistic structures were extensively disturbed by later Roman buildings, in particular by a large temple on the NW side of the tell (initially assigned to the Hellenistic period, but now dated to the 1st century A.D.). The Roman city spread into the valley below the tell, where a colonnaded street, a hippodrome, a villa with mosaic floors, a theater, and an extensive wall circuit (spanning the Wâdī Jalud) were uncovered. Roman tombs in the Northern Cemetery produced glass vessels, pottery figurines, and portrait busts of the dead; a stone sarcophagus in one tomb was inscribed with the name of Antiochus, son of Phallion, possibly a cousin of Herod the Great.

The uppermost level on the tell (level I) was dominated by a circular Byzantine church, with an ambulatory around an open court. FitzGerald dated the building to the early 5th century because of the similarity between its column capitals and those of the Church of St. Stephen in Jerusalem, which was constructed by the empress Eudocia between 431 and 438. A mosaic in the building was also comparable to one of approximately the same period in the Church of Eleona on the Mount of Olives. Domestic residences surrounded the church, and a paved road led from the latter to the NW gate. A monastery, dedicated to or sponsored by a certain Lady Mary, was constructed N of the cemetery on the opposite bank of the Wâdī Jalud, just outside the Byzantine city wall; inscriptions and a hoard of coins minted under Heraclius I indicate that it was constructed in the early 6th century A.D. and probably stood until the Islamic conquest. Extensive mosaic floors included circular representations of the Labors of the Months grouped around the personified sun and moon. In addition, four synagogues in the vicinity of the tell have been investigated. Near the Monastery of Lady Mary and dating from the 5th through the early 7th century, one synagogue contained mosaics with representations of the ark of the covenant covered by a curtain, ritual vessels, and a seven-branched candelabra, together with four inscriptions (three Greek and one Samaritan). Nearby, the mosaics in a second synagogue of the 6th century also showed ritual vessels and a candelabra, and included Greek, Hebrew, and Aramaic inscriptions. At Farwana (probably ancient Rehob), S of Beth-shan and dating from the 5th–7th centuries, was discovered the longest Hebrew mosaic inscription, detailing halakic laws of the Sabbatical Year and tithing. Byzantine houses, another monastery, and a potter's workshop were also located in the vicinity of the tell. Numerous tombs from the Byzantine period were excavated in the Northern Cemetery.

PATRICK E. MCGOVERN

BETH-SHEAN. An alternate spelling for BETH-SHAN.

BETH-SHEARIM (PLACE). See BURIALS (ANCIENT JEWISH).

BETH-SHEMESH (PLACE) [Heb *bêt šemeš* (בֵּית שֶׁמֶשׁ), *ʿîr šemeš* (עִיר שֶׁמֶשׁ)]. The RSV has three towns with this name and the Heb MT has another.

1. A town located in the NE Shephelah (M.R. 147128) in the Valley of Sorek and which played a small but significant role in Israel's history. It was occupied throughout the biblical period and, as a border town, experienced the varying fortunes of the tribe and kingdom of Judah.

a. Biblical References. Beth-shemesh is mentioned in two geographical lists of Joshua:first as Ir-shemesh (Josh 19:41) within the territory of Dan, and then (Josh 21:16) as Beth-shemesh, a town given by the tribe of Judah to the Kohathite sons of Aaron. However, Beth-shemesh is not mentioned as a town of Judah in the geographical list of Joshua 15. The question of whether Beth-shemesh belonged to the tribe of Judah or Dan may be answered by reference to Dan's 11th-century migration to its N territory, which would have left Beth-shemesh on the NW border of Judah. An equally plausible, though more technical, explanation concerns the second Solomonic administrative district (1 Kgs 4:9), which appears to parallel the territory mentioned in Josh 19:41. The Joshua passage may be a description of 10th-century rather than of 11th- or of 12th-century geography, irrespective of tribal designations.

Beth-shemesh plays a prominent role in the story of the Philistine capture of the ark of the covenant (1 Sam 6:9–15). The ark is carried from Philistine territory to Beth-shemesh, which was a border town just inside Israelite territory.

With the division of the kingdom, Beth-shemesh fell within the borders of Judah. Jehoash of Israel and Amaziah of Judah engaged in a battle at Beth-shemesh in which Jehoash proved the victor (2 Kgs 14:11; 2 Chr 25:21). Not only does this battle emphasize the location of Beth-shemesh as a border town, but the subsequent sacking of Jerusalem by Jehoash also indicates that Beth-shemesh had guarded the Sorek pass from the Philistine plain to Jerusalem. Beth-shemesh later passed from Israelite control when the Philistines captured it during the reign of Ahaz (2 Chr 28:18).

The only other ancient sources to mention Beth-shemesh are the Palestinian Talmud in a geographical context (*Meg.* 1.70a and parallel passages) and Eusebius (*Onomast.* 54.11–13), who identifies it as Bethsamis. The final settlement appears to have been a Byzantine monastery. Between the fall of the Israelite kingdoms and the Byzantine period, only the scantiest remains (Hellenistic coins and Roman ceramics) were deposited at the site. The Beth-shemesh in Judah should not be confused with that associated with Naphtali (Josh 19:38) or that associated with Issachar (Josh 19:22).

b. Archaeological Excavations. The Arab village of ʿAin Shems preserved a reference to the ancient name; and E. Robinson in 1841 identified Tell er-Rumeilah, just W of ʿAin Shems, with biblical Beth-

shemesh. The Palestine Exploration Fund began excavations at the site in 1911 under the direction of D. Mackenzie, who identified four strata at the site. The earliest was a Bronze Age stratum containing imported Aegean and Cypriot pottery. The succeeding stratum was characterized by Philistine pottery, which had much in common with Mycenaean IIIC wares. The third stratum was designated "Israelite" and was thought to have been destroyed by Sennacherib in 701 B.C.E. The final stratum was the Byzantine occupation, represented by the monastery on the SE side of the hill. During 1911–1912 Mackenzie excavated the entire monastery and an area on the S side of the mound. He also excavated a Bronze Age fortification system, including a typical MB gate, and a curtain wall with adjoining towers. The wall was followed for its full course around the city. These fortifications may have been reused in the LB, but they clearly went out of use by the beginning of the Iron Age.

A second series of excavations on the W and S sides of the tell were conducted from 1928–31 by E. Grant, assisted by C. S. Fisher and A. Rowe. Although Grant published three reports (1929; 1931–32; 1934), the authoritative volumes on these latter excavations were published by Grant together with G. E. Wright (1939). The following description of the stratigraphy and finds from Beth-shemesh is based largely on that report.

c. Stratigraphy. Six major occupational levels were discovered at Beth-shemesh, some of which were further subdivided (e.g., IVa and IVb). With the improved stratigraphic techniques and ceramic analysis of the last half century, it is apparent that further subdivisions should have been made. However, the published evidence makes it difficult to argue specifically for a more complex stratigraphy.

(1) Stratum VI. The earliest level produced no building remains. Only a collection of flints, ceramics, and some stone objects give evidence of the EB IV–MB I period. It is not known whether this evidence indicates a sedentary occupation, or whether these are simply campsite remains.

(2) Tombs. A series of tombs (9, 17, 13) stratigraphically appear to predate the city wall. Their contents are MB II–III and testify to a preurban phase of the MB occupation at Beth-shemesh.

(3) Stratum V. This stratum represents the first fortification of the site in the MB III period. The fortification consisted of a city wall encircling the tell, three rectangular towers, and a three-chambered city gate. Evidence for a glacis and lower retaining wall, which usually accompany such fortifications, was not found nor was there effort to locate it. The single major house discovered in stratum V was built against the city wall. Called the Herrenhaus by the excavators, this structure consisted of a single courtyard flanked by smaller rooms on three sides. The full extent of this house may not have been excavated. A tower on the SW of the city wall is a later addition to the wall. Although it is possible that this tower was added in the LB, it may indicate a second phase to the MB city. If such is the case, then Beth-shemesh V would have three phases: (1) a preurban phase indicated by tombs; (2) the first urban phase indicated by the city wall, gate, and Herrenhaus; and (3) a later urban phase indicated by additions to the city wall. It seems likely on the basis of the pottery that stratum V spans the period from the middle of the MB II to the end of the MB. An ash layer on the floor of the Herrenhaus and the breaching of the city wall indicate a destruction of stratum V. Wright dates this destruction to the mid-16th century B.C.E.

(4) Stratum IV. During the LB the city's defenses seem to have been repaired on the W side of the mound. However, on the S side of the city, the Herrenhaus was rebuilt above the city wall, indicating the fortifications were not reused. This apparent contradiction may indicate stratigraphic phasing within stratum IV or different uses of the fortifications within the city at the same time. Our present knowledge of Beth-shemesh does not allow a resolution of this issue.

Wright and Grant subdivided stratum IV into two phases: IVA, the earlier spanning the 15th and early 14th centuries; and IVB, which was destroyed in the 13th or early 12th century B.C.E. Stratigraphic differentiation between IVA and IVB was noticeable from a change in building orientation in some areas and from evidence of destruction on the W edge of the tell. Stratum IVB was also burned. A number of large buildings were excavated in stratum IV along with three industrial furnaces and a number of silos and plastered water cisterns.

Wright and Grant have isolated the bichrome pottery from Beth-shemesh into stratum IVA, the Mycenaean imports into stratum IVB, and the Philistine pottery into the subsequent stratum III. Pottery

which paralleled that of Tell Beit Mirsim Bl and which is considered characteristic of the early Israelites was found in two silos (551 and 530; stratum IVB). This pottery was buried under destruction debris and the buildings of stratum III.

(5) Stratum III. The Iron Age I (stratum III) probably came to an end in the mid-11th century B.C.E. through another violent destruction. The city may or may not have been fortified at this time. The city wall appears to have been repaired again, but there is no stratigraphic evidence that these repairs did not occur in the previous stratum. The finest building of stratum III, the Hofhaus, consisted of a partially paved courtyard flanked on the W by three smaller rooms.

A significant amount of Philistine pottery was found throughout stratum III as would be expected given the location of Beth-shemesh near the Philistine plain. The occupation of stratum III appears to coincide chronologically with the appearance and disappearance of this distinctive ceramic style.

(6) Stratum II. Stratum II was subdivided into three phases IIA, IIB, and IIC. On the W side of the tell, stratum IIA was characterized by a casemate wall and administrative buildings—one considered a governor's house and another a storage complex. The former building was not fully excavated; the latter consisted of three long rooms. Stratum IIA's occupation was burned in the early 10th century B.C.E. Strata IIB and IIC cover the rest of the Iron Age to the Babylonian destruction of Judah in 587 B.C.E. Mackenzie and Y. and M. Aharoni would date the final destruction of Beth-shemesh to the Assyrian invasion of 701 B.C.E. However, the appearance of some (although not all) 7th-century ceramic forms in the Beth-shemesh collection would seem to contradict that conclusion. The later Iron Age occupation was unfortified. The houses excavated on the W edge of the tell were arranged along the old line of fortifications and were divided by a series of streets. The distinction between strata IIB and IIC is based on ceramic evidence although stratigraphic changes were noted within the unfortified village.

That strata IIB–C at Beth-shemesh were unfortified is reflected in the biblical record. Rehoboam neglected to fortify Beth-shemesh while building defenses at a number of Judean towns including nearby Zorah (2 Chr 11:5–10). Similarly Beth-shemesh is not mentioned in the city list of Judah (Josh 15:33–36), which includes neighboring towns like Zorah and Azekah. It is possible that the site was unoccupied for some time in the 9th century B.C.E.

(7) Stratum I. The Roman-Byzantine period was represented by a Byzantine monastery on the SE side of the tell. Hellenistic, Roman, and medieval pottery were also found in small quantities at Beth-shemesh.

d. Inscriptions. Although Beth-shemesh is not noted for its inscriptional finds, a few significant documents were discovered there. In stratum IV scarabs of Amenhotep III and Rameses I and II were found, along with scarabs of Thutmose II, Seti I, and Rameses III in tomb 11. In room 526 of stratum IVA a cuneiform tablet with an inscription in Ugaritic script was discovered. The signs were written backwards as if to be read with a mirror. A similar mirror-written inscription has been found at Ugarit itself. An ostracon found in area Y31, attributable to either stratum V or IV, bears a proto-Canaanite inscription.

Ten stamped jar handles bearing individualized Hebrew inscriptions typical of the end of the Judean Monarchy were found in stratum II. One reading "To Eliakim, Steward of Yawkin" is identical to two sealings found at Tell Beit Mirsim. Royal stamp seals with either winged scarab or winged scroll decoration typical of the 8th century B.C.E. were also found in stratum II. In most cases these bear the place name "Hebron." A carnelian seal from tomb 14 was also inscribed in Hebrew.

e. Tombs. There were a number of tombs cut in the rock in the area closely surrounding the tell and beneath the earliest dwellings. In the MB these tombs were located within the walled city. Some of the tombs predated urbanization, and some were used while the houses above were occupied. Only two tombs of the LB were discovered—a small tomb within the city walls and a larger one which was extramural. While two skeletons contemporary with stratum III were found with modest grave goods, a considerable series of tombs attributed to stratum II were located outside the city walls. These tombs date primarily to the end of the Iron Age, although some were slightly earlier.

FREDRIC BRANDFON

2. A town belonging to Issachar (Josh 19:22). Its location is uncertain, but Aharoni has suggested *(LBHG* 432) that it might be identified with Khirbet Sheikh esh-Shamsāwî (M.R. 199232), just SW of the Sea of Galilee. The name preserves some elements of the ancient name (Boling and Wright, *Joshua* AB, 450), and the site is within the described borders of Issachar (Josh 19:17–23).

3. A town given to Naphtali (Josh 19:38) and which from the context of the passage (v 35) appears to have been fortified. This conclusion is strengthened by the statement in Judg 1:33 that Naphtali did not expel the Canaanites from either Beth-shemesh or Beth-anath. The locations of both of these towns are unknown, but Aharoni suggests (*LBHG* 162, 432) that Beth-shemesh might be identified with Khirbet Tell er-Ruweisi (M.R. 181271) in the far N of upper Galilee. Attempts to locate Beth-shemesh have encompassed both lower and upper Galilee, but it was in the N part of upper Galilee that the Canaanites maintained strong and well-developed towns into the early Israelite period (*LBHG* 235–36).

The N Galilee Beth-shemesh is likely that mentioned in the Egyptian Execration Texts (Posener 1940:E60) and perhaps is mentioned (No. 89) on the list of Canaanite cities by Thutmose III (*LBHG* 162).

4. The MT in Jer 43:13 refers to another Beth-shemesh, which was located in Egypt. The RSV renders this site HELIOPOLIS, following the which reads *Hēliou poleōs* (LXX Jer 50:13).

BETH-SHITTAH (PLACE) [Heb *bêt haššiṭṭâ* (בֵּית הַשִּׁטָּה)]. A site mentioned in Judg 7:22 as one of the locations to which Midianite troops fled to escape the attack of Gideon's band. Beth-shittah appears to be distinct from SHITTIM; it has been identified with Shatta, 2.5 miles E of Harod and 5.5 miles NW of Beisan, although this identification has been doubted (*IDB* 1:403; *ISBE* 1:479). Another possible location is Tell Sleihat, E of the Jordan river. The name Beth-shittah means "house of acacia (trees/wood)" (on this important plant and its wood, see FLORA, BIBLICAL).
HENRY O. THOMPSON

BETH-TAPPUAH (PLACE) [Heb *bêt-tappûaḥ* (בֵּית־תַּפּוּחַ)]. A town situated in the central hill country of Judah (Josh 15:53) within the same district as Hebron. This settlement, the name of which perhaps means "house of the apple tree" (from *tappŭaḥ* 'apple'), is listed among the towns within the tribal allotment of Judah (Josh 15:21–62; see also BETH DAGON (PLACE). Beth-tappuah is also mentioned in Shishak's inscription on the wall of the Amon Temple at Karnak (Aharoni *LBHG* 285). The name is preserved in the modern village of Taffuh (M.R. 154105), approximately 5 km W and slightly N of Hebron (*LBHG* 300). The ancient settlement is no doubt to be found in the immediate vicinity.

BETH-YERAH (M.R. 204235). A city generally associated with Khirbet Kerak (Arabic meaning "ruins of the fortress"), a 50 acre site along the SW shore of the Sea of Galilee. The site is not mentioned in the Bible; primary evidence linking this area with Beth-yerah 'the house of the Moon'comes from the Talmud, which states that the Jordan begins S of Beth-yerah (*b. Talm. Bik.* 55a; *Gen. Rab.* 98.18; cf. Neubauer 1868:31, 215; Sukenik 1922:102–3; Maisler, Stekelis, and Avi-Yonah 1952:165). Sukenik associates the site with Philoteria following Polybius, who depicts Antiochus the Great in 216 B.C.E. marching to Philoteria (Sukenik 1922:103–4). Polybius states that the city "lies off the shore of the lake into which the river Jordan falls, and from which it issues again to traverse the plains round Scythopolis"

(Polyb. 5.70.4). The city had substantial territory so that it, along with Scythopolis, could easily supply Antiochus' entire army (5.70.5).

The name Philoteria suggests a Ptolemaic foundation, possibly by Ptolemy II Philadephus who had a sister by that name (Sukenik 1922:104–5). The Byzantine chronicler Syncellus places Philoteria E of the Jordan river and lists it as one of the cities captured by Alexander Jannaeus (Syncellus 1984:355). Avi-Yonah argues that in antiquity Beth-yerah/Philoteria was E of the Jordan because the Jordan's ancient river bed flowed N and W of the site; therefore Philoteria was never part of Galilee (Avi-Yonah 1966:37, 70, 138). The city may have had a sister city, Sennabris (*j. Talm. Bik.* I.81a; *j. Talm. Meg.* 2a; cf. Sukenik 1922:106–7; Hestrin 1975:253), where, Josephus states, Vespasian stationed his troops during the Jewish revolt (ca. 66–67 C.E.) before marching on Tiberias (*JW* 3.447; 4.455).

Excavations at the site indicate a long period of occupation that extended from the Chalcolithic into the Arab period with an apparent occupation break between the MB II and Persian periods. Chalcolithic finds show that inhabitants lived in huts sunk in pits and that they practiced child burial (Maisler, Stekelis, and Avi-Yonah 1952:167, 229; Hestrin 1975:255). Major building activity, however, did not occur until EB I, when Beth-yerah became one of the first fortified towns in Palestine. A massive mudbrick wall measuring 8 m in width found at Beth-yerah (Hestrin 1975:254–55) may reflect increasing rivalry among local townships as well as similar town planning in Mesopotamia and Egypt (Aharoni 1982:56–58; Anati 1963:337–41). The discovery of EB I rectangular homes with mudbrick walls, a large courtyard with basalt paving, a tournette for making pottery, and an apsidal house (Hestrin 1975:255–56) along with the town wall reflects a move toward a walled-town culture with its fixed-plot agriculture and nuclear, closed societies (Hanbury-Tenison 1986:63, 106; Esse 1982) rather than toward urbanization.

The walled-town culture continues into the EB II period as brick walls, a paved street, and parts of a drainage system have been found. Jars found on the floor of an EB II house are similar to those found in a tomb at Kinneret, 1.25 km W of Beth-yerah and considered a possible burial site for the EB II city (Mazar 1975:717). Excavation of three levels of EB II burials produced numerous household goods such as jugs, jars, bowls, and platters along with the cremated remains of those buried. The tomb provides a glimpse at the wealth available to some in this period. Numerous beads and jewelry were found including part of a necklace that had two gold and two ruby beads. The city participated in a wider trade network as evident in the composition of the beads, which included copper, faience, ruby, crystal, jasper, quartz, pottery, and mother-of-pearl. In addition, bone plaques with ornamentation and a round plaque of beaten gold were found (Mazar 1975:717–18; Mazar, Amiran, and Haas 1973:176–93). Although influenced by its contacts with the Mesopotamian area, Beth-yerah reflects distinctive regional characteristics as evidenced by a locally produced EB II cylinder seal stamp, which was used to make impressions on vessels themselves rather than to seal documents or jars as in Mesopotamia (Ben-Tor 1978:108–9).

The site flourished in EB III; a paved road with houses on each side (Ussishkin 1968:267) and a large public building, possibly a granary, indicate increasing centralization and cooperation (Maisler, Stekelis, and Avi-Yonah 1952:223–28; Hestrin 1975:257–58; Aharoni 1982:67). The period is distinguished by the sudden appearance of KHIRBET KERAK WARE, first found at Beth-yerah. This hand-turned and highly burnished ware is found in a number of EB III sites (e.g., Megiddo, Ai, Jericho), although it seems concentrated in N Palestine and Syria. The pottery was apparently brought by peoples moving into the area from Anatolia (Amiran 1952:101–3; Anati 1963:359–61). The destruction layers directly below this ware at the EB III layer at Ai and the lack of such a destruction layer at Beth-yerah suggest that the population movement associated with the ware could be violent or peaceable (Kenyon 1979:99–101).

Evidence of the cultural horizon of the EB III site comes from small figurines of animals, two model mills or houses made of clay, a pottery piece in the shape of a roaring lion (Maisler, Stekelis, and Avi-Yonah 1952:171), and a rare ivory bull's head found in a large colonnaded structure, possibly a temple (Ben-Tor 1972:26–27; Tadmor 1986:98). As yet no clear function can be determined for the ivory bull's head, although two of four EB bull heads found in Palestine appear to have a temple as their provenance, suggesting some cultic purpose (Ben-Tor 1972:26; Callaway 1974:60–61). Since no clear parallels can be found in the ANE, the general view is that the head was made locally. The use of ivory, a luxury item at

this time, provides further evidence of the larger trade network in which Beth-yerah flourished (Tadmor 1986:98–99).

The Khirbet Kerak period came to an abrupt end around 2200 B.C.E. when Beth-yerah experienced mass destruction as did other cities such as Jericho, Ai, Megiddo, and Beth-shan (Aharoni 1982:73). Nevertheless, the city apparently continued through the MB II period as indicated by an MB I potter's workshop and by MB II buildings divided by narrow passages and by a broad street leading from the S gate to industrial kilns (Hestrin 1975:256; Bar-Adon 1953:132; Bar-Adon 1954:128).

Occupation of the site occurs again in the Persian period as evidenced by Perisan pottery in the foundation of a Hellenistic city wall, which extends over 1600 m. In the floors of the wall's towers were found iron arrowheads, Hellenistic pottery, and coins and cooking stoves (Bar-Adon 1955:273). During the Ptolemaic period certain members of the city apparently flourished as indicated by a large private residence with courtyard. In addition, several excavated houses of the Hellenistic period overlook the Sea of Galilee. One of these houses has colored plaster that imitates black, red, and green marble veneering (Hestrin 1975:256). Hellenistic culture is evident from a bust of Tyche found at Beth-yerah but in an undatable context; Sukenik dates it to the 1st centuries C.E. (Sukenik 1922:104–5, 108).

The Roman period is represented by a large Roman fort (60 × 60 m) built in the 2d or 3d century C.E. During the Byzantine period, after the fort went out of use, a synagogue (22 × 37 m) was built within the interior of the Roman fort. A colored mosaic that depicted plants, birds and lions was found as was the base of a column that had a menorah, lulab, ethrog and incense shovel carved in it. Additional finds include a large bath complex of possible 4th–5th century date and a Byzantine church, which dates to 528 C.E. based on a Greek inscription in the mosaic floor (Maisler, Stekelis, and Avi-Yonah 1952:218–23; Hestrin 1975:258, 262).

BETH-ZAITH (PLACE) [Gk *Bēthzaith* (Βηθζαιθ)]. 1 Macc 7:19 identifies Beth-zaith (the "house/place of the olive" from the Heb *bêt zayit*) as the camping place of the Seleucid general Bacchides after his treacherous murder of 60 Hasideans near Jerusalem. Although Beth-zaith was once thought to be Bezeth (or Bethesda) (Meyer 1921:244 n. 1), the N quarter of Jerusalem, Abel (*GP 2:* 284, 286) identified Beth-zaith with modern Beit Zita (M.R. 161114), 6 km N of Beth-zur. 1 Maccabees indicates that

Bacchides had left Jerusalem. That would not have been the case if Beth-zaith were to be identified with Bezeth/Bethesda. Josephus (*Ant* 12.10.2) refers to this place as Berzetho (Gk *bērzēthō*). Schlatter (1896:225) points out the unreliability of the Josephan text on this point of spelling.

BETH-ZATHA (PLACE) [Gk *Bēthzatha* (Βηθζαθα)]. This pool of Jerusalem is mentioned only in John 5:2 as "a pool, in Hebrew called Bethzatha, which has five porticoes." The name is "Bethsaida" (Gk *bēthsaïda,* house of the fisherman) in the KJV. This reading appears in Papyrus Bodmer (p^{66} and p^{75}), Codex Vaticanus, the supplement to Codex Washingtonus, Codex Psi, two texts of the Old Latin, the Vulgate, the Harclean Syriac, the Coptic, the Ethiopic, the Stuttgart Diatessaron, Tertullian, and Jerome. The name is "Bethzatha" (Aram *bet zatha*ʿ, house of olive [oil]) in the RSV, following Codex Sinaiticus, Codex Bezae, Codex Regius, minuscule 33, Eusebius, and many texts of the Old Latin. A third reading is "Bethesda" (Aram *bet ḥesda*ʿ or house of mercy), attested in Codex Alexandrinus, Codex Ephraemi Rescriptus, Codex K, the commentary section of Codex X, at least five other late majuscules, also many minuscules, Byzantine Lectionaries, the Armenian, the Georgian, the Diatessaron, Didymus, Chrysostom, and Cyril. The Editorial Committee of the United Bible Societies Greek New Testament prefers "Bethzatha", because "Bethsaida" may be a scribal assimilation to John 1:44, and "Bethesda" may simply be an edifying etymology. The Copper Scroll of Qumran refers to *"Beteshdathayim*" in Jerusalem, perhaps Aramaic for "place of poured-out water" (3Q15.xi.12), which some of the committee felt tended to support the reading "Bethesda" (Metzger 1975:208). Josephus speaks of the "fourth hill" of Jerusalem N of the Temple Mount and calls it "the Bezetha" in Greek (*JW* 5.4.2). The scribal confusion in the textual tradition may be due to the similarity of the name for the NE quarter of the city called "the Bezetha" or "the Beth Zetha" [alt. "Beth Zatha"], where the pool lay and the putative name of the pool (*Bet Ḥesda*ʿ or "house of mercy"). The latter name would derive from the local healing cult that the man in John 5 and his associates at the pool seemed to believe in.

The pool was itself a double pool, as the dual ending on *Betheshdathayim (Bet ʿEshdathayim)* indicates. If the Copper Scroll is to be understood as anything other than a fantasy, then near the pool stood a triclinium with a porch and entry on the W side. The pool underwent excavation from 1863–76 and from 1888–1900 (Yadin 1976:133), then again after 1956 (Yadin 1976:24). A bedrock causeway and dam running E-W separated two pools partially cut from the bedrock and partially built of stone and mortar. The five porches mentioned in John 5:2 stood upon this causeway and upon the four sides of the double pool. After 231 C.E. Origen of Caesarea would explain that the porches stood "four around the edges and one across the middle" (*C. Ioan.* 5.2–4.532).

The two pools are of two different sizes and were trapezoids in plan. They extended across at least one city block in the Beth Zatha quarter. The W edge of the two pools was aligned with the N-S street system of the quarter; whereas the E side ran roughly NNW to SSE. Overall length N to S measured about 97 m. The small pool to the N was about 60 m broad on its N side, while the large pool to the S was about 76 m broad on its S side. This comes to about 300 Greek feet N to S by 225 Greek feet E to W on its largest dimension.

Confirmation that a local healing cult continued into the 2d century comes from archaeological excavations at the site (Duprez 1970). Votive offerings characteristic of grateful devotees of Serapis or of Asclepius were unearthed in the debris in the double pool. Thus the local cult assumed Roman dress when Roman cults appeared in the new city of Aelia Capitolina. Aelia replaced Jerusalem under the emperor Hadrian in 135 C.E. after the Second Jewish Revolt against Rome. The site would therefore have become part of the Roman cult, namely, a Serapeum or an Asclepium, which may account for the underground chambers at the site.

Further evidence for the continued importance of the site is the erection of a Christian church in the 5th century just E of the pool. Its courtyard school on arched pillars and buttresses directly over the E end of

the double pool. The presence of the church would overthrow and obliterate the local cult, much as the construction of the church of the Nativity in Bethlehem supplanted a cult of Thammuz or Adonis, or the construction of the Anastasis (Holy Sepulchre) in Jerusalem supplanted a temple to Venus (Wilkinson 1978).

BETH-ZECHARIAH (PLACE) [Gk *Baithzacharia* (Βαιθζαχαρια)]. 1 Macc 6:32–33 records that Judas the Maccabee and his army met and were defeated by a Syrian force at Beth-zechariah ("the house/place of Zechariah" from the Heb *bêt zĕkaryāhû*). Josephus described Beth-zechariah as a mountain defile (*Ant* 12.9.4; *JW* 1.1.5). Eleazar (or Avaran), brother of Judas, was killed there attacking a Syrian elephant (1 Macc 6:43–46) Abel (*GP* 2, 284) identified Beth-zechariah as the modern *Beit Zekaria* (M.R. 161118) 18 km S of Jerusalem and 10 km N of Beth-zur.

MICHAEL E. HARDWICK

BETH-ZUR (PLACE) [Heb *bêt ṣûr* (בֵּית צוּר)]. A fortress city in Judah located on the road between Jerusalem and Hebron, about 20 miles S of Jerusalem (2 Macc 11:5); in the Hellenistic period, a S Judean border fortress facing Idumea (1 Macc 4:61). Beth-zur offered a defensible position which could serve to guard the approach to Jerusalem from the S. With an altitude of 3304 feet above sea level it is one of the highest ancient sites in Palestine.

The ancient city has been identified with Khirbet eṭ-Ṭubeiqah (M.R. 159110), although the name of the city survives in the adjacent and newer site Khirbet eṣ-Ṣur (500 yards to the SE), where material remains attest Arab and Byzantine occupation. Two archaeological campaigns have been conducted at Beth-zur under the direction of O. R. Sellers, the first in 1931 and the second in 1957.

Ceramic evidence indicates sporadic occupation of Beth-zur during the EB and MB I ages, but the city first became a fortified stronghold during the MB II period. Excavations at Beth-zur have revealed massive fortifications of a type often attributed to the Hyksos. Beth-zur's fortifications were similar to those of the same period found at Bethel, Tell Beit Mirsim, and Shechem. At the end of the MB age the city was destroyed (it is speculated by the Egyptians), but a less prosperous community continued there during the 1st century of the LB age. The site was abandoned from the 14th to 12th centuries.

The archaeological record attests a reoccupation of Beth-zur during the early Israelite period. Though this settlement apparently used the MB II fortifications, there is also some material evidence to suggest that the new occupants may have reduced the size of the city on the N by building a new wall. By the close of the 11th century the city was again destroyed.

Two biblical texts appear to give information pertaining to the period of Israelite settlement at Beth-zur. In 1 Chr 2:42–50 Beth-zur appears alongside several other cities of Judah including Mareshah, Ziph, Hebron, Tappuah, and Maon in the genealogy of Caleb, signifying that at some time in the history of Judah, Beth-zur was occupied by Calebites (cf. Josh 14:13–15; 15:13–19 in reference to Hebron). Beth-zur also appears in the list of cities allotted to Judah (in Josh 15:20–63 at v 58) at the time when Joshua apportioned the land to the tribes. However, it is probable that this list of cities, with its organization according to districts, reflects the administrative subdivisions of a much later time in the kingdom of Judah. The time to which it pertains is a matter of dispute. According to A. Alt (1925) the list dates from the time of Josiah, according to F. M. Cross and G. E. Wright (1956) it reflects Jehoshaphat's administrative districts, and according to Z. Kallai (*HGB* 334–48, 377) it belongs to the time of Hezekiah.

Material remains from the 10th to 9th centuries amount to only a few potsherds indicating only slight occupation during this time. Nothing attributable to Rehoboam has been found. Consequently, a question arises concerning the Chronicler's claim that Rehoboam built up Beth-zur as one of his fortified cities (2

Chr 11:7). Some scholars argue that the Chronicler has incorrectly attributed this defensive measure to Rehoboam and that the cities were actually fortified either by Hezekiah (Na'aman 1986) or by Josiah (Fritz 1981). However, since excavations at Beth-zur offer no evidence of the refortification of the site between the 10th century and the exile, they are unable to offer confirmation for either the hypothesis of Na'aman or that of Fritz.

A significant unfortified occupation of Beth-zur occurred again in Iron Age II. The excavators dated the beginning of this settlement to a time no earlier than 640 B.C.E. on the basis of the pottery (Lapp in Sellers et al. 1968:28; Funk in Sellers et al. 1968:8), but Na'aman (1986:6), using the same evidence, argues that the beginning of the Iron Age II settlement must be moved back to the second half of the 8th century. Especially pertinent for his argument are the 11 *lmlk* jar handles exhibiting the two-winged symbol found in the Iron Age II strata at Beth-zur, because Na'aman (1979) previously contended that the *lmlk* jars belonged to Hezekiah's defensive preparations prior Sennacherib's invasion in 701 B.C.E.

The postexilic city of Beth-zur, according to archaeological evidence, had a sparse population during the 5th and 4th centuries. Yet, according to Neh 3:16 Nehemiah ben Azbuk, governor of half the district of Beth-zur, presumably working with a contingent from Beth-zur, assisted in rebuilding the walls of Jerusalem.

During the Hellenistic period Beth-zur became a thriving community, especially during the 2d century, when it expanded outside the city walls. Significant quantities of coins have been found, and their distribution—9 for the 5th to 4th centuries, 56 for the Ptolemaic period (312–181 B.C.E.), 180 for the Seleucid period (225–96 B.C.E.), and 20 for the Maccabean period (125–78 B.C.E.)—attests to the growth of the community, particularly in the 2d century. Of particular interest is one small silver coin with an inscription the reading of which has occasioned some dispute. Sellers reads, "Hezekiah of Judah" (1968:2), and takes it as a reference to the high priest Hezekiah, the friend of Ptolemy I (Joseph. *AgAp* 1:186–87). Funk, on the other hand, reads, "the governor Hezekiah" (*EAEHL* 1:263–67).

Beth-zur assumed new significance as a stronghold during the conflicts of the Hellenistic period, especially during the Maccabean wars. Three phases of building at the citadel have been distinguished. According to Funk the first phase belongs to the 3d century in the context of the conflict between the Ptolemies and the Seleucids; the second phase was built either by the Seleucids or by Judas Maccabeus; and the third phase was built by Bacchides ca. 161 B.C.E. in the context of the Maccabean wars (Funk in Sellers et al. 1968:17).

The literary evidence in 1 and 2 Maccabees also gives Beth-zur a prominent place during the Maccabean revolt. Following upon the initial defeat of several Seleucid forces (1 Macc 3:10–4:25), Lysias approached Judah from the S through Idumea and fought Judas at or near Beth-zur in 165 B.C.E. (1 Macc 4:29; cf. 2 Macc 11:5). After his victory over Lysias in this battle, Judas rededicated the temple at Jerusalem, refortified Jerusalem, and also fortified Beth-zur (phase 2 of the citadel? 1 Macc 4:61; cf. 6:7, 26). In 162 B.C.E. Lysias led a second campaign through Idumea. He laid siege to the stronghold at Beth-zur (1 Macc 6:31; cf. 2 Macc 13:19), which was unable to withstand it because of its inadequate food provisions (1 Macc 6:49; cf. 2 Macc 13:22). So Lysias took Beth-zur and stationed troops there. Subsequently Beth-zur remained in Seleucid control for some time, having its fortifications rebuilt by Bacchides in 160 B.C.E. (the third phase of the citadel, 1 Macc 9:52). Finally, in 145 B.C.E. Simon laid siege to Beth-zur and recaptured it for Judea (1 Macc 11:65–66). It remained in Judean control thereafter, but the community slowly declined until the settlement ended about 100 B.C.E.

WESLEY I. TOEWS

BETHANY (PLACE) [Gk *Bēthania* (Βηθανια)]. **1.** Name of a town mentioned in Jdt 1:9, located "beyond the Jordan" but in the vicinity of Jerusalem. The name (Gk *baitanē*) is rendered in the RSV as Bethany, but in the RV as Betane. The expression "beyond the Jordan" in biblical texts may denote areas either E or W of the Jordan river. In this case, however, because the perspective is that of Nebuchadnezzar in "Assyria" and because the list of names (which includes Jerusalem) follows in order moving from Galilee in the N to Egypt in the S, it seems to indicate the region W of the Jordan.

Moore (*Judith* AB) identifies this town with Beth-anoth (M.R. 162107) (modern Beit-ʿAinum), which is located S of Jerusalem, about 7 miles N of Hebron (Josh 15:59) in the highlands of Judea. It is probably not to be identified with the Bethany of Mark 14:3f.

In the legendary story of Judith this city is included in a list of cities and regions which Nebuchadnezzar conquered and from which he demanded assistance to engage his enemy, Arphaxad. Because they rejected his demands, he mounted a campaign against them which set the scene for the actions of the heroine, Judith. The town did not figure in any of the action of this story.

2. Place where John the Baptist conducted his ministry, situated on the E bank of the Jordan river (John 1:28). See also BETHANY BEYOND THE JORDAN. Because of its location it is doubtful whether it can be identified with the hometown of Lazarus (John 11:18), although Parker (1955) argues for the identity of the two Bethanys.

During his sojourn in Palestine, Origen reports (Comm. G 40) that he visited the area but failed to find any trace of a town with this name on the E side of the Jordan. He concluded that the text should read "Bethabara," a place pointed out to him on the W bank of the Jordan. Etymological factors probably influenced him as well, because it means the "place of crossing over".

The Madaba map mosaic (6th century A.D.), as Schnackenburg (1980) reports, locates a town named Bethabara on the W bank of the Jordan close to the point where the Jordan flows into the Dead Sea. Brown (*John*) notes that some modern commentators have accepted this variant, suggesting that the gospel writer is stressing the parallels between Jesus and Joshua. Jesus, like Joshua, crosses over the Jordan after his baptism, leading his people into the promised land.

The discovery of p^{75} (3d century A.D.), which supports the reading "Bethany," leads most scholars to accept this as the original reading. Traditions dating to the 3d century state that John baptized Jesus near the Wâdī el-Ḥarrar, located near the Prodromos Monastery, about 5 miles N of the Jordan's entrance into the Dead Sea. Whether Bethany should be located in this vicinity remains uncertain.

3. Most frequently mentioned town of this name located on the E slopes of the Mount of Olives, 3 km E of Jerusalem (John 11:1). In the Synoptic Gospels Jesus made Bethany his headquarters during his final week of ministry in Jerusalem (Mark 11:11, 12 = Matt 21:17; cf. Luke 19:29). Bethany marked the last station for the pilgrim traveling from Jordan to Jerusalem. Prior to his "triumphal entry" into Jerusalem, Jesus sends some of his disciples to Bethany in order to secure the donkey upon which he will ride into the city (Mark 11:1).

The gospels of Mark and Matthew also note that the anointing of Jesus at Simon the Leper's house took place in Bethany (Mark 14:3 = Matt 26:6). This story may have some relationship with a similar anointing recorded in John 12:1–8 which occurred in Bethany, the village of Lazarus, and in which Mary, Lazarus' sister, is identified as the woman anointing Jesus.

The story of the raising of Lazarus from the dead (John 11:1–44) also occurs in the context of Bethany. The modern town at this site is called El-ʿAziriyeh (M.R. 174131) by its Muslim inhabitants, reflecting the traditional linkage with Lazarus. The gospel writer stresses the proximity of this town to Jerusalem, just under 2 miles distant (v 18). Eusebius (*Onomast.* 58) places it at the second milestone from Jerusalem on the way to Jericho. Similarly the Bordeaux Pilgrim (CCSL, 125.18), A.D. 333, locates it 1500 paces E of the Mount of Olives.

Luke 24:50 records Bethany as being in the vicinity of the Ascension of Jesus Christ. This Bethany is not mentioned in the OT, although Ananiah (Neh 11:32), associated with Anathoth and Nob, may be the same place. See ANANIAH (PLACE).

Archaeological investigations have taken place at Bethany under the direction of the Franciscans (1949–53). A series of churches dating back to the 4th century A.D. were uncovered. The tomb of Lazarus was also located.

L. J. PERKINS

BETHANY BEYOND THE JORDAN. Place where John baptized and was questioned by the envoys from Jerusalem concerning his self-claims (John 1:19–28). It was at Bethany that Jesus gained his first disciples from the circle of the Baptist (1:35–51). Following the gospel of John, Bethany is frequently held to be the locus of Jesus' Baptism; however, this view is not cogent, since John 1:32–34 contains only an indirect allusion to the Baptism (Schnackenburg, *John* HTKNT, 1:283). After Jesus escaped an attempt to lynch him at the feast of Hanukkah in Jerusalem (John 10:22–39) and preceding the Passion, he stayed at Bethany and once more gained a large number of followers there from the circle of the Baptist (10:40–42).

Because Origen could not find a location named Bethany on the E bank of the Jordan, he opted for the reading of *Bēthabara* in John 1:28, though almost all of the mss of his time read Bethany (*Comm. on John* 6. 204). Currently this reading is almost uniformly considered to be original because Bethany is not only extant in codices Vaticanus and Sinaiticus (4th century) but also in a large number of mss with considerable geographical distribution and because it is now possible to trace it back to the 3d century via p^{75}, and as far back as to the 2d century via p^{66}. Further, the transition from John 10:40–42 to 11:1ff. shows that the Evangelist intended the concordance with the name of the location Bethany near Jerusalem (11:1, 18). However, the agreement between Origen and the Syriac version of the Gospels (syr^{c}, syr^{s}) demonstrates that with Bēthabara he followed a genuine local tradition (Burkitt 1904:308–9, contra Clapp 1907:75–83). The name, likely derived from the Heb *bêt ʿabārâ,* "house of crossing," points to one of the fords of the Jordan.

On account of the early ms attestation, all attempts to understand Bethany as a corruption of the text or as an interpolation have failed. This outcome also applies to the assumption that Bethany and Bēthabara are miswritten forms of Baithanabra in Josh 13:27 LXX (B) (*EncBib* 1:548). Against the hypothesis of a merely fictitious place, (Krieger 1954) is the fact that Johannine references to places have generally proven to be accurate, if they can be verified (Schwank 1981). To parallel Bethany in John 1:28 with the homonymous location on the Mount of Olives (Parker 1955) is grammatically impossible to begin with (Fortna 1974:67). Furthermore, the Evangelist has deliberately distinguished the two locations (see above).

A modern suggestion lacking the support of tradition or of archaeology (Buzy 1931) is the localization of Bethany at the Tel el-Medesch at the end of the Wâdī Nimrīn on the elevation of the Jordan ford el-Ghōranije (Féderlin 1908; *DBSup* 1:968–70). The same applies to the search in the Wâdī Gharbe, near Livias, the residence of Herod Antipas (Wiefel 1967:81). Betonim (Josh 13:26), today's Khirbet Batneh SW of Es-Salt, which was suggested by F. Delitzsch (1876:602), K. Furrer (1902:257–58), and T. Zahn (1907:290–94), is eliminated because of the absence of running water, which is necessary for baptismal practice. C. R. Conder's (1875) assumption that Bēthabara was to be located near a ford by the name of Makhādet ʿAbārah, 5 km NE of Beth-shean was widely accepted in earlier years (Erbes 1928:82). But the existence of the name could not be verified by later researchers (Lagrange 1895:510; Rix 1903:161); the Byzantine tradition locates Bēthabara over against Jericho (see below). Long before Conder, in 1658, J. Lightfoot (reprint 1979:327–33) equated Bēthabara with the Beth-barah in Judg 7:24 and considered it to

be a ford near Beth-shean. Today, however, the search for Beth-barah has moved farther to the S to the vicinity where the Jabbok flows into the Jordan.

Unless one foregoes an attempt at localization altogether (Brown *John* AB, 44–45), the current search for Bethany concentrates mostly on the Wâdī el-Charrār (Mommert 1903; Dalman 1924:96–102; Kopp 1964:153–66; Schnackenburg *John* HTKNT 1, 283–84; Keel and Küchler 1982:527–32), which flows into the Jordan vis-à-vis Jericho. In the Byzantine era a Johannine church which recalled the Baptism of Jesus (Kopp 1964:158–59; Wiefel 1967:76–77) was located there at the E bank of the Jordan (Baldi 1982:172). But this localization dates back to the early 4th century. Since the anonymous Pilgrim of Bordeaux in A.D. 333 (Baldi 1982:171) also discovered an apparently older Jewish tradition of Elijah's ascension (2 Kgs 2:5–14) at this location, it could indeed be possible that the Baptist himself chose this site in order to point to himself symbolically as the eschatological Elijah (cf. Matt 11:14; 17:11–13 = Mark 9:12–13; Luke 1:17; Schnackenburg, *John* HTKNT 1, 283–84). The map of the Madaba mosaic of the second half of the 6th century marks a Bēth-abara over against Jericho, though on the W bank of the Jordan. This name was likely already associated with this region during the time of Eusebius (*Onomast.* 58:19–20) and of Origen. There is no indication in local onomastica, however, of a location Bethany which derived from *bêt ʿaniyyâ*, "house of the boat" = ford.

While the tradition in favor of the place of Jesus' Baptism at the lower course of the Jordan (Matt 3:1; cf. Matt 11:7–9 = Luke 7:24–26) is ancient and reliable (Baldi and Bagatti 1980:38–46), there are, nevertheless, reasons against an identification of this location with the Bethany of John 1:28. Contemporary researchers have likewise pointed out that the relationship of the distances in John 1–2 and 10–11 require the search for Bethany to take place closer to Galilee than to Judea (Elliger, *BHH* 1:231; Brownlee 1972:167–68; Dockx 1984:14). John 1:35–51 represents a parallel of the Synoptic accounts of the call of the disciples in the vicinity of the Lake of Genezareth (Matt 4:18–22 = Mark 1:16–20; cf. Luke 5:1–11). "Beyond the Jordan" *(peran tou Iordanou)* does not have to carry the political sense of the Perea of Herod Antipas by any means, but simply denotes the land E of the Jordan, and sometimes the more northerly Transjordan (especially so in Matt 4:15). If a parallel is drawn from John 10:40–42 to Matt 19:1 = Mark 10:1 (Brown, *John* AB, 414), the expression "Judea beyond the Jordan" (Matt 19:1) points, against the backdrop of Josh 19:34 (MT), to the N territory E of the Jordan (Riesner fc.).

Hence it is necessary to consider the suggestion of those scholars who claim to see, in Bethany of John 1:28, the name of the region of Batanea (Gk *Batanaia*), the OT Bashan. In the LXX (Num 32:32–33; Deut 3:8; 4:47) and in Josephus (*Ant* 8.37), Bashan is described as "beyond the Jordan" (*peran tou Iordanou*). An initial reference to this solution appears already in J. Lightfoot (1979:328). Its first recent defendant was C. R. Conder (1877). Today this theory is espoused especially by K. A. Eckhardt (1961:168–71) and W. H. Brownlee (1972:167–73). The change in the forms of the names is feasible philologically, especially if they are compared with the forms in the Targums and in the Jerusalem Talmud (Brownlee 1972:169). The name of a region would also explain why Origen did not find a location of Bethany. In John 10:40 Bethany is not described as a village or town, but as an undetermined place *(topos)*, in obvious contrast to Bethany near Jerusalem (11:30). Further, this reduces the difficulty presented by the fact that the article one would expect with the name of a region is missing in John 1:28. If Bethany signifies the Batanea, it becomes clearer historically why Jesus withdrew to that place at the end of his ministry (John 10:40). For the time being, Jesus would be secure in the territory of Philip, the tolerant tetrarch, according to Josephus (*Ant* 18.106–7).

The SW part of the Batanea, to which John 1:28 points, later on was not only particularly densely populated by Nazorite and Ebionite Jewish Christians (Epiph. *Haer.* 29.7; 30.2). Under Herod the Great, according to Josephus, this region attracted pious Jews of the most diverse background (*Ant* 17.23–27). Among these seem to have been especially the adherents of Jewish sects, such as the Essenes (Wieder 1962:1–5; Pixner 1983:350–58), or the forerunners of the Mandaeans (Rudolph 1960:248–52). In the area of Mt. Hermon, apparently, those circles resembling the Essenes were settled who considered this mountain, following *1 Enoch* 13 and *T. Levi* 2–5 (cf. Matt 16:13–19), to be a place of special revelation

(Nickelsburg 1981). John 1:51 (cf. Gen 28:12–13) is associated with such expectations, and John 10:16, as well as 11:52, may allude to missionary work among Jewish sects.

Jerome (*Comm. on Isa.* 9:1 [130]) knew of a Jewish Christian interpretation of Isa 8:23–9:1 according to which the Messiah would appear in the N because Israel's calamity began there (cf. 2 Kgs 15:29). This expectation is also in the back of Matt 4:13–16 and had Jewish rudiments (Wieder 1962:3–51). Against this backdrop it may also become clear why John, according to John 10:40, "first" *(to prōton)* began to baptize in the Batanea, that is in the northernmost area of the Holy Land. Together with the baptismal activity in the central Jordan valley (Baldi and Bagatti 1980:50–52) at Aenon, near Salim (John 3:24), as well as in the lower Jordan valley (see above), we thus obtain a very plausible historical picture of an itinerant preacher (Flusser 1969:30–31; Riesner 1988:353–57).

Like other place names in the gospel of John, therefore, Bethany is first of all a concrete geographical designation. But this does not rule out that it also has a deeper theological significance (Mollat 1959:323; Voigt 1977:72–75, 93–100). The special prominence of Bethany may indicate the existence of Johannine communities in this area (Scobie 1982:82). To the degree that Bethany also attributes significance to Transjordan, next to Galilee, Samaria, and Judea, the Fourth Gospel emphasizes the mission of Jesus to all of Israel (Meeks 1966:163–64). When the evangelist approximates the name of the region (Batanea), which was especially associated with the beginning of the messianic era, with the name of the location Bethany, where Jesus' passion began (cf. John 11:47ff.; 12:1), he merges redemption's beginning and completion into an indivisible unity.

BETHASMOTH (PLACE) [Gk *Baitasmōn* (Βαιτασμων)]. An alternate form of Azmaveth.

BETHBASI (PLACE) [Gk *Baithbasi* (Βαιθβασι)]. A city in the wilderness of Judah to which Jonathan, Simon, and their followers retreated (1 Macc 9:62) from Bacchides, a friend of the Seleucid king Demetrius I Soter, who appointed him governor (7:8) of the province named Beyond the River (i.e. west of the Euphrates). The city is identified with Khirbet Beit Baṣṣi, located SE of Bethlehem about 5 km NE of Tekoa on the Wâdī Umm l-Qal‹ah (Simons *GTTOT* 414).

In 159 B.C. the high priest Alcimus (appointed by Demetrius at the same time as Bacchides, but from outside the legitimate high priestly family) had given orders to tear down the inner wall separating the Court of the Gentiles from direct access to the temple. Alcimus was unable to carry out this plan, however, since he was stricken by paralysis and died. Bacchides returned to Demetrius for two years, then ordered his sympathizers to seize Jonathan and hold him until he returned (1 Macc 9:54–60). When the plan became known, Jonathan killed 50 collaborators and retreated to Bethbasi, refortified it, and waited for Bacchides to besiege the city. Jonathan took a small contingent of his army out of the city and attacked Bacchides. With the rest of the army, Simon attacked Bacchides' siege weapons and joined the attack on the enemy troops. Bacchides was forced to withdraw, and eventually agreed to peace terms with Jonathan (1 Macc 9:65–73), leaving the Maccabean brothers in charge of all of Judah except for Jerusalem and Beth-zur (*MBA* map 198).

BETHEL (DEITY) [Heb *bêt‹ēl* (בֵּיתְאֵל)]. A NW Semitic deity whose presence in the Near East may be traced for more than a millennium, with its greatest attestation in the military colony of Syene-Elephantine in Egypt during the 6th and 5th centuries B.C. See ELEPHANTINE PAPYRI. The divine Bethel may be found in one personal name in the Hebrew Bible (Zech 7:2); other alleged biblical references to the divinity are dubious.

———

A. The Historical Data

1. Pre-Elephantine History. PHILO OF BYBLOS (116–64 B.C.) in his *Phoenician History,* which purports to be a translation of a work by an early Phoenician historian named Sanchuniathon, has bequeathed a theogony of the Phoenician pantheon. It relates that Uranus and Ge produced four sons: Elus (Kronos), Baitylus (Bethel), Dagon, and Atlas. This exalted status of Bethel indicates the erstwhile importance of the god, being descended from the supreme deities and fraternally related to Elus (El), Dagon, and Atlas (Baumgarten 1981:15, lines 21–24; cf. pp. 202–3). There is a ring of antiquity in the birth of Bethel in this passage and an implied geographical diffusion of his veneration. It is important to

distinguish carefully between the god Baitylos (Bethel) and the *baitylia,* which Uranus devised, contriving to put life into stones (ibid. 202–3), hence "holy stone" (*baitylion,* neuter sing.). Some scholars have attempted to discover the god Bethel in ancient Ugaritic culture (Hyatt 1939:87f.), but their proposals have been effectively challenged by Marvin H. Pope, who denies any reference to Bethel in the Ugaritic pantheon—at least within our present resources (Pope 1955:59f.).

The first indubitable reference to the god Bethel appears in an Akkadian tablet embodying the text of a treaty consummated between Esarhaddon of Assyria and Baal, king of Tyre, ca. 675 B.C. (*ANET,* 534a). To preserve inviolate this compact, the great gods of heaven and earth, the gods of Assyria, the gods of Akkad, and the gods of Eber-nari (= Syria) are enjoined. One of the great gods of Eber-nari so implicated was the god Bethel (Akkad). ^{d}*Ba-a-a-ti-DINGER.MEŠ = Bayt-ʾil* = Bethel (Hyatt 1939:81–84; on the reading, Coogan 1976:45–47). The relevant imprecation reads:"May Bethel and ʿAnath-Bethel deliver you to a man-eating lion."

2. The Elephantine-Syene Papyri. Although a difficult Aramaic religious text in demotic script of the Persian period has been known for some years to contain the name of the god Bethel (Bowman 1944:226, lines 8, 9; 11, 18), the translational difficulties have hindered a satisfactory understanding of the text. The situation is quite the reverse regarding the 108 papyri and some significant ostraca and other inscriptional materials which surfaced largely from the Syene-Elephantine sector (see ELEPHANTINE PAPYRI).

A brief *Sitz im Leben* of the political, ethnological, and religious factors of the Syene-Elephantine community will form a foundation to adjudicate the role of the god Bethel in the military outpost.

a. The Political Situation. Elephantine, known in ancient Egypt as Yeb (Eg *3bw;* Aram *yb;* for the later Greek toponym see *LÄ* 1:1217–24), is one of the larger islands of the Nile. It is elliptical with N-S dimensions of 1 mile with its greatest width one-third of a mile. It embraces an area of some 200 acres (see *ArchEleph* 35–42). At this strategic location the Egyptian government installed a military garrison composed largely of Jewish mercenaries. On the E bank of the Nile, opposite Yeb, was the counterpart of Yeb; it was the port city and fortress of Syene, populated largely by Syrian Arameans as a complement to the Yeb forces.

b. The Ethnicity of Yeb-Syene. The two fortresses were staffed by foreign mercenaries under the high command of Egyptian officers. With the Persian conquest, the leadership passed to Persian officials. Both Yeb and Syene had populations of Semitic origin, a demographic similarity which at times occasions some difficulty in identifying individuals. Thus in *CAP* 5.2 Koniya b. Zadok and Mahseiah b. Yedoniah are both identified as Arameans of Syene, but in *CAP* 6.3 and 8 they are termed Jews. Both groups seem to have been located in their Egyptian setting as early as the 7th century B.C. When Cambyses invaded Egypt (ca. 525 B.C.), he is reported to have devastated many religious shrines; but he manifested an entirely different attitude toward the Jews and spared their temple at Yeb (*CAP* 30.13; Oppenheim *CHI* 2:554–59). However, with such plurality of ethnic groups, Egyptians, Babylonians, Persians, Syrians, and Judeans, one can easily forecast that friction would arise. The destruction of the Jewish temple by the instigation of the Egyptians is a case in point (*CAP* 30:14; 31:12, 13).

c. The Religious State of Affairs. Ethnic diversity among the mercenary immigrants, combined with that of the indigenous population, explains the variety of religions in the Yeb-Syene sector. The Egyptians venerated the isle of Yeb as the illustrious site of the temple of the ram headed god Khnum, the giver of rebirth to Hapy, the god of the Nile and the lord of the inundation (*WbMyth* 1:346–47).

One may forecast that the Aramean garrison at Syene would become a residence of Syrian deities. In four letters destined for Syene, greetings are accorded to "the Temple of Nabu" (BK 1.1), "the Temple of Banit in Syene" (BK 2.1; 3.1), and "the Temple of Bethel and the Temple of the Queen of Heaven" (BK 4.1). In addition, one of the ostraca, dispatched by a certain Yarḥo, invokes Bel, Nabu, Šamaš, and Nergal for the welfare of Yarḥo's brother Haggai (*ANET* 491). Aramean personal names composed with a theophoric element such as Nus (h)ku (*CAP* 2.19), Atar (*CAP* 8.27), and Sin (*CAP* 6.19) appear in the documents. The gods are both West Semitic and Babylonian.

The Judean mercenaries may have enjoyed a privileged status in that their temple to Ya'u appears to be the sole foreign religious establishment that shared the island of Yeb with the illustrious Egyptian deity

Khnum and the goddess Satet. Their sizable temple to Ya'u had an invested priestly staff and services which, as far as we know, paralleled the operations of the Judean ritual of the temple at Jerusalem, with its sacrifices, sacred calendar, and supportive offerings. Whether it was the offense of the Jewish bloody sacrifices (cf. *CAP* 33; *CHJ* 1:227–32) or the animosity that developed between the Yahwists and the devotees of Khnum (*CAP* 31.4–11), it was the Jewish opinion that the priests of Khnum instigated an attack upon the temple of Ya'u in 411 B.C. and destroyed it. In 408 B.C. the officials of the temple appealed to Baghoi (Bigvai), the governor of Judea, for permission to rebuild the temple (*CAP* 30; 31). In response the governor, together with Delaiah, one of the sons of Sanballat, the governor of Samaria (Neh 2:10, 19; 13:28), directed that the temple should be rebuilt (*ANET* 491–92). The Jewish colony seems to have survived until Pharaoh Nepherites I (399–393 B.C.); he is the last king included in the papyri of Yeb (*BMAP* 13).

In retrospect it may be affirmed that the worship of the Judeans at Yeb favored a Yahwistic conformity, which, though it might not observe the dogma of the Jerusalem cult in regard to exclusive worship at one temple (cf. Deut 12:5–7, 11, 13, 14, 18, 26) and its exclusive sacrificial office, nevertheless comported with the spirit of 5th-century Judaism (*CHJ* 1:227–31; *ArchEleph* 105–50).

Despite this affirmation there are some unresolved problems that largely concern the place of the foreign deities mentioned in the papyri. In addition to the temples of foreign deities mentioned above, there is a list of donors and their financial contributions for the support of the temple at Yeb, where the beneficiaries included not only Ya'u but the god Eshembethel and the goddess ʿAnathbethel (*CAP* 22.1, 123–25). Again, in an oath of a certain Menahem it is stated that he swore by "[…], by the temple and by ʿAnatya'u" (*CAP* 44.22). It is to be noted that the goddess ʿAnat is a component both of ʿAnabethel and of ʿAnatya'u.

In the Aramean documents of the period the god Bethel formed the initial component of 16 different personal names, names severally attached to 31 individuals (*ArchEleph* Appendix V). In the same literary deposit the god Eshem is a component of four diverse names borne by six different individuals, while the god Ḥerem is found in nine instances, including a hypocorisn. Eight of these instances have the divine nominal component in four different personal names.

B. Analysis of the Name "Bethel"

The term *Bethel* (Heb *bêt* "house, temple" + *ʿēl* "God"), meaning "house of God," developed, it is maintained by some scholars, into a pious surrogate for the name of God. This argument has been illustrated by the concept of Pharaoh. This name derives from the Egyptian *pr.ʿ3* "great house." In the New Kingdom it became the custom to address the king of Egypt as "the great house," metonymically to be understood as the dweller within the royal palace. One might roughly compare the name "sublime porte," an English translation of the Turkish *babi aliy,* signifying the chief office of the erstwhile Ottoman government, or the name of the Japanese emperor *mikado* (*mi,* exalted + *kado,* gate), literally, "exalted gate." Similar circumlocutions for a deity are discoverable in Ugaritic, Phoenician, Punic, Egyptian, and Hebrew usage.

C. The Role of Bethel at Syene-Elephantine

The Elephantine-Syene sector was saturated with diverse polytheisms, Egyptian, Babylonian, Aramaic being the dominant types; Judean religious beliefs and practices were in the minority in such a crowded international area. Proselytism, intermarriage, and syncretistic attraction played a significant role within such a society united by a common Aramean tongue. It has been noted that there was such an affinity between the Jews of Elephantine and the Arameans of Syene that it is difficult to differentiate them (*CHJ* 1:223 n. 6). Accordingly, identifying the various documents as Elephantine Judean or as Syene Aramean is a difficult task. Most of the papyri represent informal correspondence, legal involvements, or a few ecclesiastical exchanges. Much of the material is limited to the concerns of several families. To generalize from these fragments of a centurial culture as though they constituted the total experience of the community is a seduction that must be denied.

The ambiguity of the data fairly prejudices the possibility of a unanimous interpretation of the religion of the Elephantine Judeans and of our particular concern, the role of the god Bethel. Three diverse proposals may now be presented as embodying the most satisfactory approaches to the subject.

The first approach argues that the Judeans were syncretistic or monolatrous:they gave Ya›u, their ancestral God, preeminence, but accepted in varying degrees the gods and practices of their neighbors. That Israel and Judah repeatedly succumbed to foreign religious practices, the book of Kings, a 6th-century B.C. manifesto of Judean conformity, is frank to admit (2 Kgs 17:29–34; 21:1–7; 23:4–15; Jer 2:28; 7:18; 44:15–21; Ezek 8). By their anomalous priesthood and sacrificial rites the Judeans at Yeb contravened some of the precedents thought normative by the temple officials at Jerusalem. This defection may have occasioned the ecclesiastical officials in Jerusalem to ignore the letter from Yeb petitioning for help to rebuild the temple (*CAP* 30.18, 19). Proponents to this view have a tendency to aggregate the religious evidence given in the papyri. Some have postulated that the religion of 5th-century Judaism was like that of the devotees of the Queen of Heaven (Jer 44:17) or of the diverse foreign cults in Judah from Manasseh to the exile. "It was not a case of falling away from a monotheistic ideal, but a continuation of pre-exilic popular beliefs" (*CAP* xix).

The second proposal carefully separates Syene (and Hermopolis) letters from those thought strictly related to Elephantine. From the ample data regarding the religion of the Judeans at Yeb there has been reconstructed a pattern of worship that indicates a similarity to the temple worship at Jerusalem. An analysis by Porten (*ArchEleph* 133–50) of the Jewish names from Elephantine concludes that they resemble to a large degree the Yahwistic names of the preexilic period. From these, he argues, a solid religious affirmation can be derived. Porten regards the non-Yahwist components found in some names in the Elephantine-Syene sector, theophores containing the names of the deities Bethel, Eshem, Ḥerem, and Anath, as non-Jewish. They are to be attributed to the Syene community.

Some scholars have challenged this view by adducing nomenclature that seems quite opposed:Malkiah, a person possessing a definite Yahwistic name, swears an oath before "Bethel the god" (*CAP* 7:7; on the interpretation, see van der Toorn 1986) even though he is an Aramean (*CAP* 7:2); a number of Arameans, described as such, have Yahwistic names. A rejoinder to these objections may point out that religious inferences from onomastics are a social judgment, not a personal one; the Judeans adapted themselves to the customs of their conquerors while still maintaining their essential religious integrity. If there is any syncretism among the Judeans, it is more apparent than real. In defense of this position a few scholars have interpreted the dual names of the deities as a single unit, considering the first part to be a hypostasis of the second name. To illustrate, Albright proposes to interpret the three names Eshembethel, Ḥerembethel, and Anathbethel to mean respectively "Name of the House of God," (= God), "Sacredness of the House of God," and "Sign (?) of the House of God," names in which the initial deity of the name becomes a "pure hypostatization of the second deity" (Albright 1940:286). This speculation, which attempts to avoid polytheism in the Judeans' religion at Yeb, has remained generally unconvincing. To identify the Syro-Mesopotamian syncretism described by Ezekiel and observed in the days immediately preceding the Babylonian Exile of 587 B.C. as coincident with the postexilic community at Jerusalem or with the Judeans at Yeb is an impossible religious equation. On the whole the second view assigns the pagan deities mentioned in the Syene-Elephantine papyri to the non-Jewish elements in Syene.

The third view attempts to support a mediating position, to acknowledge the general conformity of the Elephantine Judeans with the postexilic Jerusalem cult, but remains convinced that there are some instances in what appear to be genuine Elephantine correspondence elements which are admittedly tinged with a pagan syncretism. In the document relating the names of the contributors to the support of the temple of Ya›u at Elephantine, there is the unexpected statement that the total collection was dispersed not only to Ya›u but to the deities Eshembethel and Anatbethel (*CAP* 22:1, 123–25). Moreover, in the papyri there are in this same list two patronymics whose theophoric element is a pagan deity:[Beth]elnuri and Hadadnuri (lines 4 and 23). In the contemporary period some 32 names have Bethel as the theophoric element:7 theophores with the name Eshem (cf. 2 Kgs 17:30 and Amos 8:14), and 9 with Ḥerem (*ArchEleph* Appendix V). Other deities mentioned in the Elephantine correspondence are ‹Anatyahu

(*CAP* 44:3), Bel, Nabu, Šamaš, Nergal (*ANET* 491), and the Queen of Heaven (BK 4:1); in the personal names the following gods appear: Nus (h)ku (*CAP* 2:19) Atar (*CAP* 8.27), and Sin (*CAP* 6.19). To relegate all the pagan gods to the Arameans at Syene and to postulate an uncompromised Yahwistic cult at Elephantine seems to suppress evidence to the contrary, however minimal it may be. These discordant data appear to coincide with the cultism practiced by the devotees of the Queen of Heaven (Jer 44:15–25), who brashly justified their cultic adherence by tracing it back to the preexilic practices of their kings, princes, and the Judean people themselves. The view suggested here is that while the greater part of the Elephantine Judeans may have conformed to the contemporary cult in Jerusalem, there were areas where allowances were made and adaptations to the foreign religious cults were tolerated. One may compare the heterodox minority living in an orthodox majority and maintaining their minority convictions with the situation in the days of Ezra (Ezra 10:15) and often elsewhere in the OT.

D. The Diety Bethel and the Old Testament

As the name of a geographical site, some 10.5 miles N of Jerusalem, Bethel appears 71 times in the OT. With the recovery of the Elephantine data, in which Bethel appears as a significant deity, scholars undertook a minute examination of the biblical term *Bethel* to determine whether any of the occurrences involved the name of the god rather than the name of the place. The more significant results of this investigation focused generally on the following passages:the Jacob-Bethel pericope (Gen 28:17, 22; 31:13; 33:20; 35:7, 14–15); 1 Sam 10:3; Amos 3:14; 4:4; Hosea 10:8, 15; Jer 48:13; and Zech 7:12. Some scholars added other passages to these in which the term *Bethel* was conceived to be the NW Semitic deity.

The name Bethel may be applied to three diverse entities: (1) the town some 10 miles N of Jerusalem, prominent in all biblical periods, and the seat of one of the most important religious centers of the N kingdom of Israel (1 Kgs 12:26–33; Amos 7:13); (2) the name of a NW Semitic deity who is identified as one of the sons of Uranus in the Phoenician history of Sanchuniathon (Baumgarten 1981:15) and became prominent in the Egyptian-Syene papyri of the 6th–5th centuries B.C.; and (3) the name of a stone erroneously conceived as endowed with the vital force by Kronos (Baumgarten 1981:15, where the text of Philo Byblos is presented). Such was termed *baitýlion* (neuter sing.). It should be remarked that some of the biblical passages indicated above have been considerably emended to arrive at the conclusion that they refer to the deity Bethel. Accordingly, the discussion will be confined to those passages which are more likely to be references to the deity Bethel.

The Jacob-Bethel pericope has occasioned considerable diversity in the interpretation of the naming of Bethel and of the stone which Jacob used as a pillar (Gen 28:11–22; 31:13; 35:1, 6–16). The narrative may be conveniently divided into three parts:the dream of Jacob (Gen 28:10–15; 35:1, 7b); the response of Jacob (Gen 28:16–20; 31:13); and the vow of Jacob (Gen 28:21–22; 35:3, 7, 14, 15). The stone which Jacob used as a headrest was just "one of the stones of the place"; its size would be commensurate with its purpose; it is of secondary importance in the story, a detail that adds realism, since such accommodation was not dissimilar to the Egyptian headrest which relaxes the dorsal neck muscles and promotes slumber (see Sauneron 1962). When Jacob awakened from his awesome dream, his first response was to commemorate the experience by consecrating the headrest stone with oil, then setting it up as a votive stele (Heb *maṣṣēbâ*), no doubt supported by a foundation of other stones (Gen 28:16–20; 35:14; cf. 1 Sam 7:12). In the three instances where Bethel occurs, the focus is the place, not the commemorative stone. There is no suggestion that the stone served as a house for a god; it was to become a *maṣṣēbâ.* This in turn would initiate a *bêt ʾelōhîm* (Hyatt 1939:97–98). The tense of Gen 28:22 is the Heb imperfect, corresponding to the English future:"shall become the house of God." The vow of Jacob has five components in the protasis specifying the conditions of the apodosis. The apodosis has three responses thereto:Yahweh will be his god; the stone will be the earnest of a house of God, and proper cultic support is epitomized by the tithe (vv 21b, 22). The fulfillment of the vow is noted in Gen 35:1, 3, 7.

The exact nature of the stone of Jacob has caused considerable discussion. No one can deny the widespread worship of holy stones and the identification of the stone as "the seat of a numen" (Moore 1903:198). Nor would one deny their ubiquity, but general semblance cannot determine particular

uniqueness. It may be admitted that "holy stones" appear to be referred to in the OT as deplorable paganism (Jer 2:27; 3:9; Ezek 30:32; Lev 26:1; Isa 57:6), but such are not called *baitylia,* a word that does not appear in the OT.

It has been noted previously that Philo of Byblos clearly distinguishes between *Baitylos* (= Bethel, a NW Semitic deity) and the *baitylia* (animated stones). The statements in Sanchuniathon regarding the god *Baitylus* and the animated stones called *baitylia* assume a new importance. The Semitic data of Sanchuniathon regarding the "Syrian Semitic" deity Baitylus appear to maintain their identity even in a Syrian Greek inscription, dating from A.D. 223, at Kafr Nebo (near Aleppo), where in a dedicatory inscription for an oil press the god Sumbétylos appears with two other gods, jointly named "paternal gods" (Hyatt 1939:86). The name appears to be the equivalent of Eshembethel, who appears in the papyri of Elephantine.

It may be noted here that in the treaty between Barga›yah, king of *KTK,* with Mati›el, king of Arpad, dated ca. 760 B.C. the place name Bethel occurs (i A 34) and the phrase *batay›laḥayya›* (lit. "houses of the gods") appears three times (ii C 3, 7, 10) and refers not to the temple buildings, but to the stele or steles upon which were engraved the contents of the agreement (*KAI* 262; *TSSI* 2:44–45). One may postulate that the stone of Jacob, chosen at random and common (profane), was transmuted by the anointing into sacramental object, worthy to be set up publicly as a record of the divine encounter (Gen 28:22).

Two other problems in the Jacob-Bethel pericope, both textual in character, merit some brief comments. The first concerns the initial words of Gen 31:13: *›nky h›l byt-›l.* Most scholars translate the compressed words to read:"I am the God of Bethel" (RSV, RV, BJ, NJPS), justifying their rendering from other Hebrew instances, such as 2 Kgs 23:17; Num 21:14 [cf. *GK* §127, Rem. 4]. Others admit the clause found in LXX and T^{JP}:"I am the God *who appeared to you at Bethel* …" (so NEB, Westermann, Speiser, etc.). These renderings are much to be preferred to that which interprets *God* and *Bethel* to be in apposition. That Bethel is a place name and not a divine name is evident from the adverb *where* (Heb *›ăšer*), twice used modifying Bethel. Of greater weight, however, is the unlikelihood that a foreign Semitic deity would be introduced into a key kerygmatic passage of Israelite tradition.

The second problematic passage is Gen 35:7, where Jacob "built an altar, and called the name El-Bethel." This may be compared with *›ēl ›ĕlōhê-yiśra›ēl,* the name given by Jacob to another altar he built (Gen 33:20); with *ha›ēl ›ĕlōhê-›ābîkā* (Gen 46:3) and with *ilu-bâyti-īli* (Speiser *Genesis* AB, 244). One notices repeatedly in the 71 or 72 occurrences of *Bethel* in the OT that the term is uniformly geographical. To import by a homonymic accident the Syrian god Bethel into passages in the Hebrew Bible which make excellent sense with a topographical meaning appears to be an invalid approach.

The proponents of the view that the Aramean god Bethel played a significant role in preexilic Israel have had recourse to a wooden apposition in rendering such a passage as 1 Sam 10:3, where Saul is informed of men whom he will encounter as "… three men going up to the God Bethel." On the contrary, it appears that the name Bethel is locative, and may admit the omission of the preposition *b-* before a homorganic stop (Andersen and Freedman *Hosea* AB, 406). Hence the more likely translation is "… three men going up to God at Bethel" (Heb *šlšh ›nšym ‹lym ›l-h›lhym byt-›l*).

It has been further suggested that the god of Bethel appears in the text of Amos and Hosea. The name Bethel occurs seven times in the book of Amos (3:14; 4:4; 5:5 *(bis)*; 5:6; 7:10, 13). Five of these are undisputed references to the city (4:4; 5:5 [both references]; 7:10, 13). The two remaining occurrences (3:14 and 5:6) are likewise allusions to the city Bethel and not to a god. The geographic reference of Bethel in 5:6 is established by its parallelism with the expression "house of Joseph."The threat of destruction of the altars of Bethel (3:13) is best understood as specifying the location of the altars, not the deity to whom sacrifices are offered upon them. While Amos does denounce syncretistic practices elsewhere (8:14), there is no suggestion that a cult of the deity Bethel is the prophet's concern.

In the book of Hosea there are two occurrences of the word Bethel. The first occurrence follows a description of the ravages of war:fortresses destroyed, mothers and children perishing, whereupon the prophet directs its poignant reference to his audience:"Thus it shall be done to you, O Bethel, because of your great wickedness" (Hos 10:15). The MT is perfectly understandable and needs no emendation.

The other use of Bethel refers to the nocturnal wrestling of Jacob with the angel at Bethel (Hos 12:5—Eng 12:4). Here also the prophet uses Bethel as a geographical term, not as a name for the deity Bethel.

The name Beth-aven is sometimes associated with Bethel. Beth-aven was located east of Bethel (Josh 7:2) and figures in the Conquest narrative (Josh 7:2; 18:12) and in the story of Saul (1 Sam 13:5; 14:23). The name Beth-aven was the source of a play on words employed by Amos and Hosea. The element *aven* (Heb *ʾāwen*) of the name appears to be derived from the root *ʾwn* and means "trouble, idolatry" or "wickedness, iniquity." The warning by Amos that "Bethel shall become *Awen*" (5:5; RSV:"Bethel shall come to nought") may be a pun on the name with reference to the Heb word for iniquity. Hosea's three references to Beth-aven (4:15; 5:8; 10:5) may be using the term as a demeaning surrogate for Bethel (so Andersen and Freedman *Hosea* AB, 372). A related pun is also probably the meaning of Hos 10:8.

A strong argument for the appearance of the god Bethel in the OT proceeds from Jer 48:13. The passage is a forecast of woe about to devolve upon the people of Moab and to destroy their confidence in the saving ability of their national god Chemosh. This military disaster, so forcefully portrayed in the preceding verse (Jer 48:12), will shatter the nation's repose in their god and in his ability to save his people. Such fragmentation of their hope in the divine power parallels the unspeakable disaster that the house of Israel suffered when Bethel, the site of the royal sanctuary, proved impotent against the might of Assyria in 722 B.C. It would be strange if the term Bethel in this instance should refer to a god housed in the "temple of the kingdom" (Amos 7:13), when elsewhere, particularly in the contemporary assessment of Bethel by Amaziah its high priest, the term Bethel is topographical.

The final and most likely passage in which Bethel is not used topographically is Zech 7:2, in which a deputation is sent to the priests at Jerusalem in the postexilic period (December 518 B.C.) to inquire whether the fasting practiced during the Exile should still be continued (cf. Zech 7 and 8). Two major interpretations have been proposed regarding the term Bethel in Zech 7:2. The first regards Bethel as a place name and translates the pertinent words thus:"Now *they of* Bethel" (RV, ASV); "now *the people of* Bethel" (RSV, NIV); "Bethel sent" (JB, Dhorme). A variation of this view translates Bethel as "the house of God" and proposes that the deputation went to "the house of God" (LXX, Vulg., KJV). This interpretation needlessly repeats the subject of v 3. In view of the extirpation of Bethel by Josiah (2 Kgs 23:15–20) and the very few Babylonian exiles that returned (Ezra 2:28; Neh 7:32), it may be questioned whether Bethel is a place name in this text.

The second interpretation regards Bethel as the divine element in the name Bethel-sharezer (Heb *byt*ʾ*l śr ʾṣr*, "May Bethel protect the king") (NEB/REB, NAB, NJPS). The following considerations favor the identification of the Heb *byt*ʾ*l śr ʾṣr* as a single name. The DN *byt*ʾ*l* is the theophoric element of a PN of Mesopotamian origin (cf. *ArchEleph* 328). The theophoric element is in initial position, which is normative. The name in Zech 7:2 is attested in the year 518 B.C. and, accordingly, is situated in a period during which PNs with the theophoric element *byt*ʾ*l* are attested epigraphically. The name appears in a Neo-Babylonian text from Uruk datable ca. 541–540 B.C. (Hyatt 1937). The proposed biblical name thus synchronizes with the frequent appearance of theophores compounded with Bethel in the Elephantine papyri. The person bearing the name Bethel-sharezer in Zech 7:2 may have been a Jewish official in Babylon.

BETHEL (PLACE) [Heb *bêt›ēl* (בֵּיתְאֵל)]. The name of two places mentioned in the Hebrew Bible. The name means "house of God."

1. An important town in the central hill country of Palestine, located N of Jerusalem and very close to Ai. Next to Jerusalem, this Bethel is the most frequently occurring place name in the OT, referring both to a city and to a religious sanctuary which was either in or near the city. Two factors, somewhat interrelated, are responsible for the importance of Bethel: (1) it was associated with a religious sanctuary; and (2) it lay along a crossroads and near a physical and political frontier that divided the central hill country of Palestine into two parts.

Bethel became established in the Bible as a sanctuary by association with events in the lives of Abraham and Jacob. When Abram wandered S from Shechem, he pitched his tent and built an altar between Bethel and Ai (Gen 12:8), and on his return from Egypt he revisited this sacred place (Gen 13:3, 4). Jacob in his flight from Beersheba to Haran stayed there and had the famous nocturnal vision of angels ascending and descending. In the morning when he awoke, Jacob erected a pillar to mark this sacred place. Jacob called the place Bethel although the city was called Luz (Gen 28:10–22). Many years later Jacob returned to this place on his way home from Haran; he set up another altar and called the place El-Bethel (Gen 35:7). He also set up a pillar and again named the place Bethel (Gen 35:15).

These biblical descriptions of events concerning Bethel are puzzling. Should a distinction be made between Bethel, a name for a sacred place, and Bethel, a name of a settlement? When did the name of the settlement Luz become Bethel?

Some scholars have suggested that, "most of the cultic places in Israel during premonarchic and early monarchic periods were built outside of their respective towns and were called by different names" (Na›aman 1985). This practice by the Israelites of building sacred places outside the city apparently differed from a Canaanite custom of building sacred places within the settlement and might be indicative of a distinction in religious practice. However, other scholars interpret this matter differently. According to *HGB* 131 the sanctuary was inside the city, and references to its being outside the city in the Bible are not historical, "… but related to the mode of life of the patriarchs." On the other hand, there are indications that Bethel, in certain biblical contexts, could refer to a sanctuary, rather than to a city name. Boling (*Judges* AB) translates Bethel in Judg 20:18 as "sanctuary" —but a sanctuary located in the village of Mizpah. When the Israelites inquired of God at the sanctuary in Mizpah they failed. But when they shifted their battle headquarters and inquired of God in a sanctuary in the city of Bethel, they succeeded. The ark of God's covenant was, at that time, in the city of Bethel, overseen by Phineahas ben Eleazer ben Aaron (Judg 20:26–28). Apparently then, not all "Bethels" are the same—some can be trusted to provide counsel, while others can not.

Bethel is also associated with Deborah, the nurse of Rebekah who died and was buried beneath Bethel under an oak (Gen 35:8), and with Deborah, the Prophetess, who lived near the city (Judg 4:5). Samuel visited this city periodically to judge the people (1 Sam 7:16). However, with the establishment of the United Kingdom by David and the placement of the temple in Jerusalem the importance of Bethel as a sanctuary declined. The fortunes of Bethel improved, however, when the United Kingdom split and Jeroaboam I placed a golden calf in Bethel to serve as a cult center for his people in place of the temple in Jerusalem (1 Kgs 12:29–33). This religious schism aroused opposition among the prophets Hosea (10:15) and Amos, who declared, "Bethel shall come to nought" (3:14). The Judean king Josiah captured Bethel and broke down its altar and defiled the site (2 Kgs 23:15). After that time Bethel lost its importance as a cultic center.

Bethel's historic importance as a sacred place also coincides with its importance as a frontier town. Bethel lies between two separable physiographic provinces:the hills of Ephraim to the N, and the plateau of Judea to the S. Taken together, these provinces constitute the centrally elevated backbone of the land of Canaan between the valley of the Jordan river on the E and the Mediterranean Sea to the W. Throughout much of biblical history this central range was divided politically into N and S tribes, followed by kingdoms of N Israel and Judah, to the S. Later during Roman times these provinces were called Samaria and Judea.

Along the crest of the central range (or more accurately along the water parting) a N-S road ran from Hebron to Shechem, passing through Jerusalem and Bethel. This road provided one of the most important lines of transportation throughout biblical history. Just S of Bethel lay an E-W road leading up from the coast along a ridge overlooking the valley of Aijalon and then down again to Jericho and the Jordan valley along another slope overlooking the Wâdī Suweinit. One would have had to travel beyond Shechem, some 25 miles farther N, to the Wâdī Fari to find a route from the coast to the Jordan river that would have been equally attractive.

Physiographically, the Judean plateau is shielded by a longitudinal valley and an abrupt scarp from easy access from the coastal plain, but routes from the coastal plain to the hills of Ephraim do occur at many places. Climatically, rainfall and agriculture differ between the southerly plateau of Judah and the more verdant Ephraim hills. The dividing line between these provinces can be defined on the basis of physical features; but since more than one criterion can be used, and they do not exactly coincide, one can say that the physical frontier actually lies within a zone—a zone which includes the city of Bethel. The dividing line can be taken at the E-W route a few km S of Bethel, in which case Bethel belongs to the N province. The dividing line can also be taken a few km N of Bethel where the fairly straight N-S road enters a series of switchbacks reflecting the hilly nature of the N province. In this case, Bethel properly belongs to the S province.

This ambiguous geographic relationship is the key to understanding why Bethel is allotted to the tribe of Benjamin (Josh 18:22) but is taken over by the more N tribe of Ephraim (Judg 1:22). Also, although Jeroboam I made Bethel into a N city, Abijah, king of Judah, captured it (2 Chr 13:19). Baasha, king of Israel, however, retook the city, but when Israel fell to the Assyrians, Bethel reverted to Judah (Ezra 2:28; Neh 7:32). Thus Bethel, a frontier town between two provinces, shifted back and forth in political ownership.

The strategic position of Bethel (along the route to Jerusalem coming from the N) figures in later history. During the Hasmonean revolt it was fortified by the Syrian general Bacchides (1 Macc 9:50), and was captured by Vespasian in 69 C.E. (*JW* 4.551). During the Byzantine period Bethel was a village in the territory of "Aelia Capitolina" (Jerusalem) (Eusebius *Onomast.* 192 etc.). It continues to be mentioned in the literature by the Pilgrim of Bordeaux (353 C.E.) and Theodosius (ca. 503 C.E.) and is shown on the Madaba Map (ca. 565 C.E.). Apparently the city was destroyed during the Arab conquest in the 7th century C.E. and remained abandoned until it was repopulated as an Islamic village in the mid-19th century.

Most scholars since the time of Edward Robinson identify Bethel with Tell Beitin (M.R. 172148). See BEITIN, TELL (M.R. 172148). However, Livingston (1989) has suggested that Bethel may actually be el-Bireh, a few km SW of Tell Beitin.

2. A village in Judah to which David sent spoils to his friends and to the elders (1 Sam 30:27). Almost certainly, then, it was a city in Judah and not the more important Bethel N of Jerusalem, and possibly it is the same as Bethul in Josh 19:4 and BETHUEL in 1 Chr 4:30 (and Chesil in Josh 15:30, although this is less likely). Its location is unknown, although the context suggests somewhere generally in the area around Ziklag and Hormah.pg 712}

BETHEL-SHAREZER (PLACE) [Heb *bêt›ēl śar›eṣer* (בֵּיתְאֵל שַׂרְאֶצֶר)]. See SHAREZER (PERSON).

BETHER (PLACE) [Gk *Baithēr* (Βαιθηρ)*, Thethēr* (Θεθηρ)]. A village in one of the districts into which the allotment of land for the tribe of Judah was divided (Josh 15:59a LXX). The list of 11 cities of which Bether is the 10th is found in LXX but not in MT; presumably it was omitted from the Hebrew text by the copyist's error called homoioteleuton (on the textual character of Josh 15:59a LXX, see *HGB* 392–93). The district lists are variously enumerated; (cf. Bright *IB* 2:630–33; Soggin *Joshua* OTL, 178; and Boling and Wright *Joshua* AB, 378, 391). Bether is identified with Khirbet el-Yahudi (M.R. 162126) near the modern Bittir, about 7 miles SW of Jerusalem. An archaeological survey showed almost continuous occupation of the site from Iron I through the early Roman period (Carroll 1923–24:89).

During the Second Jewish Revolt (132–135 C.E.), Bittar (as it was known [Aram *bîttēr;* on the name, see Neubauer 1868:130]) became Bar Kokhba's capital. See BAR KOKHBA (REVOLT). Some scholars have detected this place name in the name Baiterus found in the list at 1 Esdr 5:17. Eusebius (*Hist. Eccl.* 4.6) refers to the site as *Baithther.* The name is of uncertain derivation. The element *btr* in the name of the location *hārê bāter* (Cant 2:17:"rugged mountains" RSV, but note margin) has been traditionally treated as a contraction of *byt tr* (*Cant. Rab.* to 2:17), but there is no certainty that this name, whatever its derivation, elucidates the meaning of Bether.

BETHLEHEM (PLACE) [Heb *bêt-leḥem* (בֵּית־לֶחֶם)]. The name of two places mentioned in the Bible.

———

A. Bethlehem of Judah
1. Site
2. Name
3. Demography
4. Bethlehem in Israelite History
5. Bethlehem in Postbiblical Times
B. Bethlehem of Zebulun

———

A. Bethlehem of Judah

1. Site. Bethlehem of Judah is located 9 km S of Jerusalem and stands at an elevation of 790 m on the E ridge of the watershed. The site lies on the border of the well-watered and fertile region of Beit-Jalah (Giloh) and of the dry district of Boaz—and Shepherds—fields ending in the Judean Desert. The village does not possess any spring, but only cisterns (2 Sam 23:15), some of which are caves on the ridge walled and plastered in the manner common at the end of the Bronze Age.

The site seems to have been inhabited during the lower Pleistocene (*EAEHL* 1:198–99; Stockton 1967:129–48, with a survey of the neighboring sites). During the 3d millennium B.C.E. pottery was left in Beth-Sahur, not far from Bethlehem, (Hennessy 1966:19–40; Saller 1963:325). Excavations have shown that the Iron Age settlement was not at the top of the spur as was thought before, but on the slope around the church of the Nativity (Saller 1964:287; 1968:153–80; Bagatti 1968:181–237). This observation has been confirmed by the survey of S. Gutman and A. Berman in 1969 (Benoit 1975, with drawings and photos).

2. Name. Place names with *bît* "house, place" are numerous in the cuneiform lists (Groneberg 1980; Nashef *RG* 5; Parpola 1970; *RLA* II:33–54); in Egyptian sources (Simons 1937:204); and in the Ugaritic

archives (*PRU* 2:227–28; 3:265–68; 4:253–56; 5:165–67; 6:146; cf. Astour 1975:139), but Bît-Lahmu does not appear. Bethlehem may be mentioned in a 14th-century B.C.E. letter of Abdi-Hepa, king of Jerusalem (EA 290:16; Schroeder 1915:294–95). In this letter the place is called Bīt-NIN.URTA, and one wonders if the ideogram NIN.URTA should be read as Antum (i.e., Lahama; cf. CT 24:14–15; see also Honigmann 1938). Other readings have been proposed:Bit-Anat (= i.e., Anatot; Dhorme 1908); Bit-(t)ašmiš = Beth-Shemesh (Lipiński 1973; but see the note by Priestbatsch 1975); or, lastly, Beth-Horon (Kallai and Tadmor 1969), though this latter suggestion has been made more for geographic than for linguistic reasons. The name Lahamu is unknown in the W and is poorly documented in Mesopotamia; the name is related to the subterranean ocean. It is not impossible (though admittedly hypothetical) that before the place name was interpreted as the "house of bread" (Heb *leḥem*), it was the "house of Lahai", the god of a well in the Negeb (Gen 16:14; 24:62, with contraction and mimesis as in Ugaritic).

3. Demography. Bethlehem of Judah (Judg 17:7–9; 19:1, 2, 18; Ruth 1:1–2; 1 Sam 17:12) is called Ephrathah (Mic 5:1—Eng 5:2). This Ephrathah cannot be the Ephrathah of 1 Sam 10:2 (on the border of Ephraim and Benjamin) near Ramah (Jer 31:15, N of Jerusalem), which in a poetic text is set in parallel with Kiriath-Jearim (Ps 132:6; cf. Melamed 1961; Tsevat 1962; Vogt 1975, with reference to Eusebius; Briend 1983). In Gen 35:19 and 48:7 (both P), Bethlehem is related, not to Ephrathah, but to the "way to Ephrathah" or "coming to Ephrathah" (see also *T. Reu.* 3:13).

Such identifications are late (like the identification of Mamre with Hebron) and reveal that the postexilic author felt there was a problem with Mic 5:1. The meaning of Ephrathah is to be determined from 1 Sam 17:12. The father of David is said to be an *ʾeprātî*, i.e., a man of Ephraim (Judg 12:5; 1 Kgs 11:26), just as the two sons of Elimelech and Naomi born in Bethlehem (Ruth 1:2), before Boaz and Jesse. This evidence strongly suggests that at the end of the 2d millennium B.C.E., a clan of Ephraim (Mic 5:1 speaks of an *ʾelep;* Judg 6:15; 1 Sam 10:19; cf. Neu 1986) was settled in Bethlehem. The Chronicler's genealogies, which are artificial but always have some foundation, treat Ephrathah both as a spouse of Caleb (1 Chr 2:19) and as a woman who became Caleb's wife after the death of Hezron his father; she was "grandmother" of Tekoa (1 Chr 2:24), a village located in the Judean Desert (cf. Myers *Chronicles* AB). The Chronicler admits an extension of the clan as far as Debir near Hebron, where Caleb lived (Judg 1:11–12; Josh 15:13).

The name of the father of David, Jesse (*yišay; ʾiyšay* in 1 Chr 2:13) is not common among Israelites. It may be Aramaic (cf. *ʾšy* in the Daskyleion Inscription; Dupont-Sommer 1966:47) or simply W Semitic (cf. *yu-šaī* in an Egyptian list of slaves; Hayes 1962), and probably is an abbreviation of Abishai, another member of the clan (1 Sam 26:6).

That the clan of Ephraim moved from the N to the S of Jerusalem is indicated (1) by the travels of Samuel, son of the *ʾepratî* Elkanah (1 Sam 16:1–12; cf. 1:1–2), (2) by the story of the Levite and his patron Micah (Judg 17:7–9), and (3) by the narrative of the Levite's concubine from Bethlehem (Judges 19). Finally, the elders of Israel recognized David as their kinsman:"We are your bone and flesh" (2 Sam 5:1).

The genealogy of David, inserted at the end of the book of Ruth (4:18–22; Campbell *Ruth* AB), suggests other marital relations which prove that the Ephramite clan of Jesse did not include all the inhabitants of Bethlehem. Amminadab and Nahshon, ancestors of Boaz, are said to be "father and brother of the wife of the Levite Aaron" (Exod 6:23). Through Ram (Amram or Abiram?) they have Hezron as an ancestor. There is a problem with Hezron; he is related either to Reuben (Gen 46:8–9; Exod 6:14; Num 26:6; 1 Chr 5:3), or to Judah through Perez (Gen 46:12; Num 26:21; Ruth 4:18–19; 1 Chr 2:5). Such a double connection can be explained historically by transfer from E (Bohan on the W side of the Jordan is spoken of as the "son of Reuben"; cf. Josh 15:6; 18:17; de Vaux 1953:541) to W (Perez-uzzah and Baal-Perazim are toponyms between Kiriath-Jearim and Jerusalem). Similarly, the clan of Karmi was transferred from Reuben (Num 26:6) to Judah (Josh 7:1; 1 Chr 2:7). These historical transfers also have a sociological connotation, because Hezron is related to *ḥaṣer*, a Hebrew term that denotes a village with a typical enclosure for herds; one of the Kerioth-hezron (Josh 15:25; cf. 15:3) is the *ḥăṣar-ʾaddār* of Num 34:4. Numerous *ḥăṣērôt* are to be found in the S of Judah, but also beyond the Jordan (1 Chr 2:21–24,

with Machir in Gilead and Ephrathah). As suggested by Eissfeldt, the *bên hamišpĕtayim* of Reuben (Judg 5:16) are also related to enclosures for herds (Eissfeldt 1949; 1954).

There were also Arabs in Bethlehem, descendants of Ishmael. David had two sisters, Zeruiah, the mother of Joab (father unknown) and Abigal, the mother of Amasa (2 Sam 17:25; 1 Chr 2:7), whose father was Ithra (Heb *yitrāʾ*) the Ishmaelite; the latter bears a true Arabic name *(watar).* However, the most important connections are with Reuben.

When the tribe disappeared, having been conquered by Moab, David, who was banished from Saul's court, entrusted his father and mother to the king of Moab (1 Sam 22:3–4).

4. Bethlehem in Israelite History. Fighting against the Philistines and the Amalekites, Saul found in Bethlehem-Ephrathah support for his campaigns. He enrolled the sons of Jesse (1 Sam 17:13), along with Elhanan, the son of Dodo (2 Sam 23:24; son of Jaareoregim in 2 Sam 21:19). Afterwards Bethlehem was taken by the Philistines (2 Sam 23:14), remaining in their hands until the victories of David, when it became a dependency of Jerusalem, the new capital city. According to 2 Chr 11:6 Bethlehem was fortified by Rehoboam, but no city walls have been discovered in the excavations of the site. Nevertheless, walls that belong to the same period (Iron I–II) were unearthed in Beit-Jalah (Giloh; Mazar 1981). As Giloh is not mentioned as a fortified city in Chronicles, it may be that the two sites were identified. In the list of Judean towns found in Joshua 15 (established probably under the reign of Josiah), mention is made of Bethlehem only in the LXX and not in the MT. It seems that Bethlehem was very small at the time (Mic 5:1—Eng 5:2, "you … who are little to be among the clans of Judah"), and noted only as the origin of the dynasty.

In the 5th century B.C.E. Bethlehem was reoccupied by the returning exiles. The exact figure of returnees varies:188 men of Bethlehem and Netophah according to Neh 7:26, and 123 "sons of Bethlehem" (and 56 "men of Netophah") according to Ezra 2:21. Bethlehem of Judah was never a priestly town as was Bethlehem of Zebulun (on which see below). It is never mentioned in the Qumran literature, even among the places of the treasures listed in the Copper Scrolls. In the *Martyrdom of Isaiah* (2:7, 8, 12) Bethlehem functions as a stage for the prophet in his flight from Jerusalem to the wilderness, a story line that is possibly built on the pattern of the narrative of Jeremiah and his companions who stopped in Kimham "near Bethlehem" (Jer 41:16–17) during their flight to Egypt. In the martyrdom of Isaiah it is a false prophet who lives in Bethlehem. Elsewhere in the pseudepigraphical literature, Bethlehem was connected with the burial of Rachel (*Jubilees* 32:34), and Ephrathah is located in Bethlehem (*T. Reu.* 3:13).

In the Fourth gospel (John 7:42) Bethlehem was considered by some of those listening to Jesus to be the birthplace of the son of David, but these same people display no knowledge of Bethlehem as the birthplace of Jesus of Nazareth. Elsewhere in the NT Bethlehem is mentioned only in the two Infancy Narratives. Although they are quite different in their traditions and structures, both Matthew and Luke converge on this point. In Luke, Bethlehem is the place where Joseph goes for the census and where the shepherds go "to see the thing that happened" (Luke 2:4, 15). In Matthew 2, Bethlehem is mentioned five times. There Jesus is born (2:1), the Magi are sent there (2:5–7) in accordance with the oracle of Mic 5:1, and it is there that Herod has all the male children who are two years in age or less killed ("in Bethlehem and its boundaries" [*horiois*]) (2:15). Then Bethlehem disappears from the NT (Brown 1985:177–85, 412–23; Perrot 1983).

5. Bethlehem in Postbiblical Times. After 135 C.E. Bethlehem was occupied by a Roman garrison which exterminated the remnant of the Bar Kokhba army as indicated by Roman inscriptions near Rachel's tomb (*RB* 1901:107; 1962:82–83; Vetrali 1967), and perhaps in *Lam. Rab.* 1:15 if we read Bethlehem (instead of Bethel) of Judah (cf. 1:16). It is possible that such a military presence would have led to the establishment of an Adonis cult in the same way as the Roman military presence in Aelia led to an Asclepius/Serapis cult in the caves adjacent to the pool of Bethesda (Duprez 1970:64–85). The Asclepius cult is attested by Jerome (*Ep.* 56.3; cf. Paulinus of Nole to Sulpicius Severus 3, CSEL 29). Nevertheless, we must be cautious because such a notice is unique in the works of Jerome and the identification of Adonis with Asclepius is not frequent (*mediante* Eshmun). A more direct attestation of a

military cult to the Syrian Goddess is known (Birley 1978:1516). Since Jerome's notice is more concerned with the lamentations over Adonis than with Adonis himself, Welten (1983) thinks there could have been a popular confusion between the tears of the Syrian Goddess (Lucian *Syr.D.*, 6), the *Venus lugens*, and Rachel's mourning for her sons. In the postexilic period Rachel's tomb was venerated in Bethlehem-Ephrathah. If the god Lahmu was really a vegetation deity like Adonis, it is possible that worship of this kind was practiced in a Bethlehem cave; a revival which neither Jews nor Christians wished to remember may have occurred during the Roman occupation.

The Gospels do not speak of a Nativity in a cave; the oldest references are to be found in Justin (*dial.*, 78) and in the *Protoevangelium* of James (18), texts which speak of a Nativity "quite near to Bethlehem," "midway," but not in Bethlehem itself.

Above a cave in Bethlehem, Constantine built an octogon with a basilica and a court enclosed by four porticoes in the front. During the Samaritan revolt of 529 C.E. the building was destroyed. Justinian rebuilt it in its actual shape, which was preserved by the Persian invaders (612). In the crypts the traditional Nativity cave is connected with other caves where the monastic sojourn of Jerome and his community is commemorated (Vincent and Abel 1914; Avi-Yonah *EAEHL* 1:202–6; Heitz 1983:6–18; Murphy-O'Connor 1983:12–13).

B. Bethlehem of Zebulun

A village, located in the N, in the tribe of Zebulun (Josh 19:15), was also known as Bethlehem. It is obviously the place where Ibzan, a minor Judge, was buried (Judg 12:8–10, related to Zebulun in the following verses; cf. Boling *Judges* AB, 215). The village is known to have been the residence of a priestly family (Cesaraea Inscription, 5–6th century C.E.; cf. Avi-Yonah 1962); an Arab village on the Asher-Zebulun border retained the name *(Beit-Laḥm).*

BETHPHAGE (PLACE) [Gk *Bēthphagē* (Βηθφαγη)]. Bethphage was the name of a village on the road from Jerusalem to Jericho meaning literally in Aramaic, "house of the early figs." The village was the place where Christ sent his disciples to find the foal of an ass for his "triumphal entry" and was mentioned together with Bethany in this context in Matt 21:1; Mark 11:1; and Luke 19:29. Both the Mishnah and the Talmud suggest that the town was a suburb of Jerusalem, laying outside the city wall and apparently surrounded by its own wall.

Bethphage was located either beyond Bethany (M.R. 174131) according to Jerome (*Ep.*, 108), or, more likely, W of Bethany toward Jerusalem (M.R. 172131), approximately 1 km E of the summit of the Mount of Olives. The latter site was the location of Bethphage accepted by the medieval Crusaders. A stone with frescoes and inscriptions was found at the latter site, showing two disciples untying a donkey and a colt. The frescoes are preserved in the Franciscan chapel at this location. Archaeological evidence indicates that the site was occupied from the 2d century B.C.E. to the 8th century C.E. Of the many archaeological artifacts found at the occupation site, of particular interest is tomb 21 with its rolling stone, Greek and archaic Semitic inscriptions, and graffiti which include a sign depicting a cross.
SCOTT T. CARROLL

BETHUEL (PERSON) [Heb *bĕtû᾽ēl* (בְּתוּאֵל)]. Var. BETHUL. A son of Nahor by Milcah (Gen 22:20–22) and the father of Rebekah (24:15) and Laban (28:5). Bethuel played no significant role even in his daughter's betrothal, where her brother was prominent. Rebekah ran to her mother's house (Gen 24:28); Laban prepared the welcome (vv 29–32); then Laban granted consent to the servant to explain his mission (v 33); and gifts were presented to Rebekah, Laban, and her mother (v 53). In the actions of vv 55–60 her brother and mother were the players. Furthermore one notes that peculiar order of names in v 50, where the father's comes after his son's. Perhaps Bethuel had already died. Josephus (*Ant* 1.16.2 §248) does claim that Bethuel was dead and that Laban, with the mother, directed the whole household and was guardian of Rebekah's maidenhood. Such an explanation would require that "and Bethuel" was added by someone who did not realize the narrative assumed Bethuel had died. But it is doubtful that anyone would have inserted the name in the wrong order. Another possible solution is that Bethuel was incapacitated by senility or invalidism or the like. This could account for the reversed order of names in v 50. The most probable interpretation may be that the story assumes a matrilineal family. Jay (1988:62) points out how in a matrilineal system Laban, as Rebekah's brother, would have authority concerning her marriage; and quite likely only he, his sister, and her mother would receive gifts or be in a position to

decide the date of Rebekah's departure. Somewhat more concretely, there are Nuzi texts in which the marriage contract was arranged by a brother for his sister (Pfeiffer and Speiser 1936:38–39, 104–6).

The meaning of the name Bethuel is uncertain. It might mean "dweller in God" —unless it equals *mětû‹ēl* (cf. Akk *Muti-ilu*), "man of God." It is similar to Batti-ilu in the Tell el-Amarna letters (EA 650).

EDWIN C. HOSTETTER

BETHUEL (PLACE) [Heb *bětû‹ēl* (בְּתוּאֵל)]. Var. BETHUL; BETHEL. A town in which the sons of Simeon dwelt prior to the reign of David (1 Chr 4:30). It is mentioned in a list along with Hormah and Ziklag. In the Josh 19 list of Simeonite towns, the name is spelled Bethul (v 4; Heb *bětûl*), and in an apparent parallel in Josh 15:30 it is replaced with Chesil. In the story of David's exploits in the area around Ziklag and Hormah, a place named BETHEL is mentioned. Given all these variants, Albright (1924:150) has suggested that Bethuel is the preferred form. The precise location of this town is unknown.

GARY A. HERION

BETHULIA (PLACE) [Gk *Baityloua* (Βαιτυλουα)]. City where the events of the book of Judith are located (Jdt 4:6). The author of Judith gives many indications of the location of Bethulia: it is N of Jerusalem (11:19), near Betomasthaim (4:6), over against Esdraelon (4:6), near Dothan (4:6), in the hill country of Samaria (6:11). It is described as having a spring below the city (7:12–13), and it is positioned to hold the narrow mountain pass giving access to Jerusalem from the N hill country (10:10–11). However, the name Bethulia is unknown to modern readers, and its exact location, despite all the descriptive material, is uncertain. Enslin (1972) points out that we do not even know whether the city was actually known to the author. There are 9 Greek variant spellings for the name out of 21 mss collated by the Larger Cambridge Septuagint, indicating confusion in the textual tradition. Many identifications have been proposed for the site:Sānūr, 5 miles south of Dothan; Meseliah, midway between Geba and Jenin; or Kubatje (so Dussaud 1926 and Steuernagel 1943). The name itself has given rise to speculation over the town's location. Is it meant to be a thinly disguised pseudonym for Bethel (Heb *byt‹l/wh,* "house of God")? Priestbatsch (1974) points out in this regard that in the LXX Ezras 2:28 the names Bethel and Ai are corrupted into one word, *baitoliō.* Or is the name itself meaningful, as *byt‹lh,* "house of ascents"? Torrey (1899) follows this hypothesis, saying that according to the book of Judith, Bethulia lay at the head of the most important pass in Samaria and was a large and important city; those facts and his understanding of the name lead him to identify Bethulia with Shechem. None of these locations is definitive. It is possible that the author of Judith modeled his city on one of the major cities in the N hill country (Shechem being the most likely candidate), but that does not lead to an absolute identification. It seems most helpful to follow Craven (1983) when she says, "It seems best to leave the details of the Book of Judith alone as the products of a fertile, creative imagination."

SIDNIE ANN WHITE

BETOMASTHAIM (PLACE) [Gk *Baitomasthaim* (Βαιτομασθαιμ)]. Var. BETOMESTHAIM. Site mentioned in the book of Judith, the exact location of which is unknown (Jdt 4:6; 15:4). The first occurrence of the name in 4:6 gives the variant spelling *baitomesthaim;* however, there seems to be no

reason to suppose the author was referring to two different cities. Betomasthaim is set near Dothan, north of Samaria. C. C. Torrey argued that Betomasthaim was a contemptuous pseudonym for Samaria: *byt mśṭmh*, 'house of shame, 'or *byt mśṭm,* 'house of the devil.' This is not at all certain. It is entirely possible that the city is totally fictitious; this would be in keeping with the genre of the book of Judith.

BETONIM (PLACE) [Heb *bĕṭōnîm* (בְּטֹנִים)]. A border point E of the Jordan river for the land of Jazer, which Moses gave to the families of Gad (Josh 13:26). The location is noted by Eusebius as *Botnia* but has never been verified as *Khirbet Batneh,* 6 miles SW of es-Salt. The location is described briefly by de Vaux (1938:404) and affirmed by Noth (1938:26).

Noth suggests that the three place names of Heshbon to Ramath-Mizpeh to Betonim constitute a N-S boundary line between Reuben and Gad. However, Mittmann (1970) dismisses Noth's view as very speculative. In a complex literary study Wüst (1975) concludes that Josh 13:26 is part of a two-step addition to the report, which is intended to support the larger territorial claims of Gad.

PAUL NIMRAH FRANKLYN

BEYOND THE JORDAN (PLACE). From the E this would be W of the Jordan, i.e., Cisjordan; from the W, it would be E of the river, i.e., Transjordan. The Talmud refers to Transjordan.

The "Jordan" is usually understood to be the Jordan river but it may be an old word for "river" with the context suggesting which river is involved and thus which area (Aharoni *LBHG* 111; Smick 1973:26–27). Among the nine references to Cisjordan, Deut 3:20, 25; 11:30 are Moses speaking about the W.

Gen 50:10–11, the burial of Jacob at Atad or Abel-mizraim ("meadow of Egypt"), has been interpreted both ways. For some unknown reason, Joseph carried the body from Egypt through Transjordan and came from the E, so "beyond the Jordan" would designate Cisjordan, with the burial at Hebron (as the usual understanding has it). Perhaps the route was a typology for the Exodus (Ottosson 1969:37 n. 2). But the reference to burial "beyond the Jordan" has been interpreted as a burial place in Transjordan with Joseph's funeral group making the more obvious and logical trip straight from Egypt to the Jordan. However, the latter could also be a straight, logical trip from Egypt to Hebron if "Jordan" here is the old word for "river," so Joseph's funeral party went "beyond the river," which from Egypt could be the River of Egypt, Wâdī el-ʿArîsh.

Smick (1973:30–31, 105 n. 72, 111) has pointed out that where Heb *ʿēber* "beyond" or "opposite" refers to the Jordan, the writer specifies the direction. Josh 5:1 refers to the W, while Num 34:15 refers to the E. The word itself also means "a side," hence at the side of, beside, adjacent. Exod 32:15 refers to two sides *(ʿebrêhem)* of the tablets of the law. Smick takes NT *peran* as in John 1:28 as carrying the same range of meaning. Matt 4:15 quotes Isa 8:23—Eng 9:1–2, which seems to put Galilee in Transjordan, if Heb *ʿēber* (and Gk *peran*) are translated "across." But there is no problem if the translation is "beside" or "adjacent to"; Galilee is beside the Jordan, not across (E of) it. Similarly, Matt 19:1 refers to Judea beyond the Jordan. Judea did not extend across the Jordan into Transjordan though rulers like Herod the Great controlled the territory. The reference is usually thought to be Perea, across the Jordan. But "Judea beside the Jordan" makes good sense in this context.

There has been some debate over John 1:28 and the location of Bethany (location unknown) beyond the Jordan. Some manuscripts read Bethabara, SE of Jericho. Finegan (1969:8–11) suggests that if Jerusalem and Judea went out to John, the place would have been on a main road, at one of the fords of the Jordan

river. He notes the Roranije ford, today's Allenby bridge, on the road from Jericho to Amman, 5 miles from Jericho and 9 from the Dead Sea. There is another ford, 4.5 miles S at the end of the Wâdī el-Charrar and near Mt. St. Elijah (Jebel Mar Elyas) on the E bank and near today's Monastery of St. John (Deir Mar Juhanna) on the W bank. Another mile S is the traditional site of the el-Hajlah ford at the end of the Wâdī Qelt. A half-mile further S is the el-Henu ford. While Finegan notes abundant springs by Mount St. Elijah was a possible site for John's baptisms, the text does not require a location in Transjordan. It could simply mean "beside the Jordan" or "on the banks of the Jordan." See also BETHANY (PLACE).

HENRY O. THOMPSON

BEYOND THE RIVER (PLACE) [Heb *ʿēber hannāhār* (עֵבֶר הַנָּהָר)]. "Beyond the river" (Aramaic *ʿăbar nahărâ;* Gk *peran tou potamou*) can refer to (1) lands E of the Euphrates, (2) the Persian provinces W of the Euphrates including Coele-Syria, and (3) possibly Transjordan. 2 Sam 10:16; 1 Kgs 14:15; and 1 Chr 19:16 use "beyond the River" (RSV, "beyond the Euphrates") from the perspective of those W of the Euphrates to refer to lands on the E side of that river. McCarter (*2 Samuel* AB, 273) surveyed minority opinions to the contrary. The Persians, from their perspective, saw the lands to the W of the Euphrates as "beyond the river" and so named the province which encompassed all the lands from the Euphrates W to the Mediterranean and as far N as the Taurus mountains in Turkey (Shalit 1954:64–73). Ezra 4:10–20; 5:3, 6; 6:6, 8, 13; 7:21, 25; 8:36; and Neh 2:7, 9; 3:7 follow the Persian use of the term. Josh 24:14–15 refers to "beyond the river" where the patriarchs served Yahweh. This is an obvious reference to Haran in N Mesopotamia (Gen 11:31). Shalit has shown this area to have been included in the province "beyond the river" or Coele-Syria. 1 Macc 7:8 notes that Bacchides was governor of the province "Beyond the River." Shalit (1954:73–77) demonstrated that under the Seleucids Coele-Syria (or "beyond the river") was limited to the area S of the Orontes to Egypt and from the Mediterranean to the border of the Syrian-Arabian desert. Josephus (*Ant* 12.10.2) misunderstood this and defined "beyond the river" as Mesopotamia. In 1 Macc 11:60, Jonathan traverses "beyond the river." Goldstein (*1 Maccabees* AB, 440) noted that the Greek verb "traverse" *(diaporeuesthai)* takes a direct object ("the province beyond the river") and not a prepositional phrase (implying that the Jordan was crossed). Goldstein further observed that although the absence of the definite article before "beyond the river" appears to argue against this rendering, it should be noted that the LXX of 1 Kgs and of Ezra also lacks the definite article where the meaning is clearly the province W of the Euphrates. Josephus (*Ant* 13.5.5) correctly understands "beyond the river" of 1 Macc 11:60, for he renders it "Phoenicia" (part of Coele-Syria or "beyond the river").

MICHAEL E. HARDWICK

BEZAE. See CODEX (BEZAE).

BEZAI (PERSON) [Heb *bēṣāy* (בֵּצָי)]. Head of a family of Babylonian exiles who are listed as returnees under the leadership of Zerubbabel and others (Ezra 2:17 = Neh 7:23 = 1 Esdr 5:16). The leader of the clan affixed the family name to the covenant document of Nehemiah in Neh 10:19—Eng 10:18. For further discussion of exilic name lists and bibliography see AKKUB (PERSON) and ATER (PERSON). The name is likely a shortened form of *bĕṣal-ʾēl,* "In the shadow of El" (Noth *IPN* 152; *TPNAH* 157).

CHANEY R. BERGDALL

BEZALEL (PERSON) [Heb *bĕṣal‹ēl* (בְּצַלְאֵל)]. The name of two individuals in the Hebrew Bible. It has been suggested that the name Bezalel may mean "in the shadow (protection) of El (God)," consisting of the preposition *b* prefixed to the construct *ṣl* and *›l* (*IPN* 152).

1. The craftsperson responsible for constructing the tent of meeting, the ark of testimony, and the accompanying furnishings (Exod 31:1–11). According to the Chronicler, Bezalel was a descendant of Caleb and a member of the tribe of Judah (1 Chr 2:20). The priestly tradition claims that Bezalel was granted a divine spirit *(rûaḥ ›ĕlōhîm)* which further endowed him with skill *(ḥokmâ),* a faculty of understanding *(tĕbûnâ),* knowledge *(da‹at),* and workmanship *(mĕlā›kâ)* by which he was able to execute the task (Exod 31:2–3; 35:30–31). Assisting him were Oholiab and "every skilled individual" (Exod 31:6, 36:1–2). The Chronicler states that Solomon brought his bronze altar to the newly constructed temple (2 Chr 1:5), indicating Bezalel's firm position in the tradition. However, Noth suggests that the priests may have added his name to the tradition in order to provide the ancestor of a postexilic family with a prominent place in Israel's sacred history (*HPT* 187–88).

2. A descendant of Pahathmoab and one of the returned exiles who were required to divorce their foreign wives (Ezra 10:30). He might appear in the parallel list in 1 Esdr 9:31 as Sesthel. Bezalel was a member of a family from which groups of exiles returned with Zerubbabel (Ezra 2:6; Neh 7:11) and later with Ezra (Ezra 8:4). For further discussion see BEDEIAH (PERSON).

JEFFREY A. FAGER

BEZEK (PLACE) [Heb *bezeq* (בֶּזֶק)]. The site where the tribes of Judah and Simeon defeated Adoni-bezek (Judg 1:4–5). Bezek is also mentioned in 1 Sam 11:8–11 as the site where Saul took a census of the people during his campaign to save the residents of Jabesh-gilead from Nahash the Ammonite.

To identify the location of Bezek, one must examine the geographical characteristics given in these sources. While no such specifications appear in Judges 1, the second source indicates that one night's march was sufficient for Saul and his army to reach Jabesh from Bezek:Saul promised the residents of Jabesh:"Tomorrow, in the heat of the day, you will have deliverance" (1 Sam 11:9). We may infer from this that the distance between Bezek and Jabesh did not exceed 20–30 km. The site of the census also had to be on one of the convenient roadways which led from the central mountains to the Jordan Valley, since Saul's starting point was Gibeah (11:4). The name of Bezek, according to these criteria, has undoubtedly been preserved at Khirbet Ibzik (M.R. 187197), a large site lying upon the ancient road leading from Shechem and the E valleys of the Manasseh hill country to the Jordan Valley. The prefix "I" in the name "Ibzik" does not deter the identification of the name, since it is typical of later Arabic prefixes (e.g., Chesulloth=Iksal; Bene-barak=Ibn Ibrak). The antiquity of the name is known at least as far back as the Byzantine period:the *Onomasticon* of Eusebius testifies on two villages named Bezek lying on the Neapolis–Scythopolis road, 17 miles from the former.

Khirbet Ibzik is located on the SW slope of Ras es-Salmeh, a high range which encloses the Zebabdeh Valley at the E, and is part of the Far‹ah Anticline. This natural passageway, leading from the center of the Manasseh hill country to the Jordan Valley, lies upon the saddle of Ras es-Salmeh, making it the most convenient route for crossing the Jordan and arriving at Jabesh-gilead. (Jabesh-gilead his been identified with the large tell of El Maklub [M.R. 214201] E of the Jordan and approximately 30 km from Khirbet Ibzik, and also with Tel Abu Kh‹araz [M.R. 206200] only 16 km from Khirbet Ibziq. Neither site is more than one night's march from the suggested identification of Bezek.)

At least two Roman roads, leading from Neapolis (Shechem) to Scythopolis (Beth Shean), were identified at the passageway of Khirbet Ibzik. The two large sites found on the route were settled mainly during the Roman-Byzantine period. Apparently, Eusebius was referring to these sites, and not to Khirbet Jabrish, located 4 km to the E and not related to the Bezek passageway. In a careful archaeological survey, Zertal found that settlement at Khirbet Ibzik began during the late Iron Age (7th–6th centuries B.C.), and not earlier. Therefore, the double site of Khirbet Ibzik cannot be associated with the place where Saul gathered the people of Israel, nor can it be connected with the ancient tradition of the

campaign of Judah and Simeon. According to the principle of names which wandered from site to site in the vicinity, apparently the original site of Bezek should be located somewhere nearby.

During the course of Zertal's survey of the Manasseh hill country, the small tell of Khirbet Salhab (M.R. 185195) was inspected and found to be suitable as the location of ancient Bezek. It lies in the wide Zebabdeh Valley, approx. 2 km W of the narrow Bezek passageway, and near the route of the Roman road. This place is suitable for gathering the people and taking a military census, unlike Kh. Ibzik, which lies in a narrow pass. During the survey of Kh. Salhab, sherds were found from as early as the beginnings of the Iron I period (13th century B.C.), and the site was settled continuously throughout the entire Iron Age. The later site of Kh. Ibzik was founded during the late Iron Age, and the original name was transferred over to it. Possible reference to Salhab is preserved in the Rehob inscription (5th–6th century A.D.), where the name "Palga deShalaf" appears, together with a series of names in the hill country of Manasseh. This source confirms that "Bezek" at that time was in Kh. Ibzik, while the name "Salhab" was already given to this (early Iron Age) site. The reason for this change is unknown; however, it is clear that the name Bezek had already passed to its present location during the Iron Age and was preserved there ever since.

The site of Salhab also seems to suit the ancient traditions preserved in the book of Judges. This tradition apparently preserves a period during which the nuclei of the tribes of Judah and Simeon wandered within the territory of Manasseh. Judah is mentioned as connected to Manasseh by genealogical ties (2 Chr 2:21–22), while the existence of Simeonites in Manasseh is well attested until the end of the existence of the kingdom of Israel and afterward (2 Chr 15:9; 34:5–6). Further evidence of this phenomenon is found in the book of Judith, dating to the Persian period (8:1).

The historical background of the Bezek battle against the Canaanites is not clear. It is possible that clans of Judah and Simeon moved up from the Jordan Valley to be met at Bezek by the Canaanites, and from there they continued S as a part of an overall movement of Israelite clans from the N mountains to Jerusalem and the Judahite territory.

ADAM ZERTAL

BEZER (PERSON) [Heb *beṣer* (בֶּצֶר)]. A son of Zophah, from the tribe of Asher (1 Chr 7:37). The name may refer to "gold" (*IPN*, 223). Although it occurs as a personal name, it likely refers to BEZER (PLACE).

BEZER (PLACE) [Heb *beṣer* (בֶּצֶר)]. A city of refuge in Transjordan, located "in the wilderness on the tableland for the Reubenites" (Deut 4:43; cf. Josh 20:8). Bezer was one of three cities of refuge established by Moses to the east of the Jordan; the other two places of asylum were Ramoth in Gilead and Golan in Bashan. Bezer was later set apart as a levitical city and assigned to the Merarites (Josh 21:36; 1 Chr 6:63, 78).

Although it pays a relatively minor role in the OT, the Mesha Inscription lists Bezer among the Israelite towns that were taken in Mesha's successful effort to reclaim the Moabite tableland. In fact, line 27 of this text seems to emphasize the severity of the destruction Mesha brought upon Bezer and another town: "I rebuilt Beth-bamoth, for it had been destroyed; and I rebuilt Bezer, for it was in ruins …" (*TSSI* 1:77). It is possible that these two sites were the scenes of heavy fighting because, like Nebo (line 14), they were in northern Moab. At any rate, Mesha rebuilt Bezer in order to consolidate his victory over Israel.

Although its exact location is unknown, Bezer is often identified with Umm el-ʿAmad (M.R. 235132), which is located ca. eight miles northeast of Medeba. Bezer is perhaps the same town as Bosor (1 Macc 5:36; cf. LXX, *Bosor*), and Moabite Bozrah (Jer 48:24), but it should not be confused with the important Edomite city named Bozrah (modern Buseirah) or still another Bezer, a town in Bashan that is named in Egyptian texts.

GERALD L. MATTINGLY

BIBLE, BISHOPS'. Early in Elizabeth's reign the preparation of the Bishops' Bible was suggested to William Cecil, secretary of state to Elizabeth, in letters of Richard Cox, bishop of Ely, January 19, 1561, and May 3, 1566, in which Cox proposed that one uniform translation be used through the realm. Matthew Parker, Archbishop of Canterbury, then casually stated in a letter to Cecil (March 9, 1565) that a translation was to be done.

Parker seems to have assigned various portions for revision over a period of time, with so many of the revisers either being or later becoming bishops that the effort is known as the Bishops' Bible. Letters collected in the *Parker Correspondence* reveal the progress, and on November 26, 1566, Parker informed Cecil that the work was under way and invited him to review an epistle. It is assumed that Cecil courteously declined.

Parker distributed portions of the Great Bible upon which notes were to be made to the participants, most of whom had been exiles in Mary's reign. It is not likely that the revisers met together. They were instructed to vary from the English translation commonly used in the churches only when Hebrew and Greek demanded it. They were to follow Pagninus and Münster in sections and divisions. No bitter or polemical notes were to be included. Genealogies and unedifying matter were to be marked so that the reader would skip them in public reading. Offensive words in the old translation were to be replaced, and the printer was to use his heaviest paper for the NT since it would have more use.

The initials of the revisers are printed with the books for which they are responsible; unfortunately, there are two lists of names which do not completely agree. Edmund Guest is remembered for having suggested to Parker one of the most asinine procedures for rendering the Psalms ever suggested. He rendered a psalm in the OT as if it was in the NT to avoid offense of "divers translations." It is thought, however, that finally either Thomas Bacon or Thomas Bickley did the psalms. More sensible is the wish expressed by Cox that the revision should use words with which the English were acquainted and should avoid "inkhorn terms." Parker, in addition to some of the revision, did the editorial work, and he explained in the preface to the OT that old copies of Bibles were wearing out and that many churches were lacking Bibles. In his letter to the queen he remarked, without specifically naming it, that the notes of the Geneva Bible were objectionable.

By September 22, 1568, Parker could inform Cecil that the work was completed and that he hoped to be able to make a presentation to Queen Elizabeth; his health did not permit him to realize his wish, however, and on October 5 he again wrote Cecil explaining procedures followed, requesting that Cecil get protection from infringers for Richard Jugge, the printer, and get a license from the queen for use of the Bible in the churches. It seems the license was never granted.

Artistically, the first edition of the Bishops' Bible was the most ornate English Bible yet to appear. Portraits of Queen Elizabeth, William Cecil, and Cecil Burleigh (later Lord Burleigh) were placed in flattering locations. Elaborate woodcuts made up page borders for the five sections of the Bible. Parker's coat of arms was included with his preface, and that of Cranmer for his prologue. The Gospel of Matthew begins with a large T decorated with a scene of Neptune taming the sea horses. At the beginning of the other gospels, Mark is accompanied by the lion, Luke by the ox, and John by the eagle. Illustrations within the text are enclosed in woodcut borders, and the pictures are frequently signed, with the whole making up 143 pictures. The art was not constant through the successive editions. The initial letter G at the Epistle to the Hebrews was decorated with the scene of Leda and the swan, which gave to the 1572 edition the name "The Leda Bible."

The Bishops' substituted "charity" where Tyndale had used "love," had a peculiar rendering not unique to it in Eccl 11:1:"Lay thy bread on wet faces …," and had the misprint at Ps 37:29:"The righteous [for unrighteous] shall be punished." The most famous marginal note is to Ps 45:9:"Orphir is thought to be the Ilande in the west coast, of late founde by Christopher Columbo, from whence at this day is brought most fine golde."

While using verses as the Geneva did, the Bishops', until 1579, continued to use the older section system of A, B, and C down the margin. The second edition, 1569, is quarto and revealed a number of

changes in the OT and some in the NT. A further revision of the NT was done in 1572, and this text appears in all later printings. This third edition in 1572 had both the Bishops' and the Great Bible Psalms in parallel columns and after 1573 all editions but one carry only the Great Bible Psalms.

On April 3, 1571, the Convocation of Canterbury ordered that the Bible of the largest volume as lately published in London be put in the halls of great houses and, as far as possible, in churches. The Great Bible appeared in its last edition in 1569. The 1574 folio edition of the Bishops' carried the words "set foorth by authorities," and by 1589 Whitgift circulated articles stating that the Bible now authorized by the bishops was to be used in the churches. Royal authorization seems never to have come; but parish accounts record purchases of Bibles as well as fines paid for lacking a proper Bible.

Shakespeare in his earlier plays used the Bishops' Bible. There is probability that some early explorers who were loyal churchmen used it in America. There were quarto editions as well as portable New Testaments printed. Alexander Whitaker of Jamestown, who regularly used the Geneva Bible, used a Bishops' phrase in a letter of June 18, 1614. Captain Samuel Argall in 1610 showed the Indians of Patawomek River a picture of creation from a Bible which likely was a Bishops'. However, the days of the Bishops' Bible had passed before the period of colonization, and it was not printed in America until 1962.

There were many critics of the Bishops' Bible. The ninth edition (1577) is quarto, was the last printed by Richard Jugge, and was criticized by Gregory Martin in the Rheims (1582) marginal notes and in the exchange with Richard Fulke in 1589. The most vocal critic was Hugh Broughton, who hoped in vain to be appointed to do a revision. He faulted many renderings, and of the table preceding the NT said, "The cockles of the sea-shore and the leaves of the forest, and the granes of the Popy may well be numbered as the grosse errours of this Table, disgracing the ground of our one hope."

The Bishops' Bible went through twenty editions in its forty-two years, the last edition being in 1602. The NT was again printed in 1617 and 1633. The instructions to the King James revisers were that they were to follow the Bishops' Bible where it was true to the original. Charles Butterworth (1941:231) estimated that the King James Bible owes four percent of its wording to the Bishops'.

The text of the Bishops' NT was included in Bagster's *English Hexapla* in 1841 (Herbert 1968, no. 1840) and in Luther A. Weigle's *The New Testament Octapla* in 1962. The text of the Psalms was printed in the *Hexaplar Psalter* of 1911 (no. 2173) and the text of Genesis in Weigle's *Genesis Octapla* of 1965.

JACK P. LEWIS

BIBLE, EUPHEMISM AND DYSPHEMISM IN THE. Reticence with regard to certain subjects—chiefly sexual and excretory functions, death, and matters considered dangerous, numinous, or holy—is notable in varying degrees in many cultures, languages, and literatures; it is also evident in the Bible.

———A. Introduction
B. Treatment of Sexual Subject Matter
    1. Genitalia
    2. Sexual Intercourse, Nudity, and Sexual Innuendo
    3. Homosexuality
C. Treatment of Excretory Subject Matter
D. Evasive References to Death
E. Treatment of Sacred Subject Matter
    1. Avoiding Affront to God
    2. Disparaging the Foreign
F. More Recent Expurgations of the Bible

A. Introduction

Measures to reduce offensive language in the Hebrew Bible were applied long before modern movements to sanitize or expurgate literature, both secular and sacred. Rabbinic sages were concerned about "clean language" as well as other kinds of purity, and this had its impact on academic discourse and also on the sacred text and its subsequent translation into other languages. "One should not open his mouth to Satan" or "let an ugly word escape his lips" (*Berakot* 19a; *Pesahim* 3a). Jesus Ben Sira (Sir 23:12) opined that some words merit death and should never be heard among Jacob's heirs, possibly a reference to blasphemy. Ben Sira also considered lewd talk sinful (Sir 23:13):cursing one's birth (as Job and Jeremiah did) dishonored one's father and mother (Sir 23:14), while abusive language was a bad habit and a sign of immaturity (Sir 23:15). Yet Ben Sira seems to have forgotten his own counsel when paying his respects to the wayward woman on whom he lays such epithets as "scorpion" and "dog" (Sir 26:7, 25).

There are various ways of rectifying language deemed improper, apart from simply expunging the offending element. *Euphemism,* the use of mild, delicate, indirect, or negative terms (as "not clean" for "dirty") to hint at an unpleasant matter rather than name it plainly, has been a factor in debasing language by excess refinement. The rabbis early noted and listed some biblical euphemisms and aptly characterized the phenomenon with the locution *kinnāh ha-katûb,* "Scripture has substituted/nicknamed," i.e., euphemized. The opposite tactic, *cacophemism* or *dysphemism,* the use of grossly disparaging terms rather than normal or neutral designations (esp. with reference to enemies or despised activities), is also common in the Bible and elsewhere. Related to euphemism and dysphemism is *antiphrasis,* saying the opposite of what is meant, as when in Akkadian the netherworld was called "clean place" *(ašru ellu),* or when Job's wife urged him to "bless" (i.e., curse) God and die. Another devious rhetorical device is *periphrasis* or *circumlocution,* deliberate evasiveness in speech or writing, i.e., talking around the topic rather than addressing it directly.

Jewish tradition concedes that there are instances where the text of the Hebrew Bible has been altered (see SCRIBAL EMENDATIONS). Such a drastic measure was applied as a last resort to eliminate blasphemy. More common is indirect alteration of the text by vocalizing what is written *(kethib)* as if it were something different and giving the alternative reading *(qere)* in the margin. (The holy name YaHWeH was ineffable and the vowels supplied with the consonants were those of the surrogate *ʾăDoNaY,* "my Lord[s]." Christians unwittingly combined the vowels of the surrogate with the sacrosanct consonants to produce the sonorous sacrilege "JeHoVaH.") Obscene words were also not to be pronounced, and the consonants of the unmentionable term were provided with the vowels of the polite euphemism or circumlocution and the surrogate consonants were supplied in the margin. For example, in Isa 36:12=2 Kgs 18:27 the consonants of the plain words for solid and liquid excreta are written but vocalized with the vowels of the polite substitute terms. Since the plain Hebrew word for "piss" is a terse triliteral monosyllable and the polite substitute meaning "water of (the) feet" is somewhat longer, the obscene consonants had to be spaced to make room for the extra vowels of the euphemism, while the consonants of the polite term were supplied in the margin.

B. Treatment of Sexual Subject Matter

1. Genitalia. Sexual terms are the most common objects of evasive language. The use of "hand" *(yād)* for "penis" is attested already in pre-Israelite Northwest Semitic in a mythological poem from Ugarit called "The Birth of the Beautiful Gods" in which the "hand" of the amative sire of the godlings is said to be as long as the sea. In Isa 57:8 it is apparent from the context that "hand watching" refers to phalloscopy (despite RSV's abashed assertion that "the meaning of the Hebrew is uncertain"). The lover's "hand" in Song of Songs 5:4 thrust into or out of the "hole" (some prepositions in Hebrew and Ugaritic may mean both "to" and "from") is suggestive of penile intromission, despite the context evoking the classical motif of the locked-out lover (Pope *Song of Songs* AB, 514–19). Among the sectarian community at Khirbet Qumran, a member was mulcted/fined for exposing his "hand" (1QS 7:13; see Delcor 1967).

"Feet" *(raglayim)* is also used for genitals of either sex, as in the aforementioned circumlocution "feet water" for urine. In Isa 7:20, "hair of feet" refers to pubic hair. Deut 28:57 speaks of the (formerly) pampered woman in famine eating the afterbirth that comes out from between her "feet." Jerusalem, personified as a wanton nymphomaniac (Ezek 16:25), is charged with spreading her "feet" to every passerby. In Isa 6:2 the six wings of the seraphim come in three pairs, one to cover the face (for reverence), one to cover the "feet" (for modesty), and the third pair for flying. Uriah the Hittite, called home on furlough by King David and urged to go home and "wash his feet," protested that while his comrades were still in battle he would not go home to eat and drink and "lie with his wife" (2 Sam 11:8). One who is quick with his "feet" sins (Prov 19:2). The term "soul" *(nepeš)* in this same verse also has sexual meaning, as it has in at least one clear instance in Ugaritic when the impotent hero Danel sought divine help and had his "soul" *(npš)* restored and then went home and sired a son. In Sufi philosophy "soul" *(nafs)* is used of carnal concupiscence which, like a black watchdog, is ever alert to assail a man and make him sin. The proverb (19:2) thus means:"Without knowledge 'soul'*(libido)* is not good. One fast with his 'feet'sins." King Asa, at the end of his long reign, got sick in his "feet" (1 Chr 16:12); whether the ailment was in the pedal extremities or in the urogenital tract is unclear. When the Lord accosted Moses and sought to kill him (Exod 4:25), Zipporah circumcised her son and touched Moses'"feet" with the foreskin. Just where the "blood (y) husband" was dabbed with the son's prepuce we can only surmise, but the best guess seems the area where foreskins are located.

In postbiblical Hebrew, "heels" sometimes referred to the posterior extremities, or arse, as is patently the case in Jer 13:22 where Jerusalem is taunted:"For your great iniquity, your skirts were lifted up and your 'heels'violated." RSV effectively obscured the sense by not mentioning the "heels."

The word for "testicles" *(ʿešek)* is used only once in the Bible (Lev 21:20) where damage to them is listed among the defects which disqualify a man for priesthood. The Ugaritic cognate *(ʿušk)* is used in a torrid love scene in which Baal and his sister Virgin Anat wax warm and begin by grasping each other's genitals. (The action continues and Anat becomes pregnant and gives birth, but still retains her title "Virgin.") In Deut 23:2—Eng 23:1, among conditions that render one unfit to "enter the congregation of the Lord," two words *(pĕṣûaʿ-dakāʾ)* are used for injury to the (paired) organ(s) which are unmentioned but understood. Loss of the adjacent appendage called "spout" *(šopkâ)* also disqualifies a man for entry into the Lord's congregation. Both testicles and "spout" are doubtless included in the term *mĕbûšîm* (pudenda, or private parts) in Deut 25:11, which stipulates that a woman who intervenes in a fight (to save her husband from injury) and grabs his assailant's privates will have her hand severed.

Both male and female genitalia are called "flesh" or "meat" *(baśār).* The oozing from a man's "meat" (Lev 15:2) may refer to *gonorrhea benigna.* Bloody discharge from a woman's "meat" is normally periodic (Lev 15:19ff.). Israel's Egyptian paramours are characterized as "large of meat" (Ezek 16:26; which RSV renders as "lustful"). The Egyptians' "meat" is compared to that of asses, and their *zirmâ* (ejaculate?) with that of horses (Ezek 23:20). The term *zirmâ* (which RSV renders "issue") may be a deliberate garbling of the word *zĕmôrāh,* "shoot, twig, or branch," which in Ezek 8:17 figures in an obscene act in the temple (the text has already been emended by the scribes; cf. Greenberg *Ezekiel 1–20* AB, 172). It is probable that in Ezek 23:20 the prominent genitalia of Israel's lovers ("meat" and "branch") were originally compared to those of both asses and horses.

An egregious expression for a human male, *maštîn bĕ-qîr,* "pisser on a wall" (1 Sam 25:22, 34; 1 Kings 14:10; 16:11; 2 Kings 9:8), was left unaltered by the scribes and was translated quite precisely by Martin Luther and King James' scholars, but is usually explained rather than translated in contemporary versions.

Tools or weapons naturally become sexual metaphors, especially such implements as rod, staff, bow, arrow, and quiver (see *IDBSup* 725–26). The "staff" of Judah between his "feet" (Gen 49:10) suggests more than political power. Joseph's perennially taut "bow" (Gen 49:24) may have sexual as well as martial reference. In 1 Sam 21:6 the "tools" of the young men that are holy by reason of abstinence from women are hardly "vessels." In the midst of his miseries, Job recalls better days when his "root" was open to the water, the dew spent the night on his "branch," his "glory" fresh with him, the "bow" in his "hand"

ever ready (29:19ff.). Ben Sira (Sir 26:12) castigates the wanton woman who will squat before any "tent-peg" and open her "quiver" to the "arrow."

The Bible is not bashful with reference to female breasts, but more intimate parts are indicated by indirection. An ancient metaphor for woman was a "well" or "cistern," as seen in the Egyptian hieroglyphic logogram for woman. The youth is advised to avoid the exotic temptress and drink from his own "cistern" or "well" (Prov 5:15). The foreign woman or whore is called a "deep pit" and a narrow "well" (Prov 23:27). In Eccles 12:1, "your Creator" (Heb *bôr*›*ekā*) may be an alteration of "your pit" *(bôrkā),* which would refer either to one's grave or to one's wife, or to both. The subsequent description of advancing senility (Eccles 12:1–8) bewails the last stage of human existence when all vitality ceases and one goes to his long home. Youth is the time to be mindful of both pits, wife and grave, as well as of the Creator. (For defense of the reading "your grave" in Eccles 12:1, see Scott *Proverbs Ecclesiastes* AB, 254–55; the suggestion of "pit" as "wife" comes from a private communication of B. Zuckerman.)

Poetic allusions to the most intimate of female charms are sometimes overlooked or studiously ignored by translators. In the Song of Songs 2:17 the lady invites her lover to be like a gazelle on the "cleft mount(s)" and in 8:14 the invitation is to "spice mound(s)." Exegetes of the naturalist school, not surprisingly, have taken the "mound" to refer to the lady's *mons pubis/veneris,* much to the distress of more spiritual interpreters. The lady of the Song speaks of her unguarded vineyard (1:6), and there is frequent reference (2:16; 4:5; 5:1; 6:2) to the garden(s) where the lover grazes, not among "lilies" (as traditionally understood), but on the lotus, an ancient and famous sexual symbol. (On lotus eating, see Pope *Song of Songs* AB 406–7, 455.) The body part (Heb *šrr*) praised as a rounded crater (mixing bowl) never to lack mix (7:3—Eng 7:2) is hardly the navel but a receptacle not far below (Pope *Song of Songs* AB, 617ff.). The all-spice part(s) of the lady (4:13) are not "shoots" but a "groove" or "conduit" (Pope *Song of Songs* AB, 490–91 on *šalḫ* as a channel and a term for "vagina").

2. Sexual Intercourse, Nudity, and Sexual Innuendo. Various evasive devices are used with reference to sexual intercourse. In four instances the consonants of the transitive verb *šgl* are allowed to remain *(kethib),* but those of the intransitive substitute *škb,* "recline," are to be read *(qere)* despite the logical and syntactic incongruity (Deut 28:30; Isa 13:16; Jer 3:2; Zech 14:2). In 2 Sam 13:14 and Ezek 23:8 *škb* is used as a transitive verb with direct object, as if it were *šgl.* Elsewhere the preposition ‹*im* or ›*ēt,* "with," is added in the common locution "lie with" which is used for both heterosexual and homosexual copulation as well as for human coupling with animals (despite the unlikelihood that humans and animals would recline in the process).

The verb *b (w)*›, "enter," with the preposition ‹*el,* "unto," is a common biblical term for coition, and the verbal noun *bî*‹*â,* "entry," though not used in the Bible, became the legal term for consummation of a marriage. (On "know" [Heb *yāda*‹] for carnal experience, see Speiser *Genesis* AB, 31–32).

Nudity is generally regarded as shameful in the Bible, as elsewhere. Captives in war were humiliated by being stripped naked (Isa 20:4; 47:1–3). Isaiah himself went naked for three years to dramatize the fate of those who opposed Assyria (Isa 20:2–3). David's emissaries to the Ammonite king were humiliated by having half their beards removed and their clothing lopped off to the buttocks (2 Sam 10:4). "Nakedness" *(*‹*erwâ)* is used to refer to the pudenda of both sexes, and as such is the object of the verbs "see," "cover," and "uncover." Saul rebuked Jonathan's relation with David (1 Sam 20:30) as "shame of your mother's nakedness," perhaps intending to suggest that more was involved than mere filial disloyalty. To uncover a father's "skirt" (Heb *kānāp*) means to have sexual intercourse with one's father's wife, as is clear in Deut 23:1—Eng 22:30 and 27:20. For a man to spread his "skirt" over a woman meant more than merely preventing chill, as is apparent in Ezek 16:8 and Ruth 3:9.

The rabbis were alert to the possibility that nonsexual terms may be used with sexual entente. In Job 31:10 "grind" (Heb *ṭḥn*) refers to pelvic gyrations as confirmed by the poetic parallelism, and was duly noted by the rabbis (*Soṭah* 10b). Samson's "grinding" in prison (Judg 16:21) and captive youths compelled to "grind" (Lam 5:13) was understood by St. Jerome, as well as by the rabbis, in this sexual sense (Pope *Job* AB, 202).

The sexual suggestiveness of "couch" *(mēsēb)* in Song of Songs 1:12a is illuminated by Rab Judah's remark that Jerusalem men were lewd *(ʿănšê šaḥaṣ).* "One would say to his colleague, 'On what did you dine today? On well-kneaded bread or on bread not kneaded; on white wine or dark wine; on a broad couch or a narrow couch; with a good companion or a poor companion?' " "All these (queries)," Hisda explained, (refer) "to fornication *(zĕnût)*" *b. Šabb.* 62b, 63a). The rabbis also perceived sexual entente in the references to eating bread in Gen 39:6 (*Genesis Rabbah* 86:6) and in Exod 2:20 (*Tanhuma* 1:11). In Prov 30:20, "the adulteress eats and wipes her mouth and says 'I've done no wrong.' " References to eating and drinking in the Song of Songs 4:16 and 5:1 have been similarly understood (Pope, *Song of Songs* AB).

The noun *zimmâ,* derived from the verb *zāmam,* "ponder, cogitate, devise, plot," used of human scheming (Deut 19:19) as well as divine planning (Jer 51:12; Zech 1:6; Lam 2:17), in some contexts refers to premeditated sexual misconduct, as in Job 31:11, which relates to seduction of a neighbor's wife characterized as *zimmâ* (RSV "heinous crime") and criminal iniquity. The Ugaritic cognate *tdmmt* is used of indecorum (presumably sexual) by serving wenches at a divine banquet. Just what the girls did is not known because of a break in the text, but it was so repulsive that Baal stood and spat in the assembly of gods and declared that there were three kinds of banquets (sacrifices) he hated and all three were characterized by lewdness *(tdmmt)* on the part of the servant girls.

3. Homosexuality. Homosexual activity is treated fairly frankly, though hardly sympathetically, in the Bible. It was common enough so that strangers were at risk in some towns, as illustrated in the episodes related in Genesis 19 and Judges 19. It was a host's obligation to protect his guests from such abuse and there is a garbled reference to this duty in Job's negative confession (Job 31:31ff.) (Pope *Job* AB, 207–8). Among misconduct condemned in the Wisdom of Solomon 14:24ff. is "change of kind" which RSV renders "sex perversion." The locution "another matter" *(dābār ʿaḥēr)* in postbiblical Hebrew was applied to homosexuality as well as to other unmentionable activities. Paul in 1 Cor 6:8 uses two different terms presumably to distinguish two types of homosexuals, *malakoi,* i.e., "softies" or effeminates, and *arsenokoitai,* "those who lie (with) males." Moffatt rendered "catamites" (from the name Ganymede) and "sodomites," but RSV took the terms as hendiadys and rendered the two in one as "homosexuals," later revised to "sexual perverts."

It is surprising that nothing was done to the Hebrew text to dysphemize the use of the epithet "holy" for persons elsewhere called "dog" and "whore." Functionaries of the Astarte temple in Cyprus were called "dogs" in a Phoenician inscription (*KAI* 37b, 1. 10); but what relation, if any, these "dogs" had to the male and female hierodules of the Bible is uncertain (*cf. BASOR* 216:56a). "Dogs" in Rev 22:15 are excluded from the celestial city along with sorcerers, fornicators, murderers, idolaters, and everyone who loves and does falsity. These "dogs" were clearly degenerate human types, whatever their sin. In Rev 21:8 persons "befouled" *(ebdelugmenoi)* are consigned to the lake of fire along with murderers, fornicators, sorcerers, idolaters, and liars. It is a fair guess that the "dogs" and the "befouled" excluded from the celestial city and consigned to fire may have been the same sort of "dogs" and "whores" whose wages were not acceptable in the earthly temple (Deut 23:18–19f.—Eng 23:17–18).

In Deut 23:18–19, the male hierodule of Canaanitish fertility worship, ordinarily called "holy (man)," *qādēš,* is more apparently called a "dog" *(keleb),* while his female counterpart is also called "whore" *(zônâ)* rather than *qĕdēšâ,* "holy (woman)." The wages of both are pronounced unacceptable for payment of a vow or offering in the temple of the Lord. "Dog" and "whore" are presumably dysphemisms for these "holy" functionaries whose activities were officially banned but not eliminated (Gen 38:21f.; Deut 23:18; 1 Kgs 14:24; 15:12; 22:47; 2 Kgs 23:7; Hos 4:14; Job 36:14). The KJV usually rendered *qādēš* as "sodomite" and *qĕdēšâ* as "harlot" or "whore," while RSV made the "sodomite" a "male cult prostitute" and the female a "harlot" or "cult prostitute." In Job 36:14, LXX took the "holy" ones (Heb *qĕdēšim*) for "angels," the Vulgate as "effeminates," the KJV as "unclean," while the RSV dysphemized "in shame" and relegated to a footnote the explanation "among the cult prostitutes." The term *qdšm* occurs several times in Ugaritic lists of professional personnel, but no hint is given as to the sort of services rendered. See also PROSTITUTION.

C. Treatment of Excretory Subject Matter

Terms related to excreta and excretory functions, as noted briefly above, are regularly euphemized. Urine *(šyn)* becomes "water of the feet" *(mêmê raglayim)* and the plain word for excrement *(ḥrʾ)* is changed to "outcome" *(ṣōʾâ).* Earlier, at Ugarit, literary usage was not so polite. The plain words *tnt* and *ḥrʾ* were written and presumably spoken with reference to cattle and horses; even the chief god El, head of the pantheon and father of gods and humans, is described as inebriated to the point of delirium and locomotor ataxia, floundering (?) in his own *tnt* and *ḥrʾ*. The scene recalls the Ephraimite orgy depicted in Isaiah 28 wherein priest and prophet reel and stagger in vomit and excrement. It seems likely that the word *hrʾ* may have been used in 28:7 and was later deliberately garbled into *brʾh* (Pope *Song of Songs* 217). Ezekiel's aversion to barley cakes (baked) over rolls of human excrement (4:12) moved the Lord to permit substitution of bovine dung (4:15) as fuel for the baking.

The divine title Beelzebub in 1 Kgs 1:12 is a corruption of Beelzebul, i.e., "Baal (the) Prince," which is correctly preserved in the gospels (Matt 10:25; 12:24, 27; Mark 3:22; Luke 11:15, 18–19). This is confirmed by the title of the dying-rising rain god of the Ugaritic myths, *zbl bʿl ʾrṣ,* "Prince, Lord of Earth." The element *zĕbub,* apparently onomatopoeic imitation of the buzzing of flies or bees (Isa 7:18), has been compared with the fly-repellent god Zeus Apomuios (mentioned by Pausanias). In postbiblical Hebrew, however, the root *zbl* also relates to excrement, and thus there would be no need to change the spelling to *zĕbub* in order to derogate a deity whose ancient title could also be taken to mean "Lord (of) Excrement." The rabbis ridiculed the cult of Baal Peor by connecting *pʿr* with ritual defecation (Pope *Song of Songs* 217).

The biblical circumlocution for defecation is "cover one's feet" (Judg 3:24; 1 Sam 24:3), from the act of squatting with spacious robe spread to cloak the action. The KJV translated the circumlocution literally, but RSV's "relieve himself" offers a dynamic equivalent of the ancient periphrasis.

Piles or hemorrhoids are always uncomfortable and embarrassing, and the biblical term supposed to designate this condition has troubled translators. In Deut 28:27 the word (*ʿŏpōlîm,* cognate with Akkadian *uplu*) occurs along with other chronic ailments which the Lord threatens to lay on his elect if they are disobedient. Among these maladies, variously diagnosed, only the term *ʿplym* is euphemized with the vowels of the word *tĕhōrîm* ("clean/pure [things]") and the consonants of the substitute word are given in the margin. LXX interprets *bʿplym* as localizing the preceding pox of Egypt "in the seat." KJV rendered "emerods," i.e., "hemorrhoids," which RSV changed to "ulcers." However, in 1 Sam 5:6, 9, 12; 6:4, RSV rendered the same term "tumors" (but misgivings have been registered that this suggests cancer (a tumor [swelling] could, of course, be benign). The connection of these swellings with rodents suggests bubonic plague. The LXX of 1 Sam 5:6 mentions an outbreak of plague on ships and increase of mice in the country. The protuberances thus were probably "buboes" (swollen and sore lymph nodes of the groin and armpits) and not anal hemorrhoids (which are caused commonly by constipation). Buboes can be much worse than hemorrhoids, but separation of the tumors from the anal aperture would obviate the need to euphemize.

D. Evasive References to Death

Dying and death are directly mentioned numerous times in the Bible, but there are also devious ways of referring to the same end:"Enoch *walked with* God and *was not,* for God *took* him" (Gen 5:24). Similarly it was announced that the Lord would "take" Elijah (2 Kgs 2:23). When David was about to die, he said to Solomon, "I am about to go the way of all the earth" (1 Kgs 2:2), and Job spoke of going the "way of no return" (7:9–10; 10:21; 16:22). Equation of death with long or eternal sleep is common in many cultures. The psalmist appeals to God, "Give my eyes light, lest I sleep (the sleep of) death" (13:4). The prophet Jeremiah speaks of drunken Babylon that "will sleep eternal sleep and not wake" (51:39). Dan 12:2 announces the awakening of "many who sleep in earth's dust" (some to eternal life and some to eternal shame and contempt). The lover of Song of Songs compares his beloved's kisses to fine wine that goes down straight, flooding (or moving) sleepers' lips (7:10). The Greek, Vulgate, and Syriac read "lips and teeth" rather than "lips of sleepers," but the ancient practice (still extant in Talmudic times, cf. *Ṣem.* 8:4) of piping libations to the dead (to moisten dust-dry lips and throats and enable them to speak) explains the

supposedly difficult reading "sleepers," which refers to the dead as guests of the funereal *agapē* or love feast (Pope *Song of Songs* AB, 640–43).

E. Treatment of Sacred Subject Matter

To nullify threats, oaths or self-imprecations, and blasphemy various alterations and substitutions were made in wording. For example, in Num 16:14 Dathan and Abiram defy Moses' order, "Should you gouge out the eyes of these men (to avoid saying "our eyes"), we will not go up." David's self-curses in 1 Sam 20:15f. and 25:22 are redirected to David's enemies. Similarly, in Nathan's rebuke of David for scorning the Lord (2 Sam 12:14) the text was altered to read "enemies of the Lord" to avoid directly accusing David of blasphemy. Naboth was charged with "blessing" (i.e., cursing) God and king (1 Kgs 21:10, 13), and the antiphrasis "bless" for "curse" is similarly used in Job 1:5, 11 and 2:5, 9. This usage survives in contemporary speech:in "Bible Belt" parlance, "he blessed me out" means "he cursed me," while "bad" means "good" in colloquial Afro-American English. A common device to eliminate blasphemy was to turn the derogation back on the speaker. Eli's sons' vilification of God (1 Sam 3:13) was turned back on them by omitting the first letter of the word for God, *ʾlhm,* to make it mean "to them" (see SCRIBAL EMENDATIONS).

1. Avoiding Affront to God. In Jer 2:11, the Lord's original charge, "My people has changed my glory for no profit," was made to read "My people changed his glory." (The letters *y* and *w* representing the first- and third-person suffixes, respectively, are virtually indistinguishable in the oldest Heb mss, 1.e., those from Qumran.) In Hab 1:12, the assurance to God "You will not die" was changed to the patently absurd "We will not die," to avoid even the thought that God could die. In Zech 2:12—Eng 2:8, the Lord promises Israel total security:"who touches you touches the pupil of my eye," meaning that any assailant of Israel will get an immediate reaction from the deity as if his (i.e., God's) eye had been poked (cf. Deut 32:10 and Ps 17:8 for the figure of God's guarding of Israel as one would protect his own eyeball). "My eye" was changed to "his eye" (i.e., the assailant's) to avoid blatant anthropomorphism and anthropopathism.

Job's protests about maltreatment by God are sometimes turned back on the complainer by the simple device of changing "his/him" to "my/me," easily done in Hebrew (cf. Pope *Job* 62, 155). The medieval commentator Rashi, averse to Job's accusation against God in Job 9:23b, suggested that the reference must be to Satan. In Job 32:3 the scribes changed "God" to "Job" to eliminate the blasphemous charge.

Concern to preserve divine dignity sometimes resulted in logical absurdity, as in Genesis 18 where the three "men" standing before Abraham included Yahweh. When two of the three departed to go to Sodom and Gomorrah, Abraham went with them a way to start them on their journey (18:16) and then returned to resume conversation with his waiting guest, the Lord. The statement (18:22) that "Abraham was still standing before the Lord" is a circumstantial contradiction. The Lord had been standing alone talking to himself while Abraham was accompanying the departing guests, and the Lord was still standing when Abraham came back. The awkward switch from YHWH to Abraham for the sake of divine dignity shows the urgency of the concern.

To see and converse directly with the deity, as did Abraham in Genesis 18, is rarely done by mortals who are normally seen by or appear before the Lord. Thus the active expression "see the face of the Lord" (Exod 23:15; 34:20, 23; Deut 16:16) was altered by vocalizing the verb as passive, despite the fact that the Lord's face remains the object of the seeing as indicated by the object marker *ʾet* (which was not deleted in Exod 34:23 and Deut 16:16). To see the Lord's face directly was a reward reserved for the righteous in the world to come, called in Catholic theology "Beatific Vision."

2. Disparaging the Foreign. Pious deference to Israel's God of course did not extend to the false gods of enemies or to their foolish and dissolute worshippers. Cacophemisms or slurs were applied especially to items and aspects of foreign worship. The term *ʾĕlîl,* applied disdainfully to foreign gods (Lev 19:4; 26:1; Isa 2:8, 18, 20; 10:10; 19:1, 3; 31:7; Ezek 30:13; Mic 7:1; Hab 2:18; Zech 11:17; Ps 96:5; 97:7; Job 10:15; 1 Chr 16:26) may be related to the common Semitic generic term for deity, *ʾil (u)* > *ʾēl,* as suggested by the reduplicated forms of Old South Arabic *ʾlʾht* and North Arabic *ʾalāʾila-t* applied to deity. Job (13:4) applies the form to his false friends as "quack healers," and Jer 14:4 uses it with

reference to worthless divination. Sir 11:3 uses the term of the honey bee as small and insignificant among flying creatures even though it reaps the choicest of all harvests. Whatever its origin, the term is dysphemistic.

The terms *piggûl, tôʿēbâ,* and *šeqeṣ* or *šiqṷṣ*, usually rendered "abomination," are applied to a variety of items regarded as repugnant. The term *piggûl* was used of meat unfit for consumption (Lev 7:18; 19:7; Ezek 4:14). In Isa 65:4 the funerary context mentioning swine flesh in parallelism with *piggûl* broth does not equate the word with pork. The Arabic cognate is used of any kind of decaying meat. The *piggûl* stew meat may have been that of dead relatives eaten in what anthropologists have called "morbid affection."

The term *tôʿēbâ* is applied more than a hundred times in the Bible to a great variety of abhorrent and abominable activities. Eating with a Hebrew was *tôʿēbâ* to Egyptians (Gen 43:32) as was also association with shepherds (Gen 46:34). Among the things deemed "abominable" were forbidden sexual acts (Gen 18:16–23, 30; 20:13), foreign idols (Deut 7:26), eating flesh of "unclean" animals (Deut 14:3), sacrificing defective animals (Deut 17:1), marrying a divorced woman (Deut 24:4), transvestism (Deut 22:5), tainted gifts to the temple (Deut 23:19), cheating with weights and measures (Deut 25:13–16), graven or molten images (Deut 27:15), foreign gods and cults (Lev 18:27; Deut 13:15; 17:4; 18:9; 32:16; Isa 44:19; 1 Kgs 14:24; 2 Kgs 16:3; 21:2; 23:13; Ezra 9:14; 2 Chr 28:3), and other reprehensible acts by Israelites (Jer 6:15; 8:12; Ezek 6:11; 7:20; 16:36; 22:11; 43:8). The scoffer is also proverbially abominable (Prov 24:9).

Various disgusting creatures not to be eaten are termed *šeqeṣ* (Lev 7:21; 11:10–42; Isa 66:17; Ezek 8:10). The so-called "intensive" (actually "factitive") stem *šaqqēṣ* is used in Deut 7:26 with reference to despised or forbidden things. In Ps 22:25—Eng 22:24 the verb *šaqqēṣ* occurs in synonymous poetic parallelism with *bzh*, "despise," and the expression "avert the face." The form *šiqṷṣ* is used of heathen idols (Deut 29:16; 2 Kgs 23:13; 24; Isa 66:3; Jer 4:1; 7:30; 20:7, 30; 37:23; Hos 9:10; 2 Chr 15:8). In Nahum 3:6 it appears that *šiqṷṣîm* can be thrown, and in Zech 9:7 they can be held (as food) between the teeth. Dan 9:27 speaks of a conqueror who will come on the wing(s) of abominations *(šiqṷṣîm),* and this is echoed in Mark 13:14; Matt 24:15 (cf. Luke 21:20) as the "abomination of desolation" (KJV) or "desolating sacrilege" (RSV). It is interesting to note that the term *šeqeṣ* lives on in Yiddish as *sheyqetz* (plural *shĕqatzim*) as an uncomplimentary term for gentile males, while the feminine form *shiqse* has passed into English with an ironic connotation of affection.

The dysphemism *gillûlîm* applied to heathen idols (Lev 26:30; Deut 29:16; 1 Kgs 15:12; 21:26; 2 Kgs 17:12; 21:11, 21, 23, 24; Jer 50:2; Ezek 6:4–13; 14:3–5, 7) is apparently derived from the root *gll*, "roll." The noun *gālāl* in 1 Kgs 14:10 and Zeph 1:17 means "dung," and thus the form *gillûl* presumably also refers to excrement. The precise English translation of *gillûlîm* would thus be "turds," a word that came into English a thousand years ago (from Latin *tord (ere),* "roll") and ought not to be eschewed when apposite.

The word *bōšet,* "shame," is a common biblical dysphemism pronounced in place of proper names of pagan deities, as in the names Ishbaal, Meribaal, Jerubbaal, featuring the theophoron *Baʿl,* meaning "Lord, Husband, Owner," but pronounced *bōšet,* "shame," when the vowels of that word were superimposed on the consonants of the name *Baʿal* and similarly on the names of other pagan deities. The name Ashtart, when provided with the vowels of *bōšet,* may be pronounced "Ashtoreth" or suppressed altogether and pronounced *bōšet,* "shame." The name of the dread god Molech (or Moloch, as in LXX 2 Kgs 23:10) may have been given the *bōšet* vowels, but we do not know for sure the original vocalization of the name; it may be that the traditional vocalization preserves ancient vowels and therefore has nothing to do with the word for "shame."

F. More Recent Expurgations of the Bible

Early scribal efforts to sanitize the biblical text were dilatory because the task was too great. Modern verbal vigilantes from time to time have sought to carry on the battle against crudity and vulgar language. The "authorized" English version of 1611 is replete with earthy language of Elizabethan times which disturbed genteel folk of the Victorian era. Since the text was not copyrighted, it was possible to alter it with impunity. One Dr. Edward Harwood in 1768 produced a Liberal Translation of the NT to "replace the bald and barbarous language of the old version." Harwood thought to allure the "young and gay" by

the innocent stratagem of "modern" style, but what he offered was inflated pomposity carried to ludicrous extremes. In America, shortly after the Revolution, Mrs. Sarah Kirby Tremmer, anxious to protect her children and others' from bad language, deleted or obscured indecent expressions in the Sacred History to reduce the text by nearly half. Her commentary and notes made up for the loss by expanding the presentation to six volumes. Beilby Porteus, bishop of London, in 1796 supplied an index to lead the Bible reader to the good parts and away from the unedifying stuff by starring the best passages (sayings of Jesus, parts of Psalms and of Isaiah) and by marking with numerals 1 and 2 other parts fit to read. Unmarked parts, nearly half of the OT and some of the NT, were to be avoided. The Porteusian Index thus, without deleting or changing a word or line, was censorious of half the Bible. There was, of course, the danger that a curious or perverse reader could invert the system and concentrate on the unrecommended parts.

Noah Webster, after achieving fame for his dictionary of decent words, decided that some of the indelicate language of the KJV, especially words like "stink," "stones" (for testicles), and "whoring," required refinement. Webster's sanitized edition was endorsed by the president and faculty of Yale and used for a time by some of the New England clergy, but was gradually abandoned for the old vulgar version.

Recent years have seen a spate of new English translations, some with notable bent toward euphemism and others with more contemporary concern for plain language. There is always the danger that overweening efforts to be frank may conjure up crudities that are imaginary. The most bizarre example of this is NEB's blunder in Josh 15:18 and Judg 1:14, "she broke wind." After the death of the proponent of this impropriety, the deodorized revision "she made a noise" does little to enhance confidence in the judgment of revisers.

The Bible is replete with puns based on assonance and multiple entente and many of them, even when (perhaps only partially) understood, are difficult or impossible to convey in terse translation. Appreciation of this problem increases as more is learned about Semitic languages and literatures. Puns and serious humor, often very earthy, are a vital feature of the Bible and a challenge to coming generations of translators and interpreters. See HUMOR AND WIT.

BIBLICAL AUTHORITY. See SCRIPTURAL AUTHORITY.

BIBLICAL CRITICISM. The word "criticism" comes from the Gk verb *krinein,* which means to distinguish, decide, or judge. Biblical criticism therefore is the practice of analyzing and making discriminating judgments about the literature of the Bible—its origin, transmission, and interpretation. In this context, "criticism" has no negative connotation but, as in other fields, is designed to promote discriminating analysis and understanding. This entry contains two articles:one outlining the history of biblical criticism, and the other surveying specifically recent modern critical approaches to the NT. See also SCRIPTURAL AUTHORITY and THEOLOGY (BIBLICAL).

HISTORY OF BIBLICAL CRITICISM

As soon as oracles, teachings, and sacred narratives are written down in a religious community their authority is fixed and they inevitably become the object of criticism. The members of the community are bound to ask the meaning of obscure passages; they and their leaders are bound to discuss and decide on what the sacred texts entail for belief and practice; and they are bound to show how one sacred text is to

be reconciled with another. As such, biblical criticism began even before the Bible was assembled in its current canonical form.

———

A. Ancient Criticism
B. Renaissance Criticism
C. Criticism in the Modern Era

———

A. Ancient Criticism

The various canons of the OT and the NT are the result of criticism, as are the texts of those canons as they came to be standardized. The "Masoretic" Text of the OT was already fixed by the time the Qumran scrolls were collected (ca. 100 B.C.–A.D. 67), but there existed other texts, fragments of which were also found at Qumran, and the existence of which can be deduced from the LXX. The LXX canon is both longer and (at points) different in content from the Masoretic canon.

The NT canon was fixed as the result of criticism which rejected some gospels and provided reasons for accepting four gospels as sufficiently consistent to be regarded as harmonious. Clement of Alexandria's story that John's gospel provided a "spiritual" complement to the "bodily" Synoptic Gospels (Eus. *Hist. eccl.* 6.14.7) gives us a glimpse of the process of criticism that led to the acceptance of a fourfold gospel canon in opposition to attempts to argue for any one single gospel or a gospel harmony.

The story that Mark wrote down all that he remembered of Peter's discourses about things said and done by the Lord, but not in order, seems to embody a critical hypothesis to explain why Mark's gospel gave events in an order contradicting another authoritative order (probably that of John) (Eus. *Hist. eccl.* 3.39.14, 15). Gaius the Presbyter challenged John's gospel on grounds of its order (Commentary of Dionysius Bar-Salibi).

The authenticity of the Pastoral Epistles must have been discussed, since Marcion does not recognize them as part of his "Apostle" canon, and we know that the authenticity of Hebrews, the Catholic Epistles, and Revelation was disputed, being impugned and defended on the basis of critical arguments about style and content. Eusebius divided the books which claimed to be canonical into Recognized (four gospels, Acts, fourteen epistles of Paul, 1 John, 1 Peter, Revelation[?]), Disputed (James, Jude, 2 Peter, 2–3 John), Spurious (*Acts Paul, Shep. Herm., Apoc. Pet., Ep. Barn., Did., Gos. Heb.,* Revelation[?]), and heretical forgeries (*Hist. eccl.* 3.25.1–7). Both before and after the canonical limits were fixed, critical decisions were taken about a standard text as a result of comparing differing manuscripts or recensions; the "Alexandrian" and "Byzantine" texts of the NT are arguably the result of criticism.

The critical activity that settled standard canons and texts is largely hidden from us, only to be deduced from the results. The critical activity by which the authority of the agreed texts was maintained under questioning from the faithful for enlightenment or in the face of challenges from heretics or opponents is much more visible.

Philo of Alexandria preserved critical theories developed in Alexandria that defended the authority of the Pentateuch against charges that God was presented as though he were a human being with limbs and passions and against charges that he acted immorally and taught immoral actions. These theories conceded the charges and defended the Scriptures on the ground that they were speaking figuratively and allegorically. Christian theologians in Alexandria took over this device and extended it to the NT. The Antiochene school, itself heir to a more literal Jewish school of critics, insisted on the straightforward historical sense of the writings (Theodore of Mopsuestia).

The question of the authority in the Church of the OT and the law of Moses produced critical theories from the beginning. Jesus and Paul must have had theories about the question, and the NT contains both pronouncements on the problem and interpretative comments (Mark 7:19c:"Thus he declared all foods clean"). Paul's position is unclear, and Marcion put forward the critical theory that Paul's genuine writings had been tampered with by the addition of Jewish interpolations.

The Church had to defend the authority of the OT Scriptures against critical theories that argued they contained not only God's laws but laws solely due to Moses and the elders (the Valentinian Ptolemaus,

Letter to Flora, Epip. *Pan.* 33.3–7; Holl 1.450–53; already labeled a sin in Judaism, *Ps.-Philo* 25.13). It is arguable though unlikely that Jesus had himself introduced this critical principle (Matt 19:8; Mark 10:5–6).

Ancient critics, like their modern counterparts, questioned received opinions about the authorship and integrity of canonical writings and tried to write a history of how they came to be composed and about the relationships in which they stood to each other.

For example, Dionysius, bishop of Alexandria (A.D. 247–65) and a pupil of Origen, argued that John the author of the Apocalypse could not be the apostolic author of the gospel of John and the First Epistle, adducing differences of form, style, syntax, ideas, as well as arguments based on historical probability in support of his case (Eus. *Hist. eccl.* 7.25).

Augustine in his *Harmony of the Gospels* argued that the gospels were written in the chronological order Matthew, Mark, Luke, and John; that only Matthew and John were by actual followers of Jesus; that Matthew was first written in Hebrew, the others in Greek; and that Mark's words are almost the same as Matthew's because he was an epitomizer of Matthew.

B. Renaissance Criticism

The foundations of modern biblical criticism were laid in the Renaissance with the recovery of knowledge of Greek and the editing and printing of ancient sources. Historians could show that present practices were developments from more primitive customs, and the question was raised as to whether or not the present Church was truly faithful to the beliefs of the primitive Church. The Reformation, both a popular and a nationalist movement, took these humanist questions and turned them into a principle, that the Church should return to the sole authority of the primitive charters as contained in the Hebrew OT and the Greek NT. It rejected the authority of the LXX and the Latin Bible.

Luther used the doctrine of justification by faith alone as an instrument to deny apostolicity to the epistles of James, Jude, and Hebrews as well as to the apocalypse. Zwingli used philological arguments to question the Church's interpretation of the words of institution of the Lord's Supper.

Once the Bible was seen as the sole authoritative basis of the Church's life, biblical criticism designed to maintain and strengthen the position of the various churches that claimed this basis against other churches of the Reformation and against the Roman Catholic Church and heretics became a central and crucial activity. Ten new German universities were founded between 1527 and 1665 to provide for this need. Critics of the Reformed and Lutheran churches from without and within resorted for justification of their position to criticism of received scholarly opinions about the Bible. Unitarians questioned whether the orthodox doctrine of the trinity could be found in the NT, let alone in the OT.

The French Oratorian priest Richard Simon (1638–1712) turned the tables on the Reformation churches by arguing that Scripture alone was far too uncertain a basis for Christianity, unless there should also exist an authoritative teaching office in the Church. He published critical histories of the OT (1678, 1680, 1685), the NT (1689), the versions (1690), and the principal commentaries (1693), together with further observations on the texts and versions of the NT (1695) and a new French translation (1704). He questioned the Mosaic authorship of the Pentateuch. He was expelled from his order for his pains, but continued to press the Roman Catholic case against Protestantism.

Biblical criticism began to move emotionally outside the limits of church controversy after the disaster and devastation of the Thirty Years War in Europe and the Civil War in England. Scholars became disgusted at the seeming hairsplitting disputes about the meaning of Scripture which had, they thought, led to such bloody conflicts. Philosophers like Benedict Spinoza (1632–77) and John Locke (1632–1704) argued that a detached reading of the Bible as a book like any other book, which paid due attention to the original language and historical circumstances, would produce a tolerant and peaceful agreement about the essentials of a moral and spiritual religion.

Heterodoxy and dissent were tolerated in 18th-century Britain, or at least only mildly punished by loss of preferment and university teaching posts (but the universities were not very important, there being only two in England, four in Scotland, and one in Ireland). The ideas worked out and published in Britain were translated into German, where they were developed and refined in the score of Protestant faculties of

theology which were to a large extent left free from state censorship so long as the teachers subscribed to the confessions and supported in public the established churches of the kingdoms and principalities the universities were founded to serve. The scholars justified their acquiescence in this restriction on the grounds that Jesus himself had accommodated his teaching about demon possession and the earthly kingdom of God to the false beliefs of his contemporaries. This is the theory of "accommodation" as it was propounded in England by Hugh Farmer (1714–87) and others.

These university scholars were left free to work out in great detail an all-embracing critical hypothesis which also came to them from England. According to this theory, the OT was the religious collection of the Jewish people and had no authority for Christians. Impartial study of the OT would show that an original spontaneous free national religion was cramped and restricted by priests who imposed detailed ceremonial laws on the people in order to get power over them, and who claimed special revelation from God. Similarly the NT, critically examined, showed that Christ preached the old original natural religion, which ecclesiastical authorities had overlaid with dogmas and religious practices. *Christianity* was *as old as the creation; the gospel* was *a republication of the religion of nature,* as the title of Matthew Tindal's famous anonymous treatise had it (1730).

Within this framework Thomas Morgan (d. 1743) put forward an elaborate theory of the history of the NT, which was to exert immense influence on biblical criticism. He argued that Jesus had died renouncing Jewish messianic ideas of the restoration of an earthly kingdom to Israel. Jesus' Jewish followers still adhered to the false conceptions Jesus had renounced. Paul, independently of them, preached Jesus as the savior of the world without distinction between Jew and gentile, and came into head-on conflict with Peter, James, and John. Peter made a pact with Paul, which he could not maintain. The Christian Jews prevailed, introduced angelic mediators, invocation of the saints, and prayers for the dead, and preached the coming violent overthrow of the Roman Empire and the establishment of their own eventual rule in all the earth. Under persecution, the two opposing wings of the Church were gradually reconciled when the gentile Christians found they too were persecuted as Jews. Together they set up a hierarchy in the Church to bind consciences, rule the universal Church, and give supernatural virtue to the two sacraments. Those who remained true to Paul's scheme were branded as gnostics. The NT was corrupted by the addition of passages suggesting Christ, the prophet of the only true natural religion, was the same being with the supreme God, and by the attribution of miracles to him (*The Moral Philosopher, In a Dialogue between Philalethes a Christian Deist, and Theophanes a Christian Jew,* 1737).

Morgan's theory was adopted by Johann Salomo Semler (1725–91), professor at Halle, and the teacher and provider of ideas for generations of biblical critics. The theory was fully worked out and applied to every book of the NT by Ferdinand Christian Baur (1792–1860).

There was endless room for speculation and for discovery once the principle was accepted that the foundation documents of the Jewish and Christian religions were produced in response to the needs of various parts and factions of the nation or Church, the history of which was reflected in the history of the books. The main hypotheses and discoveries can be set out briefly, in roughly chronological order.

The NT was extent in thousands of Greek and Latin manuscripts as well as in manuscripts written in other languages, and it was cited by Church Fathers from the 2d century onward. Johann Albrecht Bengel (1687–1752) suggested that these manuscripts could be sorted into regional recensions, one from Asia Minor and the other from Africa. Semler elaborated the division and laid down the basis of modern study of the text by positing three recensions:the Eastern, the Alexandrian, and the Western.

The Pentateuch of the OT contained palpable parallels, contradictions, and inconsistencies. The French professor of medicine and court physician Jean Astruc (1684–1766), while maintaining Mosaic authorship, argued that Moses had originally composed Genesis and the first part of Exodus in four columns, two of which were the long distinct documents distinguished by the names they used for God, Elohim and Jehovah. Later scribes jumbled the four columns together to make our canonical books (1753). Astruc's book was translated into German at Semler's prompting and provided with new notes (1783).

Johann Gottfried Eichhorn (1752–1827) picked up Astruc's suggestion and proposed that the Pentateuch was compiled from literary sources long after Moses' death. In 1805 Wilhelm Martin Leberecht de Wette (1780–1849) connected the book of Deuteronomy with Josiah's reform, and in 1835 Wilhelm Vatke (1806–82) argued that the Priestly strand (P) in the Pentateuch was later than Deuteronomy and belonged to the Exile. These clues were developed by Eduard Reuss (1804–91) and his pupil K. H. Graf (1815–69), and finally elaborated and canonized by Julius Wellhausen (1844–1918) in the form that two original sources, J and E, had been combined to make JE, to which D (Deuteronomy) was then attached; at the same time a four-covenant source was enlarged to make P (Priestly Codex), which was finally united with JE+D to make up our Hexateuch.

The view that Matthew was chronologically the first of the Synoptic Gospels was first challenged by Johannes Benjamin Koppe (1750–91) in a direct denial of Augustine, *Marcus non epitomator Matthaei* (1782). Eichhorn built on this to establish the two-source hypothesis:there existed one Aramaic source used in various forms by Matthew, Luke, and Mark, and another Aramaic source used by Matthew and Luke. Christian Gottlob Wilke (1786–1854) simplified this theory and argued that our Greek Mark was the source of Matthew and Luke (1838).

The fourth gospel was assumed to have been written by the apostle John until questioned by Edward Evanson (1731–1805) in 1792, and this position was generally accepted after Karl Gottlieb Bretschneider's careful examination of the arguments for and against (1820), despite the author's own later retraction. D. F. Strauss (1808–74) based his *Life of Jesus* (1835) on the assumption that he could disregard the gospel of John.

When the fourth gospel was set aside as a source of information about the historical Jesus, the way was open to exploit the relative silence of Jesus about his own status in the Synoptic Gospels to suggest he did not hold himself to be Messiah. His messiahship was at best implicit (F. C. Baur; Rudolf Bultmann [1884–1976]). The quest of the historical Jesus, brilliantly depicted by Albert Schweitzer (1875–1965), prompted a further quest for the history of the development from what Jesus taught to what was taught about Jesus. Julius Wellhausen in 1894 proposed a theory adopted by Johannes Weiss (1863–1914), William Wrede (1859–1906), and others that Jesus first became and was first confessed as Messiah after the resurrection, citing Acts 10:36; Rom 1:3–4. It was debated whether the titles Lord and Son of God were applied in their highest senses to Jesus by Jewish Christianity, by Hellenistic Jewish Christianity (Ferdinand Hahn; Martin Hengel), or by gentile Christianity (Wilhelm Bousset [1865–1920]). The silence of Jesus, however, may well have been part of his own belief that he was the Messiah.

Edward Evanson, who questioned the authority of John's gospel, also divided the epistles into two groups, the genuine 1st-century epistles (1–2 Corinthians; 1–2 Thessalonians; Galatians; 1–2 Timothy) and the spurious 2d-century ones (Romans; Ephesians; Colossians; Hebrews; James; 1–2 Peter; 1–2–3 John; Jude; the Letters to the Seven Churches in Revelation). University scholars moved more cautiously. Eichhorn observed that the Pastoral Epistles were not Pauline in form and eventually denied that Pauline authorship. By the 1840s the following epistles had been denied to Paul:Ephesians (Usteri and De Wette); Philippians (F. C. Baur); Colossians (Mayerhoff); 1 Thessalonians (Schrader); 2 Thessalonians (J. E. C. Schmidt, De Wette, F. H. Kern); Philemon (F. C. Baur), leaving Romans, 1–2 Corinthians, and Galatians as genuine. Bruno Bauer (1809–82) denied that Paul wrote these either. Christian Hermann Weisse (1801–70), a philospher rather than a professional biblical scholar, held that 1 Corinthians, 1 Thessalonians, and Philemon were genuine, and the rest had been interpolated to a greater or lesser extent.

C. Criticism in the Modern Era

By the end of the 19th century the archaeological discoveries and the recovery and decipherment of religious documents from Egypt and Mesopotamia revived interest in the religion of the Bible and its antecedents in the other religions of the Near East. Hermann Gunkel (1862–1932) showed that a universal religion of cosmic conflict between the forces of light and the forces of chaos and evil had pervasively influenced the religion of the Bible from Genesis to Revelation. He mocked many of the attempts to relate particular features of the books of the Bible to particular historical events. He distinguished various forms of writing, each of which was related to a cultic moment of importance, or to the religious needs of the

people. His own work gave the decisive impetus to Sigmund Mowinckel (1884–1965), who in his study of the psalms (1921–24) argued that the psalms were cultic hymns and laments for religious use, a number belonging specifically to the annual New Year festival of the enthronement of Yahweh as king. Gunkel deeply influenced the form criticism of the NT through Martin Dibelius (1883–1947), Karl Ludwig Schmidt (1891–1956), and Rudolf Bultmann. The form critics regarded the gospels as collections of traditions, each of which was shaped according to a limited number of popular forms (parable, conflict story, apothegm, etc.), each form springing from a need in the religious life of the community. Bultmann advanced the study of the fourth gospel by drawing attention to the striking parallels to be found in the Mandaean liturgies translated by Mark Lidzbarski (1868–1928) and in the Syriac *Odes of Solomon*, discovered and published by James Rendel Harris (1852–1941).

The discovery of the Dead Sea Scrolls in 1947 led to renewed interest in Jewish writings of the period. The various theories about the direct influence of the Hellenistic mystery religions on the development of Christianity (Richard Reitzenstein [1861–1931], *Die hellenistischen Mysterienreligionen:Ihre Grundgedanken und Wirkungen* [1910]; Martin Dibelius, *Colossians* [1912]; Hans Lietzmann [1875–1942], *Messe und Herrenmahl* [1926]) and of the Hellenistic cults on christology (Wilhelm Bousset, *Kyrios Christos* [1913]) have always been open to the suggestion, raised by these very scholars, that the undoubted influence was mediated through Judaism. The point had already been made by Gunkel, *Zum religionsgeschichtlichen Verständnis des Neuen Testaments* (1903). Hans Dieter Betz (1931–) has argued for the strong direct influence of contemporary Hellenistic rhetorical forms upon the epistles of Paul (*Galatians* Hermeneia) and upon the epitome-like Sermon on the Mount, but it is open to ask whether here, too, any influence has been mediated through Judaism. The old 16th-century theories that the Essenes provided the soil in which the Christian Church grew up has received a new impulse, despite the sharp contradiction that seems to exist between the Qumran community and the Church on the strict keeping of the law and the rejection of the diseased and handicapped from the community.

Two further important effects of the discovery of ancient documents and inscriptions should be mentioned. Systematic exploration for papyri letters and documents, begun by Flinders Petrie (1853–1942) in 1889–90, made available Greek texts offering contemporary parallels to the Greek of the NT. The results were exploited above all by Adolf Diessmann (1866–1937), and are conveniently gathered up by J. H. Moulton and George Milligan into *The Vocabulary of the Greek Testament illustrated from the Papyri and Other Non-literary Sources* (1930). Papyri are still being found and published. The warm dry sands of Egypt that preserved the secular papyri also preserved papyri copies of books of the NT. The oldest papyrus is P52, a fragment of John 18, from the early 2d century. The existence of long sections of the NT from the 3d century has substantiated the 19th-century view that the Alexandrian text-type was in general more reliable than the other text-types and has led to a revival of the theory of B. F. Westcott (1825–1901) and F. J. A. Hort (1828–92) that this text-type was not so much an "edition" as a good transcript of the original canonical books (Gordon D. Fee [1934–]). However, the confirmation that the editing of the Alexandrian text was good editing does not prove it was not editing. The debate between critics who tend to decide readings on the basis of the text-type to which the reading belongs and "eclectic" critics who believe good and bad readings can be found in all text-types still continues.

The observation that the style of individual authors is stable and can be measured (G. Udny Yule [1871–1951]; W. C. Wake 1947) and the use of computers to make comprehensive and accurate counts of stylistic features like proportions of sentence lengths, variations of sentence length, and position of key words has led to new interest in the authorship of the Pauline epistles. G. H. C. Macgregor (1892–1963) and A. Q. Morton (1919–) defended F. C. Baur's judgment. A. J. P. (Anthony) Kenny (1931–) surveyed all the published tests and concluded no group of the twelve epistles of Paul stands out as containing epistles uniquely comfortable with one another or uniquely diverse from the surrounding context.

The sheer weight of critical scholarship and the seemingly endless theories about all aspects of the biblical texts has led to a sharp reaction, reminiscent of John Locke's reaction against biblical scholarship of the 17th century. The modern reaction has taken the form of "structuralism," based on the work of Ferdinand de Saussure (1857–1913) and Claude Lévi-Strauss (1908–). Structuralism endorses any

disciplined and attentive reading of the text that displays the structure of the argument as it appears on the page, without reference to the history of the formation of the text or the history of the community responsible for its production. Structuralism is one facet of a larger movement in literary criticism (I. A. Richards [1893–1979]) to exclude historical considerations from literary appreciation. There is an element of self-deception involved in the enterprise, since we can scarcely exclude knowledge of detailed and specific historical theories from the apparatus we bring to the text. The structuralist answer to this charge is that the structuralist approach (being "synchronic," by which the "significations" of the text are imposed on the reader) can be practiced quite separately from the traditional critical approach (being "diachronic," by which human beings create the "significations") and that the two approaches may be kept in dialectical tension. Yet the structure of the text to which the reader thinks to submit is really the text already interpreted and read according to a critical theory inherited along with the text itself. The structuralist believes that certain basic human patterns form themselves into structures and express themselves in texts—a secularized version of the theory that the text is dictated by God.

There is no doubt that each of the books of the Bible has a history, and it is unlikely that the history of any but the shortest of them is as simple as that they were written by one man at one time to one recipient or set of recipients. Even in the simplest cases, knowledge of the history of the author could be illuminating. But if most books of the Bible are composite, which is widely agreed to be true except for the epistles of Paul (and why are they so different?), a knowledge of their history is all but essential.

Biblical criticism is unavoidable. The story of biblical criticism shows that even those expounders of the Bible who claim to be indifferent to theories about the history of the sacred texts, from the gnostic preachers of the 2d century to the structuralists of the 20th, have their own hidden historical explanations of how their texts came into existence and of how they are to be read. We do well to be conscious of the historical theories we in fact hold, to know something of their history, and to work to make them more adequate to the evidence.

NEW TESTAMENT CRITICISM

Biblical criticism as it is practiced with regard to the NT can be presented according to the following outline:

———

A. Beginnings in the 18th Century
B. Text Criticism
C. Historical Criticism
D. Literary Criticism
E. Concluding Implications

———

A. Beginnings in the 18th Century

Modern biblical criticism began in the period of the Enlightenment. At that time the new methods of empirical science were applied to the study of all disciplines, including the Bible.

1. British Deists. Devoted to rationalism and natural theology, the Deists were opposed to supernatural religion. All religious truth, in their view, could be discerned in the order of nature and in accord with human reason. The earlier rationalists, especially John Locke (1632–1704), had believed supernatural revelation to be rational. Indeed, truths disclosed in the Bible could be proved by reason and supported by the evidence of fulfilled prophecy and miracles. The Deists set out to destroy these two foundations of revealed religion.

Anthony Collins (1676–1729) demonstrated that the prophecies of the OT could not be taken literally. Yet, if they were merely allegorical, how could these ancient predictions become solid ground for truth? Thomas Woolston (1669–1733) lampooned the NT miracles, when taken literally, as representing gross absurdity. Even the supreme miracle, the resurrection of Jesus, was a fraud which had been fabricated by the disciples of Jesus.

2. Continental Pietists. On the European continent, the study of the Bible had been dominated by the orthodoxy of the Protestant scholastics. The Bible, according to the orthodox, was a compendium of inerrant truths, taken down as divine dictation by God's inspired "pen men." In the face of this arid orthodoxy, the Pietists called for a vital reading of the Bible, attuned to its spiritual and practical message.

August Hermann Francke, who became the leader of the entire educational system at Halle, published *A Guide to the Reading and Study of the Holy Scripture* (1693). The purpose of this manual was to distinguish between the shell and the kernel of the biblical message—to go beyond the external to the inner meaning of the text. In the first part of the *Guide,* Francke stressed the literal, historical meaning of the Bible, insisting that the study of Scripture required careful attention to linguistic and grammatical detail. In the second part, he presented methods for detecting the deeper meaning. This required the reading of the Bible with a sense of spiritual feeling. The Pietists concluded that only those who possessed the spirit could understand the truth of the text.

Viewed side by side, the Deists and the Pietists represent two ways of interpreting the Bible which have influenced NT criticism ever since:an objective, rational reading; and a subjective, experiential reading. The former focuses on the text and its content; the latter is concerned with the interpreter.

3. Rise of Grammatico-Historical Criticism. In the middle of the century, new methods of linguistic and historical research were applied to the study of the NT. Johann August Ernesti, a noted classicist, published *Institutio interpretis Novi Testamenti* (1761). Like Francke's work, this was a manual of procedures for interpreting the NT. Ernesti, adhering to strict grammatical principles, insisted on the literal meaning of the text in its historical setting. He argued that the same methods used for the interpretation of any other ancient book should be employed in the study of the Bible.

Ten years later, Johann Salomo Semler raised the question of the authority and canonicity of the biblical books. In his *Treatise on the Free Investigation of the Canon* (1771), Semler asserted that the canon was a historical problem. The selection of the canonical books was a gradual historical process, and throughout the history of the Church different views of the content of the canon had prevailed. In Semler's opinion, some parts of the canon, e.g., the book of Ruth, were not relevant for Christians. Using historical research, Semler concluded that Revelation was not written by an apostle, that it did not witness to Christ, and that it should not be recognized as canonical. Semler's work broke the back of the biblicism of the old orthodoxy and opened up the NT for historical investigation.

The investigation of the authenticity of the NT books was pursued by Johann David Michaelis. In his massive *Introduction to the Scriptures of the New Covenant* (4th ed., 1788), Michaelis considered the historical setting of the individual NT documents. Attention was given to such questions as authorship, date and place of writing, recipients, and purpose—the concerns of historical or higher criticism. Using historical method, Michaelis concluded that most of the NT books were written by those to whom they have been traditionally ascribed. He drew a distinction, however, between reliable, nonapostolic writings (like Luke and Acts), and the inspired writings of the apostles. Michaelis concluded that Jude and Revelation were not apostolic and, by implication, neither inspired nor canonical.

4. Bible as Literature. In reaction to the growing historicism of the grammatico-historical method, some scholars approached the writings of the NT primarily as literature, G. E. Lessing (1729–81), the

noted poet and dramatist, believed divine revelation to be progressive and continuing. Although revelation came through history, religious truth could not be established by historical argument. Between faith and history there was an unbridgeable chasm; the validity of faith could not be proved by historical fact.

J. G. von Herder (1744–1803), the eloquent court preacher at Weimar, wrote the sweeping *Outlines of a Philosophy of Man,* which traced the evolution of humanity from primitive beginnings. Revelation he saw as the evolutionary process of the education of developing humanity. All revelation was historical, and the Bible was the record of this progressive revelation which reached its zenith in the teaching of Jesus. Although the Bible was a thoroughly human book, it was not to be read the way the historical critics read it. Instead, one should see it as a poetic, aesthetic, literary expression.

5. Emergence of NT Theology. At the end of the century the results of grammatico-historical criticism were incorporated in a theological synthesis. J. P. Gabler, in his inaugural address at the University of Jena (1787), drew a sharp distinction between systematic and biblical theology. The latter he understood to be historical, constant, and normative. The task of systematic theology, on the other hand, was to take the results of biblical theology and translate them into doctrine and ethics. Although the NT spoke in language accommodated to the mythological views of an ancient people, it bore witness to eternal and changeless truths.

G. L. Bauer carried out Gabler's program in the form of his 4-vol. *Biblical Theology of the New Testament* (1800–2). Like his predecessors, Bauer believed the truth of the NT was of an order higher than that of the OT—that it presented the true biblical theology. He interpreted the NT according to empirical and rationalistic methods. The stories of the birth of Jesus he considered to be mythological legends, and the idea of inspiration, since it implied supernatural intervention, was itself a myth. Nevertheless, the NT used mythological expressions to convey universal ethical truths.

The history of NT criticism from the end of the 18th century through the first two thirds of the 20th is largely a recital of the Enlightenment themes with variations. Much of the 19th century, for example, was dominated by the work of F. C. Baur and the Tübingen School. Combining the results of the grammatico-historical method with a philosophy of history which had been articulated by Hegel, Baur proposed a theory of the historical development of early Christian history which could account for the origin and meaning of NT literature. Similarly, in the 20th century, Rudolf Bultmann (1884–1976) could develop a synthesis of historical criticism (including form and history of religions criticism), existentialist philosophy, and dialectical (Barthian) theology so as to provide a hermeneutical key for understanding early Christian literature.

B. Text Criticism

The purpose of text criticism (lower criticism) is to restore the original text. This purpose is problematic, since no autographs are available—no original manuscripts written by the NT authors. Instead, the critic is confronted with a vast collection of handwritten copies, well over 5000 manuscripts and fragments, no two of which are exactly alike.

The materials used in text criticism represent a variety of types. The oldest extant manuscript is a fragment of the gospel of John which can be dated in the early 2d century. Most of the earliest manuscripts are classified as papyri, because of the material (papyrus) on which they were written. These include such important examples as the CHESTER BEATTY and the BODMER PAPYRI. The major NT manuscripts are called uncial manuscripts because they are written in capital letters; these are usually copied on parchment and circulated in book or codex form. Among the most famous are Codex Sinaiticus and Codex Vaticanus, which can be dated in the 4th century. The large body of later Greek manuscripts are called minuscule manuscripts because they are copied in cursive handwriting.

Along with Greek manuscripts, text critics examine other sources. Translations (versions) of the Greek NT into Latin were made as early as the 2d century. The NT was available in other ancient versions, for example, Syriac and Coptic. The Fathers of the Church frequently quoted the NT in their writings; these patristic quotations provide text critics with another source of data. Early Christian lectionaries or liturgical texts include biblical citations which are also useful in the effort to restore the original text.

Although the novice is baffled by the mass of textual variants, the textual expert is able to use them in the classification and evaluation of manuscripts. The presence of common variants may indicate a common source. Variants have occurred through a variety of causes. Unintentional variants are caused by typical visual mistakes—repeating the same word (dittography), skipping to the next occurrence of the word (haplography). Sometimes variants are intentional:a copyist may attempt to "correct" a text or "improve" its theology, grammar, or style.

Modern text critical research was begun in the Renaissance. In 1515, Erasmus produced a Greek text on the basis of a very few manuscripts. Later editions of his text by Robert Etienne (called Stephanus) and Theodore Beza led to an edition produced by the publisher Elzevir in 1624, which became the standard text, the Textus Receptus. In the 18th century extensive collection and collation of manuscripts resulted in texts published by John Mill, J. A. Bengel, and J. J. Wettstein. Although these critics merely reproduced the Textus Receptus, each of them provided a new feature, a critical apparatus, which noted many textual variants. J. J. Griesbach actually published a revised text (1774–75), and carried further the work of Bengel in the classification of manuscripts according to their geographical origin.

In the 19th century text critical work produced significant results. C. Tischendorf was tireless in his search for textual materials. The 8th edition of his Greek NT (1869–72) contains the largest collection of variants available to the modern scholar. The British text critics B. F. Westcott and J. A. Hort published a Greek text (1881) which made use of their classification of manuscripts into geographical families:Western, Alexandrian, and Byzantine. Westcott and Hort also attempted to identify a Neutral Text (represented by Sinaiticus and Vaticanus) which they thought to be very close to the original. Today's student of the Greek NT usually sees a Nestle Text (the result of a series of editions begun by Eberhard Nestle in 1898 and recently carried on by Kurt Aland) or a text published by the United Bible Societies (edited by an international committee of text critics).

C. Historical Criticism

Recent NT criticism can be classified according to analysis which views the NT *either* as a document of history *or* as a body of literature. These two categories can never be completely separated, and some types of criticism make use of *both* historical *and* literary procedures. The difference is largely a matter of point of departure or emphasis.

The original purpose of historical criticism (higher criticism) was to achieve a historical understanding of the NT. To accomplish this, the NT documents had to be viewed in their historical and cultural context. The critics were concerned with historical events, and the literature of the NT was used in historical reconstruction. Actually, the reconstruction had two foci:the historical situation which the text described, and the historical situation of the author and recipients of the NT books. In regard to the former, attention was given to parallels in contemporary literature and the religious environment. Already in the 17th century John Lightfoot had traced the Jewish backgrounds of the NT. In regard to the historical situation of writing, attention was given to the traditional introductory questions:authorship, date, piece of writing, recipients—work already refined in the 18th century by Michaelis and his student, J. G. Eichhorn.

1. Religionsgeschichte. Usually translated "history of religions," this method was developed in the late 19th and early 20th centuries by the members of the *religionsgeschichtliche Schule.* The leading adherents of the "history of religions school" included Johannes Weiss, Wilhelm Bousset, Hermann Gunkel, and William Wrede. These scholars carried on the earlier concern to study the religion of the NT in its historical context; their approach was sometimes called the method of "comparative religion." In the view of these critics, the world of the Bible was a strange and distant world—a world wholly different from the modern world in language, world view, imagery, and symbols. The Lord's Supper, from this perspective, should be understood in the context of the mysterious Hellenistic cult meals, and the Christ of the early Christians should be perceived as the one confessed as the exalted lord of the cult.

Weiss developed the theory of "consistent eschatology." In his view, Jesus was at home in the setting of "late" Jewish apocalyptic religion. Jesus' proclamation of the kingdom of God, therefore, was an apocalyptic message which expected God's imminent, catastrophic intervention in history. Bousset, on the other hand, believed the essential teachings of Jesus to be in sharp contrast to the Jewish apocalyptic

thought. The ultimate source of apocalypticism was to be traced to Babylonian mythology. According to Gunkel, early Christianity had been influenced by eastern religion (especially Babylonian) which had been transported through contemporary Judaism. Wrede argued that the historian should not interpret the NT as a document of systematic theology, but as a witness to the religious life and experience of the early Christians.

In later developments, the history of religions school gave increasing attention to Greek religion and the Hellenistic cults. Richard Reitzenstein, for example, thought the Greco-Roman world universally recognized a myth of a heavenly redeemer who descended to earth and returned to heaven, disclosing to humans the way of salvation. This "gnostic myth" was believed to serve as a pattern for expressions of early Christian christology like that found in Phil 2:6–11—a hypothesis important for Rudolf Bultmann's method of "demythologizing." Bultmann believed the message of the NT, the *kerygma,* was communicated through the mythological form of Hellenistic thought. The task of demythologizing was to distinguish the *kerygma* from the myth—to separate the true Christian proclamation from its mythological framework.

2. Form Criticism. Originally termed *Formgeschichte,* this type of criticism attempts to go behind literary criticism to the study of the oral tradition. Literary criticism, which had been investigating the *written* sources of the gospels, had concluded that Mark was the earliest. Wrede had shown, however, that Mark was not a historical record of the life of Jesus but an expression of the theological confession of the author. The quest for the historical Jesus, therefore, would have to go beyond the written material to earlier oral sources which could be identified and isolated in the existing written sources.

Influenced by Gunkel's form critical investigation of oral traditions and oral features of Genesis and the Psalms, three NT critics working independently at the end of World War I arrived at similar results. K. L. Schmidt concluded that the gospels were frameworks upon which smaller, independent units of oral tradition were hung. Martin Dibelius believed the individual units of oral tradition were shaped in accord with the practical needs of early Christian preaching. Rudolf Bultmann saw the origin and development of the units of traditions as related to more specific church concerns—worship, catechesis, paranesis.

All agreed that the earliest memories of Jesus (his sayings and stories about him) were circulated by word of mouth. The earliest identifiable witnesses of the words and deeds of Jesus had already come to confess him as Lord and Christ. As the stories about Jesus were circulated, they were shaped into forms according to principles of oral communication—miracle stories, parables, etc. As these stories were told and retold they took on additional details and emphases, and new stories were created to meet the ongoing needs of the believing community. The intent of the form critic was to find the *Sitz im Leben,* the "situation in life" where such oral forms originated and developed. Although some of the earliest oral units were thought to go back to Jesus himself, many of the traditional forms were created and shaped by the community itself. The evangelists were viewed by the form critics primarily as collectors or editors of these traditional units. The gospels were like a string of beads—a loose collection and arrangement of traditional data which bore little relation to the actual history of Jesus.

In more recent times, form criticism has been applied to other sections of the NT. Here, however, research has been directed toward literary forms, so that form criticism becomes an aspect of literary criticism. In analyzing the Pauline letters, Robert Funk, Nils Dahl, and their students attended to the form and structure of the epistle as a literary genre. Study of the common papyrus letters of the Hellenistic period exhibited a variety of types of epistles (e.g., the letter of introduction)—epistles composed according to patterns prescribed by literary handbooks.

Like these letters, the epistles of Paul largely conform to the Greco-Roman conventions of letter writing. In structure, they follow the order:salutation, opening thanksgiving, paranetic sections, and closing. Within the letters conventional formulae, for example, expressions of exhortation, can be detected. Some scholars have analyzed the NT epistles according to the rubrics of classical rhetoric. H. D. Betz, for instance, identifies Galatians as an "apologetic letter" (letter of defense) which displays the rhetorical patterns of a courtroom defense (Betz *Galations* HermeneiaA.Hermeneia).

3. Tradition Criticism. Form criticism has been supplemented by tradition criticism or, as it is sometimes called, the history of the transmission of traditions. This type of criticism also considers literary expressions of tradition. Its intent is to analyze the origin and development of units of tradition which are cited within the literature of the NT. For example, Paul presents hymns (Phil 2:6–11), confessions (1 Cor 8:6), and liturgical formulae (1 Cor 11:23–25) which were recited in the pre-Pauline churches. Attention is given to the way NT authors, Paul, for example, use and adapt the traditional material to their own purposes. Some scholars (e.g., J. M. Robinson, H. Koester) trace the course of a unit of tradition as a trajectory moving from its origin through various stages of writing to its final redaction.

4. Concern with Orality. Oral tradition has recently been studied in the light of research applied to oral culture and folklore. From this perspective, the transition from oral to written tradition is seen as a movement not of continuity (as the form critics supposed) but of discontinuity. Oral communication, it is observed, is different from written, since speaking involves presence and immediacy. Written communication, on the other hand, is external, abstract, objective. In applying their method to the study of the gospels, advocates of this theory of orality (e.g., Werner Kelber) note that Jesus taught orally and was heard by a rural, nonliterary people. When oral tradition is put into writing, a fundamental distortion results. As Paul says, "The letter kills."

5. Sociological Interpretation. This modern approach picks up the form critical concern with the *Sitz im Leben* and subjects it to sociological analysis. Sociological interpretation makes use of various methods of the social sciences, especially sociology and cultural anthropology. The method was anticipated in the early 20th century by members of the "Chicago school," particularly S. J. Case and S. Matthews, and in Germany by A. Deissmann.

Critical of a narrow theological reading of the NT, the sociological interpreters note that the early Christians were not university-trained theologians, but ordinary people who lived in families and religious communities. The Hellenistic society in which they participated was largely urban (Meeks) and marked by social and economic stratification. G. Theissen argues that the schisms at the Lord's Supper in Corinth represent economic and social classes in the Church, not factions debating the nature of the eucharist.

Sociological interpretation has two main approaches:the descriptive and the theoretical. According to the descriptive approach, scholars study the customs and institutions of Hellenistic society and detect parallels in the NT. For example, they investigate the status and function of the slave in the Greco-Roman world, and ask how this information illuminates Paul's metaphorical use of the term "slave." According to the theoretical approach, scholars make use of models which sociological thinkers have devised. For example, they ask what Weber's analysis of the "charismatic leader" reveals about Paul's style of leadership.

Especially popular with biblical interpreters is the perspective of the sociology of knowledge. This approach asks how the people of the NT period perceived the social reality in which they lived, that is, their "social world." Moreover, the modern interpreters also share a social world—a perception of reality which determines their own understanding of the NT and its social context. Interpretation of the NT requires modern interpreters to move from their own social world into that of the ancient people whom they are trying to understand.

D. Literary Criticism

In contrast to methods which ape primarily concerned with history, literary criticism focuses on the written text. Historical methods are sometimes involved, however, since the NT is an example of ancient literature, and the interpretation of the NT has a history. Early works in literary criticism dealt with vocabulary, grammar, style, and rhetorical figures.

1. Source Criticism. In the 18th century literary criticism was essentially source criticism. Attention was directed primarily to the problem of the sources of the Synoptic Gospels. Two main theories prevailed:the gospels depended ultimately on lost, primitive sources; or the gospels were somehow interdependent. According to the first hypothesis, the lost source(s) consisted of oral tradition, a variety of written fragments (Schleiermacher), or a primitive (usually Aramaic) *Urgospel* (Eichhorn).

According to the second hypothesis, one of the Synoptics made use of at least one of the others. Various possibilities were suggested, but the two most popular solutions advocated either the priority of Matthew or the priority of Mark. According to Owen and Griesbach, the earliest gospel was Matthew, and Mark used both Matthew and Luke in the writing of his "shortened" gospel. The countertheory of the priority of Mark was defended by Wilke and Weisse. Lachmann, who supported this view, also believed Matthew and Luke used a lost written source (Q) as well as Mark.

The resulting "two-document" hypothesis was advocated by noted scholars like Holtzmann and became dominant by the beginning of the 20th century. More detailed analysis resulted in a four-document hypothesis:besides Mark and Q, Matthew and M and Luke used L (Streeter). Recently, the Griesbach hypothesis has been revived and vigorously defended (Farmer), although the majority of scholars continue to support Markan priority.

Source criticism has also been applied to other sections of the NT. In regard to Acts, scholars have given attention to the "we-sections" —sections where the author shifts to the use of first person plural. These are sometimes seen to represent a diary source or perhaps a travel itinerary. Other scholars detect evidence of sources related to important early Christian centers, for instance, an Antioch source. Source criticism in regard to the epistles frequently deals with the problem of integrity. 2 Corinthians, for example, is thought to be a composite of two, or perhaps as many as six, fragments of epistles. The literary dependence of 2 Peter on the epistle of Jude is widely recognized.

2. Redaction Criticism. Assuming the results of form, tradition, and source criticism, redaction criticism is concerned with the final composition; it is sometimes called "composition criticism." Thus, redaction criticism is a type of literary criticism which employs the findings of historical criticism. Assuming form critical results, it asks how Mark used the oral tradition he had received. Assuming the results of source criticism, it asks how later gospels employed earlier gospels. The method was anticipated by F. C. Baur, who noted the *Tendenz*, the theological tendency, which was revealed in the work of a particular NT author. Similarly, Wrede noted that Mark did not simply use his sources to produce a historical record, but employed them in service of a theological expression.

Three scholars working independently developed the method. Willi Marxsen coined the name *Redaktionsgeschichte* (1954). He believed Mark adapted his sources to the situation of the Church in 66 C.E., and used them in support of the expectation of the imminent parousia of Christ. G. Bornkamm investigated Matthew's use of Mark and concluded that Matthew shaped the tradition to present his own christology and ecclesiology. H. Conzelmann believed Luke presented and arranged the traditional material so as to depict a history of salvation consisting of three periods: the era of Israel, the time of Jesus, and the period of the Church.

Redaction criticism directed attention from the small units of tradition to the finished literary product. As a result, the role of the Church in the formulation of the tradition was reduced, and the work of the gospel writers as literary authors and theologians was enhanced.

3. Genre Criticism. Closely related to form and redaction criticism, genre criticism is the study of literary genre, that is, the identification and analysis of the literary type or classification to which a particular text belongs. Sometimes called *Gattungsforschung* (genre research) or *Gattungsgeschichte* (genre history), this method studies the form, style, and content of particular types of literature. In general, the method involves the classification of biblical material in relation to types of literature represented in Hellenistic writings. The method assumes that the classification of a document provides a key to its interpretation. For instance, the recognition that Paul wrote specific letters to particular situations, rather than general epistles, is crucial to interpreting his writings.

In NT research, genre criticism has been most active in the study of the gospels. The fundamental question is:to what genre do the gospels belong? Although some scholars believe the gospel was a new genre created by the early Christians (see GOSPEL GENRE), others find a parallel in the Hellenistic ARETALOGY—the account of the mighty deeds of a heroic miracle worker or divine man. A document like Q, which consists almost wholly of teachings, is often classified as belonging to a genre of literature called the "Sayings of the Sages" (J. M. Robinson and H. Koester).

Acts is widely recognized as an example of Hellenistic historical writing, evidenced, for example, by the author's conventional use of a preface and speeches. However, Acts also displays parallels with the Hellenistic romance, with its fondness for travel narratives involving narrow escapes, like the account of Paul's shipwreck.

In studying Revelation, critics give attention to the genre of the apocalypse. This type of literature, popular in the period of the NT, is marked by typical features:the disclosure of future events by a mediator to a seer (usually the pseudonymous author) who is often taken on a heavenly journey and shown cosmic visions—all presented in symbolic form (cf. Mark 13). According to some recent scholarship, Revelation should be classified as belonging to the genre of the letter or epistle.

4. The New Literary Criticism. This sort of criticism attempts to view the NT exclusively as literature. It represents a revolt against the traditional historical critical method. For the old method, the concern was to reconstruct the history in which the text was written and to discern the meaning the text had in that historical situation. For the new criticism, the text is not to be used as a device for historical or theological reconstruction; the text itself is the sole object of investigation. Once a text has been written, it has a life of its own, independent of its original setting. Thus the text is autonomous; it has its own meaning; it must be interpreted exclusively on its own terms. The original intention of the author, so dear to the historical critics, is for the new criticism unimportant. A Pauline epistle, for instance, may convey meaning which Paul did not intend.

The critic, therefore, is concerned with what is called the "world" of the text. By this term, the new criticism means the perception of reality which the text assumes. A fable, for example, may assume a world in which animals talk. Whether or not the world of the text corresponds to the actual world in which the author lived, or the world in which the interpreter works, is of no moment. According to a favorite metaphor, the text should not be seen as a window which reveals something outside. That is, the text should not be viewed as a means for describing something else, for instance, history or doctrine. Instead, the text must be seen as a mirror which has its meaning locked in. That is, the interpreter must be concerned exclusively with the meaning which is held within the text itself.

Like the older historical critics, the new literary critics believe the Bible is to be understood by the same methods which are used for other literature. They study the text as a whole, and thus are concerned with genre. Consequently, the new criticism has certain affinities with genre criticism, though its concerns are broader. The new critics also analyze style and literary forms within the text—sentence structure, metaphor, etc. Attention is especially given to the function that the various literary techniques perform within the pattern of the whole literary document. From the perspective of the new criticism, a book like Revelation can be viewed as a work of art—a dramatic presentation, using liturgical and symbolic forms of expression.

5. Rhetorical Criticism. This method is closely related to the new literary criticism. Its origin can be traced to a lecture by James Muilenberg (1968) calling for an approach which would go beyond form criticism. Rather than restricting research to the small units of tradition, rhetorical criticism looks at the work as a whole, the final literary product. In distinction from the new criticism, rhetorical criticism is concerned (as is redaction criticism) with the personal aspects of the author's thought. Moreover, rhetorical criticism is concerned with the context, including those concepts which writer and reader share. Thus, it is interested in the social and cultural relationship between author and reader. The rhetorical techniques and arrangements are analyzed in terms of their function in the author's argument. For example, when H. D. Betz (*Galations* Hermeneia), following classical rhetoric, classifies Galatians as an "apologetic letter," he interprets Paul's account of his call, the Jerusalem conference, and the events of Antioch (1:12–2:14) as "narratio" —the statement of facts upon which the whole defense is to be built.

6. Narrative Criticism. Like the new criticism and rhetorical criticism, narrative criticism is opposed to the historicizing and theologizing of the text. In particular, it intends to restore the narrative features of the Bible. The narrative elements of the gospels and Acts are obvious, yet historical critics have been inclined to sacrifice narrative in the quest for the historical Jesus or in the effort to reconstruct the history of the early Church. Instead, these narratives must be seen as story, with plot, characters, and outcome.

Narrative criticism, however, involves a broader meaning. For some scholars, narrative is a fundamental category of human existence; it has ontological significance. People live in a narrative world, that is, they have a perception of their participation in reality which is story-like. The overarching vision of reality can be described as a symbolic universe—a concept which gives meaning to the smaller stories in which all persons participate.

This larger meaning indicates that narrative criticism is important for nonnarrative or discursive texts. The letters of Paul, for example, assume a narrative substructure, that is, Paul's religious perception is informed by a sacred story—the story of God's action with people which reaches its climax in the story of Jesus (R. Hays). When Paul writes to address the particular problems of churches, he gives expression to this basic narrative. Paul has a story himself, and the relation of this story to the larger story provides his personal meaning. Each of his letters has a story—a plot which involves Paul's previous relation to the recipients of the letter, the expected reception of the letter, and the readers' response.

Narrative criticism does not ignore the importance of historical events. The narrative substructure presupposes the life of Jesus, and Paul's story is related to his own historical experience. The story of each letter is related to a chronological sequence of events, though the poetic sequence by which Paul tells the story within the epistle may be different. Indeed, history is story-like. The writing of history is not the exact reiteration of the past but a process which involves selection, plotting, and interpretation. History is story.

7. Reader Response Criticism. Closely allied to narrative criticism is reader response criticism. See also READER RESPONSE THEORY. This kind of criticism focuses on the role of the reader. The reader, from this perspective, must be differentiated from the critic. The critic reads a text out of the tradition of criticism and views the text as an object for critical analysis. The reader, like a child listening to a story or a person captivated by a novel, is the servant of the text.

Reader response criticism moves beyond these observations to more sophisticated methodology. For instance, it draws a distinction between the real reader and the implied reader. The real reader is the flesh-and-blood person who actually reads a text; the implied reader is the reader the author images when writing the text. Similarly, there is a real author (the actual writer) and the implied author (the writer the reader images when reading the text). In the process of reading, the real reader is manipulated by the implied author to react as, and become, the implied (or ideal) reader. Other participants are envisaged, such as the omniscient narrator, that is, the teller of the story who, in the imagination of the reader, knows everything.

Reader response criticism notes that reading is temporal and linear. Reading is not static but moves through the text in a sequence of time. This temporal, sequential process involves anticipation, reflection, and dialogue. The writer of the text uses devices like repetition for the education of the reader. Thus doublets in a text (for example, the two accounts of miraculous feeding in Matthew) create anticipation and encourage assent. At the same time, minor changes in the second account alert the reader to additional meanings. This temporal and linear quality of reading displays a similarity to oral communication. Just as a participant in a conversation follows a line of discussion through a sequence of time, so a reader follows the words and sentences of a text though an ongoing temporal process.

8. Structuralism. Like the new criticism, structuralism is not primarily interested in history or theology communicated through the text. The object of research is the deep structures which are encoded within the text itself. The concern is with the linguistic structure of the text, not with message the language conveys. According to structuralists, there is no salvation outside the text.

Structuralism is a method of understanding which involves a combination of linguistic theory and anthropological research (Claude Lévi-Strauss). According to the structuralists, human reality is marked by deep structures, that is, unconscious mythic patterns of meaning which have ontological significance. Structuralism believes the human brain operates according to certain structures and these structures correspond to reality. These deep structures are encoded in texts, and the task of structural exegesis is the decoding of texts, the disclosing of the structures. In the main, the structures are binary or dichotomous—contrasting opposites, like life and death.

In the study of literature, structuralism gives attention to the synchronic as well as the diachronic dimensions of the text. The diachronic can be seen as a linear, temporal sequence, while the synchronic structures are vertical, the structures beneath the surface which are present at any moment in the sequence. Like a musical score, texts have both melody (diachronic progression) and harmony (synchronic pattern). These synchronic patterns constitute paradigms of meaning—universal forms of expression which provoke understanding at the deepest level. The structuralists are much concerned with the significance of language (not mere speech) which involves a system of signs (semiotics), that is, patterns of words and sentences which constitute a whole linguistic expression. Applied to narratives, structural exegesis is concerned with narrative structures. The parable of the Good Samaritan, for example, assumes a structure which has such features as an actor or sender (the Samaritan), a recipient (the wounded man), opponents (the robbers), helpers (the innkeeper).

9. Canonical Criticism. Assuming the results of form and redaction criticism, canonical criticism is concerned primarily with the text in its final form. Emphasis is placed on the function of the canon as Scripture in the ongoing community of faith. Like literary criticism, canonical criticism is critical of traditional historical criticism's historicizing of the Bible.

The title "canonical criticism" was coined by J. A. Sanders. According to Sanders, canonical criticism has two main interests:the canonical process, and canonical hermeneutics. The canonical process is the history of the writing and selection of canonical books. The entire process, from oral tradition through writing, editing, and collecting, takes place in the context of the believing community. Study of this process displays both stability (setting boundaries to canonicity) and flexibility (plurality within the canonical boundaries). Throughout the process, the community of faith functions at every stage. What earlier tradition thought to be canonical may be found to be canonical by later tradition for different reasons.

Canonical hermeneutic involves the investigation of how canonical texts are interpreted in the ongoing development of the tradition. This hermeneutic observes the way older traditions are adapted to new situations. According to Sanders, canonical hermeneutic is theocentric. The Bible is a monotheizing literature which witnesses to God's action as creator and redeemer working through human sinfulness.

Brevard Childs dislikes the phrase "canonical criticism," since it appears to present a method alongside other types of criticism. For him, recognition of the centrality of the canon is the essential approach to understanding Scripture. The development of the canon is not a postapostolic achievement; canonicity (the concern with the norm of the gospel) is implicit in the production of the NT from its earliest (oral) beginning. However, the meaning of the NT at the time of its historical origin does not have theological priority, for the canon functions theologically as witness to Christ as Lord, as revelation, throughout the history of the Church. By implication, the Bible can only be fully understood within the community of faith.

E. Concluding Implications

Looking back over this methodological variety, one may wonder what methods are most appropriate. Many contemporary interpreters adopt an eclectic method. Norman Petersen, for example, employs a creative synthesis of social, literary, and narrative criticism in a way which informs the historical aspects of the text. The choice of method(s) can best be made in response to the questions which the interpreters bring. If they are primarily concerned with the history which the text describes, they will use methods effective for reconstructing history. If they are primarily concerned with the literary significance of the text, they will use methods effective for literary analysis. This survey suggests that the Enlightenment model of historical criticism has become increasingly problematic. The variety of critical proposals indicates a current quest for a new paradigm which has yet to be realized.

WILLIAM BAIRD

BIBLICAL SCHOLARSHIP, JAPANESE. This entry consists of two articles surveying scholarship on the OT and NT in Japan.

OT SCHOLARSHIP

A. The Dawn

The period from the late 19th century to 1910 was a time of pioneering work as well as of frustration for Japanese biblical scholars. At least two pioneers earned Ph.D. degrees, but the circumstances did not allow them to continue study in Japan. The only exception was Y. Sacon (1865–1944). Having studied the biblical languages in 1890–1906, he developed a translation of the Bible from the original languages and published his works from 1905 through 1942. Other works in this period included introductions to the OT, OT theology, and a translation of the Apocrypha. With a gifted, strong personality, K. Uchimura (1861–1930) made clear the essential meaning of the Bible through his expositions at his own Non-Church Bible Study group and through a journal. Uchimura not only influenced intellectuals, but he also produced quite a few biblical scholars who in time emerged as leaders.

B. The Formative Period (1920–45)

As early as 1899, the new impact of the Tübingen school of academic OT study was felt in Japan, and the German style of OT analysis gradually prevailed over the Anglo-Saxon type. Having studied the "science of religion" and OT studies in Berlin and Leipzig, T. Ishibashi (1886–1947) published an introduction to the OT (1922) and a history of Israelite religion and culture (1923). Against the background of dialectical theology, Z. Watanabe (1885–1978), who had been an advocate of the critical study of the OT history and literature based on the theories of Wellhausen, after studying at the Pacific School of Religion, Berkeley, California, in the early twenties, began seriously to reconsider the relationship between historical-critical study of the Bible as literature and the canonical claim of the Bible as the word of God in the Church. He had a unique methodology of biblical interpretation which eventually culminated in his trilogy entitled *The Doctrine of the Scriptures* (1949–63). Watanabe first maintained that a sharp distinction should be made between a historical-critical or genetic study of the Bible—how the text developed—and a canonical or holistic study of the Bible—what the text is. He also insisted that an appropriate methodology should be established in accordance with the nature of the Bible as canon, as long as one reads the Bible as the rule of faith and life and not as historical books.

Furthermore, he held that the concept of *Gestalt* or configuration can be adapted from phenomenology to canonical interpretation only at the place where the canonicity of the Bible is acknowledged and where one participates in the faith of the historical Church that created the Bible as canon. For him, canonical interpretation should pay due regard to the very location of the books of the Bible within the canon.

In this period, K. Baba (1892–1985) edited the first dictionary of the Bible (1934) and later assumed the editorship of a concordance (1959) and a new dictionary of the Bible (1971). More specific studies were done by several scholars. Y. H. Sacon (1906–) was the first to engage in Palestinian field archaeology under W. F. Albright in 1935–36. Having studied in Scotland and Germany, J. Asano (1899–1981) had a keen interest in OT thought and its relevance to Japanese culture and society. The Society for OT Study in Japan was formed in this period (1933).

C. The Period of Establishment and Development

After returning to Japan in 1945 from his study in Germany (1935–45), M. Sekine (1912–) broke fresh ground in OT study by introducing the German Alt-Noth-Von Rad school of OT analysis to Japan. With his acute interest in M. Weber's sociology of religion, his gifted intellect, his competent knowledge of jurisprudence and philosophy, and his broad and keen interest in new scholarly developments in the world, M. Sekine is now building his own unique outlook on the OT. His approach can be designated either as "intellectual history" or as the "sociology of literature." Sekine seeks to develop a synthesis of synchronic-literary and diachronic-sociohistorical levels with the aid of such scientific tools as philology, literary studies, sociology, and philosophical-ideological studies.

Along with several other colleagues, Sekine founded the Japan Biblical Institute in 1950 and has been its foremost representative. He is an editor of *AJBI,* which publishes in European languages. K. Nakazawa (1915–) has published solid and detailed studies on the Suffering Servant (1954) and Second Isaiah (1962).

The internationalization of Japanese scholarship may be seen in the papers read at the International Society meetings, in increasing number of contributions to international journals, *Festschriften,* and dictionaries, as well as in the books published by A. Tsukimoto. F. Kohata, and S. Sekine. Participation in the international meeting of the Society led to a collection of articles (Ishida, ed. 1982).

On Akkadian and Mesopotamian studies, J. Kikuchi, I. Nakada, A. Tsukimoto, and K. Watanabe are active in international circles. For Ugaritic and Hebrew linguistics, D. T. Tsumura is the most noted and productive. In the historical field, both Y. Ikeda and T. Ishida are noted in the scholarly world. In literary studies, K. K. Sacon and Y. Suzuki are to be noted. The former is developing his own method of literary structural analysis. In the intellectual-historical fields, K. Namiki is producing results comparable with those of M. Sekine. In the historical-theological field, K. Kida is to be mentioned. In 1987, the New Common Bible, a cooperative of Catholics and Protestants, appeared; K. Kida, Sacon, M. Ohta, K. K. Dacon, M. Takahashi, and M. Wada were heavily involved in this project.

Bibliography

A representative sampling of Japanese scholars and their (European-language) works may be found in *AJBI* ed. M. Sekine and A. Satake. This publication has appeared annually since 1975 and will be sent upon request to those who write to the Japan Bible Society, 5–1, 1-chome, Ginza, Tokyo, 104 JAPAN.

Important books published in Japanese have been reviewed in the Book List since 1974. Selected books and articles have been abstracted in *OTA* since its first volume (1978).

Ikeda, Y. 1977. *The Kingdom of Hamath and Its Relations with Aram and Israel.* Diss. Jerusalem.

———. Solomon's Trade in Horses and Chariots in Its International Setting. Pp. 215–38 in Ishida, ed. 1982.

Ishida, T. 1977. *The Royal Dynasties in Ancient Israel. BZAW* 142. Berlin.

———. 1982. Solomon's Succession to the Throne of David—A Political Analysis. Pp. 175–87 in Ishida, ed. 1982.

———. 1985. Solomon Who Is Greater than David—Solomon's Succession in 1 Kings I–II in the Light of the Inscription of Kilamuwa, King of Y‹DY-Sam‹al. *SVT* 36:145–53.

Ishida, T. ed. 1982. *Studies in the Period of David and Solomon and Other Essays.* Winona Lake, IN.

Jouzaki, S. 1956. The Secondary Passages of the Book of Amos. *Kwansei Gakuin University Annual Studies* 4:25–100.

Kida, K. 1973. *Die Entstehung der prophetischen Literatur bei Amos.* Diss. Munich.

Kumake, F. K. 1980. *The Temple Sermon:Jeremiah's Polemic against the Deuteronomists.* Diss. New York.

Nakada, I. 1974. *Deities in the Mari Texts.* Diss. New York.
———. 1982. Two Remarks on the So-called Prophetic Texts from Mari. *AcSum* 4:143–48.
Nakazawa, K. 1982. The Servant Songs—A Review after Three Decades. *Orient* 18:65–82.
Nishimura, T. 1966. *Sagesse et royauté: Les Aspects sapientiels aux origines de la royauté en Israel.* Diss. Strasbourg.
———. 1979. Un mashal de Qohelet 1, 2–11. *RHPR* 605–15.
Odashma, T. 1985. *Untersuchungen zu den vordeuteronomistischen Bearbeitungen der Heilsworte im Jeremiabuch.* Diss. Bochum.
Sacon, K. K. 1972. Isaiah 40:1–11—A Rhetorical-Critical Study. Pp. 99–116 in *Rhetorical Criticism.* PMTS 1. Ed. J. J. Jackson and M. Kessler. Pittsburgh.
———. 1982. A Study of the Literary Structure of "The Succession Narrative." Pp. 27–54 in Ishida, ed. 1982.
Sekine, M. 1962. Erwägungen zur hebräischen Zeitauffassung. *SVT* 9:66–82.
———. 1973. The Subdivisions of the North-West Semitic Languages. *JSS* 205–21.
———. 1977. Wie ist eine israelitische Literaturgeschichte möglich? *SVT* 29:285–97.
———. 1982. Lyric Literature in the Davidic-Solomonic Period in the Light of the History of Israelite Literature. Pp. 1–11 in Ishida, ed. 1982.
Sekine, S. 1984. *Redaktionsgeschichtliche studie zum Tritojesajabuch.* Diss. Munich.

KIYOSHI K. SACON

NT SCHOLARSHIP

A. Prewar Developments

In 1873 the Meiji government removed the public notices proscribing Christianity. A little more than a decade later, the Japan Bible Society published the first complete Japanese translation of the Bible (1887). This was called the *motoyaku* ("original translation"), and an amended translation of the NT, issued in 1917, was called the *kaiyaku* ("revised translation"). (The second complete translation appeared in 1954 as the *kōgoyaku* ["colloquial translation"], and a third, the *Shin Kyōdōyaku Seisho* [New Interconfessional Translation of the Bible], was published in 1987.) A full-scale Bible dictionary, the *Seisho Daijiten,* was published in 1934 (a revised version appeared in 1971). In 1941, K. Kurosaki produced a NT concordance listing Gk terms with references to the revised NT translation of 1917 (a complete concordance to the Bible appeared in 1959, keyed to the colloquial translation of 1954).

Although they were not NT specialists, several people played important roles in shaping NT biblical scholarship in Japan. Among these were E. Kashiwai, author of *Kirisutokyō Shi* (*History of Christianity* [1914]; K. Ishiwara, whose 1934 *Kirisutokyō Shi* was revised and reissued in 1972 in two separate volumes; K. Sano, author of *Shito Pauro no Shinpishugi* (*The Mysticism of the Apostle Paul* [1935]); and S. Hatano, author of *Genshi Kirisutokyō* (*Primitive Christianity* [1965]).

Following them came trained NT scholars like T. Matsumoto, K. Tominomori. S. Murata, and others who introduced historical and theological studies from the West to seminaries and theological colleges in Japan. Not least among these early scholars was S. Yamaya, the first person whose works ranged over almost the whole field of NT studies. Among his works are an introduction to the NT, a two-volume study of the origin of Christianity, a book on NT theology, and five volumes of translations and commentaries on the Pauline epistles. Also, the influence of Y. Kumano on the Japanese church and its theology has been enormous. Though his primary interest lay in systematic theology, he was an outstanding theological exegete of biblical texts, playing a role in Japan comparable to that of Karl Barth in Europe.

B. Postwar Developments

World War II prevented Japanese NT scholars from keeping up with developments in NT studies in the West, but afterward a number of specialists worked diligently to make up for this lost interaction. Individuals who helped bring Japanese NT studies up to date include I. Takayanagi, author of *Fukuinsho Gairon* (*Introduction to the Gospels* [1951]) and *Iesuden Kenkyū* (*A Life-of-Jesus Study* [1951]), M. Takemori, author of *Shinyaku Seisho Tsūron* (*Introduction to the NT* [1958]) and editor of *Iesuden Kenkyū wo Megutte* (*Life-of-Jesus Research* [1970]), J. Matsuki, author of *Rōmabito e no Tegami, Honyaku to Shakugi* (*The Letter to the Romans:Translation and Exegesis* [1966]) and *Shinyaku Shingaku I* (*NT Theology* I [1972], and G. Maeda, author of *Shinyaku Seisho Gaisetsu* (*Introduction to the NT* [1956]).

In the 1950s and ’60s, NT scholars translated the works of many Western scholars into Japanese, especially in the area of life-of-Jesus research (e.g., the works of Bultmann, Dibelius, Stauffer, Jeremias, Cullman, Dodd, Hunter, both Mansons, Taylor, and others). The scholarly distinction between the historical Jesus and Christ of the kerygma became an issue of great importance to the churches, for unless they clung to the historical revelation they would lose not only their Christian identity but also the necessity for mission—an easy temptation in a land where Shinto, Buddhism, and Confucianism have helped to shape a cultured and moral society. In the 1960s, Japanese NT scholars took special interest in redaction criticism, sociological approaches, and neo-literary criticism, methods which led to a number of original approaches to the study of the gospels and their traditions. In the 1970s and ’80s, the works of Käsemann, Bornkamm, Conzelmann, Marxsen, Brown, Strecker, Stuhlmacher, Betz, Trocmé, Theissen, Hengel, Martyn, and others also appeared in Japanese.

The same period saw the beginning of a number of original studies by Japanese NT scholars. Among such studies are T. Hirano’s *Iesu to Kami no Kuni* (*Jesus and the Kingdom of God* [1971]) and Y. Magaki’s *Yokane Fukuinsho no Kirisutoron* (*The Christology of the Fourth Gospel* [1984]. These works, though published after the 1950s and ’60s, reflect the scholarly concerns and methods of those years.

A Japanese synopsis of the first three gospels, the *Fukuinsho Idō Ichiran* (1951), was prepared by T. Tsukamoto, based on his own translation of the Gk texts. A revised edition, a colloquial version of Tsukamoto’s translation, was published by his student Y. Hirasawa in 1983.

In connection with NT Greek, T. Kanda wrote an excellent grammar, the *Shinyaku Seisho Girishiago Nyūmon,* published in 1956. This has become the new standard, taking the place of the handy but elementary NT Greek grammars produced at an earlier stage. A full-scale NT Greek dictionary has yet to appear, though there are several concise ones.

T. Hirunuma has been a leader in the field of textual criticism, publishing a monthly journal, *Studia Textus Novi Testamenti,* since September 1966. His recent book, *Shinyaku Honmon Gakushi* (*History of NT Textual Criticism* [1987]), gives a good introduction to the field, and an earlier book, *Shinyaku Seiten no Purosesu* (*The Process of Formation of the NT Canon* [1972]), provides a brief history of how the NT writings were collected and raises some problems with regard to canonization. In the recently published *Shinyaku Seisho Seiten no Seiritsu* (*The Shaping of the NT Canon* [1988]), seven scholars from the fields of NT studies and church history teamed up to describe the process of NT canonization from the days of the earliest church to the period of the church councils. S. Kawashima wrote on the NT; T. Aono on the Apostolic Fathers; S. Arai on the gnostic interpretation of biblical writings; Y. Itani on Marcion and Paulinism; T. Ōnuki on Justin Martyr, Tatian, Irenaeus, and Tertullian; N. Miyatani on canonization in the Western church; and T. Mikoda on canonization in the Eastern church and the decisions of the church councils.

During the last two decades, some excellent commentaries have appeared, striving to match the standard set by publications like HNT and NIGTC. A. Satake published a commentary on Philippians in 1969, another on Galatians in 1974, and his two-volume commentary on Revelation in 1978–89. K. Tagawa issued the first volume of a controversial commentary on Mark in 1972, and S. Arai the first volume of his commentary on Acts in 1977. M. Yamauchi’s commentary on Philippians (1987) has also been well received.

C. The Current Situation

Recent work in the field of gospel studies has focused particularly on redaction criticism. For example, A. Ogawa’s *Matai,* (a study of Matthew’s theology (1984), is a superb example of the application of redaction criticism to Matthew. An earlier popular edition of this work, entitled *Kyūyaku no Kanseisha Iesu* (*Jesus the Fulfiller of the Old Covenant* [1983]), was published as the first volume of a redaction criticism series on the four gospels. The others include S. Kawashima’s redaction critical study of Mark, entitled *Jūjika e no Michi Iesu* (*Jesus on the Way to the Cross* [1984]); M. Miyoshi’s study of Luke, *Tabizora ni Ayuma Iesu* (*Jesus’ Lonely Journey* [1984]); and T. Ōnuki’s study of John, *Yo no Hikari Iesu* (*Jesus the Light of the World* [1984]). To this series a fifth volume was added, S. Arai’s study of the gospel of Thomas, *Kakusareta Iesu* (*The Hidden Jesus* [1984]). Miyoshi, mentioned above, has produced

a number of excellent studies of the Synoptic Gospels, several of which are contained in his *Chiisaki Mono no Tomo Iesu* (*Jesus the Friend of the Least of These* [1987]).

With regard to Johannine studies, there are on the one hand scholars like Y. Ibuki, who is interested in a philosophical and hermeneutical interpretation of the Fourth Gospel. On the other, there are those like K. Matsunaga and K. Tsuchido, who are interested in applying redaction criticism methods to this gospel. Matsunaga made use of redaction criticism methods in his recently published *Hitorigo naru Kami Iesu* (*Jesus the Monogenēs Theós* [1987]) and is currently writing a commentary on John's gospel. H. Kayama has recently published a redaction criticism study of Acts, entitled *Shito Gyōden no Rekishi to Bungaku* (*History and Literature of the Acts of the Apostles* [1986]).

Unfortunately, in comparison with gospel studies, there has not been much published recently in the area of Pauline studies. A. Satake, who made his debut in NT studies with a book on Revelation, has published a substantial work called *Shito Pauro, Dendō ni Kaketa Shōgai* (*The Apostle Paul:A Life Committed to Evangelism* [1981]). Some of his articles on Paul and Paul's writings may be found in his *Shinyaku Seisho no Shomondai* (*NT Issues* [1977]). S. Matsunaga published *Karada to Rinri* (*Body and Ethics* [1976]), a study of the "body concept in the Pauline letters, and T. Aono has written a number of recent articles dealing with Paul's theology.

With regard to other fields of research, A. Kawamura is noteworthy for his ongoing contributions to the study of the letter to the Hebrews, and M. Yamauchi's monograph *Fukkatsu, sono Denshō to Kaishaku no Kanōsei* (*The Resurrection: Its Traditions and the Possibility of Interpreting the Event* [1979]) is a work of considerable importance. In the field of NT history, G. Hata, taking over where H. Niimi left off, has finished translating the complete works of Josephus. These have been published in 20 volumes under the general title *Yosefusu Zenshū* (1975–84). Hata is now working on Eusebius' *Historia Ecclesiastica* and has published three volumes to date (1986, 1987, 1988). Together with L. H. Feldman, Hata is coeditor of a four-volume bilingual Josephus-research series:*Josephus and the Jewish War, Josephus and Christianity,* and *Josephus-Hellenism-Hebraism,* vols. 1 and 2. All four volumes appeared in English, and the first two were published in Japanese in 1985. With Feldman, Hata is also coeditor of *Josephus, Judaism, and Christianity* (1987), the Japanese version of which is now in preparation.

Two academic associations should be mentioned. The Japan Biblical Institute was founded immediately after World War II. Its *Annual* has been published regularly in Japanese since 1962 and in a separate English-German version since 1975. Members of the Japan Biblical Institute translated the Dead Sea Scrolls into Japanese under the title *Shikai Bunshō* (1963), and the OT and NT noncanonical writings into Japanese in a 9-volume series called *Seisho Gaiten Giten* (*Biblical Apocrypha and Pseudepigrapha* [1975–82]). The Japan Society of New Testament Studies has published its own annual journal, the *Shinyakugaku Kenkyū,* since 1973.

Perhaps the most significant issue confronting NT scholars in Japan today is the christological question. In the main, four views compete for attention. K. Tagawa, in his book *Genshi Kirisutokyōshi no Ichi Danmen:Fukuinsho no Seiritsu* (*One Aspect of the History of Early Christianity:The Rise of "Gospel" Literature* [1967]), applied redaction criticism to the gospel of Mark and demonstrated a radical approach to the reconstruction of the historical Jesus. In his view, the Jesus of Mark 1–13 (following Trocmé, he sees these chapters as the original Mark) is a mere man, but a man who befriended the oppressed and sought to liberate them from every kind of demonic oppression, whether social, political, or religious. Angrily opposed to every human authority and establishment, Jesus was basically an anarchist, deliberately seeking the destruction of Judaism as a religious system. The disciples, however, misunderstood his intentions. At the time Mark wrote, they were forming a new religious establishment, this time with Jesus at the center. Mark wrote his gospel to protest against this "rereligionization" of Jesus. The task of the follower of Jesus today, Tagawa maintains, is to "dereligionize" the life and death of Jesus, to live out Jesus' anger, to destroy Christianity.

S. Arai, known for his research on the Nag Hammadi literature, has written two books that relate to the gospels: *Iesu to sono Jidai* (*Jesus and His Times* [1974] and *Iesu Kirisuto* (*Jesus Christ* [1979]. The former focuses on the historical Jesus, the latter on the Christ of faith. In both books he applies a

sociological/existential analysis to the gospel traditions. Like Tagawa, Arai holds that the core of the healing miracle traditions is the behavior of Jesus that liberated socially marginal people from social, political, and religious oppression. But what he sees in the miracle stories and in the kerygma of the "death and resurrection of Jesus Christ" is a mythological expression of the response that Jesus' followers made to his existential challenge. Jesus himself was a man who loved the oppressed as his neighbors and treated them without discrimination. He is "savior" in the sense that he challenged his disciples, and challenges his followers across the centuries, to experience the self-understanding that comes from living with love and fairness in all human relationships. In essence, Jesus calls his followers to existential authenticity through social and political commitment. If Christianity offers this same experience today, there is no reason to call for its destruction.

S. Yagi published his *Shinyaku Seisho no Seiritsu (The Formation of the NT*) in 1963, which divides NT thought into three types: (1) Hebraic, a *heilsgeschichtlich* and eschatological interpretation of the life and death of Jesus; (2) Hellenistic-gnostic, a dualistic interpretation; and (3) agape, representing the experience of oneness with God. According to Yagi, the agape type, though found in relatively late NT strata, is actually closest to the orientation of the historical Jesus since this is preserved in his fragmentary sayings or logia. All his activities can be explained by this agape. All NT thought represents, accordingly, some degree of modification of the agape experience that formed the substance of Jesus' relationships with his neighbors and disciples. This agape experience became explicit for them only through the experience of the resurrection. Consequently, the "religiosity" that led to this experience and interpretation is not peripheral but central. It is noteworthy that Yagi indicates in this book the phenomenon of similar interpretations in other religions, particularly Buddhism. Yagi's Jesus appears, therefore, as the bearer of agape to his contemporaries and to those who meet him in the NT. But one must distinguish between agape and its bearer. For Yagi, Jesus is neither agape nor its sole bearer. He is one bearer of agape among others.

K. Matsunaga's *Rekishi no Naka no Iesuzō* (*Jesus in History*) appeared in 1987 (fully revised and enlarged in 1989). He argues that the uniqueness of "gospel" literature, as revealed by redaction criticism, rests on the fact that each evangelist, while relying on received traditions about the Jesus of the past, presents at the same time the Jesus Christ of the present and the Jesus Christ of the future (i.e., in his second coming). The portrayals of Jesus in each gospel are composed, therefore, of these "three-dimensional" pictures. This three-dimensional portrayal, he maintains, belongs to the essential nature of "gospel" literature and derives from the nature of worship in the earliest churches. Through preaching and sacrament, the earliest churches not only recalled *(anamnesis)* the Jesus of the past but also worshipped Jesus Christ as the Lord of the present and as the One who is to come. This raison d' être of the Christian Church was and is repeated orally in worship and verbally in the gospels. The Jesus traditions took shape primarily in relation to this *anamnesis* and therefore retain a certain amount of historical information. Moreover, the overall picture of Jesus attributed to a given evangelist and his milieu by redaction criticism could not have been a free invention either of the evangelist or of his faith-community, for it was controlled by this *anamnesis.* So even after the sayings of Jesus and the so-called Jesus traditions have been examined critically, Jesus remains unique. He was one who not only proclaimed the coming of the kingdom (community) of God but also embodied what it meant for him in his time and place to live the kingdom life. The resurrection of Jesus entailed for his followers a religious experience in and through which it was revealed to them that the Jesus who had spoken so frequently of the kingdom of God was now to be recognized as the one through whose life and death the kingdom had become available. This is the Christ the Church is responsible to proclaim. If its language is partly mythological, this is not necessarily unfortunate, for myth is the symbolic language humans use when they speak of religious reality. Absolute demythologization means absolute dereligionization.

A concise (but dated) list of bibliographic references can be found in Tomonobu Yanagita's *Japan Christian Literature Review* (1958).

KIKUO MATSUNAGA

BIBLICAL THEOLOGY. See THEOLOGY (BIBLICAL), HISTORY OF.

BICHRI (PERSON) [Heb *bikrî* (בִּכְרִי)]. BICHRITES. A Benjaminite of the period of the united monarchy, designated eight times as the father of Sheba, a dissident from the hill country of Ephraim who inspired a rebellion against David (2 Sam 20:1–22). This constant reference to Sheba as "the son of Bichri" may serve to connect the Sheba uprising with the line of Saul, also a Benjaminite. While Bichri seems to be understood as a personal name, it is a gentilic formation, making it likely that the phrase "son of Bichri" refers, not to an individual, but to a clan. Dalglish (*IDB* 1:437) suggests that this clan should be identified with Benjamin's second son, BECHER (Gen 46:21; 1 Chr 7:6, 8). In v 14 the MT speaks of "the Berites" (*habbērîm;* note the use of the definite article identifying a clan rather than an individual) as a group which followed Sheba in revolt against David. This is probably a mistake for "the Bichrites" and is so translated in the RSV. McCarter (*2 Samuel* AB, 428) suggests that "the Bichrites" *(habbikrîm)* is the correct reading, following LXX^B. If this is the same group which is everywhere in the chapter related to Sheba, then "Bichri" clearly refers to a clan rather than to a person. This would also serve to indicate the small scale of Sheba's influence, as he is only able to gather support from his own clan.
SIEGFRIED S. JOHNSON

BIDKAR (PERSON) [Heb *bidqar* (בִּדְקַר)]. Officer *(šālîš)* who accompanies Jehu when he slays Joram, king of Israel (2 Kgs 9:25). It is unlikely that a *šālîš* was the third man in a chariot, as has been conjectured in the past. Where the term is used, it seems to suggest an officer of high rank (2 Kgs 7:2, 17, 19; 10:25; 15:25). The term may stem from the root *šlš* (three) to indicate that the officer was "of the third rank." Bidkar is a personal name in spite of the Syr, which translates it "son of stabbing." (See Gray *Kings* OTL; Hobbs *2 Kings* WBC.)

PAULINE A. VIVIANO

BIGTHA (PERSON) [Heb *bigtā* (בִּגְתָא)]. See MEHUMAN; BIGTHAN.

BIGTHAN (PERSON) [Heb *bigtān* (בִּגְתָן), *bigtānā* (בִּגְתָנָא)]. Guardian of the entrance to King Ahasuerus' private chambers (Esth 2:21, 6:2) (cf. Herodotus 3.77, 118, 120; Loretz 1967; Rüger 1969). With his associate TERESH, he plotted to assassinate Ahasuerus but was exposed by Mordecai (Esth 2:22–23). Such conspiracies by officials close to the king are well attested, Xerxes I (= Ahasuerus?) supposedly having been killed as the result of one (D. S. 11.69.1–2; Ctes. *Persika* 29).

Bigthan (*gabatha*) perhaps renders the Old Iranian name **Bagadāna* "gift of god," a name attested in Aramaic papyri from Egypt in the 5th century B.C.E. (*CAP* no. 17, 1—*bgdn;* reading uncertain) and in the Persepolis Elamite texts (Hallock 1969: no. 1793, 4). For discussion of this name and other proposed etymologies, see Grelot (1972:467 sv bgdn); Mayrhofer (1973:§8.192; 8.218); Hinz (1975:54–55); Kornfeld (1978:101 sv BGDN). Alternatively, Bigthan may be a form of *bigtā* (Esth 1:10), which is perhaps a short form of the Old Iranian name **Baga-dāta* (Hinz 1975:59). This name is attested in long form in the Aramaic papyri from Egypt (*CAP* Nos. 3, 24; 5, 18; 66, 6) and the Persepolis Elamite texts (Hallock 1969:672 sv Bakadada), as well as in Akkadian, Demotic, and Greek. The supposed short form is attested in the Persepolis Elamite texts (Hallock 1969:nos. 1990, 16; 767, 2). On the name **Baga-dāta,* "god given," see Mayrhofer (1973:§8.191; 8.192), Hinz (1975:54–55, 59), Kornfeld (1978:101 sv BGDT).

PETER BEDFORD

BIGVAI (PERSON) [Heb *bigway* (בִּגְוַי)]. Etymology uncertain. Noth maintains Persian derivation (*IPN* 64). From Elephantine (Papyri 30.1; 32.1), a governor of Judah (410–407 B.C.E.) is named Bagohi (Aram *bgwhy*).

1. One of the leaders of the group of returnees from Babyonian exile who is listed along with Zerubbabel in Ezra 2:2=Neh 7:7=1 Esdr 5:18. One name has apparently been dropped from the Ezra list, for those in Nehemiah and 1 Esdras include twelve leaders in what is probably a symbolic representation of all Israel throughout the entire postexilic period (Ackroyd *Chronicles, Ezra, Nehemiah* TBC, 219; Coggins *Ezra and Nehemiah* CBC, 18). For further discussion, see AKKUB.

2. Head of a family of Babylonian exiles who are listed as returnees under the leadership of Zerubbabel and others (Ezra 2:14=Neh 7:19=1 Esdr 5:14) and later under Ezra (8:14=1 Esdr 8:40). The leader of the clan affixed the family name to the covenant document of Nehemiah in Neh 10:17—Eng 10:16. For further discussion, see ATER.
CHANEY R. BERGDALL

BILDAD (PERSON) [Heb *bildad* (בִּלְדַּד)]. One of Job's three "friends" who had traveled to condole with and comfort him (Job 2:11). On his place of origin, see SHUAH. In the literary cycle of debates that forms the core of the book of Job, Bildad is consistently the second friend to speak in each round:in chap. 8 (round no. 1) he addresses the subject of God's justice, concluding that God will not reject a "blameless man" (v 20; cf. 1:1); and in chap. 18 (round no. 2) he reiterates the conventional platitude that "the light of the wicked is extinguished" (vv 5–6; cf. Job's response in 21:17). In chap. 25 Bildad's speech is surprisingly brief (only 5 verses), leading virtually all scholars to conclude that the present text of Job suffers from some dislocations in round no. 3 of the debate. For example, some scholars suggest that Job's words in 26:5–14 (which echo much of the same imagery in chap. 25) are actually parts of Bildad's now fragmented third speech. See JOB, BOOK OF.

Given the Arabian locale and the Neo-Babylonian setting of the book of Job (see UZ), it seems unlikely that the name is derived from Amorite **yabil-dāda* (Albright 1928) or Nuzi-Akkadian *bil-adad* < *apil-adad* (Speiser 1929). The name Bildad is most probably a *qtll*-formation. Since no names from the root *bld* are known, either in Aramaic, Canaanite, or epigraphic ancient Arabian, it is possibly a corruption or a phonetic variant (due to the frequent *r/l* interchange) of the name **birdād,* attested for Sabaic and among the Qedarites in the 7th century B.C. (Knauf 1985:6, n.28).

GARY A. HERION

BILEAM (PLACE) [Heb *bilʿām* (בִּלְעָם)]. A levitical town located in the territory of Manasseh (1 Chr 6:70). It is probably a variant form of IBLEAM, and therefore to be associated with Tell Belʿameh (M.R. 177205).

BILGAH (PERSON) [Heb *bilgâ* (בִּלְגָה)] Var. BILGAI. Bilgah appears as a name for an individual only in 1 Chronicles and Nehemiah. 1 Chronicles identifies a priest Bilgah as a contemporary of David. Three priestly Bilgahs appear in Nehemiah. Yet the presence of Bilgah in the reign of David represents an anachronism on the part of the Chronicler. Two of the three references in Nehemiah occur in artificial lists

constructed by the editor of the book (see nos. 2 and 4). Historically, the name seems to represent a priestly clan from Judah during the Persian period (see no. 3). Literarily, the name functions to legitimate the Chronicler's portrayal of the history of Judah.

1. A priest who received the fifteenth position in the priestly order of the temple during the reign of David (1 Chr 24:14). Rather than a historical person from the time of David, Bilgah seems to represent a priestly family within the Second Temple period that the Chronicler has projected back into the time of David as an individual (see no. 3 below). The exact date of the priestly list of 1 Chr 24:1–19, where Bilgah appears, remains debated. See GAMUL (PERSON). The stylistic evidence of the list, however, seems to link the list to the time of the composition of Chronicles (ca. 385 B.C.E.).

2. A priest who purportedly returned from exile in Babylon with Zerubbabel (Neh 12:5). The absence of Bilgah from the list of Ezra 2 = Neh 7 and the artificial nature of the list of Neh 12:1–7 (Williamson *Ezra-Nehemiah* WBC, 359–62) suggest that Bilgah arises in Neh 12:5 as a result of the editorial reworking of the Nehemiah Memoir, rather than reflecting a historical person involved in the return. The Chronicler further legitimates the priestly structure of his day by including Bilgah in the return with Zerubbabel, and thereby involved this priestly family in the *golâh* community from the resumption of the cult.

3. The family name of the priest Shammua from the time of Jehoiakim the high priest (ca. 500–450 B.C.E.; Neh 12:18). The presence of Bilgah as a family name for a priestly group most likely originated in an authentic historical source (Williamson *Ezra–Nehemia* WBC, 358–61). The exact provenance of Bilgah remains unknown and conjectural, although he must have lived before 475 B.C.E. His absence from authentic lists of returnees in Ezra–Nehemiah suggests that his inclusion in the *golâh* community occurred after the return of the exiles from Babylon. His presence early in this period may indicate that Bilgah represents either a priestly clan that remained in Judah throughout the 6th century B.C.E. or a clan that began their priestly function after the return. If so, the Chronicler's anachronistic inclusion of Bilgah in other important events of the history of the temple represents the attempt to legitimate the priestly structure of the Chronicler's era.

4. A priest who signed a document that forbade intermarriage between Judeans and other ethnic groups, ensured the observation of Sabbath, and provided for the maintenance of the temple and its staff (Neh 10:9—Eng 10:8). While some commentators have thought the signees reflect authentic historical persons from the time of Nehemiah (Rudolph *Esra und Nehemia* HAT, 173–75), the names of Neh 10:2–27—Eng 10:1–26 seem to represent "an artificial literary compilation, based on other material in Ezra and Neh" (Williamson *Ezra–Nehemiah* WBC, 329). "Bilgah" functions anachronistically in Nehemiah 10 in order to emphasize the involvement of all Judah in reforms initiated by Nehemiah, and thereby legitimates Nehemiah's policy.

JOHN W. WRIGHT

BILGAI (PERSON) [Heb *bilgay* (בִּלְגַי)]. A postexilic priest and a signatory to the code of Nehemiah (Neh 10:8). He is identified by some scholars with Bilgah (Heb *blgh*), who is listed as one of the chief priests who returned to Jerusalem with Nehemiah (Neh 12:5, 18; see M. Newman *IDB* 1:438; Brockington *Ezra, Nehemiah, Esther* NCBC, 179). If this is so, then Bilgai (meaning "cheerfulness") may be a hypocoristic shortening of Bilgah (Brockington NCBC, 179).

FREDERICK W. SCHMIDT

BILHAH (PERSON) [Heb *bilhâ* (בִּלְהָה)]. Handmaid of Rachel and mother of Dan and Naphtali (Gen 30:3–8; 1 Chr 7:13). Bilhah was given to Rachel by Laban (Gen 29:29) as a wedding gift. Like Sara some years earlier (Gen 16:2), when Rachel discovered her barrenness, she bestowed Bilhah upon her husband Jacob that she might bear children in Rachel's place. This practice was common and has been verified by the Nuzi documents. There a childless wife gave to her husband a secondary wife who might bear a son, who would become the heir and would be regarded as the son of the true wife (Gordon 1940). Since the Nuzi texts date from the patriarchal period and represent Hurrian customs, it can be assumed it was not an unusual practice for Sara, though quite strange in view of Mosaic law and later practices. For Rachel,

Bilhah bore Dan and Naphtali (Gen 30:3–8; 35:25; 46:23–25). Later, Reuben, Jacob's firstborn by Leah, lay with his stepmother Bilhah (Gen 35:22) and consequently lost his father's blessing (Gen 49:3–4). For further discussion, see Speiser *Genesis* AB, 226–27.

JOEL C. SLAYTON

BILHAH (PLACE) [Heb *bilhâ* (בִּלְהָה)]. Simeonite town within the Judean Negeb (1 Chr 4:29). See BAALAH #2.

BILHAN (PERSON) [Heb *bilhān* (בִּלְהָן)]. The name of two men in the OT.

1. A clan name in the genealogical clan list of Seir the Horite. This person is referred to in Gen 36:27 (where some mss of the Sam. Pent. have *bil*ʿ*ān*) and in the matching genealogy in 1 Chr 1:42 as the first son of the clan chief EZER, and is thus a grandson of Seir. The ending -an on the name Bilhan and that of his brothers ZAAVAN and JAAKAN may reflect a tribal or clan designation or a dialectical identifier.

2. A son of JEDIAEL, and grandson of Benjamin in the genealogical clan list in 1 Chr 7:10. He is the father of JEUSH, BENJAMIN, EHUD, CHENAANAH, ZETHAN, TARSHISH, and AHISHAHAR. The suggestion has been made, however, that 1 Chr 7:6–11 more properly belongs to the genealogical list of Zebulun. In any case, several sources (genealogies and census lists) may have been used to produce this passage. For further discussion, see ICC and AB commentaries on Chronicles.

VICTOR H. MATTHEWS

BILSHAN (PERSON) [Heb *bilšān* (בִּלְשָׁן)]. One of the leaders of the group of returnees from Babylonian exile who is listed along with Zerubbabel in Ezra 2:2=Neh 7:7=1 Esdr 5:8. The name, etymologically, is possibly an equivalent of Akkadian *Belšunu* (Noth *IPN* 63). For further discussion, see AKKUB and BIGVAI.

CHANEY R. BERGDALL

BIMHAL (PERSON) [Heb *bimhāl* (בִּמְהָל)]. Found in the genealogy of Asher (1 Chr 7:30–40), which preserves the "heads of fathers' houses, approved, mighty warriors, chief of the princes." Listed as a great-great-grandson of Asher, Bimhal, whose name means "son of circumcision," is highlighted as a leader among the sons of Asher, which, "enrolled by genealogies, for service in war," numbered 26,000 men. Since the Chronicler devotes limited attention to the genealogy of Asher, perhaps because the tribe was a lesser one, having originated from the Jacob-Zilpah union (cf. Gen 46:17–18), little is known of Bimhal. That his father was Japhlet and his brothers were Ashvath and Pasach is clear enough. Information regarding Bimhal's family, however, is no more plentiful than that available concerning Bimhal. That Bimhal was a warrior of significant military importance may be safely assumed.

J. RANDALL O'BRIEN

BINDING AND LOOSING. In the gospel of Matthew reference is twice made to a power of binding and loosing: Matt 16:19, where the power is given to "Peter," and Matt 18:18, where it is entrusted to the "disciples," a group identical with the twelve in Matthew. A parallel saying can be found in John where, on the day of the resurrection, the risen Jesus confers the Holy Spirit upon the disciples and says, "If you forgive the sins of any, they are forgiven; if you retain the sins of any, they are retained" (John 20:23). This Johannine logion does not, however, contain the verbs *deo* and *luo,* which appear to have a technical meaning in Matthew.

A. Analogies

Virtually all commentators note that the verbs are the Greek equivalents of the Aramaic *ʾasar* (Heb *ʾasar*) and *šerî* (Heb *hiṭṭîr*), terms commonly found in rabbinic writings. Hence, there has been a tendency among interpreters to find an analogy for the Matthean expression in rabbinic usage. Support for this mode of interpretation can be found in the exceptionally strong Semitic coloration of Matt 16:16–19 (the expressions "flesh and blood," "Bar Jona," "church" [*ekklesia*] with an apparent allusion to the *qahal,* etc.)

Apart from confessional disputes apropos the use made of Matt 16:16–19 in Roman Catholicism, where the passage is typically cited as *the* scriptural warrant for the authority of the papacy, the power of binding and loosing is a crux for NT interpretation. In an effort to understand Matthew's terminology, most commentators exploit later rabbinic usage, including that found in the targumic material, where the expressions "to bind" and "to loose" are often found (e.g., *Ig. Ps.-J.* Gen 4:7; *Tg. Neof.* Gen 4:7). Accordingly, binding and loosing are often interpreted (Mantey 1981; Bornkamm 1970; Manns 1983) as declarative authority in doctrinal and disciplinary matters. Christian leadership has the power to interpret and enforce what God has already decreed. By conferring the power to bind and loose upon church leadership, Jesus authorizes it to interpret the Scriptures and establish norms for Christian behavior, the Christian *halakah.* Some authors (e.g., Bornkamm and E. Schweizer) would make a distinction between the meaning of the expression in Matt 16:19 and its meaning in 18:18, interpreting the former as a *teaching* authority and the latter as a *disciplinary* authority.

On the other hand, binding and loosing are often interpreted as the power to ban members from the community and to readmit them. Sometimes this notion is combined with the disciples' authority to establish a Christian *halakah.* Thus church leadership has both the authority to determine forbidden and permitted conduct and to exclude members from the congregation.

Alternatively, binding and loosing are interpreted as the authority to release a person from some sort of vow (Falk 1974) or, especially on the basis of the analogy with John 20:23, as a power either to forgive sins (Emerton 1962) or to affect the consequences of sin (H. W. Basser). R. H. Hiers (1985), drawing attention to NT (e.g., Mark 3:27) and Hellenistic Jewish (e.g., Tob 3:17; 8:3) usage of *delein* ("bind") and *luein* ("loose") in regard to demonic possession, interprets Matthew's expressions of the apostolic commission to exorcise demons (Mark 3:14–16, etc.).

J. D. M. Derrett (1983) has attempted to clarify the NT expression by appealing to a modern Arabic phrase and practice whereby groups of people, capable of being determined *ad hoc* and somewhat independent of the authoritative opinions of the muftis, resolve the doubts troubling a community and exercise a quasi-judicial function by determining what is allowed or forbidden. They are those "who are competent to loose and bind [*mi-man bi yadihim al-ḥall waʿl-rabṭ*]." Such groups would be formed to make decisions with regard to contracts, vows, and banishment, but their competence would not be limited to these matters alone.

B. Matthew

Matthew introduces "binding" and "loosing" in his gospel without further explanation, thereby suggesting that the practice to which these expressions refer was known to his community. Since Josephus writes of the Pharisees' power to loose and bind (*luein kai desmein; JW* 1 §111), it is likely that the primary interpretive analogue is to be sought within contemporary rabbinic practice. Within Matthew's community the Scriptures were midrashically interpreted (e.g., Matt 1:22) and an appropriate *halakah* was established (e.g., Matt 5:21–48). Thus it is probable that the practice to which the Matthean "binding and loosing" refers is the interpretation of the Scriptures and the determination of an appropriate Christian way of life.

Both of Matthew's references to bind and loose are in passages proper to his gospel. There are significant differences between them insofar as the first (Matt 16:19) is formulated in the singular *(ho)* and forms part of a Jesuanic logion addressed to Peter, while the second (Matt 18:18) is formulated in the plural *(hosa)* and is directed to the disciples (cf. Matt 18:1). In its present context, the latter is clearly the work of Matthew, the redactor. Bultmann viewed it as a later variant of the saying in 16:19. The logion of Matt 18:18, appended to a short pericope on church discipline (18:15–17), expresses a significant element

of Matthew's ecclesiology, namely, that what is done within the Church, on Jesus' authority, is sanctioned by God (heaven).

The ecclesiastical saying of Matt 16:19 has a postresurrectional provenance. In origin, it belongs to a body of NT sayings in which the risen Jesus commissions his disciples not only to proclaim his message but also to exercise some authority over the faithful. The NT tradition preserves the memory of Peter's role as the first witness to Jesus (1 Cor 15:5; Luke 24:34; cf. John 21:15–17; Mark 16:7). Matthew does not explicitly cite the tradition of an appearance of the risen Jesus to Peter. He does, however, have a tendency to retroject into his sketch of Jesus' ministry elements which are postresurrectional. It is therefore likely that the binding and loosing saying in Matt 16:19—in context, an explanation of the power of the keys—is an element of Matthew's version of the postresurrectional commission of Peter, but scholars dispute among themselves as to the extent to which Matt 16:16–19 represents Matthew's own formulation and the extent to which it represents pre-Matthean tradition.

In the final redaction of the gospel, both uses of the binding and loosing saying are explicitly linked to the Church (cf. Matt 16:18 and 18:17, where the only explicit uses of *ekklēsia-church* in the canonical gospels are to be found). Matthew's Peter somehow represents the Church, but so, too, do the disciples. Hence, the power to bind and loose is attributed both to Peter and to the disciples. The binding and loosing logion ultimately speaks of the authoritative interpretation of the Scriptures within Matthew's community, the Church.

RAYMOND F. COLLINS

BINEA (PERSON) [Heb *bin‹ā›* (בִּנְעָא)]. Son of Moza, a descendant of King Saul from the family of Benjamin, according to 1 Chr 8:37 and 9:43. The etymology of the name is very unclear. The final *›alep* [›] is relatively rare in biblical preexilic names (cf. Amasa [*‹amasa›*]), although its frequent attestations in the Samaria Ostraca (Lemaire 1977:47–55) and in the El-Jib jar handles (Demsky 1971:21) indicate that it was in use in the preexilic period. This *-ā›* ending is used in abbreviated forms of theophoric names (*IPN* 38; *TPNAH* 159–67). However, if this is the case with Binea, there is no clear etymology from the remaining letters *bn‹*. Alternatively, the element Bin-[*bin*] may be seen as a prefix for "son of," as in the name Benjamin. This type of name is very rare in the Bible, but is attested to outside the Hebrew Bible (Milik 1956). However, it is difficult to understand the name as "son of *‹a›,* since the meaning of the

element ‹*a*› is not known. Perhaps the name should be emended with most manuscripts of the LXX to Baana (h) [*ba‹ănâ* or *ba‹ănā*›] (*Chronicles* HAT, 80), which is well attested to and has a clear etymology. A few mss (Syr, Ar) have *kin‹ā*›.

In the genealogies, Binea appears after Alemath and Moza, both of which are city names used as personal names (Demsky 1971; see ALEMETH and MOZA), but no city by the name of Binea is known. Perhaps an original Beth Anatot [*byt ‹ntt*] became abbreviated and corrupted to Binea [*bn‹*›]. Binea appears in the genealogy at a juncture of two types of genealogical formulae; those preceding are introduced by *hôlîd*, "begot," while those that follow use *bĕnô,* "his son," though the exact significance of this difference is elusive. On the doubling of the Benjamin genealogy in 1 Chr 8 and 9, see AHAZ.

MARC Z. BRETTLER

BINNUI (PERSON) [Heb *binnûy* (בִּנּוּי)]. Var. BELNUUS. A short form of the name BENAIAH ("Yahweh has built"), often confused with (or substituted for) BANI, another name popular in levitical circles during the postexilic period.

1. Binnui, the father of one Noadiah, a Levite under Ezra charged with weighing in the gold and silver temple vessels as they arrived in Jerusalem (Ezra 8:33). In the RSV, Binnui appears in the parallel text of 1 Esdr 8:62—Eng v 63 as a harmonization of the Greek, which reads Sabannus. Also, in this parallel Greek text, Binnui (i.e., Sabannus) is recorded as the father of Moeth rather than Noadiah (as in Ezra 8:33). For a discussion of this issue, see NOADIAH #1.

2. One of the sons of Pahath-Moab, who had taken a foreign wife (Ezra 10:30). In the 1 Esdras 9 parallel list, the name Belnuus appears instead of Binnui (v 31).

3. The ancestor of a group of men listed in the inquiry concerning those who had married foreign wives (Ezra 10:38; 1 Esdr 9:34). The RSV reading represents a modification of the Hebrew "and Bani and Binnui" on the basis of the LXX reading:"the sons of Banoui."

4. A member of the levitical family group descended from Henadad. To be "son" to someone in Hebrew can mean either (a) the immediate son or male offspring, (b) a descendant, or (c) a member in a larger social group, such as a family, clan, or tribe. Because Binnui is described as "of the sons of Henadad" in Neh 10:10—Eng v 9, it may be better to see him as a member of a larger family group descended from Henadad, rather than as the immediate offspring of Henadad. This Binnui was charged with repairing a section of Jerusalem's wall under Nehemiah (Neh 3:24). This same name has probably been corrupted to BAVVAI, the son of Henadad, in Neh 3:18, as other mss attest. The same Binnui, the son of Henadad, is found in Neh 10:10—Eng v 9 as one of those setting his seal to Nehemiah's covenant.

5. Neh 7:15 reads Binnui in the list of returning exiles where the parallel passage in Ezra 2:10 reads Bani. Either the one is a corruption of the other, or the two names have been used interchangeably for the same person.

6. One of the Levites under Zerubbabel (Neh 12:8). This Binnui may be identical with the Bani of Neh 9:4–5, since both names occur in the series—Jeshua, Bani/Binnui, Kadmiel. The presence of Bunni (another variation on Benaiah) in Neh 9:4, however, confirms the popularity of these shortened variations on the name Benaiah in levitical circles in the postexilic period. The conjectured presence of Binnui in the series Jeshua … Kadmiel in Neh 12:24 (Heb:*yēšûa‹ ben-qadmî›ēl*) could as well be Bani:there is no textual reason to prefer the one over the other, and the possibility remains that they were the same person.

D. G. SCHLEY

BIOGRAPHIES, EGYPTIAN. See EGYPTIAN LITERATURE (BIOGRAPHIES).

BIOGRAPHY, ANCIENT. The question of the genre of the gospels has made this topic a matter of interest to modern scholars. A discussion of ancient biography must begin with those writings that call themselves "lives" (Gk *bioi;* Lat *vitae*) and seek to discern what it is that holds them together as a literary group. Modern study of ancient biography may take its cue from what the ancients said about the distinction between history and biography (Polybius 10.21.8; 16.14.6; Cornelius Nepos *Pel.* 16.1.1; Plut. *Vit. Alex.* 1.2–3; *Pomp.* 8) but its conclusions cannot be based upon that alone. Genre is a descriptive, not a prescriptive, category (Perry 1967:20). Furthermore, ancient theorists are notoriously unreliable from our modern perspective. They did not discuss entire genres, like romance, and when they did theorize, they often violated their theory in practice (Horace is an example). At the same time, therefore, that one is sensitized by the ancients, one must test their descriptive efforts against one's own inductive approach from the extant texts (Vivas 1968:97–105).

References in ancient literature to biographies not now extant, as well as fragments of numerous "lives" found among the Oxyrhynchus and Herculaneum papyri, show the paucity of the extant remains of the Mediterranean biographical tradition. Nevertheless, a sizable body of such material is available, including Greco-Roman, Jewish, and Christian "lives." Some of these biographies circulated singly, others in collections.

Greco-Roman "lives" circulating alone that are extant in significant portions include:Satyrus, *Life of Euripides* (3d century B.C.E.); Andronicus, *Life of Aristotle* (ca. 70 B.C.E.), the substance of which is probably to be found in the *Vitae Aristotelis Marciana* (Momigliano 1971:86–87); Nicolaus of Damascus, *Life of Augustus* (1st century B.C.E.); Tacitus, *Life of Agricola* (98 C.E.); the anonymous *Life of Aesop* (2d century B.C.); the anonymous *Life of Secundus* (2d century C.E.); Lucian, *Life of Demonax, Life of Alexander,* and *Passing of Peregrinus* (ca. 180 C.E.); Philostratus, *Life of Apollonius of Tyana* (216 C.E.); Porphyry, *Life of Pythagoras* and *Life of Plotinus* (3d century C.E.); Ps-Callisthenes, *Life of Alexander* (ca. 300 C.E.).

Certain Jewish and Christian "lives" also circulated alone. Philo, *Life of Moses, On Abraham,* and *On Joseph* (ca. 25 B.C.E.) are Jewish biographies circulating outside a collection of "lives." Examples from the numerous Christian "lives" circulating individually include:Pontius, *Life of Cyprian* (259 C.E.); Eusebius, *Life of Constantine* (early 4th century C.E.); the anonymous *Life of Pachomius* (4th century C.E.); Athanasius, *Life of Anthony* (357 C.E.); Jerome, *Life of Paul, the Hermit* (376 C.E.) and *Life of Malchus* (386 C.E.); *Life of Hilarion* (391 C.E.); Sulpicius Severus, *Life of Martin of Tours* (397 C.E.); Paulinus of Milan, *Life of Ambrose* (400 C.E.); Palladius, *Life of Chrysostom* (408 C.E.); Hilary, *Life of Honoratus* (431 C.E.); Ennodius, *Life of Epiphanius* (503 C.E.).

Greco-Roman collections of "lives" include:Cornelius Nepos, *Lives of Great Generals* (1st century B.C.E.); Plutarch, *Parallel Lives* (100 C.E.); Suetonius, *Lives of the Twelve Caesars* (120 C.E.) and *Lives of Illustrious Men* (110 C.E.); Diogenes Laertius, *Lives of Eminent Philosophers* (3d century C.E.); *Scriptores Historiae Augustae* (3d–4th centuries C.E.). The anonymous *The Lives of the Prophets* (1st century C.E.) is a Jewish collection of brief sketches of the "lives" of the prophets. Jerome's *Lives of Illustrious Men* (4th century C.E.) offers an example of a Christian collection.

Although there is no great uniformity in these writings that designate themselves "lives," it is still possible to discern what is essential and what is accidental to ancient biography. It is constitutive of ancient biography that the subject be a distinguished or notorious figure (kings, generals, philosophers, literary figures, lawgivers, prophets, or saints) and that the aim be to expose the essence of the person. Lucian, *Demonax* (67) puts it succinctly:"These are a very few things out of the many which I might have mentioned, but they will suffice to give my readers a notion of the sort of man he was." This constitutive feature becomes clear when biography is compared with history in antiquity. Whereas history focuses on the distinguished and significant acts of great men in the political and social spheres, biography is concerned with the essence of the individual. This difference may be seen at two points where history most nearly approaches biography. The first is the historical monograph which concentrates primarily on one individual. In Sallust's *Catiline* and *Jugurtha* the aim is not to set forth the individuals' essence but to

narrate political events with which these two individuals were associated. The second is the incorporation of biographical material into a historical record. In Dio Cassius' *Roman History* (45–56) biographical material about Augustus is incorporated into a history of Rome. The very inclusion of this material in a historical context changes its aim from concern with Augustus' individual essence to his place in a social and political process. The same thing happens when Eusebius incorporates material from his earlier *Apology for the Life of Origen* into his *Ecclesiastical History* (6). Biography is interested in what sort of person the individual is, the subject's involvement in the historical process being important only insofar as it reveals his essence. Whereas history attempts to give a detailed account in terms of causes and effects of events, biography presents a highly selective, often anecdotal, account of an individual's life with everything chosen to illuminate his essential being. Ancient biography consists of information about a significant person, selected so as to reveal what sort of person the subject really was.

Having stated what is essential to ancient biography, it remains to describe what is accidental to it. First, it is incorrect to describe ancient biography as an account of the life of an individual from birth to death. Some biographies begin with the hero's mature life (e.g., Nepos, *Milt., Ar.,* Paus.); others may begin with the subject's birth and stop before his death (e.g., Nicolaus of Damascus, *Life of Augustus,* which ends with Augustus' entrance into the Civil War). How much of a subject's life is described varies. All that is necessary is that enough be given to satisfy the author that the essence of the person is revealed.

Second, the distinctiveness of the hero as an individual was assumed to appear not only in his deeds but also in insignificant gestures or passing utterance (Plut. *Alex.* 1; *Dem.* 11.7). Given this fact, it is difficult to exclude Plutarch's collections of sayings, such as "Sayings of Kings and Commanders," from the *bios/vita* genre. Indeed, in section D, Plutarch says:"their pronouncements and unpremeditated utterance … afford an opportunity to observe … the working of the mind of each man." In this and his other three collections of sayings one finds a series of materials that look like pronouncement stories, a brief narrative framework within which is set a saying. There is just enough of an event to allow the saying to reveal the individuality of the speaker.

Third, there is virtually no interest in tracing personality or character development. The essence of the person was not examined in its chronological development but only as a fixed constituent in a "life" (Stuart 1928:178). Consequently, many ancient "lives" are only loosely chronological, being more often than not largely topical or logical in their arrangement (Russell 1973:115).

Fourth, some biographies have as their aim to affect the behavior or opinions of their readers either positively (Plutarch) or negatively (Lucian, *Alex.*); others seem to have no overtly propagandistic agenda (Laertius). When such "lives" seek to affect the readers' behavior positively, this is often described in terms of imitation (Plut. *Per.* 21.4; Tacitus *Agr.* 46). The imitation of noble examples as understood in ancient biography is not to be regarded as a blind and unthinking repetition of acts performed by some great man in the past. It meant learning from a great exemplar the way to order one's life and then, without necessarily performing the same actions, to emulate what sort of person he was (Plut. *Aem.* 1; *Cim.* 2.3–5) (Gossage 1967:49).

Fifth, the "life" of a subject may be described in mythical terms (Plut. *Rom.*; Seut. *Aug.;* Philostr. *VA;* Ps-Callisthenes, *Alexander*) or may be devoid of myth. Most biographies that employ myth in the description of their hero treat founders of cities, empires, religions, and schools.

Sixth, the literary form in which "lives" are presented varies. The dominant form is a prose narrative similar to history except that it is anecdotal and unconcerned about cause and effect. Most Greco-Roman, Jewish, and Christian biographies fit into this category. Its roots seem to be in Xenophon's *Memorabilia,* or memoirs of Socrates. This, however, cannot be considered the only form of ancient biography. Satyrus' *Life of Euripides* is in the form of a dialogue with at least three speakers, of whom Diodorus and Eucleia are named. The roots of this form of biography seem to be in the Platonic dialogues that deal with Socrates (e.g., *Phaedo*). Christian adaptations of the same form may be found in Palladius' *Dialogue on the Life of Chrysostom* and in Sulpicius Severus' *Dialogues on the Life of St. Martin* in which a two-day conversation among three friends centers on Martin's life. Yet another form in which biography appears in antiquity is the encomium, a speech praising its subject (Eusebius, *Life of Constantine;* Gregory

Thaumaturgos, *Panegyric to Origen;* Hilary, *Sermon on the Life of Honoratus*). The roots of this form may be found in Isocrates, *Evagoras,* and Xenophon, *Agesilaus.* If the collections of sayings like Plutarch's "Sayings of Kings and Commanders" are also granted a place in the ancient biographical tradition, then one finds at least four literary forms in which biography may appear in the Mediterranean world.

Seventh, ancient biographies perform a multiplicity of social functions. Some apparently had only a literary aim (e.g., Laertius). Others seemed to serve a propagandistic purpose of some sort. Within this overall didactic orientation a number of more specific functions can be identified. (1) Certain "lives" portray the subject as an ideal figure so the readers will accept his authority (Nicolaus of Damascus, *Life of Augustus*) or imitate his way of life (Nepos, *Ep., Ag.;* Lucian, *Demon.;* Pontius, *Life of Cyprian;* Athanasius, *Life of Anthony;* Paulinus of Milan, *Life of Ambrose*). Lucian states his aim in an exemplary fashion:"It is not fitting to tell of Demonax … that young men of good instincts who aspire to philosophy may not have to shape themselves by ancient precedents alone, but may be able to set themselves a pattern from our modern world and to copy that man, the best of all the philosophers whom I know about" (*Demon.* 2). Although the form is that of a history-like narrative, the spirit of the encomium is felt in these "lives."

(2) Other "lives" aim to defend the subject against misunderstanding either by his followers or by outsiders, so that his true self may be seen and his influence exerted (Tacitus, *Agricola;* Philostratus, *Life of Apollonius;* Palladius, *Life of Chrysostom;* Jerome, *Life of Malchus*). Here three of the examples employ the history-like narrative form while the fourth, Palladius, uses the form of a dialogue. The spirit in all four examples is akin to that in Xenophon's *Memorabilia,* where Socrates is defended, and in Isocrates' *Busiris,* where the king is defended against calumny.

(3) Still other ancient biographies intend to discredit the subject by means of exposé (Lucian's *Alexander the False Prophet* and *Peregrinus;* also in Suetonius' *Lives of the Twelve Caesars* one finds profound censure of men who, far from measuring up to the ideal, exemplify its opposite).

(4) Another social function of didactic biographies in antiquity seems to be to indicate where the true tradition is in the present (Bickerman 1952:49). This is found first of all in "lives" of founders of philosophical schools that contained within themselves not only a life of the founder but also a list or a brief narrative of his successors and selected other disciples (an "a + b" form). In Diogenes Laertius certain "lives" of philosophers reflect this pattern. There is "a" the life of the founder, followed by "b" a brief list or narrative of his successors and selected other disciples, followed by "c" an extensive statement of the teaching of the philosopher (Aristippus—Life: 2.65–84; Pupils: 2.85–86; Teaching: 2.86–104; Plato—Life: 3.1–45; Pupils: 3.46–47; Teachings: 3.47–109; Zeno—Life: 7.1–35; Successors and other disciples: 7.36–38; Teachings: 7.38–160; Pythagoras—Life: 8.1–44; Successors: 8.45–46; Teachings: 8.48–50; Epicurus—Life: 10.1–21; Successors and other disciples: 10.22–28; Teachings: 10.29–154). Examination of Laertius' references to the sources for these "lives" shows that the material in "c" comes from a different origin than that in "a + b." This permits the inference that Laertius took over individual biographies that were written in terms of the "a + b" pattern and added the "c" component himself.

Such an inference is supported by three strands of early evidence. First, one of the four different works of Aristoxenos, all of which dealt with Pythagoreanism, was "The Life of Pythagoras and His Associates" which contained a biography of Pythagoras and a history of the Pythagoreans in chronological order (Fritz 1940:22, n. 35). Second, Herculaneum papyrus 1018 treats the Stoic succession. At four points the life of a teacher is followed by a discussion of his disciples. This is sometimes just a list of names; at other points it consists of anecdotes about them (Traversa 1952:xiii–xiv). Third, a pre-Christian biography of Aristotle included within itself both a claim that Aristotle was the successor of Plato and an anecdote about Aristotle's selection of a successor to himself (Düring 1957:465–66; 345–46). Taken together, this evidence establishes the existence of individual "lives" of founders of philosophical schools that contained within themselves not only the biography of the founder but also a narrative, however brief, about his successors and selected other disciples.

Just as Christian biography went to the classical period for its models in other cases, so here as well. In the *Life of Pachomius* one finds a Christian appropriation of this type of ancient biography. It is fitting because this "life" deals with the founder of cenobitic monasticism and with his successors in the community. The early part of the biography deals with the career of Pachomius. In chap. 117 he appoints Orsisius to succeed him, using language that may be regarded as the technical terminology of succession. In the sections that follow the narrative tells what Orsisius did and said (118–129), zealously emulating the life of Pachomius (119). Then Orsisius appoints Theodore (130). In the sections that follow one learns what Theodore did and said.

A second Christian example of this type of biography is Hilary of Arles's *Sermon on the Life of St. Honoratus.* Here is an encomium praising the founder of the monastery that fits into the "a + b" type of "life." In chap. 8, Hilary says he is Honoratus' successor and that his task is to do what the founder had done. In all of these examples, the purpose is to say where the true tradition is in the period after the founder.

(5) Yet another social function performed by some ancient didactic biographies is to serve as a hermeneutical tool, either to legitimate the teaching of the subject by showing that his life corresponded with his profession *(Life of Secundus the Silent Philosopher)* or to furnish an interpretative clue for the reading of his works (Andronicus' *Life of Aristotle,* which served to introduce his edition of Aristotle; Philo's *Life of Moses,* which served as an introduction to Philo's *Exposition of the Law* [Goodenough 1933:109–25]; Porphyry's *Life of Plotinus,* which served to introduce the *Enneads*).

If our description of what is essential and what is accidental in ancient biography holds true, then it is possible to say that we are dealing with the biographical tradition in antiquity wherever we meet the concern to depict the essence of a significant person, that is, to expose what sort of person it really is. The great variety of the ancient "lives" results from the multiple combinations of what is accidental to the genre: (1) the extent of coverage—whether from birth to death, from birth to mature life, from mature life to death; (2) the types of material used to expose the soul of the subject—whether preponderantly deeds or words or some balanced combination of them; (3) the kind of organizing principle utilized—whether chronology or logic or some combination of both; (4) the degree of detachment or involvement of the author with his readers—whether detached and descriptive or involved and evaluative; (5) the use or disuse of myth—whether the subject is described in divine terms or is depicted without recourse to language about the gods; (6) the literary form employed—whether a prose narrative akin to history or a dialogue or a speech of praise or a collection of sayings; (7) the social function of the "life" —whether didactic or nondidactic and, if the former, whether to hold the hero up as an authority or an example, to defend him against misunderstanding, to ridicule him by means of exposé, to show where the true tradition is to be found in the present, or to furnish a hermeneutical key for proper interpretation. It is crucial that what is essential and what is accidental be clearly understood. When this is done, it is possible to sense what is shared and what is distinctive in each case. For example, it is possible to say about Hilary's *Life of Honoratus* that it is biographical in its aim to set forth what sort of person this noteworthy Christian was, but that it does by using the form of an encomium, or speech of praise, shaped in such a way that it serves the social function of saying where the true tradition is in the speaker's present.

One of the most vexed areas of discussion in the study of ancient biography is the relation of the early Christian gospels, canonical and apocryphal, to this genre. To date, reluctance to view the gospels as a part of the biographical tradition of antiquity has been largely due to misunderstanding either the gospels or ancient biography. If, for example, the gospels are viewed as *Kleinliterature,* (popular writing without authorial pretensions) and not productions of individual authors, as Schmidt (1923:76) and Bultmann (*RGG³* 2:418–22) proposed, then obviously they are different from biographies produced by self-conscious authors. This view of the gospels, however, has been discarded ever since the emergence of redaction criticism, by which the evangelists as self-conscious authors is assumed. Or if ancient biography is taken as identical with modern biography, then obviously the gospels are different. The gospels, like ancient "lives," however, do not set their hero against the wider historical background of the time as do modern biographies; like many ancient "lives," the gospels do not adhere to a strict chronological order;

like ancient "lives," the gospels are not concerned to trace the personality development of the hero; like many ancient "lives," the gospels do not describe the personal appearance of their subject. The gospels, like some ancient biographies, do tell their story in terms of myth. This tendency to impose upon ancient biographies the qualities of modern ones has been disavowed by all who have worked extensively with ancient "lives." If such misunderstandings are cleared away, then it is possible to view at least some of the early Christian gospels as part of the larger literary scene of antiquity.

Since all of the Christian gospels have as their subject a significant individual and since some have as their aim to indicate what sort of person Jesus is, it is difficult to believe that on first acquaintance the canonical gospels, at least, would not have been considered biographical by Mediterranean readers and hearers (Stanton 1974:135). What is revealed in the narratives about Apollonius, Pythagoras, Moses, or Jesus is the same—the distinctive nature of each (Smith 1975:35). Some of the gospels share with the ancient biographies that which is constitutive for them—to set forth the essence of the subject, that is, what sort of person it is. Some gospels, canonical and apocryphal, manifest a biographical interest in depicting what sort of person Jesus was:the canonical four and the apocryphal gospels like the *Gospel of Peter* and the *Infancy Gospel of Thomas.* The *Protevangelium of James* has a biographical concern but it is for Mary, not Jesus. Parts of the *Epistle of the Apostles* also manifest a biographical interest. Other gospels' concern is not biographical: e.g., the gnostic dialogues like the *Sophia of Jesus Christ,* the *Dialogue of the Savior,* the first part of the *Gospel of Mary,* the *Apocryphon of James,* the *Book of Thomas the Contender,* and the sayings collection, the *Gospel of Thomas.*

The variety among the gospels with a biographical interest matches that of the ancient "lives" and for the same reason. It is due to the multiple ways those things that are accidental to biography are combined. For example, as to form, all of the gospels that possess a biographical character are history-like narratives, not dialogues, encomiums, or collections of pronouncement stories. As to the extent of coverage, the biographical gospels vary greatly. Some, like Matthew and Luke, cover Jesus' life from birth to death; others, like Mark, treat Jesus' life from mature manhood to death; still others, like the *Infancy Gospel of Thomas* and the *Gospel of Peter,* deal with more limited periods of Jesus' life. As to social function, all four canonical gospels and the *Gospel of Peter* find it necessary to correct misunderstanding about Jesus at the same time that they set him forth as the expression and the norm of a community's values. In addition, Luke-Acts shares with certain biographies a concern to say where the true tradition is in the present, even if his sense of the radical difference between apostolic and postapostolic times caused him to eschew use of the typical succession vocabulary. Matthew, moreover, has in common with some "lives" the interest in the hermeneutical relationship of the hero's life and teaching. Only the *Infancy Gospel of Thomas* seems straightforward in its praise of the lad in order to reinforce his authority. Regarding the employment of myth, all tell the story of Jesus in mythical terms, although the specific myth may vary:the Synoptics and the *Gospel of Peter* utilize the myth of immortals, John employs the myth of a descending-ascending redeemer, and the *Infancy Gospel of Thomas* expands the traditional theme of the precocious youth so that Jesus becomes a playful divine boy. Like most of the other ancient biographies that utilize myth, the Christian hero of the gospels is a founder. As with them, sacred time is focused around those events which first brought the community or cult into being. Myth becomes the means of designating this sacred time. In this regard, the Christian biographies of Jesus manifest a distinctive difference from all other "lives," Greco-Roman, Jewish, or Christian, that are not constructed in terms of myth and a remarkable kinship with those other biographies, Greco-Roman and Jewish, that do employ myth in their depiction of their hero's life (Moses, Romulus, Augustus, Apollonius, Pythagoras, Alexander). Given these rather obvious links between certain early Christian gospels and the ancient biographical genre, a growing consensus regards certain ancient "lives" as the closest analogy to the canonical four and perhaps a few other early Christian gospels as well (Cartlidge and Dungan 1980; Farmer 1967; Pleissis 1982; Robbins 1984; Schneider 1977; Shuler 1982; Talbert 1977; Toews 1981; *IDBSup* 370–72).

BIR‹AM, KEFAR. See KEFAR BIR‹AM (M.R. 189272).

BIRDS. See ZOOLOGY.

BIRSHA (PERSON) [Heb *birša‹* (בִּרְשַׁע)]. King of GOMORRAH, (Gen 14:2). Elsewhere in the chap. (vv 8, 10), he appears simply as "the king of Gomorrah." (For the story, see BERA.) The name Birsha, like those of his allies, is a "speaking name" meaning "in wickedness," as befits a king of a sinful city like Gomorrah.

MICHAEL C. ASTOUR

BIRZAITH (PERSON) [Heb K *birzāwit* (בִּרְזָוִת); Q *birzāyit* (בִּרְזָיִת)]. Found in the genealogy of Asher (1 Chr 7:30–40), which lists the "heads of fathers' houses, approved, mighty warriors, chief of the princes." The name is the first addition to the genealogy of Asher found in Genesis 46 and Numbers 26. However, it is unclear whether the name, which means "well of olives" and appears nowhere else in Scripture, represents a person or a place.

If Birzaith is the name of a person, then he is listed as a son of Malkiel, a grandson of Beriah, and a great-grandson of Asher. However, the construction, "the father of Birzaith," could be used here as it is in 1 Chr 2:51, where Salma is listed as "the father of Bethlehem." If Birzaith is taken to be a place name, modern Birzeit north of Tyre offers a possible location of the ancient site.

J. RANDALL O'BRIEN

BISHLAM (PERSON) [Heb *bišlām* (בִּשְׁלָם)]. One of several men who were party to a letter written to King Artaxerxes of Persia (Ezra 4:7=1 Esdr 2:16). The Heb word is thus understood to be a proper name by 1 Esdras (LXX 2:14)—*Bēlemos*—a transliteration Torrey (1908) suggests resulted from the

accidental dropping of the medial *s* by a copyist, and by the Vulgate—*Beselam.* For this proper name various etymologies have been proposed:an abbreviated form of *ben-šĕlām,* "son of peace" (BDB, 122, 143); the Babylonian name *Bel-šallim* or an Aramaic name *Bēl-šalām,* "Bel is peace" (Torrey 1908:244; Gehman NWDB, 119); a corrupted form of *Belshunu,* a governor of the Persian satrapy of Palestine-Syria whose name appears in a cuneiform tablet dated to Artaxerxes' third year (Rainey 1969:58). The LXX translation of this word in Ezra 4:7—*en eirēnē,* "in peace" —rather than understanding *bišlām* as a proper name, perceives it as the Aramaic word *šĕlām* with a *b* prefix. This has given rise to a number of reconstructions and interpretations. Since *šĕlām,* or a form of it, is used elsewhere as a greeting (Ezra 4:17; 5:7; Dan 3:31; 6:26—Eng 6:25) Bowman (*IDB* 3:599), with reservation, and Newman (*IDB* 1:441) conjecture that the word constitutes a salutation of the letter which the men wrote. Rudolph (*Esra und Nehemiah* HAT, 34) views it as a truncated form of *bîrŝalēm* which he renders "against Jerusalem" and which Myers (*Ezra-Nehemiah* AB, 31) construes as "concerning Jerusalem." Garbini (1985:162) reconstructs the word to read *b-śml,* "on the mantel," referring to the covering of a roll (*mtrdd:* Hitqaṭṭel ptcp. from the root *rdd* which he also reconstructs from *mtrdt*) on which the message to the king was written.

BISHOPS' BIBLE. See BIBLE, BISHOPS'.

BIT. See ZOOLOGY.

BITHIAH (PERSON) [Heb *bityâ* (בִּתְיָה)]. A daughter of Pharaoh, married to Mered, a descendant of Caleb son of Jephunneh (1 Chr 4:18—Eng 4:17). It is not sure whether "Pharaoh" should be equated with the Egyptian royal title. The theophoric form of the name, which is made up of *bat* and *yah,* seems to indicate that the person is a worshipper of Yahweh. If so, she could well be a Jewess. See further, *TPNAH* 115.

H. C. LO

BITHYNIA (PLACE) [Gk *Bithynia* (Βιθυνια)]. A district of NW Asia Minor, which formed a kingdom in the Hellenistic period and subsequently a Roman province. It corresponds approximately to the modern Turkish prefectures of Kocaeli (Izmit), Adapazarı, Bolu, Bilecik, and Bursa, and is mentioned in Acts 16:7 and 1 Pet 1:1.

A. Topography

Bithynia is a distinctive geographical and climatic region of Asia Minor. East of the river Sakarya (ancient Sangarios) rise the densely forested mountains of the Black Sea coastal region, broken at intervals by well-watered plains such as those of Düzce and Bolu. The rivers Sakarya and Filyos and their tributaries cut deep gorges through the mountains; their courses are characterized by long, trenchlike valleys running parallel to the coast for considerable distances. West of the lower valley of the Sakarya, wooded hills alternate with fertile plains, which support the cultivation of vines, olives, and grain. The whole region lies at the meeting point between the rainy, mountainous Black Sea coastal region, which formed the heartland of the ancient kingdom of Pontus, and the Marmara region, which experiences less

heavy rainfall and hotter summers on the plains. The Marmara region itself forms a transitional zone between the climates of the Black Sea and the Mediterranean.

The most important feature of the historical geography of Bithynia is the route linking Istanbul with the interior of Asia Minor, by way of Izmit (ancient Nicomedia), Düzce, Bolu (ancient Bithynium/Claudiopolis), and Gerede. This route was important from the Hellenistic period onward through Roman, Byzantine, and Ottoman times; it is still followed by the main road from Istanbul to Ankara.

B. Archaeological Exploration

The history of the modern archaeological and topographical exploration of Bithynia begins with the journey of the Abbé Boré through the region in 1831, en route for the Lazarist missions in Persia. Subsequent work in the 19th century was carried out by a colorful succession of scientists, antiquarians, consular officials, and "topographers," some of the latter with close links to what would now be regarded as military intelligence. These travelers surveyed and described the resources and topography of the region, recorded antiquities, copied inscriptions, and attempted to identify ancient sites. Their work is surveyed in detail by Louis Robert (1980:27–60).

Important work was done by Ainsworth, the geologist of the joint Royal Geographical Society—Society for the Propagation of Christian Knowledge expedition to Mesopotamia in 1839, the German travelers, including H. von Moltke, who provided data for Kiepert's map of the area (1844), the French travelers Xavier Hommaire de Hell (1846), Perrot (1861), and Guillaume, the Germans Körte (1895–99) and Von Diest (1886), and by Gustave Mendel, who catalogued the museum at Bursa (ancient Prusa). Major contributions to the collection and study of the Greek inscriptions of the region have been made in our own generation by F. K. Dörner and Sencer Şahın.

Outside Istanbul itself (ancient Byzantium), excavation has mainly been limited to rescue work in towns such as Izmit. The most noticeable traces of the Greco-Roman period are to be found at Uskübü (ancient Prusias on Hypius) and Iznik (ancient Nicaea)

C. History

1. The Hellenistic Kingdom. Bithynia emerged as a separately identifiable political unit in the period of political confusion after the death of Alexander the Great in 323 B.C. In 297 B.C. Zipoetes proclaimed himself king of the Bithynians (Vitucci 1953:11). Zipoetes was a descendant of a line of local princes who had controlled most of the Izmit Peninsula and lower Sakarya Valley since the late 5th century B.C. and who had never been fully subjugated by the Persians. The Bithynians were a people of Thracian origin with a savage reputation among the Greeks who had planted colonies on the Marmara and Black Sea coasts (Xen. *An.* 6.4.2).

The kingdom of Bithynia lasted until 74 B.C. when Nicomedes IV bequeathed his kingdom to Rome. Detailed narratives are provided by Brandis, Meyer, and Ruge (*PW* 3/1:507–39) and Vitucci (1953). Bithynia's strategic position astride one of the main roads from Europe into Asia and adjacent to the sea route from the Mediterranean to the Black Sea heavily influenced its history in the Hellenistic period. Certain recurring themes stand out in the kingdom's tortuous political history. Persistent territorial conflict with the Greek cities of the region, notably Chalcedon and Heraclea Pontica (modern Ereğli), was matched by the evident desire of most of the kings to be accepted as part of the progressive Greek world. Nicomedes I (ca. 279–260 B.C.) struck the first Bithynian coinage (on the Attic Greek standard) and founded the city of Nicomedia to be his capital. Nicomedia was a fully fledged Hellenistic city of considerable commercial importance; it succeeded the ancient Greek colony of Askakos, destroyed ca. 301 in a war between Zipoetes and Lysimachus, the Macedonian ruler of Thrace. Nicomedes also returned the Greek cities of Kieros (modern Uskübü) and Tieion (modern Filyos), which had been captured by Zipoetes, to the control of Heraclea. Prusias I (ca. 235–183 B.C.), grandson of Nicomedes I, reannexed the two cities to his kingdom, renaming Kieros as Prusias. He also refounded the two cities of Kios (also later renamed Prusias, modern Gemlik) and Myrlea (later renamed Apamea, modern Mudanya), which had been destroyed by his brother-in-law and ally Philip V of Macedon and handed over to him; at the same time he gained control of Chalcedon, on the strategically vital E shore of the

Bosporus. Both Nicomedes I's son, Ziaelas, and Nicomedes III (127–94 B.C.) maintained well-publicized relations with centers of Greek cult, civilization, and commerce, such as Cos and Delos (Magie 1950:312, 318).

Much of the kings' foreign policy was devoted to warding off threats from the more powerful neighboring kings who controlled central and W Asia Minor, notably the Attalids of Pergamum (modern Bergama). It was Nicomedes I of Bithynia who brought savage Celtic tribesmen into Asia Minor to aid him as mercenaries against his brother (277 B.C.) and probably also in his struggle against the Seleucid monarch Antiochus I (Magie 1950:311). These Celts, referred to as Galatians by NT (Gal 3:1; [Galatia] 1 Cor 16:1; 2 Tim 4:10, 1 Pet 1:1; [Galatian region] Acts 16:6, 18:23) and other Greek writers, eventually settled in central Anatolia (Galatia).

Prusias I brought Bithynia into the center of the world of Hellenistic power politics. After an unsuccessful attack (in alliance with Rhodes) on the Greek city of Byzantium, he allied with Philip V of Macedon as a counterweight to Attalus of Pergamum, who maintained close relations with the emerging power of Rome. Later, as Philip's fortunes waned, Prusias backed the Romans against the Seleucids in Asia Minor, but was unable to avoid surrendering disputed territory to Pergamum in the settlement of 184 B.C. By then he had acquired the assistance of the exiled Hannibal, but was unable to resist Roman hostility to the latter's presence in Bithynia.

Prusias II (183–149 B.C.) became involved with Eumenes II of Pergamum in a war with the rival kingdom of Pontus to the E. Relations with Pontus and Rome dominated the last century of Bithynian independence. Nicomedes III (127–94 B.C.) attempted to partition Paphlagonia with the king of Pontus, but then incurred the latter's enmity by invading Cappadocia, Pontus' southern neighbor and a Pontic sphere of influence. The last king of Bithynia, Nicomedes IV (94–74 B.C.), was driven from his throne twice by Mithridates of Pontus, being restored on both occasions by the Romans. After Nicomedes died, leaving his kingdom to Rome, Mithridates again invaded the country:the Romans were unable to achieve control over Bithynia until 72 B.C.

In spite of their vicissitudes in the wars of the age, the cities of Bithynia remained centers of Greek language and culture. Nicaea, in particular, was the home of the mathematician and astronomer Hipparchus and the littérateurs Asclepiades and Parthenius; the latter composed poetry as well as a learned handbook on mythology which influenced the Latin poets of the 1st century B.C. The kings were the object of cult in the Hellenistic manner in the cities (Vitucci 1953:128–29). But native names and cults persisted in the country districts down into the Roman period alongside the gradual spread of more or less Hellenized cults and institutions (Jones 1971:154). The orator Dio of Prusa (ca. A.D. 40–110) argued that Greek education was essential to "making your city truly Hellenic, free from turmoil and stable" (Dio Chrys. *Or.* 44:10, LCL).

2. The Roman Province. Direct Roman influence was more marked in Bithynia than in other parts of W Asia Minor. The constitutions of the cities display some common features, such as the enrollment of the Council by "Censors" *(timetai),* of Roman origin. The city of Apamea received a settlement of Julius Caesar's discharged veterans and, with them, the status of Roman colony. Yet a century later Dio addressed a speech on a sensitive political matter to the citizens in Greek (*Or.* 41).

After the Civil War, when Pompey and Mark Antony had levied troops and contributions (Appian, *BCiv.* 2.71; 4.58), Bithynia enjoyed a long period of peace and prosperity. The timber of the mountains and the fertile farmland of the plains were important sources of wealth. Nicomedia was a center of the trade in "prefabricated" marble work and there was also an important trading link with the N coast of the Black Sea (Rostovtzev 1918:9; Robert 1980:78–85).

Under the Roman Empire, Bithynia formed the major part of the province of *Bithynia et Pontus.* The province was organized in the usual way, with the principal seat of government and headquarters of the imperial cult in Nicomedia and a number of assize towns, regularly visited by the governor. Assize towns included Nicaea and Prusa. The imperial cult was maintained, as in other provinces, by the "Commonwealth [*Koinon*] of the Greeks of Bithynia," composed of representatives of the various cities. Bithynia was one of the earliest of the E provinces to seek and receive permission for the organization of

such a cult in 29 B.C. (Cass. Dio 51.20.6–7). The *Koinon,* with its prestigious priesthoods and opportunities for conspicuous displays of wealth in the organization of ceremonies and games, offered goals for many of the aspirations of the wealthy provincials. It provided something of an institutional focus for expressions of loyalty to the emperors and to pagan, "Hellenic" traditions. As well as organizing the imperial cult, the *Koinon* occasionally provided a focus for political representation of the province in the prosecution of corrupt governors before the State in Rome. Known prosecutions of governors of Bithynia took place in A.D. 103 and 106/107.

Bithynia was governed by proconsuls as a "senatorial" province until early in the reign of Marcus Aurelius (A.D. 161–80), when it was transferred to the control of an imperial legate of consular rank, directly responsible to the emperor. This change probably reflects the growing importance of the strategic military road between the increasingly troubled Danube frontier and the E provinces; this route passed through Bithynia. The proconsul was assisted by a quaestor (senatorial financial official) and legate (assistant governor). The interests of the emperors' treasury were represented by one or more procurators, who managed imperial property, collected the revenues and also certain special taxes from them. The province was never fully garrisoned; in the time of Trajan (98–115), the governor had a small force of about two auxiliary *cohortes* (not more than 2000 men) and there was also a coastal patrol on the Black Sea coast.

The *pax Romana* was rudely interrupted in Bithynia by civil war between Septimius Severus and Pescennius Niger in 193/4, during which Byzantium was besieged and Niger finally defeated in a battle near Nicaea, which had publicly supported his bid for imperial power (Robert 1977). Campaigns by the emperors in the E involved marches by Roman armies through the province in 197, 215, and 219, which placed considerable burdens on the cities lying on or close to the main road, such as Nicomedia and Prusias-on-Hypius. A number of inscriptions from the latter city commemorate the contributions made to easing the passage of the armies by prominent local citizens.

Gothic tribesmen raided Bithynia in 256, sacking Chalcedon, Nicomedia, Nicaea, Kios, Apamea, and Prusa. A few years later, Chalcedon was again destroyed by another Gothic raid and Herculea also attacked. Renewed warfare on the E frontier necessitated the passage of Roman armies through Bithynia several times during the period 242–75. Respite came only with the accession in 284 of Diocletian, who established his capital at Nicomedia. Bithynia now lay in the center of power of the E empire and was a natural setting for the great Council of the Church summoned to Nicaea by Constantine in 325. In 330, Constantine moved the imperial capital to Byzantium, now renamed Constantinople. From then on Bithynia lay at the center of the E empire.

3. The Origins of Christianity in Bithynia. Against this background of a prosperous Greek-speaking Roman province, the first firmly datable evidence for Christianity in the province appears in the correspondence of Pliny with the emperor Trajan in 110 (Pliny, *Ep.* 10.95–96). The legal, political, and religious reasons for the persecution of Christians in the Roman Empire have been exhaustively discussed, with much minute analysis of Pliny's letter and Trajan's reply (Sherwin-White 1966:691–712, 772–87; Price 1984:220–22). (It is noteworthy that Price draws an important distinction between sacrifice to the gods and veneration of the emperor's image.) Only a few brief observations on the judicial situation revealed by Pliny's letter are possible here.

The case is a good illustration of the empirical approach of Roman law and administration when confronted with a new situation. Trajan explicitly declines to lay down a general principle. He refuses to allow Christians to be deliberately sought out, but says they must be punished if successfully denounced; at the same time he introduces a novel principle into Roman law by allowing the cessation of a culpable activity as grounds for pardon and what in English legal procedure is called an "unconditional discharge" *(venia ex paenitentia).* Pliny clearly regards the situation created by the spread of Christianity as a public danger *(periculum).* Roman provincial governors had wide powers of discretion, extending to imposition of the death penalty, in dealing with possible threats to public order or local institutions, especially where those responsible were not Roman citizens. Those who appeared before Pliny and refused a direct order,

for example to invoke the gods, were in any case liable to punishment for "contempt of court" and insubordination *(contumacia).*

From the point of view of the history of Christianity in Bithynia, the evidence of Pliny for the widespread growth of the new religion in the province is significant. His informants claimed that *until the recent past* attendance at temple ceremonies had fallen markedly and that the trade in the meat of sacrificial victims had been disrupted; he himself reported that Christians were widespread in all age groups and social classes, in the cities as well as the countryside. His letter suggests that the onset of persecution had considerably reduced the growth of the new religion. Sherwin-White argues that Pliny's letter was written in either Amastris (modern Amasra) or Amisus (modern Samsun) in Pontus (1966:693–94). In the later 2d century it appears that Amastris was the principal diocese of Pontus (Eus. *Hist. Eccl.* 4.33.6).

The other notable piece of literary evidence for the origins of Christianity in Bithynia is the address of 1 Peter. The author identifies his readers as belonging to the "Dispersion," a term with unmistakable Jewish overtones (and so taken by Eusebius, *Hist. Eccl.* 3.4.2). While the contents of the letter are not especially relevant to Christians of Jewish origin, it seems likely that many of the first Christian converts in Bithynia-Pontus were drawn from the Jewish communities of the area. The synagogue of Nicomedia is attested by a series of Greek inscriptions dated to the 2d/3d century A.D. (*TAM* 4.1.375–77). Also from Nicomedia is a probably 3d-century epitaph of a Reader (*TAM* 4.1.374) and another possibly 3d-century epigraph with an incised cross; interestingly, this latter inscription commemorates a man from Aradus in Syria (Robert 1978:413).

A similar conjunction of Jewish and early Christian material occurs at Nicaea and around Bithynium-Claudiopolis. A group of probably pre-Constantinian Christian epitaphs from Nicaea threaten violators of the tomb with divine vengeance:"He will give an account to God on the Day of Judgment" (e.g., IGSK 9.555–56). The language significantly recalls the Jewish epitaphs of Nicomedia and it is not surprising to find evidence for Jews living in Nicaea (IGSK 9.615). From the countryside near Bolu come the epitaph of a Jew and a lead curse tablet containing a number of garbled Hebraisms and an appeal to the "Lords, Divine Angels," suggesting some magical interest in Jewish religious language (IGSK 31. 9, 180).

The area around Amisus has produced a similar "sub-Jewish" amulet and also a monotheistic epitaph of early imperial date that could be either Jewish or Christian (*CIJud* 802, Anderson; Cumont; and Grégoire 1910:26). A possibly 3d-century Christian epitaph has also been recorded in Bithynium (IGSK 31. 144). This case is especially interesting as the principal member of the family commemorated had been chief magistrate of the city. While the influence of Hellenized Jewish communities both on contemporary paganism and on the development of a type of Christianity that was relatively well integrated in pagan society is better documented in Phrygia, the indications are that the Jewish communities of Bithynia may have exercised a similar role.

ANTHONY SHEPPARD

BIZIOTHIAH (PLACE) [Heb *bizyôtyâ* (בִּזְיוֹתְיָה)]. A town in Judah located in the extreme S

(Negeb) near Beersheba:the MT reads "and Hazar-shual and Beersheba and Biziothiah" (Josh 15:28). However, this reading is almost certainly incorrect. First, the parallel list of Neh 11:27 reads "and in

Hazar-shual and in Beersheba and its villages" (Heb *bĕnōteyhā,* lit. "daughters"). Second, the LXX of Josh 15:28 reads *kōmai autōn,* "its villages," also presupposing a Heb vorläge reading of *bĕnōteyhā.* Thus, contra the MT (and RSV), there probably was not a village in Judah named Biziothiah.
GARY A. HERION

BIZTHA (PERSON) [Heb *bizzĕtā᾽* (בִּזְתָא)]. See MEHUMAN.

BLASPHEMY. See PUNISHMENTS AND CRIMES.

BLASTING/BLIGHT. See AGRICULTURE.

BLASTUS (PERSON) [Gk *Blastos* (Βλαστος)]. Chamberlain of Herod Agrippa I (Acts 12:20). As chamberlain *(koitōn),* he was in charge of Herod's bedchambers or private quarters. Herod had come to Caesarea in 44 C.E. to see the games. At that time he may have been waging economic war against the cities of Sidon and Tyre, perhaps as an outgrowth of the competition between the ports of Caesarea and Phoenicia. He may have banned grain exports to Tyre and Sidon and effectively cut off their traditional supply of food from Judea (1 Kgs 5:7–12; Ezek 27:17). Probably through a bribe, a Phoenician delegation persuaded Blastus to intervene on their behalf. Through his intervention the people of Tyre and Sidon gained an audience before Herod at Caesarea. There is no reference to Blastus or to this incident in Josephus' account of Agrippa I at the games in Caesarea (*Ant* 19.343–50).
JOANN FORD WATSON

BLESS/BLESSING [Heb *brk* (ברך)]. The Hebrew root *brk* has diverse but unrelated etymological meanings, just as in other Semitic languages. There are the verbal and nominal forms related to "bless/blessing." A verb "to kneel" and a noun "knee" (Gen 24:11; Ps 95:6; Isa 45:23) also derive from the same root. In addition, there is a noun that Hebrew dictionaries translate as "pool, water reservoir, basin" (Isa 7:3). It is almost unanimously agreed that apart from popular etymologies, which connect these meanings (especially the seeming religious connection between kneeling and praying, praising, blessing), there is in fact no basis in any Semitic language for the etymological tie (Mitchell 1987:16; *TDNT* 2:284).

Bless/blessing has been most frequently understood in terms of benefits conveyed—prosperity, power, and especially fertility. This focus on the content of the benefit is now being viewed as secondary. The primary factor of blessing is the statement of relationship between parties. God blesses with a benefit on the basis of the relationship. The blessing makes known the positive relationship between the parties, whether a single individual (Gen 12:1–3) or a group (Deut 7:14–16). The recipient and others become aware of the value of the relationship and hence its desirability (Job 42:12). Human blessings portray the goodwill between parties and find their basis in the human-divine relationship. Just as with God's blessing, they may either convey benediction (Num 6:24–26) or benefaction (Gen 33:11).

The focus on relationship rather than content permits a wide range of lexical meaning, so that *brk* is not always translated in the same fashion. What is conveyed, regardless of translation, is always based on the favorable relationship between parties. The term *brk* is used in the sense of thanking another individual (1 Sam 23:21; 2 Sam 14:22; Job 29:11–13). The thanks are based upon the act done, the relationship established. Of course, there is a vast array of terms for thanks, praise, and even worship that parallel *brk,* and hence *brk* may be translated with one of these terms in English. Most frequently these have God as the object of the praise (Pss 34:2—Eng 34:1; 115:17–18, 145:1–2). The contexts of *brk* found within the Hebrew Bible demand these different translations both because of the diverse relationships out of which blessing occurs and because of the fact that benediction or benefaction may be articulated. Finally, there are seven occurrences where *brk* is used euphemistically to mean "blaspheme" or "curse" (1 Kgs 21:13; Job 2:9; etc.).

The verbal and nominal occurrences of blessing appear approximately 400 times in the Hebrew Bible (88 times in Genesis and 83 times in Psalms with the remaining occurrences fairly evenly divided in the canon). Over half of all occurrences are in the *Pi᾽el* verbal form. The passive participle, with the so-called

bārûk formula ("Blessed are you," or "Blessed be …" is the only form of the Qal to be used. The subject and object of *brk*, "bless," is evenly divided between God blessing humans, humans blessing other humans, and humans blessing, i.e., "praising" God. While occurrences in other NW Semitic languages employ similar subjects and objects, there is some agreement that the Hebrew usage is both unique (*EncRel* 2:251) and more wide-ranging (Mitchell 1987:10). Caution is advised in drawing too many conclusions regarding the peculiarity of the Hebrew occurrences, in part because of the paucity of other NW Semitic texts as opposed to the relative richness of occurrences in Hebrew.

Blessing is a central part of diverse Hebrew Bible traditions, and therefore it has received rather extensive treatment in commentaries, histories of Israelite religion, theologies, and individual studies of selected texts where *brk* occurs. Since *homo religiosus* in all traditions seeks and articulates relationships with the divine or sacred, it is not surprising that blessing is significant in many ancient and modern religious traditions beyond the Hebrew Bible (*EncRel* 2:247–53). There is promise for an enriched understanding of blessing when it is placed among the analogues outside the Hebrew Bible, although much work needs to be undertaken in these comparative studies.

Specialized *brk* research among Hebrew Bible scholars has been bountiful during the 20th century. The studies focus upon three factors: (1) the history of the concept; (2) the identification of the giver and receiver of blessing; (3) the nature of the transfer that takes place in blessing.

First, much has been written on the history of blessing. The earliest NW Semitic usage is clearly of gods blessing humans with possessions and children. There is considerable difference of opinion regarding whether or not the pre-Islamic concept of blessing, which entailed an animistic understanding of power, influenced the earliest stages of NW Semitic and Hebrew understandings. Assumptions, including what is primitive and the extent of polytheism's influence on monotheism, determine in part the positions taken.

A rather extensive tradition history has been articulated by Wehmeier (1970). Within pentateuchal sources, for example, he is of the opinion that E is void of any blessing theme, that in D God primarily blesses Israel with prosperity in the land, and P utilizes earlier traditions but also spiritualizes the content of blessing. As opposed to Westermann (1978), he does not see much utilization of any blessing tradition among the prophets. Most debated of all the tradition history research is Westermann's contention that blessing and deliverance are quite distinct divine activities. He contends that deliverance concentrates on specific, often miraculous acts of God, whereas blessing deals with the natural processes of God's nurturing creation. Extensive research on the treaty-covenantal understandings of curses and blessings in the ANE and the Hebrew Bible have enriched this dimension of comparative work.

Second, almost every lexical discussion of blessing is divided along the lines of the identification of the giver and receiver of the blessing. The question of what it means for God to be blessed has generated the major disagreements. If one argues that the nature of the referent (God or a human) changes the force of a term, then the translation must change. It would not make much sense for humans to give the same benefits of blessing given by the deity. Therefore translating *brk* in a range from bless to praise preserves the basic factor of relationship in the understanding of blessing. The human response of praise to God's blessing is an entirely understandable development. Human praise is the one benefit which may be given in return for the benefits conveyed by the deity. When referents shift, these kinds of translational shifts are common.

Finally, two interrelated issues, power and magic, continue at the center of understanding what is transferred in a blessing. Here the question surrounds the acquisition of blessing. Can God be coerced into giving a blessing? Can a blessing be obtained unrelated to God's beneficence? Is there any self-fulfilling power residing in words? The earlier studies of Pedersen (*PI*) Mowinckel (1961; originally published in 1924), and Hempel's work of 1925 (1961) understood the ancient world of these texts in a dynamistic perspective and could answer these questions in a positive manner. Wehmeier (1970), Scharbert (*TDNT* 2:279–308), and Westermann (1978) understand the biblical traditions to have limited the dynamistic perspective at least partially, but not to have obliterated it entirely. Mitchell (1987) strongly opposes any magical understandings in the Hebrew Bible related to blessing.

This last issue needs further work on the individual texts portraying blessing, as well as better perspectives on Israelite religion within its own surroundings. Since there is no comprehensive study of the complex variety of synonyms ("happy," "peace," etc.) and antonyms ("curse") for blessing, we can assume that new perspectives on this important religious term will be forthcoming.

BLESSINGS AND CURSES. Scriptures testify to a traditional world in which divine powers (principally the God of Israel, but also "the sons of God," "Satan," "the queen of heaven," and others) are believed to influence, directly and indirectly, the life and destiny of nations and individuals. The course of human events is experienced as neither accidental nor self-directed but as dependent, wholly or in part, on the will of these divine powers. In this setting, blessing and curse, deriving ultimately from the disposition and ability of the gods to further or thwart the "good life," are of crucial importance to human welfare.

A. The Scope of the Discussion

In the Bible, blessing may be understood as a performative utterance (see Austin 1962; 1979), the effective activity of pronouncing and bringing about good for someone. It may be the resultant favor (benefaction) or enablement itself. Blessing may also be an act of greeting or prayer that invokes good for someone or seeks to avert or neutralize evil. Finally, it may be an act of praise by which a benefactor, human or divine, is acknowledged and thanked for benefits received or expected. The meaning of cursing is just the opposite. It may refer to the pronouncement of evil which brings about punishment or harm to someone, the actual harm or punishment effected, or an invocation of the same. It is unthinkable, however, that one would curse the deity (Lev 24:10–16), even for some harm one might attribute to God's neglect or disfavor (Job 2:9–10).

Earlier studies of blessings and curses in the Bible (e.g., Pedersen 1914; PI, 162–212:Mowinckel 1924; Hempel 1961) often dealt with perceived distinctions between "magical" and "religious" conceptions of

their efficacy. The "magical" conception would attribute inherent power, for example, to a certain form of pronouncement, so that the benediction or malediction once spoken must automatically bring about its result, barring pronouncement of an equally or more effective counter-curse or -blessing. The "religious" conception, by contrast, would attribute the power and efficacy of a blessing or curse to the cooperative will and action of God or the gods. It was felt that both conceptions could be illustrated from the Bible. Westermann argues that the magical features, still recognizable in some of the Yahwist (J) narratives, are historical leftovers no longer operative in the theological conception of the Yahwist (1978:57–58). Also, Scharbert (*TDOT*, 2:303) finds little trace of the magical left in the biblical conceptions of blessing and curse.

Closely related to this discussion was a scholarly consensus that the ancient Israelites, along with other contemporary cultures, attributed unusual power to the spoken word (Heb *dābār*); once uttered, the word would practically take on a life of its own and continue in effect whether or not circumstances changed or the original speaker had a change of mind. Thiselton (1974) strongly questions the supposed independent power of words in the Bible. The power of words in general, and of blessings and curses in particular, presumably depends upon the disposition (favorable or unfavorable), power, and status of the person who utters them, the circumstances under which they are spoken, and the expectations and receptivity of the audience for or about whom the words are spoken. The Bible presents blessings and curses as neither automatic nor irrevocable. They are effective only when spoken by authoritative or authorized persons (e.g., God, king, prophets, priests, elders) at what is considered an appropriate time and place, accompanied by the expected gestures or rituals, if any. God willing, they may also be revoked. Recent hermeneutical reflections on the Balaam story by Coats (1982) and Ford (1982) from a "process" perspective interpret blessing and curse in terms of the power of divine persuasion.

B. The Terminology of Blessings and Curses

1. In the Hebrew Bible. The Bible frequently expresses blessings by forms of the verbal root *brk,* "to bless," including *bārûk,* "blessed," and by the related noun *bĕrākâ,* "blessing." Other Hebrew terms belonging to the same semantic field include *ḥnn,* "to act favorably or graciously," *rṣh* and *rāṣôn,* "be favorably pleased," "favor," *ṣlḥ,* "to advance or prosper," *ḥesed,* "loyalty/magnanimity/kindness," and various expressions of the gracious presence or accessibility of God (i.e., God's being "with" *ʿim* or *ʾet* someone). One who has been favored or has experienced blessing may be called Heb *ʾašrê,* "happy," a term found most frequently in the Psalms and Proverbs, while the general state of well-being or security that results from blessing may be termed Heb *šālôm.* In conversation with earlier studies, Mitchell (1983) provides insightful analyses of the semantic relationships between *brk* and many of the other terms cited here.

The terminology of cursing in the Hebrew Bible includes the three principal Heb roots *ʾlh, ʾrr, qll,* and their derivatives. The first carries the basic sense of a vocal or written imprecation, a curse pronounced. The second, frequently encountered in the participial form *ʾārûr* and as an antonym to *bārûk,* seems to have the basic sense of "spell," connoting a sort of banning or barring from benefits. The third has a wide range of meanings, often dealing less with imprecation than with disrespect and verbal or physical abuse (see Brichto 1963:70–71; 114–15; 176–77). Scharbert (*TDOT*, 1:261–64) adds that Heb *ʾālâ* was commonly used in legal situations as a conditional curse or oath used to prove guilt, protect property, or ratify a treaty. He further notes that the *ʾārûr* formula was the most powerful "decree" expressed by someone in authority to deliver over a transgressor to misfortune (*TDOT*, 1:411). In the Balaam story (Numbers 22–24), the uncommon Heb root *qbb* alternates several times with *ʾrr,* while Heb *zʿm* also occurs once. Also within the semantic field of cursing are the "ban" (Heb *ḥerem*) which singled out persons or groups for extermination (e.g., Joshua 7), the interjections Heb *ʾôy* ("Woe!" e.g., Isa 6:5) and *hôy* ("Ha!" e.g., Jer 22:18), and expressions of divine withdrawal or displeasure such as God's "hiding" or "turning away the face."

2. In the New Testament. The equivalent to *brk* in the LXX, the intertestamental literature, and the NT is Gk *eulogein,* "to bless," and its derivatives, including the divine epithet *eulogētos,* "blessed." The condition of happiness resulting from being favored is expressed by Gk *makarios* (see Matthew 5 and

Luke 6). The roots may also be used interchangeably, as in Luke 1:42 and 45, where Elizabeth hails Mary as both *eulogēmenē* and *makaria.*

Cursing in the NT may be expressed by forms of *kataraesthai,* "to curse," *(kat)anathematizein,* "to make anathema," and the related terms; and by Gk *kakalogein,* "to slander or speak evil of." The woeful expression Gk *ouai* appears especially in Matthew, Luke, and Revelation.

There are, of course, many portions of the Scriptures in which blessing and curse are closely discernible in context, even though the expected terminology is not employed.

C. The Efficacy of Blessings and Curses

1. The Power and Authority behind Blessings and Curses. As noted above, blessings and curses derive their efficacy from the power and authority of the one who utters them or serves as guarantor for carrying out their intent. In the Bible, the ultimate source of power is Yahweh, the God of Israel, who is said to finally control all good and evil (Isa 45:6), and who can thwart all other counsel and intentions (Job 12:13–25). In the biblical view, therefore, no blessing or curse can become operative without the assent of this God.

Blessings and curses, once uttered, need not come to pass inexorably, because countermeasures could be taken. For example, when Micah of Ephraim revealed to his mother that he himself had stolen some silver protected by her curse, she immediately responded by pronouncing a blessing in Yahweh's name on her son and consecrating the silver to this God (Judg 17:1–3). When Jonathan brought his father Saul's curse upon himself unwittingly, the people intervened to save him from ritual execution and "ransomed" him (1 Sam 14:24–30, 36–45). Steps could also be taken ahead of time to insure blessing and avert curses. Abram was assured that God would bless those who blessed him but would curse anyone who cursed him (Gen 12:3); Isaac pronounced a similar blessing on his son Jacob (Gen 27:29). Although the specific vocabulary of blessing and curse is not used, the word that came to Jeremiah at the potter's shop indicated that Yahweh is free to reverse blessing-bearing promises ("building," "planting," "good") or curse-bearing threats ("pluck up," "break down," "destroy" if people change their ways (Jer 18:7–10).

2. Accompanying Symbolic and Ritual Acts. Various gestures or rituals may have been expected to accompany the pronouncement of blessings and curses. The laying on of hands (Gen 48:14; Mark 10:16) or the ritual sharing of food and drink (Gen 14:18–20) might accompany a blessing. When Shimei cursed David, he threw stones and dust (2 Sam 16:5–14). A person suspected of adultery was to drink curse-contaminated water which would cause injury if the person were guilty (Num 5:19–28). Jeremiah smashed a pot in the presence of elders and senior priests while delivering a divine message that Jerusalem and its inhabitants were about to be broken by their enemies (Jer 19:1–13) and would become (cursed) objects of hissing (v 8; cf. Jer 29:18). Several variations on another ritual commonly associated with curses, namely, the dismemberment of a person or animals, occur in Gen 15:9–10 (cf. Jer 34:18–20), 1 Sam 11:6–7 and, evidently, Judg 19:29–30. In his discussion of the curse ritual in Deuteronomy 27, Harrelson (1980:26–33) suggests that the division of the Israelites into two groups facing each other is another variation on this ritual of dismemberment.

D. The Settings of Blessings and Curses

In a wider sense, blessing may be understood as the continuous favorable working of God to bring about good in the world of nature and the life of individuals and families (Westermann 1979:33, 44–45). The Bible, however, depicts many typical situations in which the mediation of God's favor or disfavor, expressed as a deliberate pronouncement or invocation of curse or blessing, was expected or considered appropriate. These situations often involve a crisis, the onset of a struggle, a time of decision, or the crossing of a threshold into the future.

1. Times of Universal or Cosmic Significance. The crisis or transition may be of universal significance. Thus, in the first story of the creation, God twice directly pronounces blessings on the newly created creatures (Gen 1:22, 28) and also hallows the seventh day, which marks the completion of the "generations of the heaven and the earth" (Gen 2:3–4). By contrast, after the man and the woman have eaten of the fruit and are about to be driven from the garden, Yahweh curses the serpent and the ground

(Gen 3:14, 17) and promises pain to the humans in their future production of food and children (Gen 3:16–19).

In the NT, the arrival of the Christ (the Anointed One) and his announcement of the breaking in of the kingdom of God is accompanied by a series of blessings and woes. In Luke, Jesus balances his pronouncement of four "blesseds" with four contrasting "woes" (Luke 6:20–26). As Van Den Doel (1963:216–20, 224–25) notes, there are several other instances in the gospels where those who are receiving and acting on Jesus' message of the kingdom and the reversal of conditions it represents are called "blessed." He also notes (1963:151) that, while the many healings and exorcisms performed by Jesus are not designated "blessings" in the text, they carry that meaning for the human beneficiaries.

2. Times of Individual or Family Crisis. Crisis and transition times in individual and family life call for blessings and the averting of curses. The priest Eli blessed Hannah and Elkanah with an invocation for additional children after they had dedicated Samuel to the service of the sanctuary. The text immediately reports Yahweh's fulfillment of this blessing (1 Sam 2:20–21). Indeed, Eli had pronounced a similar benediction over the barren Hannah after her agonized prayers for a first child. That priestly blessing was also quickly answered by Yahweh (1 Sam 1:17–20). When Ruth and Boaz prepared to be married, the elders and people similarly invoked blessings of children and prosperity; and, upon the birth of a son whom they presented to Naomi, the women lauded Yahweh as blessed (Heb *bārûk;* Ruth 4:11–12, 14). Similarly, Raguel blessed his daughter Sarah and her husband Tobias upon their marriage (Tob 7:13).

Blessing may be invoked for someone undertaking an important journey, especially when the future of the family is at stake (Gen 24:7; cf. Tob 5:16). When Rebekah consented to become Isaac's wife, they sent her on her journey with a blessing that she bear innumerable descendants (Gen 24:60). Jacob went to Paddan-aram to find a wife with his father's blessing (Gen 28:1–5). Later, when Laban finally agreed to allow his daughters and grandchildren to go with Jacob, he blessed them (Gen 32:1—Eng 31:55). Finally, the climactic episode wherein Jacob struggles with "a man" at the Jabbok River and subsequently obtains a divine blessing and the new name Israel (Gen 32:22–32) takes place during his sojourn away from Paddan-aram, just before he meets again with the estranged brother he fears, Esau.

Blessings are also appropriate when one generation is about to die and wishes to pass on favor to another. Best known are the blessings bestowed by Isaac and Jacob upon their sons (Genesis 27; 48–49).

Westermann argues (1978:83–91) that NT accounts of Jesus blessing children (Mark 10:16=Matt 19:15=Luke 18:17), speaking the blessing at meals (Luke 9:16; 24:30), and blessing his disciples when he took leave of them (Luke 24:50–51), indicate that he was continuing traditional Jewish practices. Nevertheless, the latter episode also marks a significant moment of transition in the relationship between Jesus and his followers.

In contrast to the usual practice of seeking a blessing during times of crisis, Jeremiah and Job are two individuals who experienced personal crises and such intense suffering that they cursed the day of their birth and wished for death (Jer 20:14–18; Job 3). Also, Jeremiah cursed the person who made the birth announcement (vv 15–17), while Job added a curse upon the night during which he was conceived (v 3; see Alter 1985:76–83, 96–110). Jonah, in very different circumstances and without actually invoking a curse, also expressed a death wish (Jonah 4:3, 8). It is possible, however, to interpret the actions of all three as desperate attempts actually to motivate God to reverse their fortunes.

The guarantee of one's word was to swear an oath that included a potential curse upon oneself. Saul uttered such an oath which threatened Jonathan's life (1 Sam 14:44), as did Solomon when he doomed Adonijah (1 Kgs 2:23), and the king of Israel who swore to destroy Elisha (2 Kgs 6:31). When Jonathan and David swore loyalty to each other, Jonathan included a self-imprecation to guarantee his fidelity (1 Sam 20:13). Abner, too, uttered this sort of self-imprecation when he publicly switched allegiance from the family of Saul to David (2 Sam 3:9). There are many similar examples in the Hebrew Bible. A striking instance in the NT is Peter's invocation of a curse (once in Mark 14:71; twice in Matt 26:72, 74) when he denied being one of Jesus' followers. In the Sermon on the Mount, Jesus counseled against swearing by anything, but simply to state "Yes" or "No" (Matt 5:33–37).

3. Times of Community or National Decision. Blessings and curses figure prominently in the covenants that Yahweh initiated with the people of Israel. Covenants were believed to be central in determining the nation's fortunes. The rituals renewing or reaffirming covenant included reciting blessings and curses. This is especially clear in the case of the Mosaic covenant as presented in Deuteronomy. At the conclusion of his lengthy exposition of the statutes and ordinances Israel was to keep (Deuteronomy 5–26), Moses instructed the people to observe a ceremony, at Shechem on Mounts Ebal and Gerizim, in which they would declare the curses or blessings that would come upon them for obedience or disobedience to the statutes and commandments just rehearsed (Deuteronomy 27–28). In chap. 30 he reiterates Israel's obligation to choose "life," "good," and "blessing" over "death," "evil," and the "curse" (vv 15, 19) by remaining loyal to their God. The book closes with the song of Moses (chap. 32), which echoes elements of a covenant lawsuit (Heb *rîb*) and the curse-induced evils that would come upon disobedient Israel, balanced and overshadowed by the concluding blessing of Moses on all the tribes of Israel (chap. 33). The latter, set just before Moses' passing in chap. 34, serves as a last will and testament, in some ways similar to the blessing of Jacob in Genesis 49.

The so-called Holiness Code (Leviticus 17–26) also concludes with contrasted blessings (26:3–13) and curses (26:14–39) for observance or nonobservance of Yahweh's statutes. Moreover, the closing words assure the people that, even after the most dire consequences, including exile to enemy lands, genuine repentance and a return to Yahweh would cause him to remember the Abrahamic covenant and the Sinai covenant. For, after all, Yahweh would not abandon them, even in foreign lands, so as to destroy the people completely and break the covenant with them (26:40–45).

Scharbert believes that the blessing formulas in Deuteronomy 28 and Leviticus 26 are briefer and vaguer than the curse formulas (*TDOT*, 2:304–5). He notes that in Deuteronomy there is no formal list of blessings to counterbalance the curses enumerated in chap. 27. Further, blessing plays little role in the preexilic prophets, although curses are present. This may indicate that the blessings were a later insertion into the legal sanctions, which originally were only the curses that would result from covenant-breaking.

Several important studies on covenant (including Mendenhall 1955; Baltzer 1971; and McCarthy 1978) have treated the blessings and curses in Yahweh's covenant with Israel in comparison with curses and blessings found in political treaties now familiar from other nations, notably the Hittites, in the ANE. Hillers (1964:43–79) usefully correlates some 20 specific curses (e.g., ravaging animals, removal of joyful sounds, breaking of the scepter, dry breasts, contaminated water, etc.) found in various ANE treaties and paralleled in Deuteronomy 28, Leviticus 26, the Prophets, or elsewhere in the Hebrew Bible. Levenson (1985:35) remarks that it is hardly surprising that the curses in Leviticus and Deuteronomy, so horrific in their detail, are still read in undertones in synagogue worship.

4. In the Cult. Two climactic cultic occasions include David ritually conducting the covenant box into Jerusalem and Solomon's dedication of the temple. On each occasion, the king takes the leading role in the ceremonies, blessing various other participants. David dared to move the covenant box based upon the report that Yahweh had blessed Obed-edom the Gittite, with whom the box had been residing for three months (2 Sam 6:11–12). Upon safely bringing the box to its new residence, David made sacrificial offerings, distributed foodstuffs to the people, and blessed them in the name of the Lord of hosts (vv 18–19). He also intended to bless his own household (v 20), but was met with disdain by his wife Michal the daughter of Saul. Given the context, the laconic report that Michal thereafter became barren for the rest of her life (v 23) strongly implies that, by her actions, Michal exchanged the intended blessing for a curse instead.

Subsequently, when Solomon moved the covenant box to the newly erected temple, the ceremonies of dedication as reported in 1 Kings 8 included prayers, offerings, and shared feasting. In addition, Solomon pronounced blessings on the assembled people (vv 14, 55) and acknowledged Yahweh as blessed (vv 15, 56), while the people, in turn, blessed the king at the conclusion of the week-long festivities (v 66).

The so-called Aaronic benediction or blessing in Num 6:22–27 was probably used in the temple services and has remained in use among Jews and Christians to the present. Yahweh promises Moses that when the priests use this formulaic blessing Yahweh himself will bless the people. The brief formula is

dense with the terminology of blessing, including assurance of God's protection (Heb *šmr*), favor (Heb *ḥnn*), and peace (Heb *šālôm*). Noteworthy is the threefold repetition of the Heb root *brk,* once in the formula itself and twice in the accompanying rubrics, as well as the emphatic threefold repetition of the divine name, which, along with the *šālôm* it brings, is being placed (*śym;* vv 26–27) upon the recipients of the blessing. This blessing reaffirms positively the powerful words of Exod 15:26, in which God promised in the negative:"No plague which I placed *(śym)* upon Egypt will I place *(śym)* upon you, for I am Yahweh your Healer."

The book of Psalms contains indications of the use of blessings and curses in the temple liturgy. For example, Psalm 72 speaks of continual prayers and blessings offered on behalf of the monarch (vv 15, 17) and invites people to bless themselves by his name (v 17). Psalms 21 and 22—prayers before and after battle—indicate that victory over enemies was formally requested and acknowledged as a blessing (Pss 21:4, 7—Eng 21:3, 6; cf. Pss 18:47–49—Eng 18:46–48). Many of the psalms were sung as blessings of Yahweh, as is indicated by the formulaic language at the beginning and conclusion of Psalms 103 and 104, the invitation in Pss 134:1–2, and the final verses of Psalm 135. Temple singers or priests are depicted in Psalm 118 as pronouncing "blessed in the name of Yahweh" the one (perhaps the king?) who enters the sacred precincts. Cazelles (*TDOT*, 1:445–48) believes that the frequently encountered expression Heb *ʾašrê,* "happy!" in the Psalms is best understood as a sort of liturgical cry or interjection which found its way into services of the Second Temple, perhaps via Egyptian practice. The solemn pronouncement of curses, evidently, also took place in the temple, as indicated by the lists of imprecations on enemies contained in many of the laments (e.g., Pss 17:13–14; 35:4–6, 26; 58:7–10—Eng 58:6–9). Particularly striking is Psalm 137, which twice calls happy (Heb *ʾašrê*) whoever takes vengeance on Babylon (vv 8–9). Lapide (1982:166) offers the striking interpretation that these ritualized curses and imprecations helped worshippers to vent emotions of anger and frustration, and thus defused the need for carrying out actual acts of bloodshed.

In the NT Jesus blessed children (Mark 10:13–16) as a sign of their inclusion in the kingdom of God. Many Christian churches have interpreted this story as a sanction of infant baptism and have included its solemn reading or intonation at baptismal ceremonies. In the gospels, Jesus also blesses food (Mark 6:41=Matt 14:19=Luke 9:16; Luke 24:30), a practice already well attested at the Qumran community and still widely followed among Jews and Christians. In the new "family" of Christian disciples (Mark 3:31–35; 10:29–31), a central sign and affirmation of the blessing-mediating presence of the risen Christ as the "breaking of bread" together (Acts 2:42, 46–47)—a practice no doubt linked to the tradition of the Last Supper he shared with his disciples at the time of Passover just before his crucifixion (note Mark 14:22–25=Matt 26:26–29=Luke 22:15–20; 1 Cor 10:16). Paul, moreover, warns that unworthy eating and drinking of the "Lord's supper" would actually endanger the health of the assembly (1 Cor 11:20–34); the expected blessing, in effect, could be turned into a curse.

The traditional liturgy of St. John Chrysostom celebrated in the Eastern Orthodox churches powerfully presents the continuing mediation of blessing through the risen Christ. Blessing from God to the faithful is both pronounced and effected through the proclamation of the gospel and communing in the eucharistic meal. Surrounding these two climactic activities of blessing, continuous prayers and psalms invoking divine blessing for all people in every imaginable walk of life alternate with repeated ascriptions of glory to the trinity "now and ever and to ages of ages." These ascriptions bear close resemblance to the benedictions honoring God and the divine kingdom in Jewish synagogue worship. The overall mood of the liturgy is reminiscent of the psalmist's exhortation to "bless Yahweh at all times" (Ps 34:2—Eng 34:1) in acknowledgment of the saving strength of the All-Powerful One. This ancient Christian liturgy also draws together in a single cultic celebration the three lines of blessing present in the Scriptures: from God to humanity, from humans to other humans, and from humans to God. These lines of blessing were identified by Schenk (1967), whose analysis was criticized and expanded upon by Westermann (1978:68–101; see also Mitchell 1983). Westermann has also written on the place and function of blessing in worship and in the rituals of the Church and on possible continuities and discontinuities with practices attested in the Scriptures (1978:103–20).

E. Blessings, Curses, and the Literary Shape of the Bible

Recent studies have turned attention to the artistic use of blessings and curses as organizing devices by those who composed or shaped longer and shorter sections of the Bible. Some examples follow.

1. Judges 5. The so-called Song of Deborah, widely regarded as among the oldest literary compositions in the Hebrew Bible, is shaped by a series of blessings and curses (see Urbrock 1987:426–27, 432). The naming of Deborah and Jael, both subjects of praise in the song, is carefully framed by words of blessing (v 2—blessing, vv 6–7—naming, v 9—blessing; "Most blessed … Jael … most blessed," v 24). Further, the name of the Israelite commander, Barak (Heb *bārāq*), sounds like Heb *brk*, "to bless," and its repetition in vv 12 and 15 nicely balances the double invitation to "Bless Yahweh" in vv 2 and 9. By contrast, mention of the village of Meroz is framed by a double curse in v 23. Similarly, the Canaanite commander Sisera and his mother literally stand outside the blessing-frames in the text and are named only in an ironic context where food (v 25), a sign of blessing, is exchanged for violent death (vv 26–27), sign of a curse, and where those who expected to take spoil actually have been despoiled themselves (vv 28–30). The song ends with the invocation of a curse on the enemies and a blessing on the allies of Yahweh (v 31). This closing invocation, along with the invitation to "Bless Yahweh" in v 2, serves as a clear inclusion or envelope for the entire composition.

Juxtaposition of blessing and curse, used so effectively as a literary device in Judges 5, occurs frequently elsewhere in the Bible, also. The balancing of blessings and woes in Luke and the covenant blessings and curses in Deuteronomy 27–28 and Leviticus 26 have been mentioned above (secs. D.1. and D. 3.) In Jer 17:5–8, one whose heart is turned away from Yahweh is described as cursed, like a shrub in a desert; but blessed like a tree by water is the one who trusts Yahweh (see also Psalm 1). The book of Proverbs contains many maxims that contrast the cursed existence, influence, and fate of the wicked/selfish/fools with the blessed status of the righteous/liberal/wise (e.g., Prov 10:6–7; 11:11, 26; 22:9; 28:14).

2. The Book of Ruth. Blessing and curse are also juxtaposed in Ruth. Trible (1978:166–99) has shown how the surface design of the book, which moves from an initial scene heavy with death to an "All's well that ends well" conclusion, is generated by a deep structure in which the human actors move between life and death while their God works between blessing and curse behind the scenes. The story line develops around the gradual removal or reversal of the signs of curse (famine, exile, death) and the appearance, ever more openly, of the kindness (Heb *ḥesed*) of Yahweh (2:20), reflected and mediated in the *ḥesed* of Ruth (3:10) and the favor (Heb *ḥēn*) of Boaz (2:2, 10). The action is punctuated at key points by invocations of divine blessing (1:8–9; 2:4, 12, 19; 3:10; and 4:11–12) and is enclosed at beginning and end by proclamations of divine favor (1:6 and 4:13–14). Ruth's conditional self-imprecation (1:17) and Naomi's complaint (1:20–21), with their intimations of death and affliction and emptiness, are swallowed up by life and fullness and blessing for the two women and their families, even including generations past (4:10) and future (4:18–22).

3. The Book of Psalms. Although many or most of the psalms were originally composed for use in the temple liturgies, their current arrangement into five books suggests that they are intended for study and meditation like the five books of the Mosaic Torah. This intention is underscored in the blessing that opens the book in Ps 1:1–2. The editors of the arrangement have also reminded pious readers to accompany their meditation on the collected psalms with prayer and ascriptions of blessing and praise to Yahweh. Thus, each of the first four books now concludes with such a blessing (41:14—Eng 41:13; 72:18–19; 89:53—Eng 89:52; 106:48), while the fifth book concludes with a crescendo of blessing and praise in Pss 144–50. Cazelles (TDOT 1:446) draws attention to the placement of psalms identifying "happy" (Heb *ʾašrê*) readers and worshippers precisely at the beginning or close of the various divisions (see Pss 1:1; 41:2—Eng 41:1, 89:16—Eng 89:15; 106:3). One may add that Psalm 72, while lacking an *ʾašrê* identification, contains prayers of blessing for the king accompanying a description of the ideal, blessed kingdom. Overall, then, despite the many laments contained in the Psalter and the frequent cursing of enemies, the mood fostered by the blessings which frame the whole and its major subdivisions is one of confidence, praise, and thanksgiving.

4. The Tetrateuch, Pentateuch, and Deuteronomistic History. Wolff (1975) identifies Gen 12:1–4a, with its fivefold play on the central idea of blessing *(brk),* as the key passage for understanding the message of the Yahwist (J) in the Tetrateuch (Genesis through Numbers). This idea has influenced the shape of the narrative. Before the appearance of Abra (ha)m, J does not use *brk* in reference to humanity; rather, *ʾrr* appears five times (Gen 3:14, 17; 4:11; 5:29; 9:25) and *qll* once (8:21), the latter in a positive passage that points ahead to Gen 12:1–3. As Wolff sees it, the rest of J's contributions to episodes in the Tetrateuch may be understood in terms of the thematic question:how does the blessing reach the peoples through Abraham? For example, the plague narrative in Exodus is shaped by J to emphasize the pharaoh's request that Moses entreat Yahweh to remove the curse, as it were, and effect a blessing even for Egypt (Exod 12:32). The last large J complex in the Tetrateuch is the Balaam narrative in Numbers, with its dramatic portrayal of God's use of a foreigner to bless Israel several times over, although he was paid to curse them. A climactic concluding couplet in Balaam's third oracle is reminiscent of the promise to Abra (ha)m (Num 24:9; cf. Gen 12:3). Nevertheless, J's work ends with a sense that the blessing that is to come to the world through Israel still remains a task and promise to be fulfilled. Moab does not yet share the blessing, and Israel is still prone to apostasy (Num 25:1–5). Wolff sees a schematic arrangement here:a sober episode of warning follows upon pronouncements of blessing, just as the episode of affliction for the pharaoh follows the blessing on Abra (ha)m in Genesis 12.

In a companion article to Wolff's, Brueggemann (1975) suggests that the focus for understanding the message of the Priestly circle (P) in the Tetrateuch is the fivefold blessing declaration of Gen 1:28, "Be fruitful … multiply … fill the earth … subdue it … have dominion." Variations on this formula recur often in Genesis (9:7; cf. 17:2, 20; 28:1–4; 35:11; 47:27; and 48:3–4) and in the important story transition at Exod 1:7.

Overall, the Pentateuch (Genesis through Deuteronomy), now long hallowed by tradition as belonging together as the Mosaic Torah, also exhibits an envelope structure that emphasizes blessing and curse at beginning and end. The stories of the primeval times and of the Abrahamic family in Genesis, arranged to reflect the J and P schemata of blessing, are balanced by the repeated Deuteronomistic invitations to choose life and blessing rather than curse and death in Deuteronomy 27–33. Scharbert (TDOT 2:306–7) comments that the Pentateuch as finally redacted has passed on to Judaism and Christianity an enduring belief that blessing and curse, powers that emanate from God and that become effective through human behavior in relationship to divine law, "finally determine the destiny of all mankind, the nations, and the individual."

In modern scholarship, Deuteronomy is widely regarded as actually having originated not as the conclusion to the Pentateuch but as the introduction to the so-called Deuteronomistic History, which includes the books of Joshua, Judges, Samuel, and Kings. The blessings and curses that figure so prominently in the closing chapters of Deuteronomy are picked up at key points in the ensuing history. Ceremonies of covenant renewal culminating in warnings of possible good and evil for covenant observance and neglect are described as taking place at the time of Joshua's death, after the tribes of Israel had been allotted their lands (Joshua 24), and at the time of transition from tribal league to kingship under Saul (1 Samuel 12). In both instances, leaders of the people—Joshua and Samuel—are about to leave the scene, just as Moses departs at the close of Deuteronomy. When Solomon dedicates the new temple in Jerusalem, he blesses the assembled people, and blesses Yahweh at the beginning and conclusion of his great dedicatory prayer (1 Kgs 8:14, 55). The prayer itself is couched in Deuteronomistic language, acknowledging that such disasters as defeat in war (v 33), drought (v 35), famine and pestilence (v 37), and even exile (v 46) are caused by disloyalty. In a final hortatory prayer, not dissimilar to the addresses of Moses in Deuteronomy, Solomon exhorts the people to keep the commandments, statutes, and ordinances with a heart completely true to Yahweh (1 Kgs 8:58, 61; cf. Deut 6:2, 5; 30:1–2, 15–17). Centuries later, the discovery of the lost "book of Torah," perhaps an early version of Deuteronomy, caused King Josiah to tear his clothes in consternation, evidently at the possibility of the covenant curses taking effect (2 Kgs 22:11–13), and to institute a major reform of cultic practices in Judah and Jerusalem (2 Kgs 23:1–25). Not only does the theology of blessing and curse clearly pervade the Deuteronomistic

History, but a pattern of ceremonial recitation of the blessings and curses at crucial points in the nation's history also helps give literary shape to this major work in the Hebrew Bible.

5. The Christian Bible. In his helpful analysis of the differing shapes of the Hebrew and Christian Bibles, Josipovici (1988: 29–49) notes how the books in the Christian OT and NT have been arranged so as to achieve both a correspondence between the major parts of each Testament and "a continuous forward drive from Creation to the end of time" (1988:42). The design conveys an overall sense of wholeness and completion. It hardly seems surprising, then, that Revelation, the last book in the Christian arrangement, contains seven beatitudes (see Aune 1983:283–84), two of which appear in the closing verses of the book (Rev 22:7, 14) alongside a conditional curse and a reference to the tree of life (Rev 22:18–19). Along with those uttered by Jesus in Matthew, the beatitudes in Revelation serve as an excellent inclusion scheme for the NT books. But in a more inclusive sense, the blessings and curse in chap. 22 complete a ring around the entire Christian Bible by reversing the prohibition of Genesis (Gen 3:22) and alluding to the solemn warning and invitation of Deuteronomy (Deut 4:2; 30:19).

BLOOD [Heb *dām* (דָּם)]. Biblical authors identified the liquid, blood, and the solid, fat (Heb *ḥēleb*), as the body substances essential for all animal life. When David eulogized Saul and Jonathan (2 Sam 1:22) for bringing death to the foe, he sang:"From blood of slain, from fat of heroes—the bow of Jonathan never turned back. The sword of Saul never withdrew empty." The deduction that blood and fat were vital substances was arrived at by observing violent death by the sword or by beasts, accompanied by bloodshed and disembowelment. Blood was considered more significant to life than fat. Indeed "blood" and "life" are attested as lexical pairs in Hebrew, Ugaritic, and Akkadian poetry (Avishur 1984:559, 577). The alternation of phrases in Gen 37:21–22 demonstrates that, in biblical Hebrew, "shed blood" (Heb *šāpak dām*) was synonymous with "struck the life" (Heb *hikkâ nepeš*). Explicit identification of blood with life is made in Deuteronomy (12:23):"For the blood is the life *(nepeš)* and you must not consume the life along with the flesh *(bāśār).*" Similarly, the Priestly writer (P) locates animal life in the blood and equates the value of blood with that of life:"For the life *(nepeš)* of the flesh *(bāśār)* is in the blood. I have consigned it to the altar in your behalf to atone for your lives, because the blood, in its value as life, makes atonement" (Lev 17:11; Levine 1974:68). According to P, the atoning value of the blood accounts for the efficacy of the sacrificial system. By placing (Heb *sāmak*) a hand on the animal (Lev 1:4; 3:2, 8, 13; 4:4, 15, 24, 29), sinners passed their essence on to it (cf. Num 27:18–23). Once the blood of the victim had been dashed on the sides of the altar, or in some cases applied to its horns, and the fat of the victim turned into smoke, substitution was effected for the two vital substances of the human sinner. The animal's death had brought life to the sinner.

As the primary vital substance, blood was occasionally believed to be present in life-giving objects considered inanimate by moderns. Wine was "blood of the grape" (Deut 32:14; for Ugaritic, see Gordon *UT* 385) and the Nile together with all of Egypt's sources of water bled when struck (Exod 7:17–24). The vital significance of blood is reflected in the word's special treatment in the Hebrew language. Blood consumption was most often described by the verb "eat" (Heb *ʾākal*), normally said of solids, although "drinking" (Heb *šātâ*) of blood is attested (Num 23:10; Ezek 39:17, 19), as is "get drunk" (Heb *šākar;* Isa 49:26; cf. Rev 18:6).

Because they embodied life, both blood and fat were allotted by biblical legislation to God (Lev 3:2–4, 8–10, 13–15), who was popularly believed to require them as food (Isa 1:11; Ezek 44:7; Ps 50:13). As such, they were forbidden to Israelites (Lev 3:17; 7:22–26). The primacy of blood over fat was reflected in biblical legislation. It was permissible (Lev 7:24) to put to any nonfood use the fat from animals which had died or been torn by beasts. In contrast, blood of a slaughtered animal which had not been sacrificed had to be discarded (Deut 12:24). In addition, only Israelites were prohibited from eating fat, just as they were forbidden other comestibles permitted gentiles, whereas even gentiles were restricted in their consumption of blood. According to Gen 1:29–30 (P), antediluvian humans had been permitted to eat seed-bearing plants and trees with seed-bearing fruit. All other animals were permitted green plants. After the Flood, God (Elohim) expanded the category of permitted comestibles so that all humans might lawfully eat the flesh of the other animals (Gen 9:1–7 [P]), with the provision that they not consume the blood of living animals. "But as regards living flesh *(bāśār bĕnapšô),* its blood *(dāmô)* you shall not consume" (Gen 9:4). Although the entire pericope is theoretical in that it legislates for gentiles and holds beasts accountable for shedding human blood (Gen 9:5), the prohibition against consuming the blood of a living animal is realistic. Experience had demonstrated to the ancients the nutritional value of blood, which is high in protein and low in fat. Blood's accompanying symbolic potency made it even more desirable. Keeping the animal alive after eating of its blood is economical and in modern times has been documented among the Masai (Brichto 1976:21). For the legislator, however, practical considerations were overridden by the biblical conception that jurisdiction over the most vital substance must be divine.

For Israelites the Bible adds two additional restrictions to the consumption of blood. They may not eat the blood of a slaughtered animal (Lev 17:10, 14; Deut 12:23–25), nor may they eat "with the blood" (Heb *ʿal haddām;* Lev 19:26; 1 Sam 14:32–35), that is, eat the flesh of a slaughtered animal with blood still in it. Doubtless the putative Israelite audience shared with the biblical authors the belief that the life

of the flesh was in the blood. For that very reason consumption of blood might be especially attractive when the need for invigoration was felt (Gaster 1975:65–66). It may be observed that Saul's soldiers consumed meat with the blood in it when they were weary (1 Sam 14:31–32) and that Ashurbanipal's weary enemies slit open the stomachs of their camels (*ANET*, 299) and drank the blood. Possibly the charge "only be strong (Heb *ḥazaq*) not to eat the blood" (Deut 12:23) is a pun based on the belief that eating blood would bring strength. If animal blood was potent, human blood would be more so. Herodotus' well-known account (4.65) that the Scythian warriors drank the blood of their first victims finds a parallel in Balaam's description of Israel drinking the blood of the slain (Num 23:24).

The biblical sources agree that consumption of animal blood by Israelites and the strangers in their midst, even when incidental to eating meat, is a heinous crime equivalent to homicide (Lev 17:4), and constitutes "treachery" (1 Sam 14:33) against God. Biblical legislators differed, however, as to how one might eat meat without unlawfully consuming the blood. The solution of Leviticus 17 (P; cf. 1 Sam 14:34–35) was to make all slaughter of domestic animals sacrificial, thus giving the blood to God (given the nature of the ancient Israelite economy whereby the average individual would not have eaten meat other than fish or fowl more than ten times a year, the requirement was not excessive). Animals from flock and herd were to be brought to the tent of meeting and sacrificed as "tribute-offerings" (Heb *šĕlāmîm;* Levine 1974:15–52). Only after the blood had been dashed against the altar, the fat turned to smoke, and the altar and the priests had taken their share, was the sacrificer permitted to eat the meat. Profane slaughter (Milgrom 1976:1–17) was allowed only for clean wild animals such as deer and clean wild birds. Their blood was to be covered with earth (Lev 17:13), in keeping with the notion that what offends God should be hidden from his sight (Gen 37:26; Deut 23:14; 1 Sam 26:20; Isa 26:21; Ezek 24:7–8; Job 16:18). Deuteronomy 12, in contrast, permits profane slaughter of clean animals, both domestic and wild, so long as one is careful not to eat the blood, but instead pours it "out on the ground like water." Obviously, neither of the procedures described above actually removed all of the blood from the flesh, but each avoided its unrestricted human consumption.

Because of its vital power, blood could be employed in rites designed to protect the living against the forces of death. In Exodus 12 the Israelites are instructed to slaughter the Passover offering, collect its blood, and smear some of it on the lintel and the doorposts of their homes. When Yahweh sees the blood he will protect (Heb *pāsaḥ*) the door and and not permit the destroyer to enter and smite the home. The apotropaic function of blood is likewise evident in the rites by which the high priest was enabled to enter and exit the inner sanctum "without dying" (Lev 16:2). Among the prescriptions is the threefold sprinkling of blood seven times (Lev 16:14, 15, 19).

The vital power of blood serves to explain its related ritual uses in purification and consecration. Blood is employed to cleanse the altar (Ezek 43:20), the incense altar (Exod 30:10), the sanctuary, and the temple (Lev 16:15–16; Ezek 45:18–20). Blood is especially important in purification of persons who have recovered from the skin disease traditionally translated "leprosy" (Heb *ṣāraʿat*). In the first stage of the ceremony, the blood of a slaughtered bird is mixed with water and sprinkled on them. Eight days later the lepers' extremities are smeared with blood from two sacrificial offerings and with oil (Leviticus 14). The ritual installation of Aaron and his sons in the priestly office contains elements similar to the purification of lepers. The new priests are smeared with sacrificial blood on their ears, thumbs, and big toes. In the climax of the rite, blood from the altar together with anointing oil is sprinkled on the consecrants and their vestments in order to render both priests and vestments holy (Exod 29:9–21; Lev 8:24). The similarities in the two rites stem from their common purpose, which is to change the status of the affected persons and thus confer on them new life. The principle articulated in rabbinic literature that the leper is reckoned dead is already found in Num 12:10–13 and 2 Kgs 15:5 (Cassuto 1972:36, 238). Accordingly, the fresh water, literally "living water," together with the blood, serves to return the leper to life. The oil in both ceremonies is part of the same complex. Note that elsewhere in the Bible oil confers royal status on commoners (1 Sam 10:1, 16:13) and sacred status on vessels (Exod 40:9–11).

Blood that had been employed in purification rituals would, like any other "used detergent," become unclean; similarly, blood dashed on the altar (Wright 1987:146–59). In only two categories is blood in

itself a source of contamination rather than of purification. Unjustified homicide, termed "innocent blood" (Deut 19:10; 2 Kgs 4:24; Jer 7:6; Heb *dām nāqî*) or, alternatively, "blood of the innocent(s)" (Deut 19:13; Heb *dam hannāqî;* cf. Heb *dam neqîyyîm* in Jer 19:4) brings about BLOODGUILT, which pollutes (Lev 35:33; Heb *yaḥanîp*) and contaminates (Lev 35:34; Heb *ṭimmê*) the land. The second category is menstruation. Indeed, menstrual blood could serve as the epitome of impurity (Ezek 36:17; Ezra 9:11). A menstruating woman was considered to be ill (Heb *dāwâ;* Lev 12:2; 20:18). The flow of blood accompanying the birth of a male child rendered the mother menstrually unclean for a week. Following the boy's circumcision on the eighth day, the woman spent thirty-three additional days in a state of "blood purification" (Heb *dĕmê ṭoharâ*). The birth of a girl, presumably because it brought into existence a potential source of menstrual and parturient blood, initiated a two-week period of menstrual uncleanliness, followed by sixty-six days in a state of "blood purification" (see Lev 12:1–8).

Although biblical covenants often describe the slaughter of animals, they generally do not make specific mention of blood. Of special interest therefore is the pericope of Exod 24:4–9 in which Moses concludes a covenant between Yahweh and Israel. He sacrifices twelve bulls and dashes part of their blood on the altar and part of it on the people. The blood is termed "blood of the covenant" (cf. Zech 9:11; Matt 26:28; 1 Cor 11:25). As is evident elsewhere in the Bible, covenants were concluded in order to create quasi-familial relations. Parties bound by covenant regularly employed family terminology. The role of blood was to create an artificial tie of consanguinity (Gaster 1975:151). It will be recalled that in Hebrew one refers to a biological relative or a spouse as one's "bone and flesh" (Gen 2:23; 29:14; 2 Sam 19:13, 14) or simply as "flesh" (Lev 21:2). But it was not feasible physically to mingle the bone and flesh of persons who wished to effect ceremonially a social or political kinship.

The role of blood in ceremonial kinship explains the tale in which Zipporah the wife of Moses (Exod 4:25–28) saves his life after Yahweh's attack by circumcising her son and touching the bloody foreskin to Moses' genitals (Heb *raglayim;* cf. Judg 3:24; 1 Sam 24:4). By this procedure Zipporah transformed Yahweh from an adversary into a "blood kinsman" (Heb *ḥatan dāmîm*), who was required by the newly established kinship to let Moses alone (Gaster 1975:234).

Murder was particularly heinous when accompanied by bloodshed. Synonymous with the term "murderer" (Heb *roṣeaḥ*) is "man/men of blood" (2 Sam 16:8; Pss 5:7, 26:9; Prov 29:10). A city of murderers (Isa 1:21) might equally be termed "city of blood" (Ezek 22:2; 24:6, 9). Blood shed by a murderer cried to God out of the earth (Gen 4:10). Therefore, persons who felt compelled to commit murder might prefer to mitigate their deed by not physically spilling the blood of the victim. Accordingly, Reuben (Gen 37:21–22) was able to persuade his brothers that casting Joseph into a cistern would accomplish their purpose without shedding his blood. At the very least it was expected that an effort be made to conceal the blood of the victim (Gen 37:26; Ezek 24:7–8) and to hide it from the sight of God (1 Sam 26:20). According to the Chronicler (1 Chr 22:8), even the just warfare waged by David disqualified him from building a temple to Yahweh because he had shed much blood on the earth in Yahweh's sight.

S. DAVID SPERLING

BLOOD, AVENGER OF (Heb *gôʾēl haddām* (גּוֹאֵל הַדָּם)). An individual responsible for avenging the death of a relative. Biblical legislation refers to the blood avenger in connection with the cities of asylum (Num 35:11–28; Deut 4:41–43, 19:1–13; cf. Josh 20:1–9). From these texts as well as

from biblical narrative (2 Sam 14:5–11) and extrabiblical parallels it is clear that the legislators were attempting to accommodate an existing institution to the biblical notion that only God had absolute disposition over human and animal life and over BLOOD, in which life was embodied.

In biblical law, one who slew another through "an act of God" (Exod 21:13; Heb *hā›elohîm ›innâ leyādô*), by accident (Num 35:11; Heb *bišĕgagâ*), without intention (Deut 19:4; Heb *biblî da‹at;* cf. Josh 20:3), or without malice (Num 35:22; Heb *›êbâ*), was not guilty or a capital crime (Deut 19:6; Heb *mišpaṭ māwet*), and his was "innocent blood" (Deut 19:10; Heb *dām nāqî*). Nonetheless, that manslayer could be killed with impunity by an avenger of blood unless he found asylum at an altar (Exod 21:13) or at a city of asylum. If, however, malice could be demonstrated, then it was permissible to remove the manslayer from the altar (Exod 21:14). If the killer had fled to a city of asylum, the elders of his native city were to demand his extradition from the city of asylum and to turn him over to the avenger of blood for execution (Deut 19:12). The Priestly legislation (Num 35:24–25) restricts the blood avenger somewhat by empowering the assembly *(‹ēdāh)* to decide whether a manslayer qualified for asylum and to provide him safe conduct there. The death of the high priest, which atoned for the original homicide, permitted the manslayer to leave asylum without fear of reprisal by the avenger.

The key to understanding the biblical notion "avenger of blood" is the noun translated "avenger" but perhaps more accurately rendered "restorer." Heb *gô›ēl* is derived from the verb *ga›al,* "restored," a synonym of *pādâ,* "redeemed," "ransomed" (Lev 27:27; Jer 31:11; Hos 13:14); *hošî‹a,* "saved," (Isa 61:16); and *râb,* "interceded legally in one's behalf" (Isa 49:25; Jer 50:34; Ps 119:154). Indeed, as awkward as it sounds in English, the redundancy "returns its restoration" (Heb *yāšîb gĕ›ullātô;* Lev 25:51, 52) succinctly demonstrates that *gā›al* primarily means "restored to an original state." A *gô›ēl* therefore was one who effected restoration to an original, sometimes ideal, state. Such a restorer, usually a close relative (Ruth 3:12), was expected to regain land sold by a family member (Lev 25:25; Jer 32:7–8; Ruth 4:3–4) and to redeem a relative from slavery (Lev 25:47–49). The "blood avenger" was literally "taker back of the blood," that is, a redeemer with a specialized function. The killing of one clan member was construed by the remaining members not only as a shedding of the group's blood (de Vaux 1965:11) but as misappropriation of blood which properly belonged to the entire group. The responsibility of the blood avenger was to win back that misappropriated blood by killing the original blood shedder (Daube 1969:123–24). Although blood vengeance for a relative slain in battle was not justified (2 Sam 3:27–30), return of other blood was required by the clan (Heb *mišpāḥâ*), or by an agent acting on its behalf even when both slayer and victim were clan members (2 Sam 14:6–7). It appears that the rise of the monarchy limited blood vengeance in that the king could, in effect, pardon the slayer by restraining the avenger of blood (2 Sam 14:5–11).

The notion that a killer was guilty of misappropriating his victim's blood, which was to be returned, if not to the victim personally, then to his kin through the killer's death, was known in the ANE outside of Israel. The 8th-century Aramaic royal treaty from Sefîre (III:1–19; Fitzmyer 1967:97–99; Lemaire and Durand 1984:119) requires that blood be rescued from the hand of the enemies responsible for the king's assassination (Aram *tqm dmy mn yd šn›y;* cf. 2 Kgs 9:7 and EA Akk *naqāmu*) by putting them to the sword. Similarly, in a 14th-century B.C. letter from King Burlaburiash of Babylon to Pharoah Amenophis IV, the Babylonian demands that bandits who have killed Babylonian merchants in Egyptian territory must be apprehended and executed so that the blood of the slain may be returned (EA 8:26–29; Akk *damīšunu tēr*). The same notion of misappropriation explains why in Mesopotamia "master of the blood" (Akk *bēl damē*) in the Neo-Assyrian period referred both to the killer and to the kinsman of his victim (Roth 1987:363–65). The manslayer who had taken the blood had unlawfully become its master. It was the deceased's relative who was bound to reclaim that same blood.

It is of interest that, although God "avenges/rescues blood" (Deut 32:43; 2 Kgs 9:7; Heb *nāqam*) and requires it of those who shed it wrongly (Gen 9:5; 42:22; Ps 9:13; Heb *dāraš*), he is never referred to as *gô›el haddām.*

BLOOD, FIELD OF (PLACE). See AKELDAMA (PLACE).

BLOOD, FLOW OF. See UNCLEAN AND CLEAN.

BLOODGUILT. The pollution or guilt incurred when life is taken outside of the legal prescriptions defined in the Hebrew Bible. "Bloudgyltynesse" entered the English language through Coverdale's 1535 translation of Ps 51:16, but the notion that blood wrongly shed makes for guilt as indelible as blood itself is known from antiquity through modern times (Gaster 1975:56–73). The earliest example from the ANE is in an 18th-century B.C. text from Mari (ARM III:18) referring to a criminal who is "like a mad dog" and is "polluted with that blood (shed in murder)."

Although biblical Hebrew possesses words for "guilt" and "culpability," there is no Hebrew term corresponding exactly to English "bloodguilt." Because BLOOD has a life of its own (Ezek 35:6) and, in biblical thinking, embodies the life force, the biblical writers found it sufficient simply to employ the word *dām,* "blood" (Num 35:27; Deut 17:8; Josh 2:19; Judg 9:24; 2 Sam 3:27; 1 Kgs 2:37; Hos 6:8), or its plural *dāmîm* (Exod 22:1, 2; Lev 20:9; Deut 19:10, 22:8; 2 Sam 3:28; Ezek 18:13; 1 Kgs 2:23), both for the substance itself and for the consequences of its improper disposition. Justified homicide, such as the tunneling thief killed by a homeowner in darkness, does not incur bloodguilt (Exod 22:1). Unjustified killing, ranging from premeditated murder (1 Kgs 2:32) through killing a tunneling thief in daylight (Exod 22:2), to slaughtering a domestic animal without proper sacrificial rites (Lev 17:4), entails bloodguilt. Bloodguilt may also be incurred through negligence, such as that of a watchman whose failure to sound a horn results in another's death (Ezek 33:6) and that of a prophet who fails to warn his people (Ezek 33:7–9). Persons are sometimes said to bear bloodguilt for their own deaths, even when they have not committed homicide or contributed to the death of another. In this category are the mandated death penalties for the prohibited sexual acts of intercourse with one's father's wife or one's daughter-in-law, male homosexuality, and bestiality (Lev 20:11, 12, 13, 16). Regarding the executed offenders, including the beast, the biblical passages declare:"their bloodguilt is in them" (Heb *dĕmēhem bām;* cf. Ezek 33:5), that is, they and not their executioners bear the responsibility for the blood shed in carrying out the death sentences. The same is said (Lev 20:27) of persons who divine by means of ghosts (Heb *ʾôb*) or familiar spirits (Heb *yidʿônî*). Alternatively, responsibility for bloodshed is expressed by blood "on" one's "head" (2 Sam 1:16; Heb *ʿal rôšĕkâ*) or "at" one's "head" (1 Kgs 2:37; Heb *bĕrôšekâ*). Rahab was told that the Israelite spies would bear on their heads the bloodguilt for any of her family killed by the invading Israelites, so long as they stayed indoors. In contrast, if they ventured outside during the Israelite attack on Jericho their bloodguilt would be on their own heads (Josh 2:19). Note that the phrase "blood at his head" alternates synonymously with the phrase "his bloodguilt is upon himself" (Ezek 33:4–5).

In some ways similar to the Greek notion of *miasma* (Pedersen 1926:420–25; Gaster 1975:69–73), the stain or defilement brought about by a crime, illicit bloodshed pollutes the earth. Such contamination can be expunged only by shedding the blood of the killer (Num 35:33–34).

Bloodguilt incurred by a king could cling to his country even when the royal successor came from a new dynasty, so long as the members of the original royal family were themselves not avenged by the offended parties (1 Sam 21:1–11). See BLOOD, AVENGER OF. Likewise, unwarranted bloodguilt (1 Kgs 2:31; Heb *dĕmê ḥinnâm*) that had clung to a royal associate could be removed from the royal family and "returned to the head" (Reventlow 1960:311–27) of the perpetrator by executing him.

S. DAVID SPERLING

BOAR. See ZOOLOGY.

BOARD. See PLANK.

BOAZ (PERSON) [Heb *bō‹az* (בֹּעַז)]. A descendant of Judah who married Ruth the Moabitess and fathered Obed, the grandfather of David (Ruth 4:13, 18–22). Many have suggested that the etymology of Boaz is *be‹ōz,* "in the strength of," or *bō‹ōz,* "in him (is) strength," from the root *‹zz,* "to be strong." Noth, however, prefers "of sharp mind" (*IPN* 228; also the Ar *baṛzun,* "mental keenness").

Boaz was an influential landowner in Bethlehem and relative of Elimelech, whose family had migrated to Moab (Ruth 2:1; 3:2; 4:3). When Elimelech and his sons died, his wife Naomi and his daughter-in-law Ruth returned to Bethlehem, where they learned of Boaz and his relationship to the Elimelech family. See ELIMELECH; MAHLON; CHILION; ORPAH. Boaz agreed at Ruth's request to act as the family's *gō›ēl* (i.e., kinsman-redeemer) by purchasing the land offered for sale by Naomi (4:3) and by marrying Ruth to "perpetuate the name" of her deceased husband Mahlon (4:10). See FAMILY; LEVIRATE LAW. However, there are several legal problems associated with Boaz' transaction that remain unresolved. See RUTH.

Boaz functions in the story as an example of covenant fidelity and God's reward for faithfulness. A relative closer to Elimelech, who refuses to marry Ruth, serves as a foil for Boaz, but Boaz' supreme act of virtue is not his marriage to Ruth, but rather his willingness to inform the nearer kinsman of his rights. By this gesture Boaz was setting aside his personal desires for the requirements of the covenant law (Berlin 1983; 86). Boaz was a man advancing in years (3:10) who probably had no progeny (cf. the response of the nearer kinsman, 4:6); the story shows that he was rewarded with wife and son for his commitment.

Boaz' name appears in the honored seventh place in the ten-name royal line of David (Ruth 4:18–22). He is also listed in the royal lineage of David by the Chronicler (1 Chron 2:11–15). Because of his relationship to the Davidic house, he is in the ancestral line of Jesus (Matt 1:5 [*Boes*]; Luke 3:32 [cf. LXX *Boos, Booz*]). There is no OT support for Matthew's comment "Salmon begat Boaz by Rahab." Because Matthew presents a schematic, incomplete genealogy he probably means that Boaz is a descendant of Rahab.

The historicity of Boaz and his connection with David have been widely challenged. It is believed that the Ruth genealogy is borrowed from Chronicles and therefore is secondary; furthermore, discrepancies are pointed out between the narrative and the genealogy. However, a growing number of scholars have argued that the genealogy is part of the original composition by showing (1) that the story is not *novelle* (folk story) but an early example of Solomonic historiography and (2) that there are features of the narrative which assume a knowledge of the genealogy.

"Boaz" is also the name of one of the two bronze pillars erected at the N (or "left" facing E) of the entrance to Solomon's temple (1 Kgs 7:21–22; 2 Chron 3:15–17). The LXX of 2 Chron 3:17 translates Boaz *ischus* ("strength") and Jachin *katorthosis* ("a setting right"), which further supports a "strength"-related etymology of the Heb. The meaning and the function of the pillars are disputed. See JACHIN AND BOAZ.

KENNETH A. MATHEWS

BOCHERU (PERSON) [Heb *bōkĕrû* (בְּכֹרוּ)]. A Benjaminite descendant of Saul and Jonathan, listed as the second of Azel's six sons (1 Chr 8:38; 9:44). The LXX and Syr read the word as if it were vocalized *bĕkōrô,* meaning "his firstborn" (e.g., LXX *prōtotokos autou*). This reading would render the word as an adjective describing Azrikam, Azel's firstborn son. This is a strong possibility, in that the two words have identical Hebrew consonants and that the position of the word in both lists of Azel's sons is immediately following Azrikam. A similar situation exists with another Benjaminite, BECHER (Heb *beker*), the second son of Benjamin (Gen 46:21; 1 Chr 7:6, 8).

SIEGFRIED S. JOHNSON

BOCHIM (PLACE) [Heb *bōkîm* (בֹּכִים)]. A place W of the Jordan River near Gilgal and Bethel, where the Israelites wept for their disobedience at the time of Joshua (Judg 2:1–5). The Hebrew and Greek names both mean "Weepers." After entering the land of Canaan the people of Israel disobeyed God's command of *ḥerem,* "total destruction," so that "the angel of Yahweh came up from Gilgal to Bochim" to point out their disobedience. "When the angel of Yahweh spoke these words to all the sons of Israel, the people lifted up their voices and wept" (Judg 2:4). The naming of the place Bochim became a memorial for this repentance, where "they offered sacrifice to Yahweh." The location of Bochim has not been identified.

YOSHITAKA KOBAYASHI

BODMER PAPYRI. Ancient manuscripts named after Martin Bodmer (1899–1971), Swiss humanist and collector of rare books, who founded his "library of world literature," the Bibliotheca Bodmeriana, in Cologny near Geneva. Just prior to his death, Bodmer established the Foundation Martin Bodmer, in order to ensure that his library would remain intact and open to the public.

1. The Bodmer Papyri

In its widest application the term includes not only ancient Greek and Coptic mss in the possession of the Bibliotheca Bodmeriana but also documents of shared provenience at other locations. More commonly, as here, Bodmer papyri refers to mss acquired by Martin Bodmer and in the process of being published in the series *Papyrus Bodmer,* launched in 1954. Not all of the Bodmer papyri are actual papyri, however (XVI, XIX, and XXII are parchment), nor do all derive from the discovery in 1952 (XVII).

2. The Discovery

Though Panopolis (Achmim) was once thought to have been the place of discovery, it is now believed to have been somewhat farther S in the Panopolite nome, namely at Pabau (near Dishna), the ancient headquarters of the Panchomian order of monks. The bulk of the find was bought by Bodmer, but a variety of items came into the possession of Sir Chester Beatty (see CHESTER BEATTY PAPYRI), the Universities of Mississippi and Cologne, and the Fundacio "Sant Lluc Evangelista" in Barcelona. Bodmer's share numbered in excess of the sixteen codices and three rolls which have thus far been published (excluding P. Bodmer XVII). Pap. VIII (1–2 Peter), belonging to a codex of heterogeneous materials, was presented to Pope Paul VI during his visit to Geneva in 1969. Consequently it is now housed in the Vatican Library.

3. The Library at Pabau

The evident composition of the ancient monastic library has received some attention. Of interest is the inclusion of three kinds of texts:Classical Greek, Greek biblical and Christian, and Coptic biblical and Christian. Though it has been disputed that all of the Classical texts are from Pabau, one codex makes a mixture of texts indisputable: XLV (Susanna) + XLVI (Daniel) + XXVII (Thucydides) + moral maxims. That the library can be seen as a monument to the gradual triumph of Coptic over Greek in the Christianity of Upper Egypt is perhaps not confirmed by the fact that it is the majority of OT (not NT)

texts that is in Coptic. The bulk of NT mss is in Greek. Not least among the library's points of interest is the virtual absence of biblical (OT) historical books. The lone exception is P. Bodmer XXI, a Coptic papyrus codex of Joshua, minus chaps. 12–21, which never formed part of the ms.

4. The Manuscripts

Dates for the entire ancient library range from the 2d century A.D. (P. Bodmer XXVIII) to the 4th/5th century (VI, XIX, XXII, XXIX–XXXVIII), with the majority of texts falling in the 4th century. P. Bodmer XVII (7th century) does not derive from Pabau. For Coptic studies in particular, the Dishna find must rank as one of the most outstanding discoveries to date. The mss are all of early date and represent Coptic in a considerable variety of forms.

a. Biblical and Related Texts. 1. Greek. All of the published mss are on papyrus and in codex form.

P. Bodmer II=P66: containing John 1:1–21:9 (= fragment at Chester Beatty:John 19:25–28; 30–32). Date II/III century.

P. Bodmer V: Nativity of Mary, also called in the ms Apocalypse of James. Date IV. Same codex as X, XI, VII, XIII, XII, XX, IX, VIII.

P. Bodmer VII=P72: Jude 1–25. Date IV. See P. Bod. V. above.

P. Bodmer VIII=P72: 1–2 Peter. Date IV. See P. Bod. V above.

P. Bodmer IX=2113: Psalms 33–34. Date IV. See P. Bod. V. above.

P. Bodmer X: Corinthian Correspondence (contains response of the Corinthians to Paul's second letter, and Paul's third letter). Date IV. See P. Bod. V above.

P. Bodmer XI: Ode of Solomon 11. Date IV. See P. Bod. V above.

P. Bodmer XIV=P75: Luke 3:18–18:18; 22:4–24:53. Date III. Same codex as XV.

P. Bodmer XV=P75: John 1:1–15:8. Date III. See P. Bod. XIV above.

P. Bodmer XVII=P74: Acts 1:2–28:31; Jas 1:1–5:20; 1 Pet 1:1–3:5; 2 Pet 2:21–3:16; 1 John 1:1–5:17; 2 John 1–13; 3 John 6, 12; Jude 3–25. Date VII.

P. Bodmer XXIV=2110: Pss 17:46–117:44. Date III/IV.

P. Bodmer XLV: Sus (Theodotionic text). Date IV. Some codex as XLVI, XXVII, XLVII.

P. Bodmer XLVI: Dan 1:1–20 (Theodotionic text). Date IV. See P. Bod. XLV above.

P. Bodmer?=P73: Matt 25:43; 26:2–3 [ined.]. Date VII. Fragment found in P. Bod. XVII and probably in same hand.

2. Coptic. Of the published mss all but P. Bodmer VI, XVI, XIX, XXII are on papyrus. All are, however, in codex form. Unless otherwise indicated the dialect is Sahidic.

P. Bodmer III: John 1:1–21:25; Gen 1:1–4:2. Date IV. Bohairic.

P. Bodmer VI: Prov 1:1–21:4. Date IV/V. Paleo-Theban ("Dialect P").

P. Bodmer XVI: Exod 1:1–15:21. Date IV.

P. Bodmer XVIII: Deut 1:1–10:7. Date IV.

P. Bodmer XIX: Matt 14:28–28:20; Rom 1:1–2:3. Date IV/V.

P. Bodmer XXI: Josh 6:16–25; 7:6–11:23; 22:1–2; 22:19–23:7; 23:15–24:2 (=P. Chester Beatty 2019). Date IV.

P. Bodmer XXII: Jer 40:3–52:34; Lamentations, Epistle of Jeremiah, Bar 1:1–5:5 (=Mississippi Coptic Codex II). Date IV/V.

P. Bodmer XXIII: Isaiah 47:1–66:24. Date IV.

P. Bodmer XL: Song of Songs [ined.].

P. Bodmer XLI: Acta Pauli. Date IV. Sub-Achmimic.

P. Bodmer XLII: 2 Corinthians [ined.].

P. Bodmer XLIII: An Apocryphon [ined.].

P. Bodmer XLIV: Daniel [ined.]. Bohairic.

b. Christian miscellanea. 1. Greek.

P. Bodmer XII: a liturgical fragment (Melito?). Date IV. See P. Bod. V above.

P. Bodmer XIII: Melito of Sardis, *Peri Pascha.* Date IV. See P. Bod. V above.

P. Bodmer XX: Apology of Phileas (=fragment at Chester Beatty: 135, 13–16 and 136, 14–17). Date IV. See P. Bod. V above.
P. Bodmer XXIX–XXXVIII: Codex Visionum. Date IV/V. [XXX–XXXVIII ined.].
P. Bodmer XLVII: Moral Maxims. Date IV. See P. Bod. XXVII above.

2. Coptic.

P. Bodmer XXXIX: Pachomius' Letter 11^{b} [ined.].

c. Classical texts.

P. Bodmer I: *Iliad* 5 and 6. Date III/IV. 2 papyrus rolls.
P. Bodmer IV: Menander, *Dyskolos.* Date III. Same codex as XXV and XXVI.
P. Bodmer XXV: Menander, *Samia* (= P. Barc. 45). Date III. See P. Bod. IV above.
P. Bodmer XXVI: Menander, *Aspis* (= P. Robinson inv. 38+P. Köln 3 [inv. 904]). Date III. See P. Bod. IV above.
P. Bodmer XXVII: Thucydides Bk 6. Date IV. See P. Bod. XLV above.
P. Bodmer XXVIII: Satyr play. Date II. Papyrus roll.
P. Bodmer XLVIII: *Iliad* [ined.].
P. Bodmer XLIX: *Odyssey* [ined.].

The number of Bodmer papyri has to date reached L (= business documents of Panopolis on recto of P. Bodmer I).

ALBERT PIETERSMA

BODY. The word for body (Gk *sōma* (σωμα)) appears in a number of theologically significant contexts in the NT. Consequently, it is important to note this usage and to seek its antecedents in the Jewish and Hellenistic world of the time.

5. Colossians and Ephesians
D. Summary

———

A. OT and Judaism

The OT speaks of the human being in terms of "flesh" and "soul." It uses *gĕwiyyâ* ("body") a few times referring to the body of an angel where "flesh" would be inadequate (Ezek 1:11, 23; Dan 10:6); to a slave in the sense of persons as "manpower" (Gen 47:18; Neh 9:37), and to a corpse or carcass (Judg 14:8, 9; 1 Sam 31:10, 12; Nah 3:3; Ps 110:6; also *gûpâ* 1 Chr 10:12). The OT shows little interest in distinguishing the "body" as one part of a man from the rest of his personality, his "soul." To speak of man's "body" (as distinguished from man as a whole) makes sense only when describing him in his capacity as a worker at the disposal of his master, or as a mere dead substance to be buried. What man is can only be understood in a wholistic way. Man does not possess a soul and a body, rather he is both soul and flesh, full of life and potential activity, while at the same time threatened by illness, transitoriness, and death. Soul without flesh is like a ghost without real existence, while flesh without soul is but a corpse (or, at most, the manpower of a slave). Nor is the OT interested in a conception of the human being as an individual person, either as distinguished from other persons or as a small universe complete in himself/herself. Wherever a person is prominent in the OT, he/she is elected by God to serve God's whole people. The idea of an individual developing to a more and more perfect specimen of human being is foreign to the OT.

Death, therefore, is not understood as a separation of the divine soul from the mortal body, or as the ultimate perfection of a person in his/her "dying beautifully," or as the natural biological goal of life. Death remains a person's enemy, and only God himself is more poweful:"My flesh and my heart may fail, but God is the rock of my heart and my portion forever" (Ps 73:26).

In Aramaic, the language of Jesus, the above view is slightly altered as a result of Hellenistic influence. Aramaic *gĕšēm* appears in Daniel in the sense of corpse (4:30; 7:11), and in the sense of a man exposed to fire or water (3:27–28; 5:21), while in rabbinic literature *ǧpā*› signifies a "person" (*Qidd.* 37a; *t. Sanh.* 13:4 (434); *j. Ta*‹*an.* 1:64d.6) as opposed to the members or the head (*m. Pesaḥ.* 10:3; *t. Ta*‹*an.* 2:5) or even the soul (*Lev. Rab.* 34). This usage illustrates the extent of Greek influence in the first centuries of the Christian era.

B. Greek/Hellenistic World

The situation is quite different in the Greek-speaking world. With Homer, *sōma,* "body," is primarily a "corpse," that is, something different from the ego of the speaker, an object that he observes as lying

outside himself. Later, the word denotes a living human or animal body, and a physical (e.g., a celestial) body (so also in English, which lacks the distinction of German *Leib* and *Körper*). During the NT period, *sōma* was also used of a "slave" (Polyb. 2.6.6; 18.35.6, etc.). It could also designate a unity, e.g., the *ekklēsia* ("assembly," the same term designating the "Church" in the NT), as a body of citizens (Chrysipp. *Fr.* 367). Two countries that became united after a war are now "one body" (Plut. *Phil.* 8[I 360c]). All the parts of the universe form such a unity; it is, therefore, possible to speak of the cosmos as a (divine) body (see C.5 below).

The original usage of *sōma* in the sense of "corpse" illustrates one line of development in which the body is seen merely as matter, either dead (as a corpse or a star), as a kind of machine, or as an object at the disposal of its owner (e.g., a slave). This leads to Plato's view, especially in his middle period, of the body as a mere "tomb" (*sōma-sēma,* Grg. 493a, originally a Pythagorean pun; cf. Orph. *Fr.* 228d), a "prison" (*Cra.* 400bc), or an "oyster shell" (*Phdr.* 250c; *Phd.* 66b). Death is, therefore, liberation of the soul. During a later period, Plato also spoke of a beautiful body as a kind of (imperfect) image of the beauty of the heavenly ideas (*Ti.* 29a; *Resp.* 8.591d; *Symp.* 211c).

Plato's student, Aristotle, still valued the soul, though he did not share his teacher's conviction of its heavenly origin as the principle of life higher than the body. For him it was the soul that molds the matter of the body into a piece of art, a living man. The Stoics combined this view with another line of development in which "body" became a designation of unity. The old idea of the human body as a small world *(mikrokosmos),* parallel and related to the great body *(makrokosmos),* the universe, was revived. The soul belongs to the body and is part of it as the power of life within it. Within the great body of the universe, it permeates everything; initially faintly present in the rocks, with gradually increasing concentration in the plants, animals, and men. Thus, man is part of the universe; the same life-spirit that permeates the whole world is, in its most concentrated form, to be found in the human mind. Conversely, the universe is a body governed by Zeus, the highest god, or heaven, or the divine mind or *logos* (Cornutus, *Theol. Graec.* 20; Orph. *Fr.* 21a; Philo *Fuga* 108–13; *Somn* 1.144; *Quaes Ex* 2.117). A heroic or otherwise impressive death would be the last touch of the artist perfecting his piece of art. Epicurus shares with the Stoics the conviction of the bodily quality of the soul. He, therefore, prefers to speak of "flesh" instead of "body," since "the desire of the belly is the first impact and root of every good" (*Fr.* 409), though the pleasures of the soul are higher than those of the flesh (D.L. 10.137). For him, death is the natural biological end of life.

C. The NT

1. Body and Soul. In the NT, the OT wholistic view of man continues to dominate, though the Greek word *sōma* is now used. "Body" designates in the same way the whole man who can be raised after death (Matt 27:52; Acts 9:40; John 2:21; Rom 8:11; 1 Cor 6:14). The "soul" is its life-power, continually renewed by eating and drinking (Matt 6:25). Matthew 10:28 speaks, in a unique way, of those who are able to kill the body but not the soul (the latter phrase is lacking in Luke 12:4), though man remains soul and body after his death. This is understandable when we consider Paul's concept of a "spiritual body" over against a "psychic" (earthly) one. It is the body that will be raised, though it will be changed and not remain "flesh and blood" (1 Cor 15:50–51; Phil 3:21). Once (2 Cor 5:8), Paul speaks of the believers' wish to "emigrate from the body," and of the destruction of "the earthly tent" (5:1). V 3 may be interpreted "so that by putting it on, we may not be found naked"; however, a more probable reading is "provided that, stripped [of earthly body] we shall not be found naked." Be this as it may, it is clear that Paul does not expect any "nakedness" of a pure soul, not even for the interim between death and parousia, but a new "clothing" that will be "life swallowing up what is mortal" (v 4). Most surprising is 2 Cor 12:3, where Paul relates, in a sarcastically boastful manner, a most extraordinary experience of being taken up to paradise and seeing unspeakable things. Moreover, he is not even interested in the miracle as such; whether he ascended to heaven "in the body" or not is of little concern to him. Only the fact that he had been there has meaning for him; whether or not this might be something like a soul that is able to leave the body (as Platonists would think) is insignificant. Rather, Paul states that after the resurrection God's spirit takes the place of the former soul (1 Cor 15:44). Strictly speaking, the soul is the life of the earthly

body and, hence, is limited by the body's existence (as with the Stoics or Epicureans). As such the soul can, in one respect, be negatively contrasted to the spirit, since it is open to the influence of demons or any kind of desires (Jas 3:15; Jude 18–19). As such the soul is, according to Philo (*Leg All* 3.246–47), equivalent to the earth cursed by God (Gen 3:17). In another respect, it is also the place of listening to and trusting in God. Thus, God's spirit is already living in earthly men, if and when they do not remain merely "psychic" (literally "soulish") men (1 Cor 2:14). That means that God's spirit, and with it the life that is no longer perishable, is, up to some degree, already found within the earthly body. This is the view of John 11:25–26. In Jesus, the resurrection and the life are already present. Certainly the body will die, but the new life that the spirit of God has begun to build in each person individually will live on.

2. The Physical Body of Man. Since there is no word for "body" in the OT (except when designating a corpse or a slave), it is not surprising that the term rarely occurs in Jesus' teachings. Nonetheless, there is some emphasis on life in its bodily form; e.g., Jesus' healing restores the "body" of a sick person (Mark 5:29), and the disciples' obedience concerns their bodies, i.e., that they should not commit adultery (Matt 5:29) or become the cause of anxiety (6:25) or fear (10:28). This becomes central in Paul's letters:to present one's body as a living sacrifice (but not in martyrdom as in 1 Cor 13:3) is one's spiritual worship (Rom 12:1). Even Paul himself must "pommel and subdue" his body in the service of his Lord (1 Cor 9:27). It is the body, not the soul, that is the temple of the Holy Spirit (1 Cor 6:19–20). In the apostle's body, i.e., in his "mortal flesh," the death and the life of Jesus are manifest, as, for instance, in the marks of many whippings (2 Cor 4:10–11; 11:24–25; Gal 6:17). In the last judgment, one is to be responsible for what he/she has done "in the body" (2 Cor 5:10). Thus, "body" is much more than a mere physical instrument (like, e.g., the stomach); it always belongs either to Christ or to other powers (e.g., to sin and death, or to a prostitute; Rom 6:6; 7:24; 1 Cor 6:13, 15). In this body the grace of God transforms the new life of man. Because the believers were "bought with a price" by God's grace, it is in their bodies that God will be glorified (1 Cor 6:20). Hence, all who have been baptized into Christ Jesus' death can no longer allow sin to reign in their mortal bodies (Rom 6:3, 12).

3. The Lord's Supper. The words of institution during the Last Supper of Jesus are handed down in mainly two different versions. Paul writes to the Corinthians (ca. A.D. 50), "I received from the Lord what I also delivered to you, that … he … took bread … and said, 'This is my body which is for you …'In the same way also the cup, after supper, saying, 'This cup is the new covenant in my blood …' " (1 Cor 11:23–25). In Mark 14:22–24 these words of institution are rendered differently:"Take, this my body," and "This is my blood of the covenant, which is poured out for many" (written around A.D. 70). Paul's version seems to be, on the whole, the more ancient one. It shows that the first word was separated from the second by a whole meal ("after the supper"). It is, therefore, not surprising that the two sayings are, originally, not perfectly parallel. It is to be expected that gradually they would have been harmonized during the tradition in the NT and especially in modern liturgies. If Mark's version, in which the first statement, "This is my body," runs parallel to the second, "This is my blood," was the original, then we should expect the constantly recurring combination "flesh" and "blood," because "body" and "blood" are never combined in Hebrew or Greek (except, perhaps, in Job 6:14), and "body" does not designate an offering except in Gen 15:11 (referred to in *Apoc. Ab.* 13:3). Differently, the cup in 1 Chr 11:25 (the wine is never mentioned!) is identified with the new covenant, not with the blood, which excludes the idea of drinking blood, horrifying for a Jew. Some scholars argue that this proposed original Markan formula (according to which the disciples drank before Jesus spoke his word of institution, identifying the cup with his blood) was changed to the less offensive form found in Paul's tradition. But would Jesus ever have identified the cup with his blood without pointing in some way to the scandalous character of drinking it (as in the passage of John 6:52–56, probably part of a later church liturgy)? The phrase "which is for you" (1 Cor 11:24) may have been originally lacking (as in Mark 14:24). However, the idea of a vicarious death is implied in 1 Cor 11:25 ("in my blood," cf. Exod 25:8–11), since in the time of Jesus the sacrifice of the covenant was also regarded as being expiatory. Since the Aramaic word for "body" *(gûpā)* can designate the "I" of a person, Jesus may have meant that he himself would be present with his disciples whenever they ate the bread. The implication of the second formula would then have led to

greater emphasis on Jesus' readiness to give up his life ("in my blood"). In the Pauline tradition, the latter was made explicit by combining the words "which is for you" with "body" (cf. Luke 22:19; Heb 10:5, 10; 1 Pet 2:24), and in the Markan tradition by the combination of the "blood" with "poured out for many." Thus, the Lord's Supper reenacts the new covenant in the present communion of the participants with God and their fellow disciples (especially in Paul). This communion is based on the past sacrifice of Jesus (especially in Mark) and is the pledge for the future eschatological fulfillment of the meal in the kingdom of God and the parousia of Christ (1 Cor 11:26; Mark 14:25; Matt 26:29; with special emphasis in Luke 22:15–18). All reports contain this threefold orientation toward the past, the present, and the future.

4. The Body of Christ. When, according to the eucharist tradition, Jesus spoke of "my body," he spoke of his future presence with his disciples as a presence "for you" (added in the Pauline tradition and implied from the beginning in the word about the cup). Hence, "body" is not so much used as a designation of an individual person in and of himself/herself, but rather points to someone's being, living, and acting in relationship with others. Any body is in one sense limited by its form and contour (e.g., a human body by its skin); in another sense it is a means of contact and communication (e.g., seeing through the eyes, hearing with the ears, touching with the hands, walking with the legs). It is in this latter sense that Jesus uses the term in the Last Supper, and that Paul uses it generally. Thus, the "body of Christ" is, primarily, Christ himself crucified for the sake of his disciples (Rom 7:4; Col 1:22). In the Lord's Supper, "participation in" (or "communion with") the body of Christ takes place in such a way that it transforms the "many" into "one body," since all partake of the same bread. In order to emphasize this interpretation of the oneness of the Church, the apostle speaks in 1 Cor 10:16–17 first of the cup, and then of the bread, reversing the usual order. "In Christ" they all become "one body" (Rom 12:5).

As far as this expression goes, Paul's wording is not unusual linguistically. A Greek would have easily understood the phrase "a body of believers" or "all believers becoming one body." However, Paul intends to say more than that. The Christians do not simply become unified by a common belief (e.g., in Jesus giving his body for them). Rather, they become "the body of Christ" (1 Cor 12:27) because they are "baptized into one body" (v 13). This "one body" is Christ's body, as the preceding verse illustrates:"As the body is one and has many members … so is Christ." In baptism, the believers are actually brought into Christ himself. Therefore, they did not call themselves "Christians" (as those outside of the Church would do; Acts 11:26; 26:28; 1 Pet 4:16), as if the newness were their own attribute; rather, they call themselves "those in Christ," because what distinguishes them from others is Christ himself, whom they had "put on" in baptism like a garment and in whom they are now living (Gal 3:27–29). This is why Paul, when using the term of the body of Christ (or in Christ) always speaks collectively of the communion with God or Christ as opposed to that of an individual believer. In 1 Cor 6:15–17 he states that an individual man "becomes one body with a prostitute," but when speaking of "becoming one with the Lord," he replaces "body" by "spirit." As members of the Church, "the body of Christ" is of primary importance, whereas its "individual members" are secondary. This is also typical of Jewish thinking which (according to M. Buber) sees a forest not as a sum of many trees (the typical occidental perspective) but the individual trees always as part of the whole forest (see also H. W. Robinson [1936]).

Nonetheless, there is no doubt that Christ also remains the lord of his Church (Rom 10:9; 1 Cor 12:3; etc.). Unity with Christ becomes effective in an event which creates a new relationship, not in a unity of substance shared by Christ and his Church. Thus, it is a dynamic unity of life, not a static one of unchangeable quality. This is what the Corinthians, who attached an almost magical effectiveness to the sacraments (1 Cor 15:29; 10:1–13), could not understand. The difficult saying of 1 Cor 11:27, "Whoever eats the bread or drinks the cup in an unworthy manner will be guilty of the body and blood of the Lord" means basically the same as 8:11–12:whoever becomes "a stumbling block to the weak" (v 9), i.e., "the brother for whom Christ died … sins against Christ." According to 8:11–12 this happens when "knowledge puffs up in the congregation" (8:1); according to 11:27, it happens when the congregation does not wait for the latecomers (11:22, 33). In the context of the Lord's Supper, Paul uses the term "body and blood of the Lord" instead of "Christ who died for him/them." In the same way "my body which is for you" (1 Cor 11:24) means "I myself dying for you." Thus 11:27 declares that sinning against the

brothers/sisters is sinning against Christ himself. Hence, the unity of the body of Christ ceases to exist for those who, by their actions, place themselves outside the realm of the living Christ. Therefore, Paul uses the term "body of Christ" only within the context of parenesis (see the works of Daines; Guénel; Gundry; Jewett 1971:201–304; and Wedderburn). This is not the case in Colossians and Ephesians (see below); however, the identification of Christ with the head of the body (Col 1:18; Eph 1:22–23; 4:15–16; 5:23) implies his authority over all the actions of his congregation.

The origin of the phrase "body of Christ" is difficult to determine. Four sources have been suggested: (1) a gnostic myth of a primeval man; (2) the Hellenistic idea of the universe as a divine body; (3) a Stoic parable; and (4) the Jewish view of a patriarch representing the whole present and future tribe. Gnosticism (1) is out of the question since the idea of a savior's "body" including the saved ones as its members is totally lacking up to the 3d century A.D. except in some occasional reminiscences of a Pauline phrase in Christian Gnosticism (Fischer 1973:62–68). The view of the universe as a (divine) "body" (2) and the corresponding designation of powers (in Christian writings:of believers) as "members" is, however, present in Hellenistic text (Plato, *Ti.* 30b, 31b, 32a, c, 39e; Philetaer. 30a; Diod. Sic. 1, 2, 6; Orph. *Fr.* 21a; Orph. *H.* 11.3; 66. 6–9; etc.). In Stoic texts (3), one also encounters the parable of a body whose members are dependent upon one another. This parable was first used to illustrate how working labor needs the idle nobility in the same manner as the working members of the body need the stomach to digest food (Titus Livius, *Ab urbe condita* 2.32; Dio Chrys. *Or.* 33.16). In 1 Cor 12:14–26 the term "body [of Christ]" is also used parabolically to show that neither inferiority nor superiority complexes are able to endanger the unity of the congregation. This is certainly parallel to and influenced by the Stoic usage. However, Paul says more than that (see above).

Two possible roots of a nonparabolic usage (or parallels to it, which make it linguistically possible) should be noted. First, the contemporary Hellenistic view of the universe (2) was that of a body permeated and governed by God (or heaven, or Logos). Since Plato, this body was regarded as a divine one, though probably not explicitly as a "body of God." This is the understanding of the body of Christ in Colossians and Ephesians, and it is possible that Paul "decosmologized" the Greek conception, reducing it to a description of the Church (not of the world) and coining the unusual phrase "body of Christ." Colossians and Ephesians would, in this case, have reverted to the original view.

Secondly, the Jewish background (4) may be important. John 15:1 identifies Christ with the true vine, the constant symbol of Israel, which even in Jesus' time was seen as a vine of cosmic dimensions reaching from the abyss to heaven, where the vine becomes the "house of God" *(L.A.B.).* In John 15:1 the Son of Man (identified in Ps 79:12 LXX with the "vine" of God) is the new Jacob, and Jacob, according to Gen 35:10, is Israel. The patriarch qualifies his people; it is through Abraham that Israel is the holy people of God, through Jacob that Israel is blessed (*Jub* 2:20; 19:27–29), and through Adam that all humankind has become sinful (2 Esdr 7:118; cf. Wis 10:1, 4); also to his (Adam's) glory part of Israel will be restored (1QS 4:23; 1QH 17:15; CD 3:20; 4QpPs 37, 3:1). Thus, in many texts, the patriarch is identical to his tribe or nation:"Adam" (in Hebrew) means "humankind," and Jacob is called "Israel" by God himself. In the same way, Jesus is the new Israel in John 15:1. The vine, apart from which they can do nothing (v 5), includes all its branches, just as the body, apart from which they can do nothing, includes all its members. However, while John 15 sees Jesus as the true vine or Israel, Paul views him as the one "offspring" of Abraham in whom all become one (Gal 3:16, 28), or even the Adam of latter times, "in whom" all are made alive (1 Cor 15:22, 45; cf. Rom 5:12–19). The idea of a patriarch determining the future tribe is originally temporal. It is still alive in the reference to Jacob's experience which is fulfilled in the Son of Man (i.e., Jesus), and in the Church being the offspring of Abraham. However, it is converted by John and Paul to a rather spatial imagery of the vine with its branches or the body and its members. The same can be seen in Gal 4:25–26, where the temporal term "the present Jerusalem" is replaced by a spatial one, "the Jerusalem above." Perhaps it is not possible to decide definitively for either a Hellenistic or a Jewish background, since there was so much cultural interaction between the Jewish idea of a patriarch determining the destiny of humankind and the Hellenistic idea of God's spirit or Logos ruling and permeating the world.

5. Colossians and Ephesians. The hymn in Col 1:15–20 praises Christ's lordship over the whole creation and adds, "He is the head of the body." Compared with earlier Pauline passages, two anomalies are obvious. First, we find "the body," not "the body of Christ" or "his body." Secondly, the hymn speaks of "the body" three times in terms of "all [created] things," and suggests that Christ is the head of the principalities and authorities (1:16; cf. 2:10). Both of the above points are typical of the Hellenistic conception of the universe as "the body" whose "head" is Zeus or Logos. This is indeed what "body" must have originally meant in the context of the hymn, since the Church enters the chain of thought only from v 18b on. The author of the letter, a disciple of Paul (or possibly Paul in a later stage of his life), adapted the phrase to a theological context with the explanatory addition "the Church" (cf. 1:24; 3:15). This transfer of the Greek view of the world to ecclesiology guards the Pauline understanding of the Church as the body of Christ from an abusive identification of the Church with Christ himself (the Church as a "prolonged Christ") by emphasizing Christ's role as the head (2:19). Thus, Christ is head over all creation (2:10, 15) for the Church, which is his body and derives all its strength and growth from him (2:19). In Eph 1:22–23 both statements are combined (cf. 4:15–16), while in Eph 2:16 it is difficult to decide whether the "one body," through which Jews and gentiles are reconciled, means the crucified body of Christ, as suggested by the parallel phrase "in [or by] the blood of Christ" in v 13 (cf. Col 1:22), or, more probably, the Church as Christ's body, as suggested by the images of "one new man" (v 15) and "the whole structure" of "the holy temple" (v 21), into which Jews and gentiles have been brought.

The headship of Christ is certainly no authoritarian power; he rules by filling his body with his own spirit (1:23; 4:10; cf. Col 2:19). Thus, as the head he is the savior of his body (Eph 5:23). In the same way, the husband is the head of his wife, who in turn is his body (Eph 5:23, 28). Even a modern interpreter, critical of this phrase, would note that the Greek text of v 22 says merely "the wives to their husbands," because their behavior is only one example of what is expected from all members; i.e., "Be subject to one another out of reverence for Christ …" (v 21). Furthermore, the unity of husband and wife is taken so seriously that "loving his wife as he would his own body" involves "loving himself," because both are "one flesh" (vv 28, 31). The traditional formula of the wife being her husband's "own flesh" (see Sir 25:26; *L. A. E.* 3) emphasizes her status as his property. In Ephesians 5, though still within the context of the patriarchalism of that time, it has been transformed into an image of the oneness of a most intimate love, which is demonstrated through the readiness of the one partner to live for the sake of the other.

D. Summary

Through the Greek language Judaism acquired the word *sōma,* "body." The middle Platonism of the NT period would have strongly suggested a view of man as principally soul, and an understanding of life as a gradual separation of the ego (the soul) from the body and its physical impediment, where death becomes the final liberation. It was, however, the OT background and especially the life and teaching of Jesus that provided the NT with an understanding of the body as a means of communication and mutual help and love among members of the body of Christ (and even beyond to nonbelievers). The climax of this view is manifest in Jesus' body, always open to God's spirit and willing to become the final sacrifice on the cross for the sake of all people.

The Stoicism of the 1st century A.D. would have suggested with equal strength a view of man as part of a harmonious universe where God's spirit could be found everywhere. Again it was the OT and Jesus that made it impossible to equate God and the world. God's spirit is not merely a life power in creation; it is the spirit manifested in Jesus' service and given to his disciples at Pentecost. Therefore, the "divine body" is not simply the totality of nature with its beautiful and beneficial forces (but also with its cruel and destructive forces), but rather "the body of Christ," i.e., the unity of all individuals who allow themselves to be helped, loved, and permeated by Jesus, who gave his earthly body "for many." Every Lord's Supper reminds his Church that it is only in this body that his believers will find real life forever. Through his promise at the Last Supper, the body and blood of Jesus, offered as a sacrifice, become present and real again for the participants in every Lord's Supper, granting them the quality of the one people of God and, at the same time, obliging them to live this oneness of Jew and Greek, lord and slave, man and woman realistically time and again, to be and to become the "body of Christ," until he comes.

BOHAN, STONE OF (PLACE) [Heb *ʾeben bōhan* (אֶבֶן בֹּהַן)]. A site located on the N border of the territory of Judah (Josh 15:6) and consequently the S boundary of Benjamin (Josh 18:17). It is apparently near the top of the descent from the highlands down to the Jordan River, just a few miles N and W of the Dead Sea.

By its name, it is a topographical feature which was known in the period, and not necessarily a settlement. The exact location of the stone is debated, and the lack of any further reference to a son of Reuben named Bohan does not aid the process of identification. The tribe of Reuben was allocated land in Transjordan (Josh 13:8), so a site in this area has been proposed (*GTTOT* 405). Since the OT description of the boundary between the two tribes of Judah and Benjamin starts at one end of the confluence of the Jordan and the Dead Sea, and runs W from there based on the identifiable sites (Josh 15:5), a location to the W rather than the E of the Jordan is indicated. The association with Reuben could simply be the memory of an undetermined influence of the tribe on the W bank as well as in Transjordan (Woudstra *Joshua* NICOT, 236).

Bohan could be a Heb noun, "thumb," and not a proper name at all (Noth 1966:69). It would then most probably describe a rocky outcrop or pillar of the period that in some way resembled a thumb. This does not treat the present Heb text with integrity, however, since the biblical description "son of Reuben" indicates that, for the author at least, Bohan was a proper name.

Some currently existing topographical features have been proposed as the location of the stone (Boling *Joshua* AB, 366; *HGB* 119), but none of the proposals are compelling.

BOND. A biblical word often referring to something that restricts one's freedom.

A. Old Testament

In the OT the word "bond" is used to refer to a state of servitude, or "bondage." Thus "bondmaid" (Exod 23:12) and "bondwoman" (Deut 15:17) are used for the Heb *ʾāmāh,* generally "maidservant" as in their parallel texts (Exod 23:12=Exod 20:8; Deut 15:17=Exod 21:6). Similarly, "bondman" is used for Heb *ʿebed* (Deut 15:17; Ezra 9:9), usually "slave" or "servant."

A like interpretation is warranted for the phrase "bond or free" (Heb *ʿāṣûr wĕʿāzûb;* Deut 32:36; 1 Kgs 14:10; 21:10; 2 Kgs 9:8; 14:26). The pairing of *ʿzb* with *ʿbd* in Ezra 9:9 would seem to support the implications of servitude. The repeated threats to destroy "every male" of the royal houses of Jeroboam I and Ahab of Israel, "both bond and free," however, imply a broader sense of the phrase, because members of the ruling family did not likely continue in slavery. In these cases, "bond and free" designates those still under the bond of parental authority and especially sustenance, along with those who had been freed

from the protection and authority of their parents. The phrase is a merism denoting opposing extremes in the designated group and encompassing all members of it.

In both the singular and the plural, the noun *môsēr* serves as a general term for "chains," "fetters," or the like, as both the symbol and reality of servitude. Isa 52:2 and Jer 30:8, for instance, refer to the bonds or chains of the neck. Expressions of liberation include "to loose the bonds" (Job 12:18; 39:5; Ps 116:16) and "to burst/break bonds asunder" (Pss 2:3; 107:14). Conversely, *môsēr,* "bond," also functions as a positive metaphor for the law (Jer 2:20; 5:5; 30:8) as that which binds the people to Yahweh. As punishment for breaking these "bonds," Yahweh will subject both people and leaders to foreign servitude. Later, however, he will "break the bonds" of their foreign masters, and Israel will return to "serve" Yahweh and the Davidic king.

The noun *ʾāsûr* is used literally of the restraints with which Samson was bound by his Philistine captors (Judg 15:14), and the cognate adjective *ʾāsîr* as a figure of captives not forgotten by their God (Ps 69:33). To "loose the bonds [*rĕṣubbôt*] of wickedness" is the "fast" which God desires of Israel (Isa 58:6).

B. New Testament

Two words in the NT can have the meaning "bond": *sundesmos* and *desmos* (BAGD 1957:175, 793). Col 2:19 uses *sundesmos* to refer to the sinews of the body (for comparative Hellenistic usage, cf. LSJM, 1701; Fitzer *TDNT* 7:857). In accordance with other Hellenistic usage (Plut. *Num.* 6.3 where Numa is the Sabines' "bond of good will and friendship" with Rome; Simplicius *in Epict.* 30/89.15, "the Pythagoreans … called friendship the bond of all the virtues"), Col 3:14 uses the word metaphorically to speak of love as the bond *(sundesmos)* of perfection. This could be understood as the bond of all the virtues or as the bond that leads to perfection or perfect harmony (Lohse *Colossians and Philippians* Hermeneia, 148–49). To keep the unity of the spirit the Ephesians are called to the bond *(sundesmos)* of unrighteousness (unrighteousness is the bond) in Acts 8:23 (cf. Isa 58:6).

Jesus releases the bond *(desmos)* from a deaf mute's tongue (Mark 7:35). A. Deissmann understands it to be a demonic bond (1978:304–7) by using ancient magic texts and by referring to Luke 13:16, where Satan's bond kept a woman bent over for eighteen years. But nature could place a bond on the tongue in Hellenistic thought (Nonnus *Dion.* 26.261; Bacchus heals it in 26.287). Wettstein (*NovTG*[26] on Mark 7:35) gives uses of *desmos* as a term for mute tongues. "Bond" can refer to physical objects used to bind persons as in Acts 16:26 (stocks for feet:for a description of one kind with five holes, cf. Eus. *Hist. Eccl.* 5.1.27). The word refers to head and foot chains in Luke 8:29 and to eternal chains in Jude 6. An ambiguity occurs because the word can be used to refer to prison (and not physical bonds) as in LXX Isa 42:7; 49:9. Bonds were the rule in Roman imprisonment (Hitzig 1899:1581) but not in every case (see two laws in Ulp. *Digest* 50.16.216 and Sever. *Codex Iust* 2.11.1). Whether texts such as Phil 1:7, 13 should be translated as "imprisonment" or "bonds" [in a physical sense]" is an unsolved question since the context does not clearly indicate which meaning is present. (See the varying interpretations in BAGD [175] and Gnilka *Philippians* HTKNT, 47, 56).

BOOTHS, FEAST OF. One of ancient Israel's three giant annual feasts, celebrated in autumn. See CALENDARS, ANCIENT ISRAELITE AND EARLY JEWISH.

BOR-ASHAN (PLACE) [Heb *bôr ʿāšān* (בּוֹר עָשָׁן)]. See ASHAN.

BORITH (PERSON) [Lat *Borith*]. See BUKKI.

BOSOR (PLACE) [Gk *Bosor* (Βοσορ)]. One of five sites in Gilead in which Jews were taken captive by gentile inhabitants (1 Macc 5:25, 36). The city is usually identified with Buṣr el-Ḥarīri, approximately 70 km E of the Sea of Galilee, perhaps the same site as "Bezer in the wilderness" mentioned in Deut 4:43 (Tedesche and Zeitlin 1950:115). Goldstein (*1 Maccabees* AB, 301) argues cogently that ALEMA is the district within which Bosor lies, rather than being a separate city.

Judas Maccabeus' early successes, including retaking the temple in 164 B.C. led to gentile reprisals. Many Jews in Gilead fled to a stronghold at the city of Dathema, from which they sent word to Judas for help. En route to rescue the refugees, Judas encountered Nabateans, who told him that Jews were under attack in the cities of Bozrah, Bosor-in-Alema, Chaspho, Maked, and Carnaim, as well as other cities (1 Macc 5:24–27). Judas detoured from Dathema to rescue Jews in Bozrah first, then in Dathema, and finally in the other cities.

PAUL L. REDDITT

BOUGAEAN (PLACE) [Gk *Bougaios* (Βουγαιος)]. An epithet used to describe Haman in Add Esth 12:6, by the LXX in Esth 3:1 (for the Heb *hā›agāgi*), and as an addition in 9:10. The precise significance of the designation is disputed. Because the meaning of the term is obscure, some scholars have argued that the term is simply a corruption of the Gk *agagaios* or "agagite" (Gregg *APOT* 673–74; Newman *IDB* 1:458). Noting that the term is replaced by the word "Macedonian" in Esth 9:24, some scholars have argued that it is simply a Homeric term of reproach (*Iliad* 13.824; *Odyssey* 18.79), meaning "bully" or "braggart" (Haupt 1908:141). A third view has been advanced by Hoschander (1923:23–27) and Lewy (1939:134–35), who argue that the term *bougaios* is derived from the word *baga.* A West Iranian religious term, meaning "god," these scholars have argued that it refers specifically to Mithra and that, therefore, the designation *bougaios* means "worshipper of Mithra" (Lewy 1939:135). If this is so, then the use of the word may be one small piece of evidence favoring the argument that the book of Esther, as well as the festival of Purim, is of non-Jewish origin (Moore *Esther* AB, xlviii–xlix). Owing to the limited amount of evidence available, however, it may be impossible to choose between the options (Moore *Esther* AB, 36; *Daniel, Esther, Jeremiah:The Additions* AB, 178).

BOWL. See POTTERY (CHRONOLOGY).

BOX TREE. See FLORA.

BOZEZ (PLACE) [Heb *bôṣēṣ* (בּוֹצֵץ)]. An outcropping of rock in the pass between GEBA and MICHMASH (1 Sam 14:4). This outcropping figures in the story in which Jonathan, the son of Saul, initiates the defeat of the Philistines at Michmash. Bozez apparently occupied the N side of the pass, while an outcropping named SENEH stood on the S side. The names of the two outcroppings reflect their formidable appearance. Seneh means "The Thorny One" while Bozez means either "The Gleaming One" or "The Miry One" (see McCarter *1 Samuel* 239). The exact location of these two outcroppings has not been mapped with precision, though it is generally agreed that they must lie upon the Wadi eṣ-Ṣuweinit, which runs between Geba and Michmash, in the middle of the triangle defined by Jerusalem, Bethel, and Jericho (see *NHT* 106; *MBA* 60).

JEFFRIES M. HAMILTON

BOZKATH (PLACE) [Heb *boṣqat* (בָּצְקַת)]. A town situated in the Shephelah, or low country, of Judah (Josh 15:39), within the same district as Lachish and Eglon. This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–62; see also BETH-DAGON). Jedidah, mother of Josiah, was the daughter of Adaiah of Bozkath (2 Kgs 22:1). The location of the ancient settlement is unknown.

BOZRAH (PLACE) [Heb *boṣrâ* (בָּצְרָה)]. Three sites of antiquity possessed this name. Two are mentioned in the Hebrew Bible and the third is mentioned in the apocryphal writings and secular sources.

1. Bozrah in Edom. According to Gen 36:33 and 1 Chr 1:44, Bozrah was associated with Jobab the son of Zerah, one of the Edomite kings (whether his place of origin or his residence is unclear), and periodically it was the capital and administrative center of the Edomite state. Apart from these, the only other references to Bozrah in the OT are all in the woe-oracles against the nations (Isa 34:6; 63:1; Jer 49:13, 22; Amos 1:12; and perhaps Mic 2:12 [read **baṣṣirâ*]). These defy concrete historical evaluation and their authenticity and dating are uncertain. Because of their apocalyptic character (Isa 34:6, 63:1) they can probably be dated to the postexilic period.

Bozrah, the ancient capital of Edom, is without a doubt to be identified with the modern village of Buseirah, which is located in N Edom (M.R. 208018). It guards both the Kings' Highway (the major N–S route through Transjordan) and a major route W to the Wadi Arabah and thence to the Negeb and S Judah. It is also within striking distance of the Edomite copper mines in the Wadi Dana and Wadi Feinan some 10–15 km SSW.

It is situated W of the Kings' Highway on a projecting spur, steep on the N, W, and E sides, with easy access only from the S. In addition to this natural defensive position, strong walls enclose a site of some 3200 m^2. No water source has been found within the site, the main supply probably being the spring at ʿAin Jenin, about one km E, which until recently was also the source for the modern village.

Excavations at the site have been undertaken by C.-M. Bennett (1971–74) and the British Institute at Amman for Archaeology and History (1980). These have revealed a large, fortified site with monumental public buildings, far larger than any other site in the region. Two major phases of occupation have been found in all the excavated areas, with numerous rebuildings and subphases. Exact dating has not yet been determined, but both phases would appear to fall within the confines of the 7th–6th centuries B.C. There is no evidence for occupation earlier than the 8th century B.C.

Four main areas have been excavated. See Fig. BOZ.01. Area A, the highest point on the site and the so-called "acropolis," contains large public buildings. Areas B and D, to the SW and NE of Area A respectively, contain private dwellings. Area B also contains a postern gate. Area C, to the S of Area A, contains more monumental buildings, probably residential but of higher quality than those in B or D. Thick plaster floors are in use in all areas.

Two successive large buildings occupy the acropolis (Area A). Building A, the later, measures 48 m N–S and 36 m E–W and is "winged," i.e., the corners curve outward. It is similar to the Assyrian courtyard building and hence has usually been assigned to the Neo-Assyrian period (734–610 B.C.), but Bennett notes (1977:3) that "the discovery of stratified Persian pottery in a late phase in a similar building in Area C has given rise to doubt." Building A overlies the S part of Building B.

The plan of the N part of Building B is clear, consisting of a large courtyard (ca. 10 × 15 m), a central cistern, rooms on the N, E, and W sides, and external access in the NW corner. A monumental entrance, consisting of shallow steps flanked by a column plinth on each side, leads to the S part of the building, the plan of which is mostly obscured. It would seem, however, that this is the more important part of the building for which the courtyard was an entrance or antechamber. Bennett (1977:6) suggests that this

might be a temple, the outer area being for purification. A palace or governor's residence would also be a plausible interpretation with the outer area being for general admission.

Area B is a section of the outer defensive wall with a postern gate. The defensive wall is approximately 3.5 m thick at the base and still stands to a height of 3.8 m. At some points the wall was strengthened by the addition of casemates. Domestic houses of rough stone were built against the casemates. A narrow gateway provided access during the main phases of the site. It was blocked in the final phase and the whole area used as a pottery dump.

Area C lies S of the acropolis and covers an area of approximately 67 × 105 m. It contains a large residential complex, not dissimilar in plan to Building A in Area A. Persian pottery was found in the latest phase of Area C. A bath complex suggests the residence of a very important official.

Area D is a small area of domestic houses built on rough stone construction. Several phases of occupation have been identified, some utilizing mudbrick.

All the excavations at Buseirah have taken place in the upper town, which is isolated from the lower town by a battered enclosure wall (see Fig. BOZ.01). It is unclear whether the lower town was residential or mainly open.

Dating for the two main phases at Buseirah has so far not been determined. The earlier phase is probably Assyrian, the later Babylonian/Persian, but there is no evidence to attribute the transition to the Babylonian campaign of 587/586 B.C. which had such a devastating effect on Jerusalem and the cities W of the Jordan. Edomite relations with Babylon at this point appear to have been cordial. The transition is likely to have occurred (supported by the late pottery from Area C) ca. 550 B.C. when the Babylonian king, Nabonidus, passed through Edom on his way to the N Arabian oasis of Teima.

ULRICH HÜBNER

2. Bozrah in Moab. The Moabite town, situated on the Mishor *(mîšōr),* is mentioned in a list of geographical places, which are the objects of the woe-oracles against Moab (Jer 48:21–24). This list can hardly be accredited to Jeremiah and is probably a secondary addition. Bozrah may be identical with Bezer *(beṣer),* with which it is etymologically related (Deut 4:43; Josh 20:8; 21:36; and 1 Chr 6:63—Eng 6:78; one of the cities of refuge belonging to Reuben), and *bṣr* of the Mesha Inscription (*ANET* 320–21; line 27; cf. Euseb., *Onomast.* 46.8.11, Bosor; Josephus, *Ant* 4.173). Although Barāzēn and Umm el-ʿAmed E of Heshbon have been suggested, the exact location of Bozrah is unknown.

3. Bozrah in Ḥaurān. Bozrah lies on one of the fruitful and water-rich plains of S Ḥaurān at the important intersection of the N–S route, which leads from Damascus through the Transjordan to the Hejaz, with the E–W route, on which one could travel from the Mediterranean to Mesopotamia. The ancient site is identical with the modern village Buṣra ash-Shām (32°31′N; 36°29′E), which lies E of Adraa (Derʿā) (cf. Euseb., *Onomast.* 12.14; 13.14; 84.9; 85.8–9). The earliest attestations of Bozrah are in an Egyptian Execration Text as *bw d^3nw* (Posener 1940: E 27) and in the list of conquered Palestinian cities, compiled under Thutmose III, found at Karnak, as *b^3d^3rwwn^3 (bdrwn).* The literary evidence of the place name ceases after two attestations in the Amarna Letters (197:13 and 199:13; *Buṣruna*). (The Ugaritic site *bṣry* cannot be identified with any of the Bozrahs discussed here. It ought, rather, to be located in the environs of Ugarit. The site of *URU Ba-as-re-e* mentioned in the Assyrian sources is unknown.)

Little is known about pre-Nabatean Bozrah since archaeological excavations (apart from the reconstruction of visibly preserved architectural remains) have only begun. The only settlements

(excluding those from prehistory) which can be archaeologically verified are from the LB and from the 2d century B.C.

Bozrah's history is again attested in written sources beginning in the Hellenistic age when Judas Maccabeus conquered Bozrah (1 Macc 5:26, 28; probably Bosorra instead of Bosor, cf. Jos., *Ant* 12.336). It is not known if the town was ruled by the Seleucids, was independent, or was perhaps autonomous. It is likely that Bozrah gradually came under Nabatean control, was slowly incorporated into the state, and soon became its most important city (Bostra Dousaria) except for Petra. This development paralleled the decline of the Seleucid empire. Bozrah's importance remained unchanged from approximately 25 B.C. to A.D. 93. During this time Herod the Great (*JW* 1.398; 2.215), Philip (*JW* 2.95; *Ant* 17.319), and Agrippa I and II (*JW* 2.215) reigned over Aurantis, which was briefly incorporated into the Roman province of Syria (A.D. 34–37).

Following Trajan's annexation of the Nabatean empire, Bozrah became the capital of the newly created Roman province of Arabia in A.D. 106 and remained such throughout all of the expansions and divisions of this province. The status of a *polis*, with its own era (22 March 106) along with the right to mint its own coins, was bestowed upon Bozrah. It also became the garrison of the Legio III Cyrenaica. The city prospered from the construction and enlargement of the Via Nova Traiana. Two Safaitic inscriptions divulge that the city *(bṣry)*, which was promoted to the status of a colony by the Severans (Nea Traiana Alexandriana Colonia Bostra) and to a metropolis *(Mētropolis tēs Arabias)* by Philippus Arabs, had to subject itself to an invasion by the Sassanians (A.D. 253 or 256).

The city's prosperity was due to its important commercial and political position, which enabled it to export grain, wine, and other commodities and to profit from commission and caravan trade with the rest of Syria, Mesopotamia, the Mediterranean coast, and especially N Arabia. Monumental buildings such as the theater, the thermal bath, the avenues flanked by colonnades, the gateways, and the tetrapylons testify to the prosperity of the city in Roman times. The colorful, multiracial population included not only Arabs (Nabateans and Sassanids), Romans, Greeks, Jews, and Christians but also merchants from Palmyra, a Safaitic colony, and, among the soldiers, foreigners of mixed extraction (Carthaginians, Thracians, Persians, Britons, and perhaps even Goths).

Nothing is known about the inception of Christianity in Bozrah, yet Christianity cannot have appeared much later in Bozrah than in Damascus. At any rate, Bozrah was already the seat of a bishop in the 3d century A.D. and shortly thereafter became the metropolitan seat subject to the patriarch of Antioch. Origen sojourned in Bozrah twice. During his first stay he was employed as a teacher by the governor of the province and during his second visit he attended a synod at which he rebuked the residing bishop Beryll, who had uttered heretical views (Euseb., *Hist. Eccl.* 6.19.15; 33.1–3).

BRANCH [Heb *ṣemaḥ* (צֶמַח)]. Branch (Jer 23:5; 33:15; Zech 3:8; 6:12) refers to the legitimate Davidic scion who is associated with Yahweh's postexilic restoration of Israel and Judah.

Debate about the exact meaning of branch has focused upon possible messianic connotations of the word. In Jer 23:5 and 33:15 branch refers to an unspecified future Davidic scion whose reign Yahweh would establish in the postexilic restoration of Israel and Judah. In Zech 3:8 and 6:12 branch refers specifically to Zerubbabel as the Davidic scion (Patterson *Haggai Zechariah 1–8* OTL, 273–78), though the difference between the Zechariah and Jeremiah texts is only the degree of specificity. On the basis of these texts, it has been proposed that branch was a technical term for the Messiah in later Judaism (Baldwin 1964:93–97; cf. Mowinckel 1956:119–22, 160–65). Yet, while the expectation of a Davidic branch in both Zechariah and Jeremiah may have contributed to the development of a messianic expectation in Judaism, uses of the term in other Northwest Semitic languages make it unlikely that the term was originally a messianic designation.

The phrase *ṣmk ṣdk* has been found in a 3d-century B.C.E. Phoenician inscription where it refers to the legitimate king of the Ptolemaic dynasty (Beyerlin 1978:232–34). Holladay (*Jeremiah 1–25* Hermeneia, 617–8) concludes that branch is the usual Northwest Semitic word to designate the legitimate king. At the same time, there seem to be several other Hebrew synonyms which convey the same idea:for instance, shoot *(ḥōṭer)* and sprout *(nēṣer),* both in Isa 11:1 (cf. IDB 1:460–61).

The sense of branch as the legitimate scion is reinforced by studies of *ṣedek* (McKane *Jeremiah 1–25* ICC, 568), which modifies branch in Jeremiah and Semitic occurrences (though in Jer 23:5, cf. Holladay *Jeremiah 1–25* Hermeneia, 616). While *ṣedek* is usually translated "righteous," these studies have suggested numerous Northwest Semitic occurrences where *ṣedek* implies rightful or lawful as a particular nuance of righteous.

Thus, branch, or more specifically righteous branch, should be understood as the legitimate or rightful Davidic scion to the throne of Israel. Especially in Jer 23:5, the legitimacy of this future king contrasts with Zedekiah, whose name suggests legitimacy but who is in fact a Babylonian vassel (Swetnam 1965:29–40).

BRAND, CAMEL. See WASM (CAMEL BRAND).

BREAD. Bread includes various kinds of food such as unleavened and leavened bread, porridge, and gruel prepared from cereal grains such as wheat and barley. The term "bread" was also used for solid food in general. In the Bible, bread is a polyvalent symbol, being used both in everyday life and for metaphoric and symbolic purposes.

3. Bread in the NT

_____

A. General Introduction

Many civilizations have developed around the successful cultivation of one main cereal crop such as wheat, rice, or maize. The particular crop raised greatly shaped political, economic, and religious institutions. A large portion of everyday life revolved around the production, distribution, preparation, and consumption of this crop.

Various technologies and tools were necessary for producing different kinds of food from cereals. After the grain was harvested, the husk or bran was removed from the seed. Various means of milling or pounding were used to atomize the endosperm. Different cooking methods, skills, recipes, and utensils were used to produce different kinds of bread.

Humans generally eat only the seeds of cereals, since the outer husk or bran is indigestible. Most of the nutrition of a seed is located in the endosperm. Since the starch in seeds is not easy to digest, humans generally prepare them for consumption. They can be simply parched, toasted, or soaked in water, though more often they are first milled or ground, mixed with liquid, and heated. If the grain is only roughly crushed and the bran is not separated from the rest of the kernel, the product is "meal." If only the kernel, separated from the bran, is very finely ground, "flour" is the result. Heating a mixture of liquid and meal produces porridge (see Moritz 1958:xix). To bake bread, a mixture of liquid and flour is usually heated at least to 450° F. Leaven added to dough produces a light and aerated loaf. Because of the gluten content of cereals, wheat makes the best leavened bread, rye is second best, and barley can only be used for unleavened bread.

B. Bread in the Ancient Near East

1. General Background. Early hunting and gathering societies in the ANE gathered the seeds of wild cereals for food. These native plants were later domesticated. The cereals that were raised and the food products made from them varied regionally and historically. Both climate and soil type shaped people's diets.

Since wheat and barley have different growing requirements, they are often found in different regions. Oppenheim states:"Since barley can be grown in poor and alkaline soils, it was preferred to wheat in Mesopotamia; Egypt became the wheat land, and the regions in between used the cereal which best responded to local conditions" (1977:314).

In the lands around the Mediterranean, bread was the staple food which provided most of the proteins and carbohydrates for humans for centuries and even millennia. The high costs of transportation kept both imports and exports to a minimum. Therefore, the amount of grain an area produced was a key factor for how large a population could be supported (Broshi 1979:7). Similarly, within any given community, social and economic differences were reflected in cuisine—bread of the poor and bread of the rich.

Bread played a major role in the civilizations of Mesopotamia, Asia Minor, Syria, Palestine, Egypt, Greece, and Italy. Here only a few brief comments concerning bread in Mesopotamia and Egypt will be made. (For more details, see Hoffner 1974; Darby 1976; Währen 1964; Dalman 1935.)

2. Mesopotamia. Some 300 kinds of bread are mentioned in Mesopotamian vocabulary lists. These breads were made from a variety of ingredients such as flours, spices, and fruit fillings and came in a variety of shapes and sizes. After grain was crushed on a grindstone to make meal and flour it could be used for porridge, mush, leavened and unleavened bread, and beer. Unleavened bread was made by a method called *tinûru.* "A fire was built inside an upright clay cylinder, resulting in very hot exterior walls, upon which loaves of unleavened bread were placed and baked" (Bottéro 1985:39). Dome ovens, which were available by the 3d millennium B.C.E., were necessary for making leavened bread.

3. Egypt. On the walls of Egyptian tombs one finds depictions of various activities related to the production of bread and beer. Three-dimensional sculpture and wooden models depict people grinding grain, making dough, and baking bread (Filce Leek 1972:pls. 29–32; Darby 1976:501–28). Breads were made in numerous shapes:conical, circular with slashes, triangular, semicircular, flat and curved, rolled into spirals, and even shaped into animal and human figures.

Archaeologists have found loaves and pieces of bread at grave sites. While the origin of leavened bread is unknown, samples of bread found at Neolithic El-Badari appear to have been leavened (Darby 1976:515–16). Most specimens of bread examined were made from emmer but this may have been because offering breads had to be made from the best cereal. Most of the samples of the abdominal contents of prehistoric Egyptian mummies that were examined by Netolitzky contained husks of barley (Filce Leek 1973:200–1).

C. Bread in the Bible

1. Introduction. Biblical texts do not present an extensive treatment about bread. Aspects related to the production and eating of bread were so commonplace that writers did not go into much detail about them. Here only bread in the OT and NT will be examined. Data from other literary works such as the Mishnah, intertestamental literature, and secular sources, as well as material evidence from archaeology, still needs to be collected, sorted, and assimilated.

2. Bread in the OT. a. Etymology. The term *leḥem,* "bread," occurs nearly 300 times in the OT. In Semitic languages *leḥem* was used for "solid food." Ullendorff (1956:192) contends that the "root *lḥm* expressed in Semitic simply the staple-diet and would, therefore, vary in the different regions." In Arabic one has *laḥm,* "meat," in Ethiopic *laḥm,* "cow," and in the South Arabic language of Soqoṭra *leḥem,* "fish." In Ugaritic, Phoenician, Hebrew, Aramaic, Syriac, and Mandaic *lḥm* referred to bread specifically and food generally (*TWAT* 4:538).

b. Basic Components. Grains such as wheat and barley are used to make porridge, mush, leavened bread, and unleavened bread. Bread is generally made from barley (2 Kgs 4:42) or wheat (Exod 29:2). Ezekiel is told to make bread from wheat, barley, beans, lentils, millet, and spelt, and eat it like a barley cake (Ezek 4:9). The mixture was not typical but reflected the scarcity of food during the siege of Jerusalem.

While wheat bread was probably tastier than barley cakes and therefore more desirable, not all bread was made from wheat. Wheat was more expensive than barley (2 Kgs 7:1–twice as much; Rev 6:6–thrice as much) and may have been too expensive for the average Israelite. Furthermore, it was not advisable or even possible for the farmer to plant only wheat and not barley. Planting both crops allowed for diversification, enabled the farmer to utilize the different types of soil available, and spread out the harvest time (Hopkins 1985:242). In premonarchic times most people ate barley bread; however, by the 8th and 7th centuries, Silver argues, more of the population ate wheat bread (1983:93–98).

c. Preparation of Bread. Borowski mentions three stages of cereal ripening during which grain could be picked, processed, and eaten (1987:88). Grain could be eaten raw, parched (Ruth 2:14), crushed (Lev 2:14), or it could be ground to flour and used in various kinds of leavened and unleavened bread.

While the term *leḥem* can refer to grain in general (Isa 28:28), most often it refers to food processed from grain. It is distinguished from raw grain in 2 Kgs 4:42 and from roasted and new grain in Lev 23:14. The general term for flour or meal from wheat or barley is *qemaḥ,* whereas *sōlet* refers to very fine flour of wheat. Borowski reports that a jar of semolina which is a "by-product of grinding and sifting flour" was found "in Beth-shemesh in an early Iron Age context" (1987:90). Either a mortar and pestle or grinding stones were used to grind the grain into flour (Num 11:8). Grinding stones and saddle querns are richly represented in archaeological reports (Borowski 1987:89–90).

Flour and/or meal could be stored in jars (1 Kgs 17:12). Flour which had water added to it was kneaded into dough. Then the dough was shaped (2 Sam 13:8; Gen 18:6) into a form which could be baked. Leaven was sometimes added before baking took place (Exod 12:39). One finds frequent mention of the baking of bread (Lev 23:17; 2 Sam 13:8; Ezek 4:12).

Particular types of bread include *ṣappîḥit,* "flat cake, wafer" (BDB, 860; Exod 16:31); *niqqūdîm,* "hard bisquit or cake" (BDB, 666; 1 Kgs 14:3); *kikkār,* " (disk-shaped, round, thin) loaf of bread" (*CHAL* 156; 1 Sam 2:36); *ḥallâ* " (ring-shaped) bread" (*CHAL* 104–5; 2 Sam 6:19); *rāqîq,* "thin cake, wafer" (BDB, 956; Exod 29:23); *lĕbibâ,* "heart-shaped cake" (*CHAL* 172; 2 Sam 13:6); *ʿugâ* " (circular, flat) bread cake" (*CHAL* 264; Gen 18:6); *maʾăpeh* "thing baked" (BDB, 66); Lev 2:4); *maṣṣâ* "unleavened bread, or

cake" (BDB, 595; Lev 2:5); *ḥāmēṣ*, "that which is leavened" (BDB, 329; Exod 12:15). A loaf of bread which had been preserved by a fire was found at Gezer dating from 1800–1400 B.C.E. (Silver 1983:92).

While men and women reportedly baked bread (Gen 19:3; 1 Sam 28:24), baking was probably largely the work of women (Lev 26:26). Bread for cultic usage was made by priests (Lev 24:5). While the king could afford to have professional bakers who were women (1 Sam 8:13) or men (Gen 40:1), most families baked their own bread. References to the bakers' street (Jer 37:21) and the tower of the ovens (Neh 3:11) might indicate a quarter of bakers in Jerusalem.

Three methods are mentioned for cooking grain offerings:baked in an oven, made in a pan, or made on a griddle (Lev 7:9). Similar means of making bread were probably used outside the temple:in an oven (Lev. 26:26) or on hot coals (Isa 44:19; 1 Kgs 19:6).

d. Bread as Food or Nourishment. The term "bread" can refer to food in general. The importance of bread is indicated by the expression "staff of bread" (Ps 105:16). Holladay (*CHAL* 192) suggests that this phrase refers to "a bread-pole, stick on which ring-shaped bread is stacked (to keep it away from mice, etc.)." Other scholars think the expression refers to the support that food provides for humans. When Yahweh breaks this staff of life, he brings famine upon people (Ezek 5:16).

While bread usually is food for humans, it can also be food for all living beings (Pss 136:25; 147:9). Bread offerings are sometimes designated as food for God (Lev 21:6). While some texts indicate that God does not need food for sustenance (50:12–13), sacrificial rites are partly modeled around activities associated with a meal.

Along with water (Neh 13:2) or wine (Gen 14:18), *leḥem* refers to solid food. Bread occurs in lists of food items in such contexts as agricultural products of Israel (Ps 104:15), travel provisions (2 Sam 16:1), food supplies (1 Sam 25:18), gifts to the king (1 Sam 16:20), and sacrificial offerings (1 Sam 10:3).

Bread is a basic part of a meal. The expression "to eat bread" meant to share a meal (Gen 31:54; 37:25). Even the prisoner must have rations of bread and water (1 Kgs 22:27). The author of Proverbs wisely prays not for poverty or riches but rather for the proper portion of bread necessary for daily existence (Prov 30:8–9). The virtuous person shares bread with the hungry (Isa 58:7).

e. Special Usages and Expressions. To show his displeasure, God could send "bread of adversity" (Isa 30:20) or "bread of tears" (Ps 80:5). Tears (Ps 42:4) or ashes (Ps 102:10—Eng. 102:9) are the figurative bread of those who mourn. At some point during mourning rites, others encouraged the mourners to break their fast and eat (1 Sam 28:22; 2 Sam 3:35). This food was called the "bread of mourners" (Hos 9:4).

The idioms "bread of idleness" (Prov 31:27), "bread of deception" (Prov 20:17), and "bread of wickedness" (Prov 4:17) refer to improper means by which people gain bread. They all deal with a characteristic lifestyle which should be avoided.

The idiom "to eat people like bread" (Ps 14:4) or that people are "bread" for others (Num 14:9) refers to oppression. The figurative usage of cannibalistic imagery portrays the horror of oppression.

Manna can be called *leḥem* (Exod 16:8) because it was the daily food of the Israelites in the wilderness. It was prepared for eating like bread from grain (Num 11:8) and was perishable and spoiled much like regular bread (Exod 16:20; cf. Josh 9:12).

f. Theology of Bread. Bread is seen as a gift of God. Westermann (1982:38) makes a distinction between bread of blessing and bread of deliverance:"Israel learned to differentiate between 'bread of blessing'growing during the yearly cycles, bread in which man's own work participated, and the 'saving bread'received as the preserving gift of the saving God during the distress of hunger."

The Israelites knew that land, fertility, rain, and productive labor were all essential for the production of grain (Genesis 3; Isa 30:23). They also knew that they themselves could not control all of these factors, and therefore depended upon God's blessing (Ps 127:1–2). The bounty of the basket and kneading trough was a result of his blessing or his curse upon their actions (Deut 28:5, 17).

g. Cultic Usages of Bread. This close connection between Yahweh and bread meant that the people needed to maintain a proper relationship with Yahweh. Gerstenberger points out that "The purpose, then, of most ritual activity is to secure and maintain the means of survival: food, shelter, medicine, rain, etc."

(*Psalms-Part 1* FOTL, 5–6). Gifts of food were offered to God with the expectation that God would continue to provide food for them.

Bread is frequently part of offerings and sacrifices. Both leavened (Lev 7:13) and unleavened bread (Exod 29:2) could be used. As part of the first fruits of the harvest, bread was offered to God during the Feast of Weeks (Lev 23:15–20). During the Feast of Unleavened Bread, only unleavened bread was eaten (Lev 23:4–6).

Bread was widely used in the ANE and around the Mediterranean for religious purposes (Haran 1985:221–23), and was probably originally understood to be nourishment for gods. Such an anthropomorphic depiction of a deity was considered crude by some in ancient times and was countered by various polemics (Ps 50:12–13; Bel and the Dragon; editing of the Gilgamesh Epic [Tigay 1982:224–28]). Even if the deity could not physically consume the food, it was assumed that in some sense the deity was pleased with it. Bread also served as a means for the provision of the daily needs of the priests, and when eaten as part of a religious meal it provided fellowship among community members and the deity.

3. Bread in the NT. a. Bread in Everyday Life. In Classical Greek *artos* is used for a "cake or loaf of wheat-bread" and for bread in general, and is distinguished from *maza*, "porridge" or "barley-cake" (*LSJM*, 250, 1072). In Koine Greek *artos* is used as the general word for bread (*TDNT* 1:477). In other Koine texts one frequently finds the term with *katharos* referring to "pure" or "white bread" (MM, 1930:80).

The term *artos*, "bread," occurs nearly 100 times in the NT. Louw and Nida (1988:50) describe this bread:"a relatively small and generally round loaf of bread (considerably smaller than present-day typical loaves of bread and thus more like 'rolls" or 'buns')."

Barley bread is only mentioned twice (John 6:9, 13). The poor may have eaten unleavened barley bread because wheat was expensive. While there is a special term for unleavened bread *(azumos), artos* by itself can be used for both leavened and unleavened bread. The bread eaten at the Last Supper (Mark 14:22) and on the road to Emmaus (Luke 24:30) probably was unleavened since these meals took place during the Passover week (Jeremias 1966:66).

There is a rich vocabulary related to the production of bread. Mention is made of mills, millstones, and grinding grain (Matt 24:41; Luke 17:2; Mark 9:42). The sound of the grinding of grain was a sound of normal everyday existence in a city (Rev 18:22). References are made to the sifting of flour (Luke 22:31), a batch of dough (1 Cor 5:6–7), yeast and the process of fermentation, regular flour (Matt 13:33), and fine wheat flour (Rev 18:13).

The opening of a meal by giving thanks often focused upon bread (Matt 14:19; 15:36; Luke 24:30). "The father of the household opened a meal by taking a loaf of bread, giving thanks, breaking it, and distributing it" (BAGD, 110). Abbreviated expressions such as "to take bread" (John 21:13) or "to break bread" (Luke 24:35) often referred to the onset of a meal. A common practice of Jesus before meals, including the Last Supper (Matt 26:26=Mark 14:22; Luke 22:19=1 Cor 11:24), this was continued by the early Christians in their daily fellowship (Acts 2:46).

b. Bread as Food in General. The term *artos* can be used for food in general (Matt 4:4). The idiom "to eat bread" meant to have a meal (Mark 3:20). To eat no bread or drink no wine meant to fast (Luke 7:33). "To eat one's own bread" meant to make one's own living (2 Thess 3:12).

The petition for bread stands at the heart of the Lord's Prayer and is the first of a series of requests for human needs (Matt 6:11). The expression with *artos* and *epiousios* has been variously rendered as "bread for subsistence," "bread for today," and "bread for the future" (*Luke 10–24* AB, 900–6; cf. BAGD, 296–97). While there is no consensus, the expression "daily bread" is still useful. Yamauchi (1964–65:148) states:"In antiquity much of the food, such as bread, was prepared daily, and would be apportioned daily. This daily bread was the very symbol for subsistence, representing the minimal need for existence."

c. Symbolic Usages of Bread. Bread was used in Jewish religious ceremonies including the Feast of Unleavened Bread (Exod 12:17) and the bread of the Presence in the temple (Exod 25:30; Lev 24:5–9). In the Christian eucharist, bread and wine were the elements (1 Cor 11:23–26). In these cases bread had symbolic and religious functions, but it was also eaten and served as food.

By the 1st century a rich midrashic treatment of manna had developed (Borgen 1981). Vermes (1969:262) summarizes:"in rabbinic tradition Moses is associated with manna and Torah, and manna is accepted as an allegorical Torah. In Philo, manna is connected with Logos, wisdom and Torah, and Moses is presented as Logos and Torah incarnate." Gärtner (1959:20–25) refers to the Jewish view of the three ages and the bread which is associated with each of them. In the Passover Haggadah a distinction is made between bread of the Mosaic age, bread of the present meal, and bread of the world to come.

Jesus is called the "bread of life" (John 6:35) and the "bread which comes down from heaven" (John 6:41). In John a distinction is made between manna in the desert for the Mosaic age, Jesus' feeding of the people in the wilderness, and the eucharistic bread for the feast in God's kingdom. Borgen suggests that John contrasts the external bread of the past given through Moses with the spiritual bread of the present that is available in Jesus (1981:172–79). In Luke 14:15 a blessing is pronounced upon those who will eat bread in the kingdom of God. This refers to an eschatological banquet. The idea of such a banquet can already be found in Isa 25:6–8 and continues to develop in the following centuries.

STEPHEN A. REED

BREAD OF THE PRESENCE. The bread of the Presence consists of twelve loaves of unleavened bread that are displayed in the temple sanctuary. Since the sanctuary is next to the holy of holies, the bread is separated only by a curtain from Yahweh's immediate presence. In this important location, the loaves symbolize the covenant between God and his people Israel (Lev 24:5–9).

Although the purpose of the bread of the Presence is to be on display before Yahweh, the Priestly source (P) directs its attention to the stages of preparation and disposal. (This is not surprising, for, unlike preparation and disposal, the week-long display requires no human intervention.) Preparation begins prior to the Sabbath's onset with the baking of the loaves, each of which contains two tenths of an ephah of flour. Then, on Sabbath morning, the high priest enters the sanctuary with the bread, removes the old loaves, and sets out the new ones. He arranges them—with accompanying pieces of frankincense—into two rows of six on a golden table on the N side of the sanctuary (Lev 24:5–9; Exod 26:35).

Once the bread of the Presence enters the sanctuary, its nearness to Yahweh renders it holy. After the high priest removes the loaves from the sanctuary, therefore, he must properly dispose of the holy bread. To accomplish this, he gives the bread to other priests who in turn must eat it in a holy place—namely,

within the temple complex. The frankincense cannot be reused, so it is burned on the sacrificial altar in the priestly court.

The sanctuary constitutes the location for two further rites beside the bread of the Presence:burning lamps every night, and burning pure frankincense at morning and evening. The three observances have the same status, for they all take place on a golden piece of furniture. The bread rests on a golden table (Exod 25:23–30), the lamps are on a golden seven-branched lampstand (Exod 25:31–39), and the frankincense is burned on a golden altar (Exod 30:1–10). Furthermore, each observance is tended by the high priest, who, according to P, is the only priest allowed to do so. Of the three rites, though, only the bread of the Presence is continual, for the lamp burns only at night and the incense burns only a few hours after it has been lit.

The significance of the bread of the Presence within the temple cult is revealed by its location, the sanctuary. Indeed, only one act of worship occurs in a more important area of the temple, namely, the high priest entering the holy of holies on the Day of Atonement. Most temple observances—those involving, e.g., animal sacrifices and grain offerings—take place in a less important area, that is, the priestly court and the sacrificial altar in it. This hierarchy can be seen in several ways. To begin with, the sanctuary is more holy than the court, because the closer an area is to Yahweh, the more holy it is. Since the sanctuary is separated from Yahweh in the holy of holies by only a curtain, it is more holy than the priestly court outside. This difference in status is reinforced by the furnishings and the personnel of the two locations. The sanctuary's furniture is gold, while the court's is primarily of bronze. Similarly, the sanctuary rites must be performed by the high priest, while the sacrifices are usually done by regular priests. Most importantly, however, the purposes of the rites carried out in the two locations differ. Those in the sanctuary maintain the continual relationship between God and his people Israel. Indeed, Leviticus (25:5–9) specifically states that the bread of the Presence symbolizes the covenant. The rites at the altar, by contrast, primarily concern the relationship between individuals and Yahweh. The animals and other offerings brought by private individuals are sacrificed on the altar or distributed in the priestly court around it. P's emphasis on the different locations within the temple complex thus reveals the importance of the bread of the Presence in the worship of Yahweh.

Outside of P, the bread of the Presence is frequently associated with Israelite temples to Yahweh. Most references assume P's description, while occasionally adding a new detail (1 Kgs 7:48; 1 Chr 9:32; 23:29; 28:16; 2 Chr 2:4; 13:11; 29:18; Neh 10:33). Others merely mention the existence of the bread or its table. For example, in 1 Sam 21:5–7, the Deuteronomic historian mentions that the temple at Nob has this bread as part of its rites. Similarly, 1 Maccabees (1:22 and 4:49) states that Antiochus Epiphanes carried off the table in 170 B.C.E. but that Simon the Maccabee later replaced it. Josephus mentions the bread of the Presence (*Ant* 3.6.6; 3.10.7), as do the Temple Scroll (cols. 3, 8), the gospels (Matt 12:4=Mark 2:26=Luke 6:4), and Hebrews (9:2). Finally, the Arch of Titus in Rome depicts the golden table being carried in Titus' triumph after he conquered Jerusalem in 70 C.E.

The name bread of the Presence (sometimes mistranslated as "showbread") is based on the Hebrew *leḥem pānîm* (LXX: *artos enōpion*), which literally means "the bread which is in the presence of …" (e.g., Exod 25:30). It is also referred to as *leḥem hamma*ʿ*ăreket* (LXX: *artos tēs protheseōs*), "the arranged bread," presumably because it is arranged *(*ʿ*rk)* in two rows (e.g., 1 Chr 9:32). Num 4:7 calls it *leḥem hatāmîd* (LXX: *prokemai*), the "regular bread" or the "continual bread."

PAUL V. M. FLESHER

BREASTPIECE [Heb *ḥōšen* (חֹשֶׁן)]. An item made of fabric that constituted part of the high priest's apparel. A different term, "breastplate" [Heb *širyôn*], refers to a type of metal armor worn by soldiers.

The breastpiece of Aaron's priestly wardrobe is described in great detail in the tabernacle texts of Exodus (see esp. 28:5–30 and 39:8–21) and is also mentioned in one passage in Leviticus (8:8) dealing with the tabernacle. The breastpiece was made of the same kind of material as the ephod: gold, blue, purple, and scarlet woolen threads interwoven with fine linen. The workmanship was of a certain skillful type *(ḥôšēb)* also used for the ephod. The woven fabric formed a double piece of material, a span 9 or 10 inches square when folded over. The reason for the doubled fabric was that the breastpiece, in addition to its symbolic ritual value, also served as a container for the Urim and Thummim.

Once fashioned, the breastpiece was set with 12 precious stones, in four rows of three stones, with each stone set in gold filigree. These stones were set into the fabric and evidently did not protrude. Each stone represented one of the twelve "sons of Israel." A series of golden fittings (rings, chains, or cords) and also a blue ribbon were then used to attach the breastpiece to other items of the high priest's garb:at the top to the shoulder of the ephod, and at the bottom to the woven band or girdle of the ephod.

As one of four special overgarments fashioned for the high priest and worn by no other priest, the breastpiece was part of a carefully designed complex of ritual acts associated with the priest's role within the tabernacle, as opposed to the outer courts. Several of the inner rituals involved sacral acts; others were carried out by the wearing of the Aaronic ritual garb, each item having symbolic significance so that the wearing of the item was tantamount to the performing of a ritual (see Haran 1978:212). Known as the "breastpiece of judgment," the stone-studded breastpiece signified the sons of Israel to God and also contained mantic devices by which God's decisions were rendered. Along with the bells of the ephod coat and the diadem, it aroused the attention of God toward the people of Israel.

The priestly "breastpiece" shares with the "breastplate" the fact that it was worn across the chest. However, the word rendered as breastplate is sometimes translated by the more inclusive term "coat of mail" (as in 1 Sam 17:5, 38). The breastplate as a piece of military garb is used literally in reference to soldiers' clothing (1 Kgs 22:34=2 Ch 18:33) and also figuratively to represent righteousness (Isa 39:17; cf. Eph 6:14; 1 Thess 5:8).

BREASTPLATE. See WEAPONS AND IMPLEMENTS OF WARFARE.

BREECHES. See DRESS AND ORNAMENTATION.

BRIDAL JEWELRY. See JEWELRY.

BRIDE. See MARRIAGE.

BRIDE OF CHRIST. Although the specific phrase "bride of Christ" does not appear in the NT, the concept is found in several NT works as a description of the Church. Paul describes the Corinthian believers as having been betrothed to Christ and presented as a bride to her husband (2 Cor 11:2; cf. Rom 7:1–6). In Eph 5:21–33 the relationship between husband and wife is explained in terms of the relationship that exists between Christ and the Church. The author of Revelation applies the metaphor of the bride of the Lamb (Christ), not only to the Church (19:7), but also to the new Jerusalem, the heavenly city, which is the eschatological manifestation of the people of God (21:2, 9). The source for this imagery is found in the OT where the relationship between Israel and God is often spoken of in marital terms (Isa 54:1–6; Jer 31:32; Ezek 16:8; Hos 2). The transference of this imagery to Christ and his Church was natural for the NT writers who viewed the Church as the new Israel.

BROAD PLACE. The RSV translation of *raḥab* in Job 36:16 and *merḥab* in 2 Sam 22:20=Ps 18:20 (—Eng v 19); Ps 31:9 (—Eng v 8). Both words come from a root *(rḥb)* that means to be wide, spacious,

roomy. Because it is geographically descriptive, the root was often used in place names such as Beth-rehob, Rehob, and Rehoboth. However, the root seems to be used metaphorically for salvation in the passages cited above:someone located in the middle of a "broad place" is relatively secure and safe from a surprise attack.

BROAD WALL (PLACE) [Heb *haḥômâ hārĕḥābâ* (הַחוֹמָה הָרְחָבָה)). Wall of postexilic Jerusalem mentioned in Nehemiah. After repair of the Jeshanah Gate (RSV:"Old Gate," Neh 3:6), evidently in the NW corner of Jerusalem, repairs were made as far as the Broad Wall (Neh 3:8), which was reached by going past the Tower of the Ovens (Neh 12:38), which seems to have been on the W wall. This description would suggest that the Broad Wall was somewhere on the western hill, the Upper City. In 1969–71 N. Avigad (1970; 1972) uncovered a section of a massive Broad Wall in the modern Jewish Quarter of the Upper City, a wall of large unhewn, unmortared stone, 23 feet (7 m) broad and ca. 140 feet long, preserved in part to the height of ca. 11 feet; the foundation section of this massive city wall running NE–SW and ending ca. 917 feet W of the temple platform may have been part of the city wall built by Hezekiah (2 Chr 32:5) to enclose the Mishneh (Second) Quarter and, according to Avigad, iq continued around to the walls of the City of David and enclosed the Siloam Pool. See Mazar 1975:176–78; CORNER GATE.

BROTHER, BROTHERHOOD (NT) [Gk *adelphos* (ἀδελφος)*, adelphotēs* (ἀδελφοτης)]. *Adelphos* is a compound term formed from the copulative prefix *a* and from *delphus*, "the womb," which gives the meaning "one born from the same womb." *Adelphos* and the feminine form, *adelphē,* are used first to speak of physical relationships, but approximately half of the occurrences in the NT use the figuratively/spiritually, primarily to speak of relationships between the people of Israel or between Christians. All of the derivatives and compounds *(adelphotēs, philadelphos, philadelphia, pseudadelphos)* bring out the figurative significance of the basic term.

Adelphos was used for the male and *adelphē* for the female members of the same physical family. The masculine plural could cover all the children of a family. *Adelphos* was also used to signify near relatives, whether joined together by bloodline (e.g., nephew) or marriage (e.g., brother-in-law). Plato uses it for compatriots (*Menex.,* 239a), Xenophon for friends (*An.,* 7.2.25; 38), and Plotinus calls all the things in the world *adelphoi* (*Enn.,* 2.9.18). It is often used for members of a religious society, both in the papyri and inscriptions and also in literature (Moulton and Milligan 1930:8–9).

In the LXX *adelphos* is the usual term to render Heb *ʾāḥ,* and only occasionally for *rēaʿ* (Gen 43:33; Jer 31[38]:34). *Adelphos* was used originally for a physical brother and *adelphē* for a physical sister, but *adelphos* could also be used for other relatives as well (e.g., Gen 29:12ff.). The figurative use of the term naturally arose within the nation of Israel because the twelve tribes were descended from the twelve sons of Jacob. This is clearly seen in Ps 22:22[23] where "brothers" are in parallelism with the "congregation" and are synonymous with the descendants of Jacob/Israel in the following verse. A related feature is found in the use of the terms "son" and "brother" in the picture of God's relationship to his people (e.g., Hos 2:1–3 [—Eng 1:10–2:1]).

Judaism also uses "brother" with both a physical and a figurative sense. The term designates physical relationships (4 Macc 9:23; 10:3, 15; 13:19, 27) and also the brotherhood established by covenant fellowship (1 Macc 12:10, 17). The compound term "love of the brethren" *(philadelphia)* also occurs (cf. 4 Macc 13:23, 26; 14:1). Josephus uses *adelphos* figuratively to speak of relationships between members of the Essenes (*JW* 2.122), and in the Qumran texts "brother" is a common term to designate the

relationship between members of the community. Indeed, brotherhood was significant for the community because they saw themselves as the true remnant of Israel, the true people of God (Urbach 1979:584–85; Schilling 1967:211–12). The Heb term *ḥābēr* ("companion, brother"), although used to designate scholars, was also used to describe the associates of the Pharasaic sect during the Second Temple period up to the time of Jesus (Wilkins 1988:123; *HJP²* 2:583–89; Aberbach 1967:19–20).

NT use of *adelphos/adelphē* is consistent with usage in the surrounding milieu, but it has unique characteristics as well. *Adelphos* occurs at least 343 times in the NT, 13 of which are in Acts in conjunction with *anēr* ("man") as an address (e.g., Acts 1:16–*andres adelphoi*). *Adelphē* is used 25 times. As was true with the history of the terms, so also is true of their use in the NT: *adelphos/adelphē* designate both biological and figurative brothers/sisters.

Adelphos/adelphē are used to describe several different literal family relationships, the most famous among them being Peter and his brother Andrew (Mark 1:16 par.), John and his brother James (Mark 1:19 par.), Lazarus the brother of the sisters Mary and Martha (John 11:1–2), and the brothers and sisters of Jesus (cf. Mark 3:31–35; 6:3).

The OT figurative use is carried over to the NT when the apostles addressed Jews as *adelphoi* in Acts (2:29; 3:17; 7:2; 13:15, 26, 38; 22:1; 23:1ff.; 28:17), and are themselves addressed in the same way (2:37).

But the terms come to have a distinctive emphasis in the NT. In Matt 12:46–50 Jesus gives a definition of those who would be his spiritual *adelphoi/adelphai.* While his physical mother and brothers wait outside to see him, Jesus stretches out his hand toward his disciples and says, "Behold my mother and my brothers. For whoever does the will of my Father in heaven, this one is my brother and sister and mother." With this definition Jesus declares that spiritual union in the family of God takes precedence over national or blood-family lines (cf. also Luke 14:26). Here Jesus unites discipleship with a familial emphasis. See also JESUS, BROTHERS AND SISTERS OF.

The early Church understood the family nature of the new community. *Adelphos* was one of the first terms for their self-designation (cf. Acts 1:15, 16; 6:3). The decision of the apostolic council explicitly applied the term to gentile Christians, giving them assurance that they were also part of the family of God (Acts 15:23). In 1 Cor 5:11 Paul calls the immoral person who postures as a believer a "so-called brother," and calls the Judaizers who attempt to bring believers into bondage to law "false brothers" (*pseudadelphoi;* 2 Cor 11:26; Gal 2:4).

But the family relationship is not merely figurative. It is based on a spiritual birth. Jesus is the only begotten, firstborn, beloved Son of God, and through faith in him believers are born into a new life (2 Cor 5:17; 1 Pet 1:3–5) where they are called Jesus' brothers (Rom 8:29; Heb 2:11ff.). To believe in Jesus as the Christ causes one to be born of God, and to love marks the relationship of the members of the family (1 John 5:1–2). The derivative term *adelphotēs* (found only in 1 Pet 2:17; 5:9) conceives of a "brotherhood" of believers throughout the world. Members of the brotherhood are urged to exercise "brotherly love" toward one another (*philadelphos* only in 1 Pet 3:8; *philadelphia* in Rom 12:10; 1 Thess 4:9; Heb 13:1; 1 Pet 1:22; 2 Pet 1:7). Indeed, love is to be so characteristic of the believer's relationships that to hate one's brother is to give evidence that one does not love God (1 John 5:19–21), which means that one is not truly a member of the family of God.

BUDDE HYPOTHESIS. In 1882 Karl Budde first described in detail his hypothesis on the structure of ancient Hebrew poetry. Qina meter, or falling rhythm, is a succession of lines of two colons, unequally divided in terms of syllables or accents, so that the first exceeds the second, as in Lam 1:5, Line 1:"Her foes have become the head, her enemies prosper," where in the Heb the syllable pattern is 7:6 and the stress pattern is 3:2. Normally in the Heb the longer colon consists of three words and the shorter is two words, with some recognized variations. Budde held that the line is never equally divided. He described the falling meter as a rhythm that always dies away and he attempted to establish rules for its structure. He associated the rhythm with the lament or funeral song. Like many other scholars of his time and since, Budde accepted the possibility that exceptions to the qina pattern might be due to a faulty text. It is, however, to be noted that Budde accepted the possibility of some overarching principle that would allow for the exceptions found in the text.

The concept of Budde's falling rhythm has attracted scholarly attention up to the present time. The paradox is that, while one can find classic examples of the falling rhythm in Lamentations and elsewhere in the Hebrew Bible, there has been no agreement on a rationale for the numerous exceptions found in the same poems. There are clearly many examples of the qina meter in Hebrew poetry that have nothing to do with lament, and some laments are not written in that pattern. Perhaps the only consensus is that great caution is in order when characterizing falling rhythm.

Conventional statistical tests have the ability to distinguish patterns, differences, or relationships that may not reasonably be attributed to chance. Thus it is possible to analyze Budde's hypothesis by means of statistics in order to determine which patterns of syllable or stress structure may be attributed to the freedom of the poet to express each thought without regard to structure, and which patterns may fairly be laid to nonchance factors, technically called significant differences. A nonchance pattern would imply the presence of design crafted into the structure of the poem under study in terms of line length, colon length, and stress pattern. If all fluctuations and exceptions are nothing more than chance factors, the argument for design could not be sustained. The advantage of such analysis is that it examines only the overall design, rather than the usual practice of stanza-by-stanza analysis.

The acrostic poems of Lamentations 1 through 4 are especially valuable for analysis because a clear structure is built into the text. Because of the alphabetic pattern, we can be certain about where the line or the verse begins, which at least removes one aspect of the uncertainty in approaching the analysis of Hebrew poetry (see Hillers *Lamentations* AB).

The following is a summary of research of David Noel Freedman and Erich A. von Fange to explore aspects of Budde's hypothesis. Stress counts and two methods of syllable counts (A and B) were provided by Freedman.

Analyses of colons according to syllable counts. The first line of each of the 22 stanzas of Lamentations 1, taken as a group, was analyzed according to the extent to which the sum of syllables of all the first colons (163) exceeded that of the second (136). Similar analyses were conducted for second (154 and 120) and third lines (154 and 128) of Lamentations 1, and the same procedure was followed for the other chapters of Lamentations. For this analysis Lamentations 3 was treated as though it consisted of 22 stanzas of 3 lines each. Lamentations 5 (also 22 stanzas) was included in the analysis despite the fact that it is not an alphabetic acrostic. Of 12 analyses each for the A and B syllable counts, nonchance differences occurred for every comparison made in Lamentations 1 through 4, a total of 22 tests for differences. In every case, the first of the two colons under comparison for a given line significantly exceeded the second in length, thus strongly supporting Budde's hypothesis. No significant differences were found for the 2

analyses of Lamentations 5, which clearly does not have a falling rhythm, but one in which parallel colons are equal in length.

Analyses of stress patterns. Stress counts for colons were analyzed following the same pattern as above, e.g., the sum of stresses for the first and second colons of the first lines of Lamentations 1 was 66 and 49 respectively. Similar analyses were made for second and third lines of Lamentations 1, and the same procedure was also followed for the other chapters of Lamentations. In all colon comparisons of total stress counts, a total of 12 tests, the first exceeded the second to a significant degree. The surprising finding was that in Lamentations 5, where the syllable counts of first colons do not differ significantly from the second, the stress counts do differ in the expected manner to support what Budde perhaps felt intuitively when he stated that when the first unit equals the second the first is "heavier."

In sum, statistical analysis provides substantial support for the structural aspect of Budde's hypothesis when the colons and stresses of the poems are taken as a whole. One possible interpretation of this evidence is that the poems were sung in ancient times in such a way as to emphasize the qina pattern, and that the chanter had ways analogous to modern liturgical chanting of accommodating to those lines which did not conform to that pattern.

ERICH A. VON FANGE

BUKKI (PERSON) [Heb *bukkî* (בֻּכִּי)]. Var. BORITH. The name of two people mentioned in the Hebrew Bible, Bukki seems to be a shortened version of the name BUKKIAH (1 Chr 25:4, 13). This is supported by the translation *bōkai* (1 Chr 5:31—Eng 6:4; 6:36—Eng 6:51). However, contrary evidence is supplied by the of 1 Esdr 8:2 (Gk *bokka*) and 2 Esdr 1:2 (Rahlfs ed., 7:4; Gk *bokki,* or *borith,* see Myers *1–2 Esdras* 154), and the of Num 34:22 (Gk *bakchir*). The name may be related to the root *bqq,* "luxuriant," as in Hos 10:1, "the luxuriant vine" (Heb *gepen bôqēq*). Guthrie (*IDB* 1:473) suggests "proved of God," which relates the root *bqh* to Aram *bqʿ,* "to test, prove" (see *IPN* 226).

1. The son of Jogli, a leader (Heb *nāsîʾ*) of the tribe of Dan (Num 34:22), when the land of Canaan was allotted to the Israelites.

2. The son of Abishua, and a priest in the line of Eleazar, the high priest (Ezra 7:4; 1 Chr 5:31—Eng 6:4; 6:36—Eng 6:51). His name appears also in a genealogy linking the postexilic leader Ezra with this same original Israelite priestly family (Ezra 7:4=1 Esdr 8:2; see Myers *1–2 Esdras* AB, 154 for a comparison of these lists). In noncanonical uses of this same genealogy, Josephus (*Ant* 5.10.5; 8.1.3) employs the priestly lineage, which includes Bukki (Gk *bokki, bokkias*), to establish the period during which Eli, the priest who raised Samuel, lived.

RAPHAEL I. PANITZ

BUKKIAH (PERSON) [Heb *buqqîyāhû* (בֻּקִּיָּהוּ)]. One of the fourteen sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). Bukkiah received the sixth lot which was cast to determine duties (1 Chr 25:13). Scholars continue to debate the relationship between the two lists (1 Chr 25:2–6, 9–31) which contain the name Bukkiah. For a summary of the discussion and bibliography, see ASHARELAH. The etymology of the name is uncertain. Suggested meanings include "proved of Yahweh" (from a hypothetical Heb root *bqh,* perhaps related to Aram *bqʿ*) and "flask of Yahweh" (from Heb *bqq;* see the noun *baqbuq* in Jer 19:1, 10; 1 Kgs 14:3).

J. CLINTON MCCANN, JR.

BUL [Heb *bûl* (בּוּל)]. The eighth month of the Canaanite calendar, roughly corresponding to October–November. See CALENDARS.

BULL/BULLOCK. See ZOOLOGY.

BUNAH (PERSON) [Heb *bûnâ* (בּוּנָה)]. Individual of the tribe of Judah, the son of Jerahmeel (1 Chr 2:25).

BUNNI (PERSON) [Heb *bunnî* (בֻּנִּי)]. Like Bani and Binnui, Bunni is another short form of the name Benaiah (see BANI; BINNUI), found among the Levites at the time of Ezra and Nehemiah.

1. A Levite in attendance at Ezra's reading of the Law (Neh 9:4).
2. The levitical ancestor of Shemaiah, the son of Hasshub, one of those who volunteered to live in Jerusalem at the time of Nehemiah (Neh 11:15). This ancestor was five generations removed from Shemaiah, the contemporary to Nehemiah, and is therefore not to be confused with the Bunni in Neh 9:4.
3. One of the chiefs of the people who set his seal to Nehemiah's covenant (Neh 10:15).

D. G. SCHLEY

BURIALS. Biblical references to burial are descriptive rather than prescriptive. Descriptions often include the formulas, "he lay with his fathers" (mainly in Kings and Chronicles, cf. 1 Kgs 14:31; 2 Chr 12:16), indicating a natural death, or "he was gathered to his people" (used by P, cf. Gen 25:8; Deut 32:50), denoting appropriate burial, apparently thought to ensure reunion with the ancestors. Proper burial required interment in a *geber*, *geburâ*, or *bayit*, words meaning "burial" and "dwelling." Interment was accorded all who served Yahweh; sinners were cursed with lack of burial or exhumation (Deut 28:25–26; 1 Kgs 14:10–11; Jer 16:4).

ISRAELITE

A. Patriarchs and Matriarchs
B. Exodus and Conquest Generations
C. Period of the Judges
D. Monarchic Period
    1. Textual Witnesses
    2. Archaeological Witnesses

A. Patriarchs and Matriarchs

From the patriarchal period, with the exception of Rachel, the patriarchs and matriarchs were interred in the Cave of Machpelah purchased by Abraham (Gen 49:29–31). In accordance with their wishes to be buried with family, the embalmed remains of Jacob and Joseph were transported from Egypt to Canaan (Gen 47:29–30; 50:13; Exod 13:19; but cf. Gen 50:5).

Interment at the location of death and in proximity to a tree were also attested in this period and later. Rebekah's nurse, Deborah, was interred where she died near Bethel under an oak tree (Gen 35:8) and the people of Jabesh-gilead cremated the bodies of Saul and his sons and then buried their bones under a tamarisk tree (1 Sam 31:12–13). The tree signified divine presence as demonstrated by Abraham planting a tamarisk tree and calling on the name of God at a treaty site (Gen 21:32–33). Burial under a tree also expressed the desire to propagate and to perpetuate the memory of the individual. The tree was long associated with immortality as illustrated by the "tree of life" in the Garden of Eden (Gen 2:9; cf. Isa 56:3, the eunuch as a "withered tree"). Rachel was also buried where she died. Variant traditions locate her burial on the way to Ephrath where a *maṣṣēbâ* was erected (Gen 35:19–20) and in Zelzah in Benjaminite territory near the Ephraim border (1 Sam 10:2). The tradition locating her burial in the Bethlehem vicinity has been explained as a later attempt to associate her burial with Ephrathah in Judah, the ancestral home of David and the site of the present-day "Tomb of Rachel" (McCarter *1 Samuel* AB, 181).

In the patriarchal period, usually dated to the MB II from ca. 1750 to 1600 B.C.E. (*IJH* 142–48), it is impossible to distinguish Israelite from Canaanite burials. The prevalent practice in the highlands was multiple burial in caves, as described for Abraham and his descendants. Typical tombs were cut at the highland site of Gibeon, located 9 km N of Jerusalem. At the bottom of a vertical, cylindrical shaft, a

doorway blocked with stones provided access into a circular chamber with lamp niches cut into the walls. Tomb 15 exhibited three phases of use probably representing two generations. The skulls and bones of fourteen individuals were found along the sides of the chamber. Toggle pins used to secure wraps and jewelry demonstrate that the individuals were clothed and adorned at burial. The most common burial provisions were bowls and platters for foodstuffs, jugs for liquids, and juglets for oil and perfume. Additional gifts included a knife, a dagger blade, two limestone pommels for daggers, fragments of bone inlay probably from a box, and four sheep skulls (Pritchard 1963:22–33). These provisions demonstrate that the deceased were thought to need nourishment and the protection afforded both by weapons and symbolically by colored and metal jewelry.

B. Exodus and Conquest Generations

Like Rachel and Deborah, members of the Exodus generation were interred at the location of their death:Miriam in Kadesh (Num 20:1), Aaron on Mt. Hor (Num 33:39, but see Deut 10:6), and Moses in Moab (Deut 34:6). Burial at the death locale deviates from the patriarchal practice, for just as the bones of Jacob and Joseph were carried from Egypt for burial on family land (Josh 24:32) so could the remains of Miriam, Aaron, and Moses have been transported.

Beginning with the Conquest generation, family burials established a visible, perpetual claim to the patrimony *(naḥălâ),* which sometimes functioned as a territorial boundary marker as in the cases of Rachel (1 Sam 10:2) and Joshua (Josh 24:30). Joshua was buried on the border of his inheritance in the hill country of Ephraim (Josh 24:30), Joseph on family land in Shechem (Josh 24:32), and Eleazar the son of Aaron at Gibeah in the hill country of Ephraim (Josh 24:33). The only other burial from this period was that of the five Amorite kings killed by Joshua. After being hanged from trees, their bodies were thrown into a cave the mouth of which was sealed with stones (Josh 10:26).

The Exodus and Conquest are usually dated to the LB and beginning of the Iron Age, from the 16th through the early 11th century B.C.E. As in the preceding MB, through the LB, the most common mode of burial in the highlands was multiple (family) burial in caves (Gonen 1979). In the highlands of Israel and especially Judah, the conception of the burial dwelling, the treatment of the corporeal remains, and the categories of provisions for the deceased continued unchanged from the MB through the Iron Age. Gibeon tomb 10A–B contained the remains of eleven individuals provided with ceramic lamps, bowls, jugs, dipper juglets, and seven scarabs (an Egyptian amulet signifying birth and renewal which was a standard Egyptian funerary provision) (Pritchard 1963:11–17). Lachish Tomb 216, dated from ca. 1450 to 1300 B.C.E., consisted of a shaft leading into a circular pit with plastered walls and floors. Buried in the pit were numerous individuals supplied with more than 200 vessels. As at Gibeon, bowls predominated with lamps, jugs, and dipper juglets. There was also a sizable collection of Cypriot and Mycenaean imported pottery. Metal knives, arrowheads, and a dagger, scarabs, beads, toggle pins, and playing pieces provided protection, adornment, and amusement (Tufnell 1958:232–35, pls. 52–54).

C. Period of the Judges

By the period of the Judges, family tombs of inherited lands were well established and so individuals were interred "in their father's tomb" or "in their hometown." For Gideon, Samson, and Asahel the record specifies that they were buried in their father's tomb on family land (Judg 8:32; 16:31; 2 Sam 2:32). Only the fact of burial locale is given for the remaining judges:Tola in the Shamir hill country of Ephraim (Judg 10:2), Jair in Kamon, Gilead (Judg 10:5), Jephthah in the cities of Gilead (Judg 12:7), Ibzan in Bethlehem, Zebulun (Judg 12:10), Elon in Aijalon, Zebulun (Judg 12:12), Abdon in Pirathon, Ephraim (Judg 12:15), and Samuel in Ramah (1 Sam 25:1; 28:3). Ramah may refer to this city Ramathaim-Zophim as well as to an elevated place, for important individuals were buried in prominent places where their tombs would be visible and accessible. For some of these individuals little is known except for their burial location. Men who enjoyed a special relationship with Yahweh during their lifetimes were thought to continue that relationship after death and so it was important to know where they were buried.

D. Monarchic Period

1. Textual Witnesses. Beginning with David's reign, kings and religious and administrative high functionaries (2 Chr 24:15–16; Isa 22:15–16) were buried in their capital cities. David initiated burial in

the City of David (1 Kgs 2:10) and was joined by his son Solomon (1 Kgs 11:43; 2 Chr 9:31). Other recorded family burials from the period of the united monarchy include Abner and the head of Ishbaal (Ishboshet) in Hebron (2 Sam 3:32; 4:12), Ahitophel (2 Sam 17:23), Barzillai in Gilead (2 Sam 19:38), and Joab in the wilderness (1 Kgs 2:34).

Following the death of Solomon and the division of the country into Israel in the N and Judah in the S, monarchs were buried in their capital cities of Tirzah or Samaria and Jerusalem respectively. Of kings and prophets it is recorded that they were sometimes interred in proximity to holy sites:prophets of Judah and Bethel near the Bethel altar (2 Kgs 23:17–18) and later Judahite kings adjacent to the Jerusalem temple (Ezek 43:7–8). The deaths and burials of the kings of Israel were recounted solely in Kings. The books of Kings present royal interment in a formulaic, consistent manner, perhaps in an attempt to fabricate a positive record for the Judahite kings in homage to the house of David. Varying accounts of the burials of Judahite kings are preserved in Kings and Chronicles (for a discussion of the reliability of the Chronicler's account, see Japhet 1985). The Chronicler's supplemental information has been discounted as glorifying favored kings and discrediting others. However, the Chronicler may have expressed judgment not through manufacturing new material but in choosing which references to include and which to delete.

Relatively little was written about the burial of the kings of Israel. Of several kings, including Nadab, Elah, Zimri, Ahaziah, Zechariah, and all subsequent kings, no details of burial are given (1 Kgs 15:28; 16:10; 18; 2 Kgs 1:17; 15:10). For most of the remaining kings only the fact of burial in the royal city was mentioned:Baasha in Tirzah (1 Kgs 16:6), and Omri, Ahab, Jehu, Jehoahaz, Joash, and probably Jeroboam II in Samaria (1 Kings 16:28; 22:37; 2 Kgs 10:35; 13:9, 13; 14:16, 29).

In Judah, David and his descendants were buried in the Jerusalem City of David, a small ridge bounded by the Kidron, Hinnom, and Tyropoeon valleys. According to the account in Kings, all kings from Rehoboam through Ahaz were buried "with their fathers in the City of David" (1 Kgs 14:31; 15:8, 24; 22:51; 2 Kgs 8:24; 9:28; 12:22; 14:20, 22; 15:7, 38; 16:20; Neh 3:16). Subsequent kings were buried elsewhere, Manasseh and Amon in the household garden of Uzzah (2 Kgs 21:18, 26) and Josiah in his own tomb (2 Kgs 23:30). There is no reference to burial for Hezekiah or for Josiah's successors.

The Chronicler noted no such harmony in burial arrangements. While commendable kings were buried with their predecessors in the City of David, sinful and ailing kings were denied interment with their fathers. A *kabôd* (honor) was prepared for the righteous king Hezekiah. The honor certainly entailed lamenting (1 Kgs 13:30; Jer 22:18) and offering sacrifices (Isa 57:7; 2 Chr 16:14). Jehoiadah the priest was also accorded burial with the kings in the City of David (2 Chr 24:16). Among the discredited kings, Asa was buried in his own tomb. Mortuary practices included laying the body "… in the resting-place [*miškāb*] which was filled with spices of all kinds; expertly blended; a very great fire was made in his honor" (2 Chr 16:14). The "very great fire" probably resembled in appearance and intent the burnt-offering sacrifices of sweet savor presented to Yahweh (Gen 8:20–21; Lev 1:9, 18). Others denied burial in the royal tombs included Jehoram, Ahaziah, Jehoash, Amaziah, Uzziah, Ahaz, and Amon (2 Chr 21:19–20; 22:9; 24:25; 25:28; 26:23; 28:27).

Isaiah described rock-cut tombs and mortuary practices in a condemnation of the cult of the dead. Isaiah 57, so-called "Third" Isaiah, is usually dated to the last quarter of the 6th century B.C.E. but the text describes Jerusalem bench tombs which had attained their postexilic form by the 7th century B.C.E. According to Isa 57:7–9, tombs were hewn high in the mountainsides. A door and door post opened into the chamber with a resting-place *(miškāb)* for the deceased and a mortuary stele perhaps in the shape of a phallus *(zikrôn, yād)* near the door. At the tomb sacrifices were offered (cf. also Deut 26:14 and Ps 16:3–4) and the dead consulted (cf. also 1 Sam 28 and Isa 8:19–20). To conclude the diatribe, Isaiah refuted the role of the ancestors in insuring control of the patrimony—true inheritance passes not through the ancestral dead (and the family tomb) but through Yahweh (Isa 57:13).

A variety of mortuary practices existed within Israelite society, not all of which were widely practiced or acceptable to 8th century B.C.E. and later prophets and the Deuteronomistic editor(s). The majority buried their dead in family cave and bench tombs located in proximity to the patrimony. Biblical

references and inscriptions on a tomb at Khirbet Beit Lei testify to family burial, but there is currently no osteological evidence. Isaiah rebuked Shebna, an official of King Hezekiah, for having hewn an ostentatious individual tomb in Jerusalem, rather than being buried with his family (Isa 22:15–16). The common burial ground in Jerusalem's Kidron Valley was considered by some an illegitimate form and place of burial as suggested by Josiah's scattering asherah ashes over the ground and Jehoiakim's casting in the body of the assassinated prophet Uriah (Jer 26:23; 2 Kgs 23:6). Both royalty and commoners sacrificed children in the tophet in Jerusalem's Hinnom Valley (and presumably buried them as at Carthage; see Stager and Wolff 1984), demonstrating official sanction during certain reigns of a practice considered abhorrent and unacceptable at other times (2 Kgs 16:3; 2 Chr 28:3; Jer 7:31).

Burial markers preserved the memory of the righteous, the sinner, and men without offspring. A *maṣṣēbâ* and *ṣîyûn* ("pillar" and "monument") marked the graves of the righteous Rachel (Gen 35:20) and the unnamed prophet (2 Kgs 23:17) respectively. A circle of stones served to censure Israel's enemies and those who challenged Yahweh's anointed:Achan, the king of Ai, the five kings of the S coalition, and Absalom (Josh 7:26; 8:29; 10:26; 2 Sam 18:17–18). Monuments serving to perpetuate the memory of men without descendants, literally to "memorialize the name," have been associated with death cult activities (Pitard 1979). During his lifetime Absalom erected a pillar, literally, "hand/phallus [Heb *yād*] of Absalom" (2 Sam 18:18; cf. also Isa 57:8) and Yahweh promised the faithful eunuch through his temple and holy city "a monument and memorial [*yād wāšēm*] better than sons and daughters," a perpetual testimonial which cannot be severed (Isa 56:5; cf. 2 Sam 14:7).

2. Archaeological Witnesses. Multiple (family) burials in caves continued from the Bronze Age into the Iron Age at the sites of Gibeon, nearby Tell en-Nasbeh (biblical Mizpah or Ataroth-Addar), and Dothan. In the Gibeon tomb, ceramic vessels, objects of personal adornment, weapons, household articles, and amulets were present as in the earlier assemblages (Dajani 1951:48; 1953:66). Dothan Tomb 1 was in use from approximately 1400 to 1200/1100 B.C.E. It contained the remains of at least 288 individuals and 3146 artifacts in an irregularly shaped chamber with a domed roof, six niches, two crypts, and a window (Cooley 1983; Free 1960:12).

All the salient features of 8th century B.C.E. and later Judahite tombs appeared by the 12th century in tombs at Tell el-Farah (S), in Shephelah tombs at Gezer, Lachish, and Tel ʿAitun, and at Sarafend on the coast and Pella in Transjordan. Tel ʿAitun C1 consisted of steps leading into two chambers equipped with waist-high benches extending along the sides of the tomb on which to repose the dead, lamp niches, and a repository. The repository was a pit hewn in the rear of the chamber or under a bench to accommodate skeletal remains and accompanying objects moved to make room on the benches for additional burials. Fifteen individuals were distinguished in the tomb and the repository was completely filled with bones. One inhabitant lay extended on its back with a copper bracelet on its arm, surrounded by lamps, a flask, a Philistine krater and jar, beads, and two bronze-socketed arrowheads. Other goods in the tomb included large quantities of local and Philistine pottery, many objects of personal adornment, household items, weapons, scarabs, and scaraboid seals (Edelstein et al. 1971:86–87).

Through the 10th to 8th century B.C.E. both cave and bench tombs were utilized in Israel and Judah. Following the fall of the N kingdom of Israel, "bathtub" coffins and jar burials were introduced by the Assyrians and other foreigners who settled there. Assyrian bathtub coffins are named for their characteristic shape, a deep bathtub-shaped ceramic vessel approximately 1 m long, with one rounded and one straight end, and handles around the sides. In a jar burial, the vessel neck was broken off and the body inserted either in a single jar or two facing jars. In both jar and bathtub coffin burials the deceased were supplied with the same types of goods provided in earlier and contemporary cave and bench tombs. In Judah the bench tomb overwhelmingly prevailed. See Fig. BUR.01. Two of the largest and finest examples of bench tombs were preserved in the N cemetery of Jerusalem, the St. Étienne tombs. One example consisted of a central court around which were symmetrically arranged six burial chambers. Each chamber was equipped on three sides with parapeted benches with horseshoe (or Hathor wig)-shaped headrests and a repository under one of the benches. Stone-carved recessed door frames, right-angled cornices, and imitation sunken wooden panels enhanced the tomb (Barkai et al. 1975).

Exceptionally fine tombs were also cut in the cliffs of what is today Silwan Village facing the City of David. These tombs incorporated distinctive Phoenician and Egyptian features such as gabled ceilings, stone coffins, funerary inscriptions carved into tomb facades, and a crowning pyramid atop a monolithic aboveground structure (Ussishkin 1970). These magnificent structures surely housed the wealthy and eminent members of Jerusalem society, such as Shebna (Isa 22:15–16).

Beginning in the 10th century B.C.E. with the settlement of the S highlands of Judah, new objects were added to the standard funerary assemblage. These included additional vessels for the preparation, serving, and storing of foodstuffs and wine:cooking pots, plates/platters, store jars, and wine decanters. Juglets and dipper juglets were more frequently supplied for use as dippers in store jars and as containers of scented oils and perfumes in a period when tombs were repeatedly entered and bodies anointed. Ceramic models of chairs, beds, quadrupeds, and horse and rider figurines were found in Shephelah tombs, and female pillar figurines were recorded from tombs initially in the Shephelah and later from throughout Judah. This figurine has a hollow or solid conical body, pronounced breasts emphasized by arms encircling them, and a hand-fashioned or molded head. The form is evocative of a tree, long depicted in ANE art as a source of nourishment, but identified with different deities at different times. Their presence in Judahite tombs, in conjunction with figurines of the Egyptian god Bes, one of whose roles was to safeguard mothers and their newborn infants and children, indicates widespread concern for adequate lactation to nourish newborns and infants, and an acceptance of the use of figurines for sympathetic magic.

Following the Babylonian conquest, within the region of the former kingdom of Judah, Iron Age burial customs persisted into the 6th century B.C.E. at Khirbet Beit Lei, Gezer, Beth Shemesh, Abu-Ghosh, and Jerusalem (see Fig. BUR.02). By the end of the 6th century B.C.E. settlement was concentrated along the coast and through the Shephelah where cist tombs with Achaemenid-style metal objects and weapons were succeeded by shaft tombs with Greek and Phoenician pottery and coins (Stern 1982:68–92). A cist tomb consisted of a rectangular grave which was lined and occasionally floored with fieldstones or stone slabs. In a shaft tomb, a vertical shaft led into a rock-cut chamber of no particular shape.

A. Burial Customs

Our principal data for funerary customs and art in the Second Temple period come from two cemeteries, one in Jerusalem (Avigad 1950–51; Rahmani 1981, 1982; Kloner 1980) and the other in Jericho (Hachlili 1978, 1979, 1980; Hachlili and Killebrew 1983). They were both located outside their respective town limits, in accordance with Jewish law (*m. B. Bat.* 2:9). The Jerusalem cemetery consisted of tombs surrounding the walls of the city, in three major areas of concentration to the N, S, and E (Kloner 1980:259–68) and the Jericho cemetery was located outside the town, on the hills flanking the Jordan Valley.

The Jerusalem necropolis developed as the result of tombs being randomly scattered wherever the rock was soft and could be easily carved. Roads and paths led to the tombs, and plants and trees landscaped the surroundings. Families purchased burial plots presumably according to their means. Several of the loculi tombs have richly ornamented facades, while a group of monumental rock-hewn tombs (the Kidron Valley tombs), probably belonging to prominent Jerusalem families, have a memorial or *nefesh* in the shape of a pyramid or tholus standing above the ground (Hachlili 1981). Despite the lavish ornamentation, burial was probably similar to that of the simpler, undecorated loculi tombs. Apart from two tombs where sarcophagi were discovered, all were found in a disturbed, robbed state. Several crowded burial quarters exist in the present-day areas of Mt. Scopus, Dominus Flevit, and French Hill (Kloner 1980:268).

A large necropolis at Jericho containing either primary burials in wooden coffins or secondary collected bone burials in ossuaries was excavated and surveyed (Hachlili 1979; 1980).

1. Tomb Types. The tombs found in these two cemeteries may be divided into two types:the first consists of rock-hewn loculi tombs and the second type is a monumental tomb which is rock-hewn and has a memorial or *nefesh* standing next to or above it. Two basic tomb plans exist:one is called the loculi type *(kokhim)* and the other is the arcosolia. Some tombs are equipped solely with a burial room. Both types of plans are found in the Jerusalem necropolis, but the Jericho cemetery consists only of loculi tombs which are hewn into the hillsides. Both serve as family tombs but with provision for separate burial of each individual.

The form of the loculi tomb (see Fig. BUR.03) consists of a square burial chamber, often with a pit dug into its floor to enable a man to stand upright. From one to three arched loculi 1 m high and 2 m long *(kokhim)* are hewn into three walls, the entrance wall excepted. The entrance to the tomb is square; in Jerusalem it sometimes has a forecourt and a molded facade (Avigad 1950–51:98, fig. 3) or an ornamental facade. It is closed either by a rectangular blocking stone, sometimes in the shape of a large “stopper,” or by mudbricks and small stones. Occasionally, single-loculus tombs were constructed.

The evidence from Jericho proves conclusively that loculi tombs were first designed and used for primary—that is, permanent—burial in coffins. This is also indicated by the length of the *kokh* (ca. 2 m), which is the length of a coffin. The same tomb plan continued to be used in the case of ossuary burials. In previous research scholars have claimed that the *kokh* was “intimately” connected with secondary burial.

If this was the case and the loculi tomb had been designed for 70cm-long ossuaries there would have been no need to dig a 2m-long *kokh.*

The origin of the plan for the rock-cut loculi tomb of the Second Temple period in Judea is to be sought in Egypt, particularly in Leontopolis, from as early as Hasmonean times (*Ant.* 13. 63, 67; 14. 99, 131–33; Hachlili and Killebrew 1983:110–12).

In some Jerusalem tombs the arcosolium type of burial is found. The arcosolium is a benchlike aperture with an arched ceiling hewn into the length of the wall. The arcosolium is a later type of burial, in use at the end of the Second Temple period. In the Beth-shearim catacombs the arcosolia were usually reserved for more expensive burials. In several cases the deceased was interred in a trough grave hewn in the arcosolium. From the 3d century on, the trough grave became the prevalent type of burial (Avigad 1976:259).

2. Burial Types. Two distinctly different types of loculi tomb burials, primary and secondary, were discovered during the excavations in the Jericho cemetery. They can be classified typologically, chronologically, and stratigraphically into primary burials in wooden coffins (type 1) and secondary burials of collected bones which were either placed in individual ossuaries or piled in heaps (type 2).

a. Primary Burial in Wooden Coffins. This is the earliest type of burial known from the Jericho cemetery. The coffins were placed in the rock-cut loculi tombs, each loculus holding one wooden coffin; only when all loculi were filled would further coffins be placed on the benches or in the pit.

Coffins took the form of a completely wooden chest, sometimes with a post at each corner, and were constructed by means of mortising and dovetailing. Several types of wood were used in the construction:the most common types were sycamore, Christ-thorn, and cypress. The lid of the chest was usually gabled and consisted of one plank on each side and a pediment at each end. See Fig. BUR.04. One well-preserved example, however, has a hinged lid. Iron nails and knobs found with the coffins were probably used only for decoration or structural support. The coffins were decorated with painted red and black geometric patterns and designs.

Contemporaneous coffins, different in their construction and decoration, were found in tombs at En-gedi, Jericho, and in the Qumran cemetery (de Vaux 1973:46–47; Hachlili and Killebrew 1983:115). Earlier examples of similar wooden coffins dating to the 4th century B.C.E. have survived in Egypt and S Russia (Watzinger 1905).

All the bodies were extended, face upward, in the coffin, usually with the head to one side and hands close to the side of the body. Most coffins contain one individual, but sometimes a mother and a small child (infant or fetus) are found together in a coffin. There are several occurrences where one or two bodies have been added to a coffin that already contained an individual, but no more than three bodies have ever been found in any one coffin.

In most of the coffin tombs, grave goods consisting of both personal possessions and objects of daily use were found in with the deceased, usually placed near the head or feet. Found only with women and children, they include wooden objects such as bowls, spatulas, beads, and a glass amphoriskos. Leather sandals were also commonly found, placed at the head of the deceased inside the coffin. Objects of daily use were found in the floor or in the pit of the tomb, while storage jars were placed outside the entrance to the tomb.

b. Secondary Burial in Ossuaries. This type was at first practiced only in Jerusalem but later became more widespread (Rahmani 1982:109). From the finds and stratigraphy of the ossuary burials in Jericho it is clear tht they postdate coffin burials. Ossuaries were hewn from one large block of limestone usually in the shape of a small, rectangular box resting on four low legs and measuring ca. 60 × 35 × 30 cm for adults (less for children). A stone lid—flat, slightly curved, or gabled—was placed on top. The ossuaries were often decorated. Only a few pottery ossuaries, but none of wood, have been discovered thus far.

The ossuaries were placed in the loculi or on the benches. Often two ossuaries would be stacked one above the other or placed next to each other. The occupants of ossuaries placed in the same loculus were usually related to each other, as can be concluded from the inscriptions found on the ossuaries. The bodies were prepared for secondary burial by being temporarily buried first to allow the flesh to decay

completely, leaving only the bones. It has been suggested that the body was placed in the loculus of the family tomb and that after a year the relatives of the deceased would come to gather the bones and put them in the ossuary (Rahmani 1961:117–18; Kloner 1980:226–27; 248–52). The bones were then placed inside the ossuary in a customary order. There are several occurrences of more than one individual being interred in one ossuary.

Grave goods discovered with ossuary burial tombs include unguentaria, bowls, Herodian lamps and cooking pots, and glass vessels, all identical to those used in daily life. No personal objects were found inside the ossuaries themselves, but were usually placed close the ossuaries or in the pit. It is noteworthy that some of the objects in the tombs were defective at the time of their placement; for example, cooking pots were cracked, and pottery was left Ÿ in fragments. This raises the question whether it was economically preferable to place a defective item in the tomb or whether this had symbolic significance. The practice of placing burial gifts with the dead was widespread throughout the Hellenistic and pagan worlds, but the Jews, although following the custom, gave it their own interpretation by ignoring the connotation of an offering to the dead for their use in the afterlife. Possibly Jews placed personal belongings in the tomb of the deceased because the scene aroused the grief of the onlookers.

Inscriptions were incised, scratched, or written on ossuaries. No particular place was reserved for the inscriptions and they are found on the front, back, sides, and lid. Some were bilingual, written in Jewish and Greek script. The inscription usually included the name of the interred and his position in the family (e.g., father), but in several cases additional information is also given, such as place of origin and age or status, for example, "freedman" (Hachlili 1979:46).

A unique inscribed funerary bowl, found in an ossuary tomb in Jericho (Hachlili 1978) mentions a three-generation family which originated in Jerusalem but probably lived, died, and was buried in Jericho. In Jerusalem most of the inscriptions consist of names and family relations. Sometimes a profession, such as "Simon the master builder," appears, or an Aramaic inscription appears in archaic Hebrew script (such as the Abba cave inscription). An intriguing aspect of the inscriptions is the identity of their authors:they were probably professional scribes or family members. The latter seems more likely because of the great variety of hands that are evident in the execution of these inscriptions. A consideration of the inscriptions leads us to conclude (1) that ossuary tombs contained at most three generations of a particular family; (2) that the recurrence of names is common in successive generations of a family (Hachlili 1979:53); and (3) that Jewish families were literate and bilingual in Aramaic or Hebrew and in Greek.

Relatives and friends of the deceased probably performed the more personal duties associated with the burial of the deceased, such as carrying the coffin, placing it properly in the tomb, collecting bones and laying them in the ossuaries, mourning, and writing inscriptions (see *AgAp* 2.205). Contemporary and later sources mention charitable societies, the *heber ʿir,* who probably dealt with other duties involved in the preparation of the body for burial.

3. Dating. Dates for these burial customs are still the subject of some debate. Rahmani dates the practice of secondary burials in ossuaries in Jerusalem to 30/20 B.C.E.–70 C.E., continuing sporadically either until ca. 135 C.E. or the 3d century. Nevertheless, the Jericho cemetery can provide some chronology for the two different types of burials. Primary burials in coffins can be dated to ca. mid-1st century B.C.E.–10 C.E., while secondary burials in ossuaries followed immediately, dating to ca. 10–68 C.E.

B. Funerary Art

Funerary art of the Second Temple period is a rich and varied art. It consists of ornamentation of tomb facades, ossuaries, and sarcophagi, as well as wall paintings and graffiti.

1. Tomb Decoration. The composite style, an amalgamation of stylistic features influenced by Hellenistic-Roman architecture and by oriental elements, is characteristic of ornamented tombs in Jerusalem, and its execution is typical generally of local Jewish art of the Second Temple period. This composite style is found both on (a) facade-ornamented tombs with either a Doric frieze together with Ionic columns, or an ornate gable (such as the Jerusalem tomb of Zechariah), and on (b) monumental

tombs exhibiting a mixture of classical features and Egyptian pyramids and cornices (such as the Jerusalem monument of Absalom, which has a Doric frieze, Ionic capitals, and an Egyptian cornice).

2. Ossuary Ornamentation. Most of the ossuaries found in Jerusalem are undecorated, whereas most of those in Jericho are decorated. The repertoire of motifs decorating ossuaries is quite varied and consists of plant, geometric, and architectural motifs. These motifs are similar to those appearing in other artistic works of the Second Temple period. However, the variation on each motif is greater, probably due to the large quantity of ossuaries found. Stone ossuary workshops and artists probably had a repertoire, presumably in the form of a pattern book, to which reference could be repeatedly made. See Fig. BUR.05.

The ornamentation was carved into the soft stone of the ossuaries with the aid of tools such as a ruler and compass. Few ossuaries were painted. The most common type of ossuary ornamentation is a scheme consisting of a frame of zigzag lines, incised or chip-carved, within two straight lines. This frame is usually divided into two, and sometimes more, metopes which are filled generally with six-petaled rosettes.

The motifs decorating the ossuaries represent actual contemporary funerary art and architecture in Jerusalem. In fact, no symbols are depicted on the ossuaries, neither are there displayed any motifs connected with everyday life or with the temple. Rahmani's contention (1982) seems to be the most acceptable:the repertoire of motifs used to decorate the ossuaries is part of a general ensemble of decorative patterns used in Second Temple period art, several of which are found solely in funerary art.

3. Sarcophagus Ornamentation. A few sarcophagi have been found in tombs in Jerusalem. Made of hard stone, their ornamentation differs from that of ossuaries in both design and execution, although the motifs are similar, consisting of plants, rosettes, vine branches and bunches of grapes, and acanthus leaves. However, differences are noticeable between sarcophagi and ossuary decoration and ornamentation. The sarcophagi are usually depicted in high relief, are skillfully executed, and their design is richer and more elaborate. The richer and beautifully reliefed sarcophagi were probably much more expensive, suggesting that only wealthy families would have been able to afford them.

4. Wall Paintings. Jewish rock-cut tombs of the Second Temple period are not known to have been decorated. However, one wall painting was discovered in the monumental "Goliath" tomb in the Jericho necropolis (Hachlili 1985). Traces of a wall painting enclosed by a painted red Ÿ frame appear on three walls of the tomb. The vine motif is the subject of paintings on both N and S walls. Several birds perch on the vines. The Jericho tomb painting was most likely executed at the same time as the tomb itself was hewn, evidently for the benefit of the tomb's visitors and to indicate the family's prominent position.

5. Drawings. Several drawings in charcoal of three ships and a recumbent stag appear on the N and S walls of the porch of Jason's tomb in Jerusalem. They probably were executed by one artist at the same time. On the E wall of the porch graffiti of five menorahs are scratched, probably later than the drawing of the ships, about 30 C.E. A charcoal drawing of a *nefesh*, a column pyramid, was discovered on a tomb wall in the Jericho cemetery. The drawing depicts three columns and part of a fourth.

C. Other Burial Customs

Two completely contrasting Jewish tomb forms and burial customs are encountered in the cemeteries of Qumran and En-el Guweir, (both belonging to the Jewish sect of the Essenes in the Dead Sea area) and in the 2d–4th-century burials in the Jewish necropolis at Beth-shearim.

1. Essene Burial Customs. One sect of Jews during the 1st century C.E. the Essenes, practiced a completely different primary burial in individual graves as evidenced by their cemeteries at Qumran and En el-Guweir. The main cemetery of Qumran is located E of the settlement and contains some 1100 graves (de Vaux 1973). Its organized plan consists of rows of single graves, usually oriented N–S. The graves are marked by oval-shaped heaps of stones placed on the surface. Several graves contained signs of wooden coffins. Most of the excavated tombs contained individual burials; male interments only were found in the main cemetery (de Vaux 1973:46, pls. XXV–XXVI; Bar-Adon 1977:12, 16, figs. 19–20). On the outskirts of this cemetery and in the smaller cemeteries of Qumran, a few females and children were interred. The large number of males found in these graves compared to the small number of women and children might point to the importance placed on celibacy in this community.

The Essene burial practices have a few elements in common with those of the Jerusalem and Jericho cemeteries. The coffin burials at Qumran, though later in date, are comparable to those found at Jericho. Grave goods were discovered with women and children at Qumran and En el-Guweir, as well as remains of mattresses and cloth (indicating that the dead had been wrapped in shrouds). Broken storage jars were discovered on top of the graves at En el-Guweir and Qumran, probably a custom parallel to that of placing storage jars outside the tombs at Jericho.

The contrasts in these burial practices indicate differences in religious philosophy toward the dead among the Jews of this time and reflects the separation of the Essenes from more mainstream Judaism. Single-person burials at Qumran and En el-Guweir cemeteries stress the importance of the individual rather than the family.

2. The Beth-shearim Necropolis. The Jewish necropolis at Beth-shearim (M.R. 162234) was the central burial ground for Jews from the land of Israel and neighboring areas. The majority of the catacombs date to the 3d–4th centuries. Beth-shearim was expanded after the death of Rabbi Judah in the latter part of the 3d century. The *terminus ante quem* for the catacombs is the date of their destruction in the year 352 C.E. (Avigad 1976:260).

The Beth-shearim burial place consists of catacombs, with a frontal courtyard and portals constructed of stone doors imitating wooden doors with nails (Mazar 1973:Plan 1–5; pl. VI; Avigad 1976: figs. 3–5; pls. 25:1; 27:2; 28:1). Several burial halls spaced out along a corridor were hewn in the rock (see Avigad 1976: fig. 31). The graves were mainly loculi or arcosolia types and it is clear that burial customs—that is, primary inhumation in arcosolia, coffins, and sarcophagi—have little in common with those of the Second Temple period. On the walls were carved, painted, or incised decoration, in a popular art style. Decorated marble or clay sarcophagi contained the primary burials of local Jews or the reinterred remains of those returned from the Diaspora (Mazar 1973; Avigad 1976). By this time burial had become a commercialized, public enterprise and was directed apparently by the burial society *(Hebrah Kadisha)*, who sold burial places to any purchaser (Avigad 1976:253, 265).

The Aramaic, Hebrew, and Greek inscriptions found in these tombs mainly record the names of the tomb owners; sometimes a personal note is added. Longer inscriptions are written on the walls. Their purpose was to identify the graves of the deceased for visitors (Schwabe and Lifshitz 1974:219). The inscriptions found at Beth-shearim indicate that the interred were people of importance, such as rabbis, public officers, merchants, craftsmen, and scribes.

The Beth-shearim tomb walls, sarcophagi, and coffins are adorned with carvings, reliefs, incisions, and drawings. The patterns used are a blend of Hellenistic and oriental elements, with the occasional creation of a new motif. The style in which they are worked is similar to that used in contemporaneous Jewish synagogal art. See ART AND ARCHITECTURE (EARLY JEWISH).

A distinction must be made between the custom of secondary burial in ossuaries and the custom of Diaspora Jews to be reinterred in the land of Israel. Scholars have claimed that ossuaries contained the bones of Diaspora Jews, citing as proof inscriptions mentioning a person's place of origin outside the land of Israel. What the inscriptions actually indicate is that the deceased had belonged to a community of Jews residing in Jerusalem who were of Diaspora origin (Rahmani 1977:28, and nn. 123–24). Jews did not begin to practice the custom of reinterment in the land of Israel until the 3d century C.E. (Gafni 1981), and especially abundant evidence for this practice can be found in the Beth-shearim cemetery (Schwabe and Lifshitz 1974:219).

D. Conclusions

The excavations in the extended Jerusalem necropolis and the Jericho cemetery reveal that two completely different burial customs, one chronologically following the other, were practiced by Jews of the Second Temple period. The earlier custom (1st century B.C.E.) is a primary individual burial in a wooden coffin. In Jerusalem indications of such primary burial have been found in many tombs. Jewish burial practices of the late Second Temple period reveal a corresponding importance placed on both the individual and the family. This is reflected in the plan of the loculi tomb, which provided for individual burial of coffins or ossuaries in separate loculi while at the same time allowing a family to be buried

together in the same tomb. The entire population and not just the upper classes (as in the Israelite period) were given individual burials. This practice is probably related to the increasing importance played on the individual in contemporary Hellenistic society, and to the Jewish belief in individual resurrection of the body. This belief is reflected in sources dating as early as the 2d century B.C.E. (Rahmani 1961:117–18, n.6). Similarly, burial in wooden coffins was practiced in En-gedi and in the cemetery of the Qumran sect.

The second type of burial found in Jerusalem and in the Jericho cemetery—chronologically following the coffin burials—is deliberate secondary burial of the bones, placed either in individual ossuaries or in communal burials in loculi or pits, which was also common in burials of the First Temple and Hellenistic periods. This complete change in burial customs occurs during the beginning of the 1st century C.E. simultaneously with a change in the political status of Judea, which now became a Roman province. Up to now no theory has been able to account for this drastic change in burial customs; unfortunately, all sources dealing with ossilegium describe only the custom itself without mentioning the reasons for its sudden appearance.

In summary, what is most extraordinary in the Jewish burial customs of the Second Temple period is the astonishing fact that within a comparatively short span of time burial practices, which are typically among the most conservative customs in a society, underwent rapid changes. Loculi tombs appear with primary coffin burials, and within a century secondary burials in ossuaries in similar loculi tombs becomes the prevalent custom, a practice lacking parallels in any other contemporary neighboring culture. At the same time, these customs were short-lived and show little affinity with either the earlier Israelite customs or the later Jewish rituals of late antiquity which contain only traces of these Second Temple customs. Furthermore, archaeological investigation has been unable to uncover the causes for these ossuary burial innovations. It may be conjectured that the Jews blamed their loss of independence and their state, in 6 C.E., on their sinful behavior; the custom of secondary burial of the bones in ossuaries, after decay of the flesh, may have become a way to expiate sins. The later Beth-shearim necropolis (3d–4th century C.E.) shows the practice of individual burial in various kinds of sarcophagi and was a central cemetery for Jews both in the land of Israel and in the Diaspora.

BUZ (PERSON) [Heb *bûz* (בּוּז)]. **1.** The second son of Nahor (Gen 22:21). See BUZ (PLACE).

2. A "son," i.e., descendant, of Abihail in Israelite Transjordan (1 Chr 5:14). The persons (or rather families?) in 1 Chr 5:12–15 may actually have been "registered" in the reign of Jeroboam II (787–747 B.C.), as 1 Chr 5:17 indicates. In this case, these names may represent the free, landowning, and taxpaying Israelite families in Gilead before it became an Assyrian province in 734 B.C. (cf. 1 Chr 5:6). These Israelites cannot, however, have belonged to the tribe of Gad, as 1 Chr 5:11 claims. Gad did not inhabit Gilead but the region immediately N of the Moabite border and S of Gilead. The attribution of the Gadite territory to Reuben and of Gilead to Gad originated in Israelite historiographic theory after these tribes had disappeared from the scene of history (Wüst 1975:245f.).

As a personal name, Buz is difficult to explain. Heb *bz,* "despise," is unlikely to have generated personal names. Perhaps one may compare Arabic *Baus,* "Kissing," already attested in Thamudic and Safaitic (Knauf 1982:173 and n.16). Buz can be derived from *Baus* by partial assimilation of the voiceless sibilant to the voiced labial.

BUZ (PLACE) [Heb *bûz* (בּוּז)]. A country in E Arabia (Jer 25:23; Job 32:2, 6). In 605/604 B.C. (Jer 25:1), the prophet Jeremiah named four polities from the Arabian Peninsula (25:23):the city-states of Dedan and Taima in NW Arabia; "those with cropped hair" (i.e., the Qedarites according to Jer 49:28–33; see KEDAR); and Buz. In Job 32:2, 6, Buz is Elihu's country or tribe of origin. See ELIHU. Buz (*Bauz* in the i.e., originally **Bôz*) occurs in Assyrian records under the name of **Bâzu* (Knauf 1985:55, n.267 *pace* Eph‘al 1982:133). In 677 B.C. Esarhaddon conducted a campaign into *Bâzu* (Eph‘al 1982:130–37). Two of the conquered cities can be located in E Arabia (Knauf 1985:55 n.267).

It is highly likely that the "sons of Nahor" (Gen 22:21f.) actually form a list of Syrian and Arabian countries and people from the 1st millennium B.C. The "brothers" of Buz, son of Nahor, are:Uz, a country or tribe in W Arabia (see UZ); Kemuel, the father of Aram (i.e., Syria and/or the Arameans); Kesed, the Chaldeans; and Hazo. The last recalls *Ḥazû,* a mountainous area next to *Bâzu* in the inscriptions of Esarhaddon (Knauf 1985:55, n. 267). In the Sefire-Inscriptions (KAI 222) B 9, *y‘dy* (Zinjirli; but cf. Lipiński 1986:85) *bz* denote the extension of the world known to its N Syrian author(s) in the first half of the 8th century B.C.

BUZI (PERSON) [Heb *bûzî* (בּוּזִי)]. The father of the prophet Ezekiel (Ezek 1:3). The name means "The man from the land (or tribe) of Buz." See BUZ. Because Ezekiel was of priestly descent, and from Jerusalem, it is highly unlikely that his family originated from this country in E Arabia. The name may, however, betray links of Ezekiel's family to E Arabia (by way of trade or diplomacy) at the time when his father was given this name.

CABBON (PLACE) [Heb *kabbôn* (כַּבּוֹן)]. A town situated in the Shephelah, or low country, of Judah (Josh 15:40), within the same district as Lachish and Eglon. The only reference to this settlement occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62; see also BETH-DAGON). It has been suggested (Boling and Wright *Joshua* AB 386) that Cabbon may be related to MACHBENAH, listed in 1 Chr 2:49 as one of the descendants of CALEB. The location of the ancient settlement is unknown.

WADE R. KOTTER

CABUL (PLACE) [Heb *kābûl* (כָּבוּל)]. A town in the tribe of Asher (Josh 19:27; 1 Kgs 9:13). Cabul is of great importance for the understanding of the topography of the territory of the tribe of Asher because it is the only place, the name of which has been retained in a modern place name, that is undoubtedly part of the description of the E border of the tribal territory. Other places mentioned in Josh 19:27–28, connected by the conjunctive *waw* ("and"), are generally considered not to belong to the border description but to have been part of a town list later added to it. Literally the phrase in Josh 19:27 reads "and [Asher's territory] went out to Cabul from the left." It has been suggested, however, that "left" should here be understood as "north" (Cooke, *Joshua* CBSC, 180).

The name Cabul has survived in the name of the village Kabul (M.R. 170252) 14 km SE of Acco, situated on a low W spur of the hills of Galilee. This is with little doubt the ancient Chaboulon/Chabolo mentioned by Josephus as having been burnt by Cestius Gallus (*JW* 2.1.9), as his own headquarters (*Life* 43–45), and as the W border of Lower Galilee (*JW* 3.3.1; there "Zaboulon" should be corrected to "Chaboulon"). It is also the "Kabul" mentioned frequently in Talmudic literature (*t. Šabb.* 7:17; *t. Moʿed Qaṭ.* 2:5; *y. Meg.* 4:78b; etc.).

No evidence of Iron Age occupation has been reported from Kabul, however, and Gal (1985) suggests that biblical Cabul be identified at Kh. Ras ez-Zeitun, 1.5 km NE of Kabul. Excavations there have revealed a town 5 acres in extent from the early Iron Age replaced by a fort from the 9th century B.C.E. Cabul's position between the hills of Galilee and the coastal plain determined its being chosen to demarcate the borders of Asher in Joshua and of Lower Galilee in *JW*. The border of Asher was apparently to the E of Cabul, thus including the foothills in the tribe's territory, while the border of Lower Galilee was probably to the W of Cabul at the foot of the hills.

The "land of Cabul" (Heb *ʾereṣ kābûl*) is mentioned in connection with the episode in which Hiram king of Tyre received "twenty towns in Galilee" from Solomon (1 Kgs 9:10–14; but cf. 2 Chr 8:2). Various attempts have been made to explain the derogatory meaning implied by the text. Josephus explained that it means "unpleasant" in Phoenician (*Ant* 8.5.3), and in the Talmud (*b. Šabb.* 54b) it is explained as "unfruitful." There is, however, little doubt that the Cabul of 1 Kgs 9:13 is to be identified with that of Josh 19:27, and that the explanation in 1 Kgs 9:13 is etiological in character, either unconnected to the Hiram episode (*NHI*, 212, n.1), or intended to counteract (or at least soften) the negative political implications of the loss of Israelite territory to Hiram.

The biblical text implies that the "land of Cabul" is identical with the "twenty towns in Galilee." These are usually presumed to be the towns of the coastal plain that in Joshua 19 are included in the territory of Asher but that are later Sidonian (*ANET*, 287). However, it is unlikely that this region of important cities would be named after Cabul, a comparatively unimportant town on the periphery. The LXX of 1 Kgs 9:13 renders the MT *kābûl* ("Cabul") as Gk *Opion* ("border"), implying that the original Hebrew was *gĕbûl* ("border") or that the translator interpreted it as such. The "land of Cabul" in 1 Kings 9 has therefore been

explained as a smaller region in the vicinity of Cabul/Kabul, and the discrepancy of this explanation with the biblical text has been explained either by presuming that part of the original narrative is missing (Alt 1929: 43–44; *LBHG*, 277) or by separating completely the episode of the land of Cabul from that of the cities in Galilee (*NHI*, 212, n.1).

RAFAEL FRANKEL

CAESAR. Originally "Caesar" was a cognomen used by some of the members of the Julian family, e.g., by the dictator Gaius Julius Caesar. On his death, his heir and adopted son Octavian (later Augustus) added Caesar's names to his own; for it was the custom, according to the historian Dio Cassius, "for a person, when he was adopted, to take most of his name from his adopter" (46.47.6). Subsequently, "Caesar" was transmitted, legally, to those whom Augustus adopted and to their direct descendants, namely, the emperor Tiberius (along with his son Drusus and his two sons), Germanicus (and his five sons, including the emperor Gaius), and the three sons of Marcus Agrippa. But Claudius and Nero (and later emperors as well) used it too, though they were not entitled to do so, or at least had no legal claim to it as a cognomen: neither they nor their fathers had been adopted by Augustus. Presumably, they regarded it as another imperial title. But by the 2d century at the latest it had acquired a new meaning: it was used to indicate the heir to the throne. "Caesar" is first attested in this sense in Hadrian's reign, when he adopted Aelius Verus. Each subsequent heir presumptive was automatically called "Caesar."

CAESAR'S HOUSEHOLD. The extended family of the Roman emperor, including all slaves (*servi*) and freedmen (*liberti*) in his service, constituted the household of Caesar.

The *familia Caesaris* was no different than the *familia* possessed by members of any great Roman clan (*gens*). From the earliest times the Roman *familia* "consisted of the conjugal family plus dependents," and "could in its widest sense, refer to all persons (and property) under the control (*patria potestas*) of the head of the family (*paterfamilias*)" (Rawson 1986: 7–8). Accordingly, the households of wealthy nobles could become very large indeed. Under the empire, by far the wealthiest of Romans was the emperor, and his household was correspondingly greater than any other.

The *familia Caesaris* consisted of thousands of slaves and freedmen of the emperor. Their function was not necessarily servile, though many worked the emperor's estates and properties, while others filled traditional servant roles in caring for the persons of the emperor and his relatives. Quite the contrary, many of the emperor's slaves and especially freedmen functioned as managers of estates, enterprises, or other properties throughout the empire. Others took part in the administration of the government itself, which in the early empire remained attached to the emperor's household in the same way as did his personal property. The first Roman civil service developed out of the secretariats manned by the freedmen of Caesar and headed by a few elite freedmen who thus came to possess power far greater than that of the Roman nobility itself, and ultimately formed in imperial society a new influential class. For their role in the administration and governance of the empire, as well as in the personal service of the emperor, see Weaver 1972.

CAESAR, APPEAL TO. See APPEAL TO CAESAR.

CAESAREA (PLACE) [Gk *kaisareia* (καισαρεια)]. A seaport located ca. 50 km N of Tel Aviv and ca. 45 km S of Haifa on the Mediterranean coast (M.R. 140212); also known as Caesarea Maritima or Caesarea Palestinae.

A. Caesarea's History

For millennia before any permanent occuption occurred, the future site of Caesarea Maritima had been used as a roadstead for maritime trade between Egypt and the Levant. The founder of the first known settlement at the site was a Sidonian king named Strato, who lived during the 4th century B.C.E. His trading station came to be known as Strato's Tower.

The original village may have been located ca. 300 m N of the subsequent Crusader fortifications. It probably included a small harbor, private houses, some official buildings, magazines for storage, and perhaps a lighthouse or watchtower that may have given the settlement its name. Adjacent to the fertile Plain of Sharon, the site provided an excellent maritime outlet for the agricultural abundance of the region.

In 259 B.C.E., when the region had passed under Ptolemaic control, an Egyptian official named Zeno arrived at the site to inspect the estates and manage the financial interests of his employer, Apollonius, and his king, Ptolemy Philadelphus. His visit, recorded in the so-called Zeno papyrus, provides the first mention of Strato's Tower or of the site of Caesarea itself.

Near the end of the 2d century B.C.E., a petty ruler named Zoilus seized Strato's Tower and the nearby city of Dor 12 km to the north. He transformed the coastal trading settlement into a fortified port city—a political imperative considering his tenuous hold on these coastal enclaves and the rise of the Hasmonean dynasty. In addition, he expanded his port's harbor capacity by creating an artificial, protected anchorage in the lee (N) of the site's highest promontory. This facility, which was literally carved from the coast and then flooded, augmented a harbor to the north that had served the original settlement. Both basins were now enclosed within the city walls, consistent with the tradition of harbor construction of the Hellenistic age.

Zoilus held Strato's Tower until it was taken by Alexander Jannaeus in 103 B.C.E. Its fate after this date is not clear, although its fortunes clearly declined. It had fallen into a ruinous state by the time of Herod the Great (40–4 B.C.E.).

Having survived the tumultuous last years of the Roman civil wars, Herod continued as Rome's client king of Judea. A successful meeting with Octavian (later Augustus Caesar) led to reconfirmation of his status and to a grant of additional territory which included the coastal region embracing the ruins of Strato's Tower.

Herod decided to build a major international port in his newly acquired land to foster several policy goals. A grand city built in the style of a Roman provincial capital and named for his imperial patron would be a tangible demonstration of his loyalty and would manifest his commitment to the traditions of Rome. In addition, Herod, who was a Jew and who would eventually rebuild the Second Temple in Jerusalem, could show his sympathy and support for his non-Jewish subjects through the construction of a great Greco-Roman urban center complete with pagan temples and other structures (a theater, hippodrome, and amphitheater) that were inimical to his Jewish constituency. This ambitious building program was a gentile counterpoint to his rebuiding of the Jewish temple.

Herod's dream for Caesarea had an economic dimension as well. He hoped that this port, with its great harbor complex called Sebastos, would challenge and perhaps supplant Alexandria as the great emporium of the eastern Mediterranean. Finally, the erection of such an elegant city from the ruins of Strato's Tower would confirm Herod's place in history as a great statesman and master builder. With so much at stake, work on the new city proceeded rapidly. In little more than a decade (ca. 22–10/9 B.C.E.), the city was completed and dedicated with spectacular games, with the Sebastos harbor complex finished perhaps a few years earlier. See Fig. CAE.01.

The primary source for Herodian Caesarea is the ancient historian Flavius Josephus (*JW* 1.408–14; *Ant.* 15.331–41). Although not a contemporary of the king, he knew Caesarea and its history well. We are

fortunate to have not only his description of Herod's city at its inception but also an account of the actual building of the Outer Basin of Sebastos as well—a literary description that is unique in ancient texts.

From its inception, Caesarea contained all the principal architectural elements that distinguished contemporary pagan cities—a theater, temples, elaborate sewer and water systems, paved streets installed on the typical orthogonal urban design, etc.—plus some unique features as well. Josephus mentions that Herod erected a grand temple to Augustus and Roma that dominated the harbor and provided a monumental landmark for incoming ships. From archaeological data uncovered, we now know that it was constructed on an artificial podium adjacent to the earlier Inner Basin that itself had been refurbished, perhaps to serve as a limited-use royal harbor or a protected anchorage for Herod's fleet.

Josephus' description of the construction of the Outer Basin, long judged by many scholars as an exercise in inflated prose or even a conscious exaggeration, has been proven largely correct by recent underwater excavations. When completed, this facility was an engineering marvel of the age, incorporating such sophisticated and modern features as a siltation control system that used flushing channels, the extensive use of hydraulic concrete (a building substance that was poured liquid into the sea to harden *in situ*), and certain design elements to mitigate damage from wave energy.

This facility was but one element of the city's elaborate harbor complex known as Sebastos, or *Portus Augusti* (as it is identified on coins from the Roman occupation of Caesarea). Sebastos consisted of four harbors: the Inner Basin and Outer Basin that were connected by a channel, the South Bay anchorage, and the North Harbor (the original Hellenistic facility restored by Herod). Each may have had a distinct purpose. Their total working area was far greater than the immediate economic needs of the city or the Plain of Sharon required. Herod clearly planned for his seaport to assume a premier role in the maritime affairs of the Roman world. Caesarea was intended to be a major transshipment point on the busy maritime trade routes leading to Rome from the east. Although his city never surpassed Alexandria, it did achieve an international prominence and importance commensurate with Herod's dream.

Upon his death in 4 B.C.E., one of Herod's surviving sons, Archelaus, received his throne. Archelaus was judged incompetent by Augustus and was removed from power in A.D. 6. His kingdom, including Caesarea, was then absorbed by the Romans into their empire, and the new province was henceforth known as Judea. Herod's seaport became the new provincial capital. When Judea entered the empire, the Romans took a census in the country, directed from Caesarea, to determine tax liabilities. This was the same census recorded in Luke 2:2 (contrast Matt 2:1).

The city figured prominently in the history of the early Church as recorded in the book of Acts. Philip, a deacon in the Jerusalem church, first brought Christianity to Caesarea (Acts 8:4–40). Pontius Pilate, who presided at Jesus' trial, governed Judea as prefect from this provincial capital. An important step toward fulfilling Christianity's destiny as a world religion occurred at Caesarea when Peter there converted the first gentile, Cornelius the centurion (10:3–48). Paul, who earlier had been safely spirited away to Tarsus from Caesarea (9:29–30), was imprisoned for two years (A.D. 57–59) in Caesarea before being sent to Rome for trial (Acts 23–26). Although incarcerated, he was not isolated from the rest of the Christian community. Caesarea's central position on the major maritime routes of the Roman Empire provided him with ample opportunity to continue his epistolary activities. Following these events, however, our knowledge of Caesarea's Christian history dims until the 3d century.

Caesarea also played an important role in the First Jewish War (A.D. 66–70). Events in the city triggered the onset of hostilities. Nearly 20,000 Jews were slaughtered at Caesarea in one hour. Vespasian, then his son Titus (after Vespasian had been declared emperor of Rome at Caesarea by his legions), conducted the war from there. Over 10,000 soldiers were quartered in the city at one point in the war. When the war was over, Titus held victory games in the amphitheater. There 2500 Jewish prisoners of war were forced to fight to their deaths as gladiators. Vespasian honored Caesarea's loyalty by refounding the city as a Roman colony, *Colonia Prima Flavia Augusta Caesarea*.

The emperor Hadrian, who visited the city at least once during his extensive imperial travels, patronized the city on a grand scale. Among the public works attributed to him are a new temple, a second aqueduct, and possibly the construction of a permanent stone hippodrome. Later emperors favored the city as well.

New titles and honors accrued as time passed until the city achieved its most glorious (and ponderous!) recognition under Trebonianus Gallus (A.D. 251–53): *Colonia Prima Flavia Augusta Felix Concordia Caesarea Metropolis Provinciae Syriae Palaestinae*.

Throughout the centuries of Rome's rule, the city prospered on many levels, enjoying the benefits of its role as provincial capital and busy international seaport. Its geopolitical importance, its local prosperity, and its cosmopolitan character as a leading Mediterranean seaport attracted numerous intellectuals and religious leaders. It evolved into one of the leading centers for religious study in the Roman world.

By the beginning of the 3d century, the Jewish population had recovered from the disasters of two wars with Rome (the second in A.D. 132–35) and had grown once again to a considerable size. Prominent rabbis, including Rabbi Hoshaya, Rabbi Abbahu, and Rabbi Isaac Hapaha, taught and issued legal decisions at Caesarea. Their contributions to both the Jerusalem and Babylonian Talmuds loom large. The scholar Origen came to Caesarea in A.D. 231 and almost single-handedly turned the city into a center of Christian learning. During the next two decades he amassed a huge library that attracted serious scholars and students. His efforts were continued by Pamphilus, who educated another generation of Christians at Caesarea.

During the great persecution of Christians (A.D. 303–13), numerous individuals died as martyrs for their faith at Caesarea. Eusebius of Caesarea wrote *On the Martyrs of Palestine* in 311 to describe their sufferings. Slightly earlier, he had written the *Ecclesiastical History*, the first history of the Christian Church. Both works were subsequently revised.

As the Byzantine era dawned with the personal conversion of Constantine and the subsequent Christianizing of the Roman world, Caesarea became an even more important Christian center. As a provincial capital (a role it continued to play during the Byzantine era as well), its bishop, bearing the additional title of *metropolitan*, exercised a leadership role in the Christian Holy Land. This prestige and influence enjoyed by Caesarea's metropolitan bishops engendered a great rivalry with the bishops of Jerusalem until the issue was resolved in Jerusalem's favor in A.D. 451.

The city became a regular stop on Christian pilgrimages to the Holy Land. Numerous imperial visitors, including St. Helena, mother of Constantine, and famous churchmen like St. Jerome, visited Caesarea during its Byzantine era. Jerome's stay was prolonged because he took advantage of the city's famous library.

The prosperity of the city ebbed and flowed during the 4th–7th centuries, reflecting both international and local conditions. Sometime in the late 4th century the city walls were extended to incorporate an expanded population and another aqueduct was constructed. Although its prosperity extended into the 5th century, Caesarea eventually declined, a victim of the general forces at work in that tumultuous century as well as of local drought and religious tensions.

Procopius of Gaza (not to be confused with Procopius of Caesarea, the famous historian of the era of Justinian [A.D. 527–65]), wrote of the restoration of the harbor under Anastasius (probably after A.D. 502) and the subsequent return of prosperity to the city and the region it served. In the reign of Justinian an ambitious rebuilding program was undertaken throughout Caesarea. It is quite likely that the city reached its greatest population during the last years of his reign. Perhaps as many as 150,000 people lived there, making this city one of the largest in the Mediterranean world.

With the dawn of the 7th century, Caesarea's fortunes changed again. The city surrendered without major resistance to the Persians in 614 and was held by them until 627–28 when the emperor Heraclius destroyed the Persian Empire and recovered the occupied territories. Only six years later, the first Muslim army invaded Palestine. Caesarea was first attacked in 634. With its defenses revitalized by Heraclius and its ability to be resupplied by the sea, it withstood Arab attacks until 640 or 641. It only fell then because a Jew named Joseph led the Muslim besiegers into the city through a water "conduit," either the Byzantine aqueduct (described by archaeologists as the low-level aqueduct) or a sewer.

Many inhabitants fled, contributing to Caesarea's decline as a city. In addition, the geopolitical realities of the Mediterranean world changed with the Arab conquest. Caesarea no longer was on the major sea

lanes of E–W trade. Its harbors, now allowed to decline because they were no longer required, served only local coastal trade. The economic ramifications were significant.

Caesarea survived, but as a less grand settlement. It lost its international and cosmopolitan urbanity and became an agricultural center on the fringes of a desert empire and a *ribat*, or coast guard station. It gained renown for its produce, its impregnable walls, its fountains, and its Great Mosque, constructed on the same podium where Herod's temple to Augustus and Roma had stood centuries before.

The advent of the Crusades saw another shift of fortunes. Although not taken in the first military actions in the Holy Land, Caesarea soon thereafter came under Western control. In May 1101, Frankish knights under Baldwin I supported by a Genoese fleet assaulted and took the Arab city. One of the prizes of war was a green cut-glass chalice, found in the Great Mosque and thought to be the Holy Grail. It was taken by the Genoese to their city where it still forms part of the treasury of the Cathedral of San Lorenzo.

During the next two centuries the city retrenched again and became a fortified settlement of slightly more than 12 hectares. See Fig. CAE.02. Its history was tumultuous, as it changed hands several times during this period. The fortifications that distinguish the site today were completed in 1252. King Louis IX himself worked on these walls after his failed efforts to take Egypt in the Sixth Crusade. Ultimately, these Crusader fortifications proved insufficient: the Mamluk sultan Baybars, ruler of Egypt, took the city in 1265 after a siege of six days, and the defenders were allowed to evacuate the city. In 1291, as the Crusaders were finally expelled from the Holy Land, Caesarea, along with other coastal fortresses, was destroyed to prevent any Christians from ever again gaining a foothold in the Holy Land.

From that point to the late 19th century, the site was abandoned. Nature reclaimed much of it, but ancient Caesarea was never forgotten. In 1882 a small village of Bosnian Muslims was settled within its ruins by the Ottoman Empire. A small settlement developed within the precinct of the old Crusader city and survived until the creation of the state of Israel in 1948. Kibbutz Sdot Yam was founded on the site in 1940. Since 1954 the Caesarea Development Corporation has built more than 400 homes on a tract of land NE of the Crusader fortifications. The Department of Antiquities and the National Parks Authority have actively encouraged tourism at this site by promoting excavations by various national and international expeditions and by restoring numerous archaeological monuments. Caesarea annually attracts large numbers of visitors from throughout the world.

B. Archaeology at Caesarea

Various travelers visited Caesarea before the 20th century and left impressionistic records of their observations. The first scientific account of the site, however, was not produced until 1873 by C. R. Conder and H. H. Kitchner, who spent six days exploring the ruins. Actual excavations did not commence until 1951 after agricultural workers from Kibbutz Sdot Yam uncovered an imperial porphyry statue on what is now called the Byzantine esplanade. S. Yeivin, then director of the Israeli Department of Antiquities, conducted that first exploration.

In the next two decades, various excavations were carried out. Beginning in 1959, the Missione Archeologica Italiana, under the direction of A. Calderini, succeeded by L. Crema and A. Frova, carried out six seasons of field work. Several of the site's most important monuments—the aqueduct, the N wall of the Herodian or Hellenistic city, and the theater—were excavated by this team. Their final report was the first significant treatment of the archaeological evidence of Caesarea (Frova 1965).

In 1960, A. Negev and G. Foerster of Hebrew University, assisted by A. Wegman of Kibbutz Sdot Yam, began field work on behalf of the Israeli National Parks Authority. They excavated and restored the Crusader fortifications and many buildings within them. In 1960, one of the first underwater explorations of a submerged terrestrial site, in this case the ruins of the Outer Basin of Sebastos, was conducted by an American-Israeli team headed by E. A. Link. In 1962, M. Avi-Yonah, also of Hebrew University, excavated a synagogue located N of the Crusader fortifications and some adjacent structures.

In 1971, a consortium of universities and colleges known as the Joint Expedition to Caesarea Maritima (JECM), headed by R. J. Bull of Drew University, began field work at various sites in the ancient city. This group has worked at the site intermittently since then (Bull 1982; Bull et al. 1986). Another team from Hebrew University, directed by D. Bahat, E. Netzer, and L. Levine, excavated an important

Byzantine building within the N sector of the Crusader fortifications and explored the promontory where Professor Netzer thinks Herod the Great's palace was located (see Levine 1975a; 1975b; Levine and Netzer 1986).

In 1980, another international consortium was formed to carry out maritime excavations at Caesarea. This group, known as the Caesarea Ancient Harbour Excavation Project (CAHEP), is headed by A. Raban of the University of Haifa and codirected by R. L. Hohlfelder of the University of Colorado, R. L. Vann of the University of Maryland, and R. Stieglitz of Rutgers University, Newark. (J. P. Oleson of Victoria University was a codirector until 1985.) CAHEP resumed Link's underwater explorations and began investigating various coastal structures relating to the ancient harbors of Caesarea (see bibliography).

Despite the considerable archaeological effort since 1951, only a small part of Caesarea has been explored. At this writing, JECM has completed its last season of field work and will continue to work on final publication of its explorations. CAHEP is continuing its marine archaeological investigations. In 1989 a new land archaeological team, the Caesarea Land Excavation Project (CLEP), began field work on the temple podium and on the Byzantine fortifications. This consortium, headed by Professor K. G. Holum, plans to conduct field work in these and other areas of the city. In June 1989 the Israel Antiquities Authority announced that it would accelerate its efforts to excavate and restore Herod's city.

ROBERT L. HOHLFELDER

CAESAREA PHILIPPI (PLACE) [Gk *Kaisareia hē Philippou* (Καισαρεια ἡ Φιλιππου)]. A town (also called Caesarea Paneas, M.R. 215294) and district 40 km N of the Sea of Galilee along the Nahal Hermon (Wadi Banias), at the SW foot of Mt. Hermon, strategically located between Syria and Palestine. It was in this region that Jesus posed the question to his disciples, "Who do you say that I am?" and Peter answered "You are the Christ" (Matt 16:13–20; Mark 8:27–30; cf. Luke 9:18–22).

Prior to the Hellenistic period, the name of the site is unknown. At the time of Antiochus the Great (ca. 200 B.C.E.), it was called Panion (Polybius 16.18.2). Both the town and the district received this name (later Paneas, Pliny *HN* 5.74) from a cave and spring dedicated to the nature god Pan (widely attested by inscriptional and numismatic evidence; see *HJP²* 2: 40 n.66; also Josephus *Ant* 15.10.3 §364; *JW* 1.21.3 §405–6). Earlier cultic use of this site may be evident in the theophoric element of the toponyms Baal-gad (Josh 11:17; 12:7; 13:5) and Baal-hermon (Judg 3:3; 1 Chr 5:23) which are located in this area. Some have suggested that the transfiguration, which follows Peter's confession in each gospel account (Matt 17:1–8; Mark 9:2–9; Luke 9:28–36), took place in this area of ancient cultic significance (note also the proximity of a mountain near the cave in the Josephus references above). Places identified as "holy" often enjoyed a long history of use in practice and legend. (Miracle stories associated with this spring are recorded in the 4th century C.E. by Eusebius *Hist. Eccl.* 7.17; on the nature of sacred space, see Brereton in *EncRel* 12: 526–28.)

After Zenodorus' death in 20 B.C.E., Augustus gave the district of Paneas to Herod the Great, who subsequently built a magnificent marble temple near the cave in honor of the emperor (called both Paneas and Panium by Josephus, *Ant* 15.10.3 §360–61, 363–64; *JW* 1.21.3 §404–5). The district then passed from Herod to his son Philip, the tetrarch of Trachonitis (*Ant* 17.8.1 §189), who enlarged the city and named it *Kaisereia* to complete the honor to Caesar Augustus (*Ant* 18.2.1 §28; *JW* 2.9.1 §168). The name Caesarea Philippi came to be used in the 1st century C.E. to distinguish it from the other cities named Caesarea.

Agrippa II (ca. 53 C.E.) enlarged the city again and gave it the name Neronias (Gk *Nerōnias*) in honor of Nero (*Ant* 20.9.4 §211; *JW* 3.10.7 §514); however, this use is rare according to numismatic evidence (Benzinger in *PW* 3: 1291). During the First Jewish War, Vespasian and his troops rested at Caesarea Philippi (*JW* 3.9.7 §443–44). After the fall of Jerusalem (ca. 70 C.E.), Titus went to the city, where it is reported by Josephus that some of the Jewish captives were thrown to wild beasts (*JW* 7.2.1 §23–24).

In later Roman and Byzantine times, the name Caesarea Philippi was superseded by the old name Paneas (e.g., Eusebius *Onomast.* 215.82; 217.40; 275.36; see *HJP²* 2: 171 n.465 for its use in rabbinic literature). This ancient frontier city is survived today by the village of Banias (the Arabic form of the name).

For additional bibliography, see *HJP²* 2: 169 n.453; for the most extensive treatment, see Hölscher in *PW* 18/3: 594–600.

JOHN KUTSKO

CAIAPHAS (PERSON) [Gk *Kaiaphas* (Καιαφας)]. There is not unanimity but rather a consensus among the Gospels that the high priest at the time of Jesus' death was named Caiaphas, and that he played an active role in the proceedings. Each of the presentations amounts to a nuanced portrayal of the events leading up to Jesus' death, and each should be appreciated in its own right before any general statement in respect of Caiaphas may be made. In Matthew, the notice of a conspiratorial meeting of high priests and elders is located in the courtyard of Caiaphas' house (26:3) at the commencement of the passion narrative. In Mark and Luke, there is no such reference to location, and less detail in the description of the conspiracy. The second (and final) reference to Caiaphas in Matthew has scribes and elders gathered with Caiaphas, to whom Jesus, having been arrested, is brought (26:57). The reference marks the success of the conspiracy. The conspirators had "taken counsel, that they might arrest Jesus by stealth, and kill him" (26:4); in 26:57 the "crowd" from the high priests, scribes, and elders (26:47) have succeeded in the arrest, and it is Caiaphas' question and Jesus' response (26:63b–64) which will bring the verdict of

blasphemy, and a condemnation to death (26:65, 66). The grounds on which Jesus is found guilty of blasphemy is a vexed question, since no profanation of the divine name appears to be involved (Lev 24:15, 16; *Sanh.* 7:5). But Caiaphas' tearing of his garments in 26:65 (again, cf. *Sanh.* 7:5) supports the reading that a judicial finding is involved.

Matthew's Caiaphas is not explicitly provided with any motivation. Indeed, he is not even named as an active agent of the conspiracy in 26:3. The mention of the courtyard may be more important cartographically than for its owner: in the same place, Peter denies Jesus at the close of the chapter (26:69–75; cf. 57, 58). At the crucial moment of his question, Caiaphas is simply identified as "the high priest" (26:59, 62, 63), the chief representative of "the high priests" generally (26:3, 14, 47, 59), who are primary instigators of Jesus' judgment, and also of his death (27:1, 3, 6, 12, 20, 41, 62). The reference to a plurality of high priests is technically incorrect, although common enough in the Gospels, and presumably is used in respect of the leading families from which the high priest was chosen. The picture of an elite, familial group, intimately associated with hierarchical authority, is supported by Acts 4:6, where Annas is named as high priest, and Caiaphas, John, and Alexander are referred to, along with all who were of high priestly lineage. Matthew's picture, then, is of deadly opposition from those most intimately involved with the temple. Caiaphas is emblematic of the opposition without being an instigator of it. Mark achieves much the same effect with a comparable pattern of diction (particularly "high priest(s)"), but without naming Caiaphas.

Luke does name Caiaphas, but in a peculiar manner (3:2). The ministry of John the Baptist is introduced with what at first sight seems chronological exactitude (3:1), but there is then reference to the time of the high priesthood of Annas and Caiaphas (v 2; Acts 4:6). Because the office was not jointly held, the statement constitutes a puzzle, and one which is complicated by the close relationship between Annas and Caiaphas, as documented by Josephus. *Ant* 18.2.2; 18.4.3 has it that Joseph Caiaphas was appointed high priest around the year 18 by Valerius Gratus and removed from office around the year 36 by Vitellius. Annas was appointed by Quirinius around A.D. 6 and deposed by Valerius Gratus in A.D. 15 (*Ant* 18.2.1, 2). Luke 3:2, and especially Acts 4:6, therefore appear to confuse two quite distinct high priesthoods. S. Sandmel has in fact argued that Luke-Acts mistakenly recognizes only Annas as high priest, and that a careless use of sources caused the name of Caiaphas to intrude (Sandmel, *IDB* 1: 482). But the close relationship between Annas and Caiaphas has simply not been taken into account by Sandmel: Annas' influence survived far beyond his high priesthood, in that five of his sons were to serve in the office (*Ant* 20.9.1), and Caiaphas was perhaps his son-in-law (John 18:13). The fact remains, however, that to single out Annas as high priest after A.D. 15 appears to be an error (Catchpole 1971: 170).

D. R. Catchpole is sufficiently convinced by the tenacity of the Lukan confusion that he understands the reference to the house and courtyard of the high priest in Luke 22:54, 55 in respect of Annas, rather than of Caiaphas (Catchpole 1971: 171). Such an exegesis construes Luke in such a way as to accord strikingly with John, and disrupts any exact parallel with Matt 26:57, 58. Substantially, however, the analogy with Matthew is difficult to explain away, and the latter identifies the house specifically as that of Caiaphas. There are, however, rather clear indications that the Lukan approach to Jesus' condemnation is to focus on "the high priests" as a group. Except for 3:2; 22:50, 54, the noun always appears in the plural in Luke, in order to speak of a judicial proceeding against Jesus (9:22; 19:47; 22:2, 4, 52, 66; 23:4, 10, 13; 24:20). The effect of that pattern is to emphasize the nature and source of opposition to Jesus; the usage of 22:66–71 even puts the fateful question of Jesus' identity in the mouth of the "high priests" generally. Likewise, Luke alone of all the Gospels refers to the *stratêgoi* in 22:4, 52 in connection with Jesus' arrest. The evident reference is to the police of the temple (Jeremias 1969: 180), but Luke uses a word in the plural which appears both in Josephus and Acts as a singular, referring to the "captain" of the temple (*Ant* 20.6.2; Acts 4:1; 5:24, 26). It may be that Lukan usage is somewhat loose at this point; Acts 16:20, 22, 35, 36, 38 employs the plural noun, in respect of magistrates in Philippi. The inference may be drawn that the description of Jesus' arrest and prosecution has been shaped to accommodate a Lukan scheme. Within that scheme, Caiaphas as a personality, or even as an active agent of conspiracy, is not in view. Annas

also is little more than a cipher of priestly opposition. What is emphasized is the organization of the prosecuting authorities and their link with the temple.

Caiaphas emerges most clearly as a personality in John, in close association with Jesus' passion, but he does not emerge as an active or willing agent of Jesus' execution. John 11:47–53 presents a gathering of "high priests" and Pharisees, in which Jesus' "many signs," most notably the raising of Lazarus (vv 1–46), provokes the fear that "the Romans will come, and destroy both our place and our nation" (v 48). But Caiaphas is said to have prophesied Jesus' death, being high priest of that year, by pronouncing the dictum that it was expedient for one man to perish for the people, that the whole nation might not be destroyed (vv 49–51). The result is, as in the Synoptics (but not in the context of Lazarus' raising), that counsel is taken to kill Jesus (v 53). Notably, no malice is ascribed to Caiaphas; his prophecy is said to derive from his high priestly office. The reference to "that year" has been taken to mean that, within the Johannine scheme, Caiaphas alternated years in service with Annas. Such a reading is an exegetically desperate maneuver, designed to explain the prominent role of Annas in chap. 18: a less strained understanding would take "that year" as the year in which Jesus died (E. Jacquier *DB* 2/1: 45). Be that as it may, the fact remains that the Johannine portrait of Caiaphas is, so far, respectful of the man and his office.

The 18th chap. of John presents an account of Jesus' arrest and trial which differs substantially from that of the Synoptics. Although Caiaphas is again called high priest of that year (v 13c), the combined forces of "the cohort and the officer and the servants of the Jews" (v 12) take Jesus to Annas first (v 13a). Caiaphas' marital relationship to Annas is also mentioned (v 13b), but that scarcely motivates the session at Annas' house, which is the scene that follows (vv 15–24). Caiaphas until this point is a bystander to the action, and the Johannine presentation heightens the contrast with Annas' activism, by recalling Caiaphas' prophecy in 11:49–52; cf. 18:14. He is more moved by events than he influences them. Consistently, the account of the session at Annas' is punctuated with references to him as the high priest; at one point, his status as such causes Jesus to be struck by a servant for his insolence (v 22; cf. vv 15, 16, 19). Caiaphas, by contrast, is a cipher within the text: Jesus is brought to him in v 24, a final scene of Petrine denial unfolds in vv 25–27, and Jesus is immediately led away from Caiaphas to the praetorium in v 28; cf. 35. Concomitant with this truncation of Caiaphas' role, which denies him any dramatic place in the action, we are left in John with no equivalent to the Synoptic dispute, which involves the temple and Jesus' messianic status. Annas interrogates him regarding his disciples and his teaching (v 19); how the issue comes to be Jesus' royal pretensions, in his confrontation with Pilate (vv 33–38), is not explained. Although Sandmel's theory, that reference to Caiaphas was made in an attempt to clean up Johannine chronology, may be invoked here, it does not actually explain why so very little involvement is attributed to Caiaphas. A possibly more satisfactory explanation is that John's gospel is written on the supposition that the Synoptic catechesis has already been appropriated.

The most striking feature of consensus among the Gospels and Josephus in respect to Caiaphas is his close relationship with the Roman administration. Cordial relations are implicit in his long tenure (some eighteen years) as high priest. Between Herod's appointment of Ananel and the destruction of the temple, Josephus counts twenty-eight high priests (Eppstein 1964: 52; *Ant* 20.10; and Jacquier *DB* 2/1: 44), so that the duration of Caiaphas' high priesthood was exceptional. Removed by Vitellus ca. 36, Caiaphas' exercise of office included the period of Pilate's tenure. The latter was infamous for his insults to the national and religious identity of Judaism, and Caiaphas is notable for his absence from the pages of Josephus which describe objections and rebellions against Pilate's activity (Jacquier *DB* 2/1: 44; *Ant* 18.3.1, 2; *JW* 2.9.24). The same Vitellus who dismissed Pilate also released the high priestly vestments from custody in the Antonia (Jeremias 1969: 149, n.4 and *Ant* 18.4.3), a custody with which Caiaphas had apparently complied. The close cooperation between Caiaphas and the Roman authorities is implicit within the passion narratives of all four gospels. For all the differences between the Synoptics and John, there is a consensus that, following a hearing and high priestly interrogation, it was resolved to dispatch Jesus to Pilate (Matt 27:1–2; Mark 15:1; Luke 23:1; John 18:28). The Johannine version of events may even hint at Roman complicity as early as Jesus' arrest: it speaks of a cohort and an officer in addition to a

force associated with the high priesthood (18:1, 12). Catchpole (1971: 149; also Jeremias 1969: 210) rightly points out that "cohort" (*speira*) and "officer" (*chiliarchos*) might refer to a band sent from the Jewish authorities, but probability is against that reading. Both the passages in John speak of the cohort and "servants" of the Jewish authorities; the identity of the two groups does not seem to be implied. Within the NT itself, both "cohort" and "officer" refer straightforwardly to Roman military arrangements. If that usage is also to be understood in the case of John, then the fourth gospel does intensify the portrait of high priestly connivance with the Romans, which is independently attested in the Synoptics and (implicitly) in Josephus.

A single, symbolic, and physical center provided the focus of Roman and high priestly cooperation—the temple. The establishment of a police force to guard the purity of the temple is widely attested, in Mishnah, Philo, and Josephus (Jeremias 1969: 209–10 and *HJP²* 1: 366). From the point of view of successive Roman administrations, the sacrificial cult of the temple was valuable, not merely tolerable, because sacrifices in the emperor's behalf were offered there (*JW* 2.10.4; *HJP²* 1: 379–80; 2/1: 311–12). Custody of high priestly garments, the maintenance of a credibly deterrent force in the Antonia (*JW* 5.6.8), and acceptance of a death penalty against desecrating the temple (*HJP²* 1: 378; 2: 80, 222 n.85, 284–85), together make sense as a coherent policy on the part of the Romans. Provided the cult of the temple proceeded under Roman permission and protection, the Jewish refusal to sacrifice to the emperor's image could be overlooked, and Judaism could be seen as a licit society. The formal outbreak of war with Rome in A.D. 66 is, precisely for that reason, signaled by a refusal to offer sacrifice on the emperor's behalf (*JW* 2.17.2).

Caiaphas would have occupied an important position within this delicate settlement. His interrogation of Jesus, following a series of questions concerning the latter's statement in respect of the temple (Matt 26:57–66; Mark 14:53–64; cf. Luke 22:54–71, which is entirely christological in focus) is quite plausible. Likewise, the suggestion of O. Betz, that Caiaphas' counsel in John 11:49–50 suits a Sadducean theology reflected in Josephus (Betz *ANRW* 2/25/1: 596–98), is speculative but defensible. Josephus calls Caiaphas "Joseph Caiaphas"; attempts to explain the surname have abounded from antiquity until the recent past. The results have been inconclusive, although they eloquently attest the attitudes of the scholars who propose them (cf. *HJP²* 2: 230; Jacquier *DB*, 44; and Jerome's verdict, *"investigator vel sagax, sed melius vomens ore,"* discussed in Kraus *JEnc* 1: 493). No judgment of Caiaphas' character or motivation can make any serious claim on our attention, except as an imaginative exercise. Historically speaking, the available evidence will not permit conclusions of that sort. Nonetheless, Caiaphas' obvious, necessary, and essential link with the temple remains.

A Talmudic tradition has it that, forty years prior to the destruction of the temple, the Sanhedrin was exiled from the chamber of hewn stone in the Jerusalem temple to Hanuth (*ʿAbod. Zar.* 8b; *Šabb.* 15a; *Sanh.* 41a; Jeremias 1969: 210; Eppstein 1964: 48). That momentous reform is naturally placed during the pontificate of Caiaphas, and Eppstein suggests that another innovation should also be attributed to him: the permission for vendors of offerings to set up shop within the precincts of the temple (Eppstein 1964: 55). Eppstein's elaborate reconstruction of a struggle for power between Caiaphas and the "Sanhedrin" (itself a problematic designation) is a tissue of speculation, but he has pointed to what may have been a crucial issue between Caiaphas and Jesus. Within the Gospels, Jesus' expulsion of such vendors and money-changers from the temple is a pivotal event (Matt 21:12–13; Mark 11:15–17; Luke 19:45–46; John 2:13–17). The money-changers are easily presented as villains, but the fact is they served a useful purpose, in that Roman coin, the currency of oppression, was scarcely apposite to achieve atonement. The ancient Tyrean shekel was used instead, and the rate of exchange appears to have been controlled (Eppstein 1964: 43, n.10; *Šeqal.* 1.6, 7). Eppstein suggests that the tables of exchange were knocked over by Jesus in the melee concerning the vendors (Eppstein 1964: 57). That anything accidental or inadvertent can have taken place with furniture as massive as was used in the temple is quite implausible (*Šeqal.* 2.1; 6.5). More probably, the quotation from Jer 7:11 led to the reference to money-changers, whose existence Jesus (or any other Jew of the period) would have taken for granted (*Šeqal.* 1.3). What does stand out as an oddity, however, is that the vendors of animals are placed at the site of the temple instead of at Hanuth.

Naturally, the possibility must be faced, that the reference to both the money-changers and the vendors is the result of a misreading of sacrificial arrangements by Christians who had lost touch with their Judaic heritage. On such an understanding, reflection upon Jer 7:11 alone produced the story as we can read it today in the Synoptics. The fatal flaw in that reconstruction is that Jer 7:11 alone is not what is ascribed to Jesus: rather, a mixed citation of Isa 56:7 and Jer 7:11 is attributed to him. A mixing of scriptural elements in that manner is characteristic of Jesus, not of those who shaped the tradition after him (Chilton 1984). It is theoretically possible that a mixed citation, correctly attributed to Jesus, was then attached arbitrarily to the narrative of the vendors, as it was to that of the money-changers. But the fact is that the vendors appear in the best witnesses of Luke 19:45, without a mention of the money-changers, so that the former appear a more stable element in the narrative than the latter. Moreover, the scriptural citation in John 2:17 (Ps 69:9) is quite unlike the Synoptic allusion (and is not attributed to Jesus), so that the story of Jesus' occupation of the temple does not appear to be a simple expansion of a favorite text into the form of a narrative. As a matter of fact, Jesus would by no means be unique among rabbis in objecting to commercial arrangements related to the cult; Simeon ben Gamaliel is said to have intervened in the matter of pricing doves (*Ker.* 1.7). More generally, complaints of high priestly rapacity are found in *Pesaḥ.* 57a. Even Vitellius, at the time he restored custody of vestments to the temple, also remitted certain taxes; a criticism of financial arrangements during the period of Pilate and Caiaphas may have been implicit in his action (*Ant* 18.4.3). On balance, it would appear that Caiaphas did engineer the installation of vendors in the temple, that Jesus reacted with force, and that the collision of the two was finally adjudicated by Pilate, Caiaphas' protector (Chilton 1984: 18).

BRUCE CHILTON

CAIN (PERSON) [Heb *qayin* (קַיִן)]. Son of Adam and Eve and father of Enoch (Gen 4:1, 17). Cain appears in Genesis 4 as the murderer of his brother Abel and as the progenitor of a line credited with the initiation of various aspects of culture. The name recurs in the oracle of Balaam at Num 24:22 in a difficult text which associates Cain (*qyn*) with the Kenites (*qyny*). Later references to Cain focus upon him as the murderer of Abel (4 Macc 18:11; 1 John 3:12) or as the one whose sacrifice was not as good as his brother's (Heb 11:4). Jude 11 pronounces judgment upon those who follow the way of Cain. In conjunction with Balaam and Korah, the way of Cain appears to represent an attitude of rebellion against God and the chosen ones of God. In line with other examples of Cain in postbiblical accounts, it may suggest the teaching of others to sin (Bauckham *Jude, 2 Peter* WBC, 79–81; Watson 1988: 59).

The derivation for the name of Cain in Gen 4:1 is the statement by Eve, "I have acquired (*qānîtî*) a man with/from (*ʾet*) Yahweh." A difficulty lies in how to understand the *ʾet,* which regularly serves as a sign of the direct object. On the basis of similar usage of the preposition *itti* in Akk personal names, Borger (1959) argues for a meaning of "from." Claims for divine paternity for Cain (Gordon 1988: 154–55) are not explicit in the present text. Nor do comparative studies prove a divine maternity (Kikawada 1971: 35–37). The association of the name Cain with the root *qnh,* "to create" and "to acquire," leaves open two interpretations for the phrase; either Eve is acknowledging God at work through her in creation (or proudly claiming her own creative act [Cassuto 1961: 201; Westermann *Genesis 1–11* BKAT, 395]) or she is recognizing God as the ultimate source of Cain (Wenham *Genesis* WBC, 102). The verbal root *qnh* associates 4:1 with the genealogy of Cain in 4:17–24. In v 20 Jabal is described as the father of *miqneh* (RSV "[those who have] cattle"), which has a root similar to that of Cain. Cain reappears in the last-named figure of his line, Tubal-Cain. Thematically there is also a connection. Cain and his line create (cities, music, tools, and weapons) and acquire (property, wives, and the fruits of vengeance).

The name of Cain has its etymology in a root, *qyn,* which does not appear other than in proper names and gentilics in biblical Hebrew. A similarly spelled root occurs in South Arabian personal, clan, and tribal names (Beeston et al. 1982: 112; *DOSA*, 454) as early as the 5th century B.C.E. (Eph‘al 1982: 194, 211, 212, 226, 227). A *qyn* root occurs in later Aramaic and Arabic with the meaning of "smith." Furthermore, a similar root appears in the gentilic with which the Balaam oracle associates the name Cain, i.e., the Kenites (Num 24:21–22). These people appear in the biblical text as smiths associated with the desert area of Israel's wanderings. See KENITES. A second etymology for the name may be found in the Hebrew *qînâ,* "song." This has the advantage of appearing in biblical Hebrew but lacks examples of a *qatil* noun formation such as the name Cain possesses. Both interpretations relate 4:1 to the genealogy of 4:17–24. If the former is followed, compare Tubal-Cain, the last-mentioned figure in the line of Cain. He not only possesses Cain's name but also is described as a smith. For the "song" derivation, compare the figure of Naamah in Cain's genealogy. In Ugaritic her name may mean "song." Recent examinations of the line of Cain have led to other connections with the region of the Kenites (Sawyer 1986).

The narrative of Cain and Abel is sandwiched between the naming of Cain and the genealogy of this figure. It also has literary connections with the preceding narratives of chaps 2 and 3 (Hauser 1980). For example, v 16 speaks of the Garden of Eden, mentioned in chap 3. Though brief and clear in its overall plot, the narrative of Cain and Abel bristles with problems. Why was Abel's offering preferred? How did God make known the preference? What is the meaning of the counsel God gave to Cain? What did Cain and Abel say to one another? What is the mark given to Cain? What is the reason behind the story?

As to the preference of Abel's offering before Cain's, see ABEL. The text is silent as to how God made known this preference for Abel's offering. The same is true concerning the conversation of the two brothers, though this has not prevented the ancient versions from filling in this and other "gaps" (*EncMiqr* 7: 119–24). The meaning of the counsel which God gave to Cain hinges on the text of v 7. Westermann's negative assessment of a corrupt text follows other modern commentators, but it is not the only solution (*Genesis 1–11* BKAT, 406–10). The word *śʾt* has been interpreted as "forgiveness," "happiness," and "erect in posture" (Wenham, *Genesis* WBC, 105). The first two seem more likely, given the context. They would then contrast with Cain's fallen countenance in v 6 (Castellino 1960: 443). The word *rōbēṣ* seems to suggest the posture of sin "crouching at the door." However, the Akkadian demon *rābiṣu* may also be intended; and a noun would solve the gender incongruence with the preceding feminine *ḥṭʾt,*"sin." Alternatively, Driver (1946: 158) suggests reading *ḥṭʾt trbṣ,* "sin will crouch," with two *taw*s expressed by a single one in an originally continuous Hebrew text without word divisions. Driver goes on to repoint the final phrase as a passive: "And so you shall be ruled by it," (*wĕʾattâ timmešel-bāh*), rather than accepting it as it is and understanding an adversative *waw,* "*but yet* you may/should rule over it." Perhaps, as Huffmon (1985) has suggested, the problem lies in the failure of Cain to investigate the reason for God's rejection of his sacrifice. The sign (*ʾôt*) given to Cain after the murder is not specified, but the narrator intends some means to make public the punishment due to anyone who kills the murderer.

The purpose of the story in its present context remains a matter of dispute. The traditional interpretations have found here a moral tale with lessons to be learned about the consequences of jealousy and anger. Historical approaches have identified a sociological struggle between nomadic shepherds (Abel) and settled farmers (Cain), or they have found an etiology for smiths who travel with nomads, such as the Kenites. Within the present context, the narrative serves to explain the rejection of Cain the firstborn from continuing the line of promise. His own line ends with v 24. It thus prepares the background for the birth of Seth and the continuation of his line. Finally, it introduces the crime of murder, a subject taken up by Lamech and others, but not explicitly forbidden until Gen 9:6.

CAINAN (PERSON) [Gk *Kainam* (Καιναμ)]. Name of two persons in the NT. The form "Cainan" is a Gk transliteration of the Heb *qênān.* See KENAN.

1. Appears in Luke's genealogy of Jesus as the son of Enos and the great-grandson of Adam (3:37–38). The name occurs in the MT of Gen 5:9–14 and 1 Chr 1:2.

2. Occurs in Luke's genealogy of Jesus as the son of Arphaxad and the father of Shelah (3:35–36). This Cainan is often called the second Cainan. The name appears in the genealogy of Shem in the LXX of Gen 10:24 and 11:12 and in Codex Alexandrinus of 1 Chr 1:18, but not in the MT or in P^{75} and Codex Bezae. The presence of the second Cainan in Luke's genealogy of Jesus suggests that the evangelist used the LXX for this section instead of the MT.

CAIRO GENIZAH. See DAMASCUS RULE (CD).

CALAH (PLACE) [Heb *kālaḥ* (כָּלַח)]. In Gen 10:11–12 it is narrated that Nimrod, who was "a mighty hunter," began his kingdom at Babel (Babylonia) and then went into Assyria where he built cities, among them Nineveh and Calah. This is the only specific reference in the Bible to one of the four great cities of ancient Assyria. Nevertheless, because of this greatness and because Assyrian armies marched from Calah against the kingdoms of Israel and Judah, a brief description and history of Calah are essential. For a fuller description, see MESOPOTAMIA, HISTORY OF (HISTORY AND CULTURE OF ASSYRIA).

The ancient site of Calah was strategically located from an economic and military point of view. It was on the E bank of the Tigris just N of the point where the Upper Zab River flows into the Tigris. From a military point of view this meant that Calah was protected on all but the N flank. From an economic point of view, the site was in the very center of the Assyrian heartland, a region where a rich agricultural economy flourished.

The biblical association of Nimrod with the city Calah has been preserved until modern times in the sense that the medieval and modern name of the site is Nimrud. While native tradition preserved in Arabic literature never forgot the correct identification of the ancient site Calah, it was only in the 19th century that Europeans recognized where the city had been. In fact there was some confusion among Europeans, and Sir Austen Henry Layard, the first excavator of Nimrud, actually thought the site was the location of Nineveh. This error was eventually corrected and his startling discoveries were then viewed in their proper historical context. Since Layard's time, various archaeological expeditions, both Iraqi and foreign, have excavated at this site. Among these was the British expedition led by Sir Max Mallowan during the 1950s and 1960s. Many of the artifacts discovered were removed to the British Museum in London and the museum in Mosul (Nineveh) but there are still numerous Assyrian stone reliefs to be seen in a museum at the site itself. Of the four great cities of Assyria, the others were ASSHUR, NINEVEH, and ARBELA. In contrast to the other three, Calah was of no significance in the 3d and 2d millennium B.C. It was singled out for importance only in the 9th century B.C. when Assurnasirpal II chose it as his capital. Assurnasirpal totally transformed the insignificant village into a metropolis which was suitable to be the center of the empire he created. The chief god of Calah was Ninurta, the god of war, and Assurnasirpal had an enormous temple and ziggurrat (a temple tower) erected in this god's honor. He also built a splendid palace, the so-called Northwest Palace, for his residence. Many other temples were erected and a

huge wall surrounded the city for defense. The waters of the Upper Zab River were partially diverted by an intricate aqueduct in order to provide irrigation inside the walls.

The extensive building program of Assurnasirpal II was continued by his immediate successors and Calah remained the administrative center of Assyria until about 700 B.C. At that time other cities were chosen as capitals, and eventually Nineveh became the chief city. When the Assyrian Empire fell at the end of the 7th century B.C., the site of Calah was abandoned and there has been no major settlement there ever since. See *RLA* 5: 303–23.

A. KIRK GRAYSON

CALAMOLALUS (PERSON) [Gk *Kalamōlalos* (Καλαμωλαλος)]. The name of the ancestor of a family which returned from Babylon with Zerubbabel; included in the RSV as a marginal reading for "of the other Elam" (*kalamō allou*; 1 Esdr 5:22). The identification of Calamolalus is further complicated by the variant Gk text (B) *kalamōkalos,* and is commonly considered a textual corruption. Myers (*1 and 2 Esdras* AB, 65), with the RSV, renders it as "the other Elam" and considers it parallel to Ezra 2:31 and Neh 7:34. However, Turner (*IDB* 1: 482) describes it as a corrupt combination of "Lod and Hadid" (Ezra 2:33=Neh 7:37).

MICHAEL DAVID MCGEHEE

CALAMUS. See PERFUMES AND SPICES.

CALCOL (PERSON) [Heb *kalkōl* (כַּלְכֹּל)]. A man from Judah, he was the son of Zerah, whom Tamar conceived by her father-in-law Judah (1 Chr 2:4, 6). In 1 Kgs 5:11—Eng 4:31, Calcol is identified as one of the sons of Mahol. Mahol should not be understood as a proper name but, as Albright (*ARI*, 123) and de Vaux (*AncIsr*, 382) have suggested, the title of a guild of musicians, "sons of the choir." See DARA.

Calcol was one of the four wise men whom Solomon excelled in wisdom. According to Albright (*ARI*, 123) the name Calcol appears as *Kulkul* in several inscribed ivories found at Megiddo. According to these inscriptions, written in Egyptian hieroglyphs, which have been dated in the 13th century B.C., *Kulkul* was the name of a female singer of the god Ptah in the Canaanite city of Aijalon (Loud 1939: 11–13). According to Albright, Calcol was the name of a flower or plant. In the ANE that name was applied to musicians.

CLAUDE F. MARIOTTINI

CALEB (PERSON) [Heb *kālēb* (כָּלֵב)]. Var. CHELUBAI. CALEBITES. It is possible to distinguish three people with this name, plus one variant form in the name Chelubai (Heb *kelûbāy*). Any discussion of the name Caleb and its variant form must of necessity also entail an investigation of the Calebites, or descendants of Caleb. This gentilic usage is quite important in sorting out the geographical location and genealogical identification of individuals and groups so named; however, these issues are one step removed from an examination of the name itself.

Caleb has most commonly been treated as a form of the root *klb*, "dog," which occurs in virtually every ANE language (*TWAT* 4: 158; Beltz 1974: 116–34). Traditionally, complimentary and uncomplimentary connotations are associated with the literal meaning of Heb *keleb*, "dog." On the one hand meanings like "raving dog" (*IPN*, 230), "dog-faced baboon" (Thomas 1960: 419–23), "dead dog," and the like, all of which are attested in extrabiblical sources (*TWAT* 4: 157–62; Thomas 1960: 410–14), express self-abasement or invective. In one biblical example, Hazael, doubting his own abilities, says to Elisha, "What is your servant, who is but a dog …" (2 Kgs 8:13). On the other hand, most scholars agree that Heb *keleb* is used in certain letters, hymns, etc., to express a servant's faithfulness, like that of a faithful watchdog

(Thomas 1960: 424–27; *EncMiqr* 4: 106–10; Boling and Wright *Joshua* AB, 356–57). Margalith (1983) contends that these are not two different connotations of meaning for one term, but rather the distinctive meanings of two homonymous terms. Brunet (1985) challenges the traditional view that there are two connotations for the term and concludes that in biblical and nonbiblical occurrences "dog" and its synonyms are almost exclusively terms of self-abasement. Various theophoric names use the root *klb*, i.e., Phoen *klb*ʿ*lm*, "dog of the gods" (*PNPI*, 131, 331), and Akk *kalbi-*^{il}*sin* and *kalbi-*^{il} *marduk* (Thomas 1960: 425; see also *TWAT* 4: 158–62). Therefore, the biblical name Caleb appears to be "an abbreviation of a name beginning with the element *kalb*-" (Albright 1941: 47, n.26) meaning lit. "dog," with the primary connotation of self-abasement, and probably also a secondary connotation of "faithful servant."

1. The son of Jephunneh and the representative of the tribe of Judah among the twelve spies sent out by Moses to reconnoiter the land of Canaan (Num 13:6). Caleb (alone in the so-called J source; Num 13:30), together with Joshua the son of Nun (in the so-called P source; Num 14:6), brought back a favorable report of the land and urged the people to go up and take it. In contrast to God prohibiting the people from entering the land because they rejected this recommendation, God singled out "my servant Caleb" and promised to bring him into the land where he had gone, and to give it to his descendants as a possession (Num 14:24; see also Num 26:65; 32:12; Deut 1:36). This promise set Caleb apart from all his peers, even Joshua, and it raises the issues of geographical location and genealogical identification of Caleb and the Calebites.

The land that came to be owned by Caleb, through apportionment (Josh 14:6–15; 15:13), force (Josh 15:14–19=Judg 1:11–15), or a combination of the two means was associated with Hebron and Debir in S Palestine. 1 Sam 30:14 identifies part of this area as "the Negeb of Caleb." If we identify the cities and boundaries of the tribe of Judah it DRMbecomes obvious that the land owned by or associated with Caleb is located within Judah's borders (Josh 15:1–12, etc.; see *KHC*, 115–24, 372–97). Hebron is a key element in this association, in part because of its proximity to other Judahite cities, but in light of the centrality of the Davidic dynasty in the biblical tradition, it was as the first capital city of David that Hebron played an unquestionable and important role. (Note that Nabal, the first husband of David's wife Abigail, was a Calebite who lived in this region; 1 Sam 25:3.) When later tradition identified Hebron as one of Judah's levitical cities, it resolved the problem of Calebite ownership by specifying that the environs, and not the city itself, belonged to Caleb (Josh 21:12; 1 Chr 6:56).

The relationship between the Kenizzite clan of Calebites and its Judahite neighbors was mutually beneficial on political and economic grounds (see Beltz 1974: 64–70), and although the Calebites became part of the tribe of Judah within the Israelite tradition they retained their distinctiveness. Of course, geographical location is not the only basis upon which the Calebites were incorporated into this tradition; there was also a genealogical connection.

In 1 Chronicles several genealogies contain the name Caleb, and these reflect inconsistencies of lineage and raise questions in light of other biblical information about individuals named Caleb. First, Caleb the son of Jephunneh is only explicitly mentioned in a genealogy of sons of Kenaz, or the Kenizzites (1 Chr 4:13–15), which is set within a section concerning descendants of Perez. The daughter of this Caleb is named elsewhere as Achsah (Josh 15:16–17 = Judg 1:12–13), while an Achsah is listed as the daughter of Caleb the son of Hezron, and a grandson of Perez (1 Chr 2:49). Second, the MT never identifies the wife of Caleb the son of Jephunneh. However, Caleb the son of Hezron has several wives and concubines, and his descendants are not easily placed in his genealogy (1 Chr 2:18–24, 42–55). One identifiable descendant, Bezalel (1 Chr 2:20), a great-grandson of Caleb the son of Hezron, was a contemporary of Moses (Exod 31:2; 35:30) and therefore cannot be the great-grandson of Caleb the son of Jephunneh. Third, a Caleb the son of Hur can be identified according to the MT of 1 Chr 2:50, but according to his genealogy (1 Chr 2:42–55), this Caleb appears to be his own grandfather. Fourth, the names of some of Caleb's descendants are place names (i.e., Tekoa, Ziph, Madmannah, and Hebron), which complicates an attempt to understand the purpose of the genealogies (see Noth 1932). Williamson (*1 and 2 Chronicles* NCBC, 48–55) resolves these problems by assuming that the Chronicler pulled together most of the genealogies but was not concerned with the details of genealogical consistency. Rudolf (*Chronikbücher*

HAT, 10–25), on the other hand, attributes the inconsistencies to later additions which disrupted the consistency of the Chronicler's composition. It is generally agreed that one section (1 Chr 2:42–50) derives from a tradition which predates the Chronicler, probably from the united monarchy or shortly thereafter (Williamson *1 and 2 Chronicles* NCBC, 55).

The key to resolving the tensions in these genealogies is the fact that Caleb is part of Judah's genealogy. Caleb the son of Jephunneh is a Kenixzite who gained special status through his deeds in the wilderness wandering and conquest stories. On the other hand, Caleb the son of Hezron plays a role only in the genealogies of Judah, and Bezalel the tabernacle builder seems to be the central character in his genealogy. The Chronicler does not attempt to relate Caleb the son of Jephunneh to Caleb the son of Hezron because neither of them is central to his purpose of establishing a royal and cultic origin in the tribe of Judah (Williamson *1 and 2 Chronicles* NCBC, 52). Caleb the Kenizzite is important, rather, because of things he did (Numbers 13–14; Josh 14:6–15) and associations he had (Josh 15:13–19 = Judg 1:11–15; Judg 3:9; see Boling *Judges* AB, 82) outside the Chronicler's framework, although these were not unknown to the Chronicler. Therefore, in addressing the questions raised above, Caleb the Kenizzite who appears in 1 Chr 4:15 within the lineage of Perez is to be identified with the individual so well known from the tradition of Calebites in S Palestine (Numbers 13–14; Joshua 14–15; Judges 1). To ask whether his daughter Achsah is the same as the daughter of Caleb the son of Hezron in 1 Chr 2:49 misses the point of the genealogy there. Furthermore, the complex genealogies of Caleb in 1 Chr 2:18–24, 42–55 serve to highlight the mix of parallel (i.e., a sequence of siblings) and hierarchical (i.e., parent followed by child) genealogies in this chapter. The chiastic structure of the sections of genealogies in 1 Chronicles 2, as discussed by Williamson (*1 and 2 Chronicles* NCBC, 49), focuses the reader's attention on the significance that the Hezron clan had within the tribe of Judah; moreover, this follows the pattern of treating the sons in reverse order as established in 1 Chr 1:5–23, 28–34. Finally, by listing descendants of Caleb who have names associated with geographical locations, the Chronicler reveals both the antiquity of his source material and the close association of persons with places (Noth 1932; see also *EJ* 3: 41–42).

This introduces the final issue of the function of genealogies. According to Wilson (1977: 183), genealogies can be used to delineate social and political ties between two groups, and, in particular, to incorporate marginally affiliated clans into a central group. The genealogy of Caleb is related in this way to the tribe of Judah (Yeivin 1971: 13–14) and was assimilated into the Israelite tribal system thereby (Johnson 1969: 6). Not only the individuals and groups of people but the places associated with them became part of the tribe. Thus, the genealogy provided a means for legitimizing social relations and for defining the geographical domain of the individuals or groups concerned.

It would appear that Caleb the son of Jephunneh is the name of a Kenizzite whose personal exploits became the tradition of the clan which took his name as patronym. This clan existed independently in S Palestine, but through political, economic, and religious ties it eventually became part of the tribe of Judah. Even within the larger Israelite tradition, the distinctive stories of the Calebites were retained into the postexilic period.

2. The son of Hezron and great-grandfather of Bezalel (1 Chr 2:18–20). A variant form of the name occurs in 1 Chr 2:9 as Chelubai (Heb *kelʾbāy*), and the LXX interprets the form as *chaleb* and identifies this third son of Hezron with the Caleb who appears in the following verses. The identification is correct because the difference in spelling is a matter of an afformative (Heb *-ay*) which is common (*IPN*, 41), and both persons hold the same position in the genealogy of Hezron (1 Chr 2:9, 18, 42; see Beltz 1974: 38). According to Williamson (*1 and 2 Chronicles* NCBC, 51), the variance may support the view that the Chronicler constructed 1 Chr 2:9 to connect two originally independent sources (1 Chr 2:10–17, and 25–33, 42–50a). As noted above, Caleb is one of three sons of Hezron along with Jerahmeel and Ram, he appears only in this genealogy, and he serves to introduce Bezalel the tabernacle builder into the line of Judah (1 Chr 2:20). Interplay between this Caleb and the tradition surrounding Caleb No. 1 influenced the genealogies. Thus, the names of the region and towns in which the Calebite tribe originally lived came to be so closely identified with the name Caleb (i.e., the Negeb of Caleb) that the town names were included as descendants in the genealogy of this son of Hezron.

3. The son of Hur, according to the MT of 1 Chr 2:50. The textual ambiguity of this verse is correctly resolved in the RSV by reading the accentual pause as a period. Rather than reading with the MT, "These were the sons of Caleb, the son of Hur the firstborn of Ephrathah …" the first phrase is taken to summarize the preceding section (vv 42–49) and what follows introduces a new genealogy, "… These are the sons of Caleb. The son(s) of Hur the firstborn of Ephrathah …" Consequently, this individual should not be differentiated from the Caleb in 1 Chr 2:42 (see Caleb No. 2 above).

CALENDARS. A calendar is a system for arranging and calculating the standard divisions of time (days, months, years, etc.). The term is also used to refer to schedules of events such as festivals. This entry consists of two articles, one surveying the use of calendars in the ANE and the other surveying ancient Israelite and early Jewish calendars.

ANCIENT NEAR EAST

A. Introduction
  1. The Lunisolar Calendar
  2. Intercalation and the Babylonian 19-Year Cycle
B. The Babylonian Calendar
  1. The Year (Akk *šattu*)
  2. The Month (Akk *arhu*)
  3. The Day (Akk *ūmu*)
C. The Assyrian Calendar
D. The Egyptian Calendar

A. Introduction

1. The Lunisolar Calendar. In most of the ancient Mediterranean, a civil calendar was developed to regulate the sacred and secular life of the state. The times for religious festivals, agricultural, fiscal, and legal activities were determined with reference to the natural intervals produced by the motion of the sun and the moon. This "lunisolar" calendar reckoned a year as the interval between successive returns of the seasons, usually beginning with spring. The month was defined as the interval between successive first appearances of the moon in its cyclical phases. The beginning of the lunar cycle is defined as the moment when, following the period of invisibility due to nearness to the sun, the lunar crescent appears again briefly on the western horizon just after sunset. The interval which constitutes the lunar month, also termed a lunation, varies in length from 29.26 to 29.80 days, and consequently is experienced as a period never less than 29 days or more than 30 days. The day, in accordance with the use of lunations, was reckoned as the interval between successive sunsets.

The lunar month was taken uniformly throughout the ANE and Mediterranean (by Sumerians, Babylonians, Assyrians, Hebrews, Arabs, and Greeks) to begin with the sighting of the first visible lunar crescent. Only the Egyptians (and later the Romans) did not conform, but instead disregarded the irregular

natural time indications in favor of regular arbitrary measures, such as the fixed 30-day month or the 365-day year (see D).

2. Intercalation and the Babylonian 19-Year Cycle. Because the motions of sun and moon are not uniform with respect to one another, a lunisolar calendar, which by definition reckons months by the moon and years by the seasons, faces the problem of maintaining synchrony between the 12 lunar months and the solar year. The effect is that 12 lunations do not divide up the solar year evenly, nor do solar days divide the lunar month into equal parts. Twelve lunar months of an average 291/2-day length is 354 days, which is about 11 days less than the average length of the solar year (= 365.2492, or 3651/4 days). If no adjustment is made to compensate for the asynchrony, the months will fall 11 days behind each year, and after 3 years the sequence of months will be fully one month out of step with the season or with the activity designated to occur in a particular month, such as the barley or date harvest, or sheep shearing (discussion of seasonal activities reflected in month names may be found in Landsberger 1949: 260–65). The problem would be eminently perceptible, since after only 321/2 years a given month would pass through the entire cycle of seasons (as it did in the Middle Assyrian calendar until the time of Tiglath-pileser I; see Weidner 1935–36: 28–29).

To ensure stability in the correspondence between specific months and times of the year, whether defined agriculturally, religiously, or fiscally, an extra "intercalary" thirteenth month was added to the year, not regularly, but whenever necessary to maintain the proper "place" of a month within the solar year. In Mesopotamia, an extra sixth month (ITI.KIN.DIRI=*Ulūlu arkû*) or twelfth month (ITI.ŠE.DIRI=*Addaru arkû*) was intercalated, one or the other being preferred in various periods. Parker and Dubberstein (1942: 3) note that preference for a given intercalary month shifted from *Ulūlu* to *Addaru*, and suggest an early tradition placing the New Year in *Tašrītu* as an underlying reason. Intercalary *Nisannu* (ITI.BARA$_2$.MIN.KAM) is occasionally attested, albeit rarely in economic texts (MUL.APIN 2.18; see also Landsberger 1915: 101; Langdon 1935: 10 and 46–47).

Intercalations were effected by royal decree. Documents from the reigns of Hammurapi, Nabonidus, Cyrus, and Cambyses attest to the procedure (Bickerman 1980: 22; *RLA* 5: 289; YOS: 3: 15 and 115, and 196, and further references for intercalary years in the reigns of Samsuiluna and Ammiṣaduqa). The ad hoc intercalation of months represented by the royal letters was the standard procedure for controlling the calendar throughout the ANE from approximately the 3d millennium B.C. until about the middle of the 1st (certainly until 525 B.C.).

Evidence from the 7th century B.C. shows that various procedures were developed for determining in advance whether a given year would be normal (*ešret* or *kīnat*, containing 12 lunar months) or intercalary (*ezbet* or *atrat*, containing 13 lunar months). One such procedure was based on the observation of the relation between the longitudes of the moon and the Pleiades throughout the year. The conjunction of moon and Pleiades (when they occupy the same position in the sky) on particular dates through the year indicated a normal year, while their "separation" (*napalsuhu*) indicated a leap year. Leap years attested in actual documents, however, indicate that the Pleiades intercalation rules were probably not implemented (Hunger and Reiner 1975). In the astronomical series MUL.APIN (Tablet 2.ii.1–6), other rules for predicting leap years using select fixed stars (Sirius, Arcturus, Pleiades) are given. Since the month in which certain fixed stars or constellations had their heliacal rising was known (e.g., Pleiades became visible on the first day of the second month, Aiaru—MUL.APIN 1.ii.38), the delayed appearance of the Pleiades in the third month instead of the second (MUL.APIN 2.Gap A.10–11) signaled the need to intercalate the year in question.

A mathematical scheme producing a regular intercalary cycle was finally introduced into the Babylonian calendar during the Achaemenid period, sometime after 500 B.C. This cycle was based on the good correspondence between the number of days in 19 solar years and 235 lunar months. When and how the nineteen-year cycle was recognized is not precisely known, although on the basis of dated documents from the reign of Artaxerxes II it clearly became the official rule from 380 B.C. Indeed, the exceptions to the rule during the preceding century, going back to 497 B.C. in the reign of Darius I, are rare (a mere two exceptions; see Neugebauer 1975: 354–55). On this basis it is argued that the establishment of the 19-year

cycle is to be dated to the 5th century (see Parker and Dubberstein 1942: 1 for the possibility that it was a discovery of the reign of Nabonassar 747 B.C., and Kugler 1924: 362–71; 422–30 contra this date; Neugebauer 1975: 354–57). From 380 B.C. on, the 19-year cycle determined the intercalation of seven months every 19 years ($19^{yr} \times 12^{m} + 7^{m} = 235^{m}$) spaced at conveniently fixed intervals, namely in years 1, 4, 7, 9, 12, 15, and 18. All intercalary years except year 18 had an extra twelfth month (*Addaru arkû*). The eighteenth year in the cycle had an extra sixth month (*Ulūlu arkû*). The 19-year cycle of intercalation, begun under the Achaemenids, remained standard for the succeeding Seleucid and Arsacid periods to the end of the cuneiform tradition.

B. The Babylonian Calendar

The Babylonian calendar was based on the three natural time intervals, the solar year (ultimately defined as the period of the return of the sun to the same fixed star, hence the sidereal year), the lunar month (from one new moon to another, defined above, A.1.), and the solar day (from one sunset to another). Further discussion of each calendaric unit follows.

1. The Year (Akk *šattu*). The Babylonian year began in the spring, with the month *Nisannu* (=March/April in the Julian calendar), and the first of the year fell approximately around the vernal equinox, but actually varied widely. During the Neo-Babylonian period (between years 626–536 B.C.), the first of Nisannu could fall between the 11th of March and 26th of April, according to the tables of Parker and Dubberstein (1942). Even after the institution of the 19-year cycle, the New Year could still vary within a 27-day range, but averaged about 14 days following vernal equinox (Kugler 1924: 333–34; *RLA* 5: 298–99).

Evidence is lacking from Babylonian administrative or economic documents for a civil year beginning in *Tašrītu,* whose name means "beginning" (see C.). *Tašrītu,* month 7 in the Babylonian calendar, is generally the month of the autumnal equinox. The possibility of a cultic New Year in *Tašrītu,* based on the performance of an *akītu* festival during that month (Thureau-Dangin 1921: 87; AO.6459 and 6465 contain the New Year's ritual for *Tašrītu,* performed in Uruk), has found further support in letters from the Neo-Assyrian period (Parpola 1970, no. 190 r.2–10; 287 r.2–6; *ABL* 951 r.2; Thompson 1900, no. 16:5). The early preference for intercalary *Ulūlu*'s in the Babylonian calendar (noted by Parker and Dubberstein 1942: 3) is more plausibly explained by such a cultic autumn New Year, although this remains to be finally confirmed or refuted.

Before the articulation of a solar theory in the mathematical astronomy of the late Babylonian period, no value for the length of a year in days can be cited. As a consequence of the lunisolar character of the calendar, the length of the Babylonian civil year varied from year to year, depending on whether an extra lunar month was intercalated. The unit "year" was so defined for all periods of Mesopotamian history. With the development of mathematical astronomy and the derivation of number periods for cyclical phenomena (such as the return of the sun to a particular fixed star), diverse values for the length of the year are seen to underlie various computations (Neugebauer 1975: 528–29). For example, Seleucid astronomical texts from Uruk listing computed solar longitudes on consecutive dates (Neugebauer 1955, nos. 185, 186, 187) use as the value for the mean solar progress $0;59,9^{o/day}$. This produces a year of about $6,5;10,23^{d}$ (Neugebauer 1975: 529). Such a year length ($6,5;10^{d}$) has been identified in a procedure text from Babylon (Sachs and Neugebauer 1956: 132:3′ and 4′). Neugebauer 1955, no. 210 sec. 3:11–12 defines the year in terms of an 18-year solar cycle: [1,4]9,34,25,27,18 UD.MEŠ *šá* 18 MU *šá* ^{d}*Šamaš* [*ana* KI-*š*]*ú* GUR *ina* 18 BAL.MEŠ "[1,4]9,34;25,27,18 days of 18 years of the sun, returning [to] its [longitude] in 18 rotations," meaning returns of the sun to the same fixed star (text quoted according to Neugebauer 1955: 272). This value produces a year length of 6,5;14,44,51 days. These and other year lengths (e.g., 6,5;15,36) are found as the periods of functions in Babylonian astronomy. Neugebauer has emphasized (1975: 528–29) that all the "years" underlying Babylonian astronomical computations refer to the so-called sidereal year, as no distinction was yet made between sidereal, tropical, and anomalistic years. Such distinctions presuppose recognition of precession, which has been conclusively shown to lie outside the knowledge of Babylonian astronomy.

2. The Month (Akk *arhu*). Although the Sum logogram ITI, "month," is found in archaic texts from Šuruppak and from Ur, month names do not appear until the ED texts of Lagaš, Adab, and Nippur (*RLA* 5: 299–300; Langdon 1935: 157–58). The month names of the Ur III calendar at Nippur were eventually adopted as standard for all of Babylonia by the early OB (Isin-Larsa) and OB periods. Before this standardization, however, many Sumerian city-states had their own month name systems (Schneider 1936: 80–107). The following are the names that became standard: (1) $BARA_2$.\LANG513 ZAG.GAR, (2) GU_4.SI.SÁ, (3) SIG_4.GA, (4) ŠU.NUMUN, (5) NE.NE.GAR.RA, (6) KIN.^{d}INNIN, (7) DU_6.KÙ, (8) APIN.DU_8.A, (9) GAN.GAN.E, (10) AB.È, (11) ZÍZ.A, (12) ŠE.KIN.KUD. These Nippur months became the logographic writings for the following Babylonian month names: (1) *Nisannu,* (2) *Aiaru,* (3) *Simanu,* (4) *Du*ˀ*ūzu,* (5) *Abu,* (6) *Ulūlu,* (7) *Tašrītu,* (8) *Arahsamna,* (9) *Kislīmu,* (10) *Ṭebētu,* (11) *Šabaṭu,* (12) *Addaru.* In other areas of Mesopotamia (e.g., Diyala region, Chagar Bazar, Mari, and Assyria) different names were used, for which, see *RLA* 5: 301–2.

The Babylonian month seems to have been divided, for both fiscal and cultic purposes, into halves (designated as *š apattu* [written UD.15.KAM] *mahrītu* "first 15th day" and *šapattu arkītu* "second 15th day"), and into 7-day units, attested primarily in menologies and celestial omen texts, which make use of a schematic 30-day month (Langdon 1935: 83–84; 90–91).

The length of the true lunar month varied between 29 and 30 days, depending on the (variable) length of the period of the moon's invisibility due to its nearness to the sun. The determination, in advance, of when a month will have 29 or 30 days is a complicated problem solved only in the Seleucid-period Babylonian mathematical astronomy. To predict when the new crescent moon would again appear depended not only on an ability to take into account the motion of the sun and the moon, but also on the recognition of factors affecting visibility, such as the seasonal variation in inclination of the ecliptic to the horizon.

3. The Day (Akk *ūmu*). Several ways of dividing the day may be identified in ancient Mesopotamia, each designed in response to a particular need. For astronomical computation with respect to the period from one sunset to the next, 12 equal intervals of 30° duration (or 120 minutes of time) termed *bēru,* "double-hour," were used. For nonmathematical time reckoning, the periods of daylight and night were divided into 12 intervals termed *simanu.* These were not of equal duration throughout the year but varied seasonally, and so are the equivalent of the "seasonal hours" representing 1/12 of the actual period of daylight (or night) attested elsewhere in the ancient world (Rochberg-Halton fc.). Late Babylonian nonmathematical astronomical texts established another system which expressed time as the number of time degrees (UŠ, sometime *běru* and UŠ) with respect to four divisions of the day that made use of sunset and sunrise as fixed points of reference. Thus the number of UŠ were counted within the four periods (1) from sunset to midnight (GE_6 GIN), (2) from midnight to sunrise (GE_6 *ana* ZALÁG), (3) from sunrise to noon (ME NIM-*a*), and (4) from noon to sunset (*ana* ŠÚ ŠAMAŠ) (Neugebauer and Sachs 1967: 212–14; for the strictly astronomical midnight epoch, see Neugebauer 1955: 79–80).

The determination of the length of daylight through the year was a prominent part of the development both of the calendar and of astronomy. In the early period, before the 5th century B.C., the variation in the length of daylight was interpreted schematically and as a calendaric problem. The ratio of longest to shortest day was determined to be 2:1 (MUL.APIN 2.107, 111, 117, 121). The equinoxes and solstices were placed in schematic fashion in the middle of months 1, 4, 7, and 10, assuming perfect symmetry between the length of the seasons as well as the lengths of days. In fact, however, no symmetry exists in the lengths of the seasons or in the lengths of day and night. The inequality of the seasons due to the irregularity in the sun's motion through the year was not taken into account until the Hellenistic period, at which point the length of daylight was perceived as a function of the sun's longitude and connected with the rising times of the zodiac. The values for daylight length found in the mathematical ephemerides ("Column C"; see Neugebauer 1955: 47) and in the procedure texts (Neugebauer 1955: 187) show the ratio 3:2 for longest to shortest day, which is a useful approximation for the geographical latitude of Babylon (about $32\frac{1}{2}^{o}$).

C. The Assyrian Calendar

The 2d-millennium Assyrian calendar has been reconstructed on the basis of texts from the reign of Šamši-Adad I (Larsen 1974: 16–17) as well as from the somewhat later archives from Kültepe (Larsen 1976: 192–93). In both periods, the New Year began in the autumn, in Šamši-Adad's time earlier in autumn than in the OA texts from Kültepe level II (=1920–1840 B.C.; see *RLA* 5:299). Fall New Year was also established in the Ebla calendar (Pettinato 1974–77: 33–35). Although no intercalary month is attested in the Old Assyrian calendar, the naming of the year-eponym, by which "solar" years were identified, occurred always at the same time of year. In other words, the solar eponym-year was coordinated with the lunar months (for the exception to this in texts from Kültepe Ib, see Larsen 1976: 53, n. 18). The lack of intercalation and the consequent slipping of the seasons backward through the months in the Middle Assyrian lunar calendar has already been mentioned (above, A; Weidner 1935–36: 27–29). This changed with the Assyrian adoption of the Babylonian calendar in the 1st millennium.

An additional calendaric device was employed in the Old Assyrian calendar. This was the "week"-eponymy, in which the *hamuš tum* period of 5 days was also designated by the names of officials. The *hamuš tum* system is widely attested in OA commercial documents and is distinctive for the Assyrian calendar. Documents were dated by means of f4*hamuštum,* month, and year (=eponymy; see Larsen 1976: 354–65 with many references).

D. The Egyptian Calendar

Two developments of major importance in the history of the calendar are contributions from Egypt. These are the Egyptian civil year of 365 days (Parker 1950: 51–56) and the 24-hour division of the day (Neugebauer and Parker 1960: 116–21). The Egyptian civil year consisted of twelve 30-day months with 5 extra "epagomenal" days added at the end of each year. Because the 30-day month was divided into three 10-day "decades," the year contained 36 such decades, plus the 5 epagomenal days. The three seasons of the Egyptian year, each four months long, were defined agriculturally, as is clear from their names: *ꜣḫt,* "inundation (of the Nile)"; *prt,* "emergence," which was the season for farming; and *š mw,* "dryness." As such, the Egyptian calendar was practical and constant, needing no intercalation of months (various lunar and cultic calendars were also used, for which, see Parker 1950: 13–50; Parker 1970; also Bickerman 1980: 41 with references).

The Egyptian civil calendar is unique in the ANE for its independence from the complicated astronomical problems endemic to the lunisolar calendars. In establishing a fixed unit for measuring time, the constant 365-day Egyptian civil year had a great advantage over the other ancient calendar years in application to astronomy. Its potential for use in astronomy, however, was not realized until the Hellenistic Greek astronomers adopted this calendar as the standard basis for computing astronomical tables. In this astronomical capacity, the Egyptian calendar remained in use during both the Middle Ages and the Renaissance.

The 24-hour division of the day derives ultimately from the Egyptian practice of counting "hours" at night on the basis of the rising of certain stars called by the Greek term "decan(s)." Around 2400 B.C., Egyptians began to tell time at night by the rising of decanal stars. Originally the decans were defined by their relationship to the 36 decades of the Egyptian civil year, as each successive decade would bring the heliacal rising (first rising of a star just before sunrise after its period of invisibility) of a new decan. The decans indicated the time of night by their risings or, later, by their transits (crossing of the meridian) at 12 intervals during the night. Evidence for the use of rising stars to indicate night hours comes from 12 extant star clocks, which are diagonal diagrams of stars on the inside of coffin lids from the 9th to the 12th Dynasties (Neugebauer and Parker 1960). Although no traces remain of decans in modern astronomy, they continued to play a role in later Hellenistic and medieval astrology, defined as thirds of zodiacal signs (=10° segments of the ecliptic). The 12 intervals between the consecutive rising of one decan and the next, counted from sunset to sunrise, were a direct consequence of the 10-day spacing of the decans. Daylight hours were reckoned on a different basis, one which determined 10 "hours" for the time between sunrise and sunset, plus 2 additional hours for twilight. The resulting division of the day was 12 hours of daylight and 12 of night, or 24 hours whose length varied with the season of the year. Eventually the Hellenistic astronomers replaced these unequal seasonal hours with 24 hours of constant

length (equinoctial hours) which were further subdivided, according to the Babylonian sexagesimal system, into 60 minutes. Our present system, in which one day contains 24 60-minute hours, is the historical survival of this development in Hellenistic astronomy.

ANCIENT ISRAELITE AND EARLY JEWISH

One may assume that the ancestors of Israel and the early Israelites themselves followed some sort of calendar (or calendars), but the extant sources do not permit one to determine what its (their) nature may have been. No part of the Bible or even the Bible as a whole presents a full calendar; information about these matters must be gleaned from occasional, often incidental references to dates, days, months, seasons, and years. The largest amount of biblical calendrical data appears in documents that were written during the exilic or postexilic periods, while an explicit, complete calendar is not found in a Jewish text until approximately the 3d century B.C.E. when the *Astronomical Book of Enoch* (*1 Enoch* 72–82) was composed. The 362-day solar calendar which is described in it may, however, have been nonnormative. The NT has even less to offer in this regard than the Hebrew Bible: it mentions only a few dates and festivals and provides some details about when the day began. In this article the calendrical information in the Bible and in contemporary or nearly contemporary Jewish sources will be surveyed.

———

A. The Biblical Evidence

Even though more facts about ancient Jewish calendary practices are known from extrabiblical than from biblical texts, it will be useful first to summarize the available scriptural data.

1. The Day. The word *ỹm* may be employed to express the general sense of "time," but it was regularly used to refer to "day" in the stricter senses of a period of light and darkness or the time of light alone. In the Hebrew Bible one meets various terms for different parts of the day: *šaḥar* (dawn); *bōqer* (morning); *ṣohŏrayim* (noon); *neš ep* (twilight); *ʿereb* (evening); *layl̦* (night); and *ḥăṣî laylâ* (midnight). There are also references to the various watches of the night (e.g., Exod 14:24; Judg 7:19; 1 Sam 11:11; Lam 2:19; Matt 14:25; Mark 13:35), and Matt 20:1–16 and John 11:9 indicate that the daytime was divided into 12 hours.

Scholars have debated but not definitively settled the issue of when the day was thought to begin at various times in biblical history. Before examining the evidence, one should be aware that casual references to "day and night" and "night and day" should not be equated with official calendrical statements. R. de Vaux, for one, has maintained (*AncIsr*) that before the Exile the day was regarded as beginning in the morning while later the evening was considered the point when it began. He was able to adduce various earlier passages in which the order day-night occurs (e.g., Deut 28:67 [but see v 66]; 1 Sam 30:12; Isa 28:19; Jer 33:20) and later ones in which night is mentioned before day (Esth 4:16; Dan 8:14; Jdt 11:17). But texts of this nature are largely irrelevant to the question of when, technically speaking, the day began. Moreover, the order day-night also surfaces in postexilic texts (Neh 1:6). An interesting example is 2 Chr 6:20, which speaks of day and night, while its source (1 Kgs 8:29) displays the reversed order of the two.

A sounder approach is to examine passages which treat the issue more officially. All of them, as it happens, deal with cultic affairs. If there ever was an official, secular position regarding the inception of the day, the sources do not divulge it. (1) Exod 12:6, 8, 10, 18 indicate that the rituals of passover and unleavened bread are to begin the evening of 1/14 (that is, month 1, day 14) and conclude the evening of 1/21. (2) Lev 23:32 mandates that the day of atonement is to be observed "on the ninth day of the month beginning at evening, from evening to evening shall you keep your sabbath." It is evident that the command envisages an evening–evening day, but the underlying calendar (the day of atonement is supposed to be 7/10 [23:27; cf. 16:29]) may have followed a morning–morning sequence. (3) The rules of purity (e.g., Lev 11:24–28; 15:1–12, 16–24; 22:1–9) state that the periods during which one is impure end in the evening. (4) Neh 13:19 relates that the sabbath was beginning as darkness fell. In later sources as well, this is clearly the understanding of when the day commenced (cf. CD 10:14–16; Josephus, *JW* 4 §9, 12; Mark 15:42; Luke 23:54–56; John 19:31–42).

For these texts, then, an evening–evening day is secure, and others are consistent with it (e.g., Gen 1:5, 8, 13, 19, 23, 31; Esth 4:16; Acts 4:3). There are, however, some passages which may, if they are meant to convey exact calendrical information, entail a morning–morning pattern (e.g., Judg 19:4–9; 1 Sam 19:11; 28:19; Lev 7:15–16 [a cultic text]). Perhaps the most that can be said is that in the Second Temple period virtually all cultic texts imply that the day began in the evening. There is insufficient evidence for establishing what preexilic practices may have been. J. Baumgarten has argued that even the author of the book of *Jubilees* (ca. 150 B.C.), who was a staunch adherent of a solar calendar, used an evening–evening day (see 21:10; 32:16; 49:1).

The Hebrew Bible makes it clear that from early times in Israel seven days constituted a week. This week was divided into six days during which work could be performed, and it concluded with a seventh day on which labor was illegal (Exod 34:21; 23:12; 20:8–11; 35:1–3; Lev 23:3; Deut 5:12–15). The familiar creation story in Gen 1:3–2:4a lists the seven days of the first week and refers to them with ordinal numbers. In the Hebrew Bible, only the seventh day receives a special name—the sabbath—but in the New Testament the day before the sabbath is called the day of preparation (Matt 27:62; Mark 15:42; Luke 23:54; John 19:31, 42). Use of this term may, however, be related to the fact that the following

sabbath was, on this occasion, also the day of Passover (see John 19:14). Units of seven days are mentioned in the legislation about the festival of weeks which was to be celebrated 50 days after the waving of the barley omer. This 50-day period is divided into seven weeks and one day (cf. Deut 16:9–10; Lev 23:15–16). It should be added that in some texts the word "week" refers to a period of seven years (e.g., Lev 25:8; Dan 9:24–27; and throughout the pseudepigraphic book of *Jubilees*).

2. The Month. The Hebrew Bible mentions months rather frequently but does not name them in a single manner throughout. In fact, it has been argued that there are three distinct systems of month names in the text.

a. The Canaanite Month Names. It is often claimed that the early Israelites used lunar months and called them by names which they borrowed from their Canaanite neighbors. There are indeed some Canaanite month names in the Bible, and the word for month that is found with them is regularly *yeraḥ*. It does not follow, however, that these months were lunar simply because this Hebrew word is etymologically related to the noun for moon (*yārēăḥ*) any more than it does that English-speaking people use lunar months because the term "month" is etymologically related to "moon." It has been maintained that there are four Canaanite month names in the Hebrew Bible: Abib (Exod 13:4; 23:15; 34:18; Deut 16:1 [=the first month]), Ziv (1 Kgs 6:1, 37 [=the second month]), Ethanim (1 Kgs 8:2 [=the seventh month]), and Bul (1 Kgs 6:38 [=the eighth month]). The words "Abib" and "Ziv" have not been identified in Canaanite or Phoenician sources, but the other two have. It is of some interest that the word *ḥōdeš* is used with Abib (always) and with Ziv in one of its two occurrences (1 Kgs 6:1), but it is not found with the remaining two names, which always appear with *yeraḥ*. It is not clear, though, that the presence of two certain Canaanite month names in the Hebrew Bible indicates that the Israelites resorted to a full system of such names in an official calendar. The two undoubted Canaanite names and the name Ziv figure only in the account of Solomon's building and dedication of the temple (which had noteworthy Canaanite connections), and even there the writer always tells the reader the corresponding number of the month. Consequently, one may be dealing with a special source at this point, and these month names may not have been in widespread or official use in Israel. In the parallel passages in 2 Chronicles the names are not given (for 1 Kgs 6:1 [Ziv], see 2 Chr 3:2; for 1 Kgs 8:2 [Ethanim], cf. 5:3). If the ordinals which are added to these months correspond with the time when they occurred in the year, these months would belong to a year which began in the spring.

b. The Numbered Months. Biblical literature which was written just before, during, and after the Exile provides many dates and calendrical hints but again offers no systematic statement about the nature of the calendar(s) employed in Judah. The most noteworthy feature of the calendrical notices in these sources is their use of ordinal numbers to designate the twelve months. References to numbered months are infrequent in 1–2 Kings but are present in the temple-building section discussed above and in the last chapter of 2 Kings which describes the Babylonian capture of Jerusalem (25:1, 3, 8, 25, 27). Some scholars have concluded from their presence in this chapter and in Jeremiah that this system came into use in Judah at approximately the time of the Babylonian Exile. The following works, many of which have undoubted priestly ties, use this nomenclature: the Priestly source; 1–2 Kings (with the exception of the Canaanite month names noted above); 1–2 Chronicles (where the Canaanite month names are eliminated from the temple section); Ezra (with one exception [6:15] in an Aramaic document in which the month when the Second Temple was completed is called Adar); Jeremiah; Ezekiel; Daniel (one example [10:4]); Haggai, and Zechariah (see 7:3–4; 8:19 for the fasts of the fourth, fifth, seventh, and tenth months).

The schedules of holidays in these books are much more precise than in the earlier sources, which give only rather vague indications of dates for festivals. Ezekiel, in his blueprint for the restored temple and community (chaps. 40–48), elaborates a cultic calendar (45:18–25; cf. 46:1) which includes 1/1 (the sanctuary is cleansed through sacrifice of a young bull); 1/7 (the same procedure as for 1/1, but the sacrifice is for "anyone who has sinned through error or ignorance; so you shall make atonement for the temple" [45:20]); 1/14 (Passover, "and for seven days unleavened bread shall be eaten" [v 21]); 7/15 (a seven-day festival begins; it has the same sacrificial prescriptions as the days of unleavened bread [v 25]). Ezekiel also treats the sabbath (46:1–5) and mentions the day of the new moon (46:6; for the new moon

celebration, see also 1 Sam 20:5, 18–19, 24–29; Hos 2:11; Amos 8:5). His remarkable calendar of holidays, which fails to mention the festival of weeks and proceeds from spring to autumn, draws no agricultural connections for any of the feasts.

The most detailed schedule of festivals surfaces in the priestly parts of the Pentateuch. In these sections the dates are expressed by numbered months and numbered days within the months, and the first month is in the spring. If one combines the data from the relevant priestly pericopes, one finds a full and precise list of festivals and observances:

1/1–12: a special offering is to be presented on the first of each month (Num 28:11–15);

1/14: Passover. Exod 12:2 specifies that the month of Passover is to be the first one of the year for the Israelites. The Passover lamb was to be selected on 1/10 and sacrificed on 1/14 (Exodus 12; Lev 23:5; Num 9:1–5; Num 28:16; cf. Josh 5:10).

1/15–21: Festival of Unleavened Bread (Exod 12:18–19; Lev 23:6–8; Num 28:17–25). One noteworthy ceremony which is mentioned just after the laws about this festival in Leviticus 23 is the waving of the omer by the priest (23:9–14). Lev 23:11 dates this ceremony to the "morrow of the sabbath"—a phrase whose ambiguity gave rise to disputes at a later time. The timing of the omer ceremony was especially significant because it determined the date of the festival of weeks.

2/14: The Second Passover. It was meant for those who had become impure through contact with a dead body or who were away on a journey at the time of the first Passover (Num 9:6–14; cf. 2 Chr 30:1–22).

3/?: The Festival of Weeks. Like Deut 16:9–12, Lev 23:15–16 provides for a 50-day count ("fifty days to the morrow after the seventh sabbath" [v 16]) in calculating the date for the festival of weeks; but it names as the starting point for the count "the morrow after the sabbath, from the day that you brought the sheaf of the wave offering [=the omer] …" (v 15). It is striking, however, that no date for either the omer ceremony or the festival of weeks is given. In fact, even the month in which this second pilgrim feast occurs must be inferred from other data (cf. also Num 28:26–31; Acts 2).

7/1: According to Lev 23:23–25, a "day of solemn rest" was to be observed on this date; it was to be "a memorial proclaimed with blast of trumpets" (v 24; see also Num 29:1–6). This observance was apparently in addition to what Num 28:11–15 requires for the first of each month. It is never called "New Year" (*rōʾš haššānāh*) in the Bible.

7/10: The Day of Atonement. Leviticus 16 provides the fullest description of the rites for this day; Lev 16:29; 23:27 and Num 29:7 furnish the date.

7/15–21: The Festival of Tabernacles. The date is given in Lev 23:34, 39; and Num 29:12–34. Both of these chapters also mention an eighth day (Lev 23:39; Num 29:35), though they indicate that the festival itself lasts just seven days (Lev 23:34, 36, 39, 42; Num 29:12–34). It was during this festival that Solomon dedicated the temple (1 Kgs 8:2, 65–66 [the eighth day is noted again]; 2 Chr 5:3; 7:8–10 [a "solemn assembly" was held on the eighth day]), and it was this celebration that Jeroboam redated to 8/15 (1 Kgs 12:32–33).

From these books which refer to months by ordinal numbers rather than names one can infer some additional information about them. First, that there were twelve months follows from lists such as those in 1 Kgs 4:7–19 and 1 Chr 27:1–15 and from the fact that no source ever mentions a higher number (2 Kgs 25:27 and Jer 52:31 mention the twenty-seventh or twenty-fifth day of the twelfth month as the date for King Jehoiachin's release; cf. Ezek 32:1; the dates in the book of Esther are discussed below). That is, these texts never mention an intercalary month as nearly as one can tell. Second, the priestly chronological notes which dot the flood story suggest how long these months lasted. On 2/17 the waters begin to come (7:11); they then rise for 150 days (7:24; cf. 8:3). On 7/17 the ark comes to rest on a mountain (8:4), and on 10/1 the summits of the mountains become visible (8:5). By 1/1 the following year the water had disappeared, and on 2/27 the earth was completely dry (8:13–14). It appears that the 150 days of 7:24 and the five months from 2/17 to 7/17 refer to the same span of time. This would imply months of 30 days. It has also been argued that the length of the flood (one year and ten days) may be related to the fact that a solar year is approximately ten days longer than a lunar one, although in a lunar calendar five months would not total 150 days.

The practice of numbering months continued for a long time and is attested in some Jewish writings which postdate the Hebrew Bible. Some examples are Judith (2:1; cf. 4:13); 1–2 Maccabees; *Testaments of the Twelve Patriarchs;* the *Assumption of Moses;* 1 Esdras (14:22, 48); *2 Baruch* (77:18); *Jubilees; 1 Enoch* (72–82); *2 Enoch* (1:1); *Pseudo-Philo* (23:1–3, 14); and the Dead Sea Scrolls (on which see below).

c. The Babylonian Month Names. Yet another practice which appears in the latest OT literature is to employ the Hebrew equivalents of the Babylonian month names. One finds this custom in Ezra (once), Nehemiah, Esther, and Zechariah—all of which are postexilic books. It is well known from later sources that the names which Jewish people gave to the months were borrowed from the Babylonian language: As *j. Roš Haš.* 1.56d says, "They carried the names of the months back with them from Babylonia." These names are used alone at times but they also figure in combination with numbered months. The practice of using the Babylonian month names was a product of the Judeans' exilic and perhaps postexilic contact with the Babylonians and Persians (who borrowed the names from the Babylonians). The Babylonian months were lunar, and the year began in the spring. It is obvious that the Jewish use of the month names entailed that the same features were transferred to the Jewish calendar. The following Babylonian names appear in the biblical sources:

Babylonian Names	*Hebrew Equivalents*
1. Nisanu	1. Nisan (Neh 2:1; Esth 3:7 [=first])
2. Aiaru	2.
3. Simanu	3. Sivan (Esth 8:9 [=third])
4. Duzu	4.
5. Abu	5.
6. Ululu	6. Elul (Neh 6:15)
7. Tashritu	7.
8. Arahsamnu	8.
9. Kislimu	9. Chislev (Neh 1:1; Zech 7:1 [=ninth])
10. Tebutu	10. Tebet (Esth 2:16 [=tenth])
11. Shabatu	11. Shebat (Zech 1:7 [=eleventh])
12. Addaru	12. Adar (Ezra 6:15; Esth 3:7, 13; 8:12; 9:1, 15, 17, 19, 21 [=twelfth])

The twelfth month occurs so frequently in the book of Esther because it was during that month that the events which gave rise to the annual festival of Purim took place. According to Esth 9:21, Mordecai gave orders that all the Jews in the Persian Empire were to "keep the fourteenth day of the month Adar and also the fifteenth day of the same, year by year …"

The Hebrew Bible, then, exhibits at least traces of three methods for naming months: with names, some of which are attested in Canaanite sources; by ordinal numbers; and by Babylonian month names. But in no case does one learn the lengths of all the months, nor is intercalary procedure ever described. It has been held that 1 Kgs 12:32 (Jeroboam dated a festival to 8/15, not 7/15 as in Jerusalem), 2 Chr 30:1–4 (Hezekiah's Passover was celebrated on 2/14 rather than 1/14), and Ezek 4:5 (the prophet lies on his left side for 390 days) point toward intercalation of one month in some years; but these passages are far from making the case even plausible, much less compelling. One also learns nothing about the methods used for determining the beginning of a month.

3. The Year. There is no statement in the Bible about how long a year lasted, and the data about its beginning are confusing. Scholars have argued from different sets of facts that the year was thought to begin in either spring or autumn. A widely held position has been that an autumnal New Year was observed in preexilic times, while a vernal New Year came into vogue in the postexilic age. Some have also maintained (e.g., Thiele) that the kingdom of Judah began the year in autumn but the realm of Israel placed it in the spring. In treating a question of this sort, for which the evidence is sparse and difficult, it

is important to remember that simultaneously there could be different inceptions for different sorts of New Years. This point is made abundantly clear by the famous passage in *m. Roš Haš.* 1:1: "There are four 'New Year' days: on the 1st of Nisan is the New Year for kings and feasts; on the 1st of Elul is the New Year for the Tithe of Cattle (R. Eleazar and R. Simeon say: The 1st of Tishri); on the 1st of Tishri is the New Year for [the reckoning of] the years [of foreign kings], of the Years of Release and Jubilee years, for the planting [of trees] and for vegetables; and the 1st of Shebat is the New Year for [fruit] trees (so the School of Shammai; and the School of Hillel say: On the 15th thereof)" (trans. Danby).

a. The Earlier Evidence. As one might expect, there is inconclusive evidence from the earlier biblical literature. The festival calendars of the sources J and E are often cited in this context as indications that the year began in the autumn in preexilic times. The J material is found in Exod 34:18–24. There the first holiday (unleavened bread) is dated to the month of Abib (i.e., the first spring month); the festival of weeks is not dated other than by its association with the wheat harvest; but the "feast of ingathering" is to be observed at the "year's end" (*tĕqûpat haššānāh* [v 22]). The phrase here more literally means the "turn of the year" and clearly expresses the fact that at this point (this must be in autumn) the year has reached a significant juncture. In E (Exod 23:10–17) similar information appears, but the "feast of ingathering" is located "at the end of the year" (*bĕṣē᾽t haššānāh* [v 16]). Hence, in the two "epic" sources, the list begins with a vernal and concludes with an autumnal holiday (cf. also Deut 16:1–17). From the two Hebrew expressions just quoted, a number of scholars have inferred that the year ended in the autumn. Here, however, it should be observed that one is dealing with an agricultural cycle which is not necessarily the same as a calendar year. It is obvious that the agricultural year concludes with the fall harvest, but whether one may deduce from that fact that a calendrical year did as well is quite another question. It seems safer to say with D. J. A. Clines: "… references to the 'end' (*ṣē᾽t*) or the 'turn' (*tĕqûpāh*) of the year in the autumn invariably have to do with the cycle of the agricultural year or of the festival calendar insofar as it is based on the agricultural seasons, and therefore they are irrelevant to the question of the beginning of the calendar year of months" (1974: 29).

In this connection it is interesting to compare the so-called Gezer calendar which undoubtedly dates from preexilic times (ca. 925 B.C. according to Albright). It reads as follows (*ANET* 320 [trans. Albright]):

His two months are (olive) harvest [᾽*sp*],
His two months are planting (grain),
His two months are late planting;
His month is hoeing up of flax.
His month is harvest of barley,
His month is harvest and *feasting*;
His two months are vine-tending,
His month is summer fruit.

As in J and E, the times of the year are identified by agricultural phenomena. The order of the twelve months is from autumn to summer, and the list begins with the process (᾽*sp*) that marks the end of the cycle in J and E. Unfortunately, one does not know what the status of this "calendar" was and what purpose it served.

b. The Later Evidence. The dating systems in which the months are numbered or given Babylonian names place the first month (=Nisan) in the spring as the Babylonians did. It is difficult to determine when the numbered system was first introduced, but there is no clear evidence that it preceded the time immediately before the Babylonian Exile. Jer 36:9, 22 indicate that the ninth month occurred during the winter; this would be true only in a system which began in the spring. But there is other evidence of a conflicting nature. For example, if one pairs the dates in Neh 1:1 (Chislev [=the ninth month] in the twentieth year, apparently of King Artaxerxes) and 2:1 (Nisan [=the first month] in the king's twentieth year) it is apparent that the monarch's regnal years were calculated from some time other than a Nisan inception of the year. If the year began with Nisan 1, this Chislev and Nisan would be in different years. These dates are consistent with a fall inception of the year. But as one is here dealing with the regnal years of a Persian king, it is not clear that these dates indicate anything about a Jewish calendar. It is well

known, of course, that in later Judaism 7/1 became the day of New Year, although Nisan continued to be regarded as the first month. To add to the puzzle, Lev 25:8–9 prescribes that the jubilee years were to begin on 7/10. Thus, the practice or practices before the Exile remain unclear, while there is evidence later for both a vernal and an autumnal inception of the year. Depending upon the topic under consideration, the autumnal New Year may have been calculated from different dates.

B. Sources Outside the Hebrew Bible

One encounters fuller calendrical details in Jewish documents which were not included in the Hebrew Bible.

1. The Elephantine Papyri. The earliest of these extrabiblical sources are the Aramaic papyri of the Jewish military colony in Elephantine on the Nile River. There are some 38 papyri that bear dates, and 22 of these have double or synchronized dates (Egyptian and Persian/Jewish). In the papyri one finds all twelve of the Babylonian/Persian month names:

Nisan	(A. E. Cowley, Aramaic Papyri 21)
Iyyar	(Kraeling, The Brooklyn Museum Aramaic Papyri 14)
Sivan	(Kraeling 1; 5)
Tammuz	(Arammic Papyri 30; Kraeling 6)
Ab	(Arammic Papyri 14)
Elul	(Arammic Papyri 5; 20; Kraeling 3)
Tishri	(Arammic Papyri 15; Kraeling 4; 7; 8)
Marcheshvan	(Arammic Papyri 17; 30; 31; Kraeling 9)
Chislev	(Arammic Papyri 6; 8; 10; 13; 25)
Tebeth	(Arammic Papyri 26)
Shebat	(Arammic Papyri 28)
Adar	(Arammic Papyre 61; 67; Kraeling 10)

Horn and Wood (1954) were able to draw no certain conclusions about whether the Jews of Elephantine had fashioned a precalculated, fixed calendar but noted strong similarities with the Babylonian system. There is no evidence among the Elephantine documents for intercalation. Horn and Wood argued that Kraeling's text (*BMAP* 6) implied a civil year that ran from fall to fall, but this has been disputed.

2. The Wâdī ed-Dâliyeh Papyri. Though these mid-4th-century B.C.E. Samaritan papyri have not yet been published in full, the available evidence indicates that the authors used the Babylonian month names. Papyrus 1 reads: "on the twentieth day of Adar, year 2 (the same being) the accession year of Darius the king, in the province of Samaria" (Cross 1974: 19).

3. *1 Enoch* 72–82. The next book in chronological order is the *Astronomical Book of Enoch* (*1 Enoch* 72–82), a work which appears to date from no later than the 3d century B.C.E. It is preserved in Ethiopic, but fragments of the work in the original Aramaic have been found among the Dead Sea Scrolls. These indicate that the original text was probably much longer than the Ethiopic version of it. Here for the first time an extant Jewish document describes a full calendar; or, more precisely, the angel Uriel reveals its details to Enoch. In fact, it sketches two systems: a solar calendar of 364 days (72:32; 74:10, 12; 75:2; 82:4–6) and a lunar one of 354 days (73:1–17; 78:6–17). The solar year of 364 days takes a schematic form (the months are again numbered, not named): months 1, 2, 4, 5, 7, 8, 10, and 11 have 30 days, while months 3, 6, 9, and 12 have 31 (72:6–32). From statements in the book about the relative lengths of day and night at different times in the year, it is obvious that the author thought the year began just after the vernal equinox (which is in the twelfth month). The summer solstice then falls in the third month, the autumnal equinox in the sixth, and the winter solstice in the ninth. Nothing is said about intercalary months, but this calendar, in which each date falls on the same day of the week every year (since 364 is exactly divisible by 7), is compared with a 354-day lunar arrangement (74:12–16; in 74:10–11 a 360-day solar calendar is compared to a 354-day lunar one—that is, the epagomenal days are not considered in

these calculations). It is not clear why the author extends the comparison to eight years since in each year the lunar is ten days shorter than the solar year. But for neither the solar nor the lunar year does the writer mention intercalation; every year has the same number of days (cf. also 78:15–17; 79:3–5 where the lunar year is divided into twelve months: 1–3, 7–9 have 30 days; 4–6, 10–12 have 29 [but 78:9 mentions a month with 28 days]).

4. The Book of *Jubilees.* The intriguing solar calendar of *1 Enoch* 72–82 was later advocated by other writers. The most vigorous of these would be the author of the book of *Jubilees* (ca. 150 B.C.) who strongly defended this solar arrangement against any sort of lunar calendar. In it an angel of the divine presence (thus here too it comes by revelation) tells Moses: "Now you command the Israelites to keep the years in this number—364 days. Then the year will be complete and it will not disturb its time from its days or from its festivals because everything will happen in harmony with their testimony. They will neither omit a day nor disturb a festival" (6:32). In the sequel the same angel predicts: "There will be people who carefully observe the moon with lunar observations because it is corrupt (with respect to) the seasons and is early from year to year by ten days" (6:36 [both passages are from Charles' translation]). In other words, the author does not simply compare calendars as in *1 Enoch*; he is decidedly for the solar one and implacably against the lunar arrangement which entails that sacred days are profaned and profane ones are sanctified (6:34, 37). It would be interesting to know the historical background against which the author wrote (see Dan 7:25 for a hint about a change of calendars), but it was apparently a time of calendrical dispute—at least for this writer, who was convinced that the 364-day solar calendar was the divine and anciently revealed system. It seems that *Jubilees,* too, does not deal with the problem of intercalation, although it has been claimed that 6:31, 33, which prohibit "transgressing" the proper year, originally read "intercalate" (the two words would be identical in a Hebrew consonantal text). In whichever way these verses are read, the result is the same: there is no intercalation, so that festivals, which had agricultural ties, would soon be celebrated at the wrong time relative to the agricultural cycle.

Jubilees, with its special calendar (months are again numbered), is able to provide a precise date for the festival of weeks—something not found in any earlier source. The author dates it to 3/15 (15:1 ["in the third month, in the middle of the month"]; 44:4–5) and associates this date with the covenants made with Noah (6:17–22), Abram (14:20), and Moses (cf. 1:1). Though *Jubilees* does not mention the ceremony of waving the omer, its calendar implies that it occurred on 1/26 (that is, the day after the sabbath [= the morrow of the sabbath] which follows the festival of unleavened bread). The book also mentions that the first days of months 1, 4, 7, and 10 were special memorial days (each recalls an incident during the flood [6:23–29]); and it speaks rather vaguely about times for the second tithe of "seed," wine, and oil (32:10–14). Finally, *Jubilees* claims that the day of atonement was instituted to mark the time when Jacob learned of Joseph's "death" (34:17–19); and it, like several biblical works, notes an additional eighth day for the festival of tabernacles (32:4–29).

5. The *Temple Scroll.* The *Temple Scroll* found at Qumran (11QTemple) offers more extrabiblical information about the same calendar of twelve numbered months, the total of whose days was 364. The date of the document is uncertain. The editor Y. Yadin (1983) thought it came from the time of John Hyrcanus (135–104 B.C.E.) or slightly earlier, while others argue that it was written closer to 200 B.C.E. As Yadin has unraveled the cultic calendar (especially in columns 12–29) found in this long but still fragmentary scroll, it can be sketched as follows:

1/1–8	Days of Ordination for Priests
1/14	Passover
1/26	Waving of the Omer (=The Festival of Firstfruits of Barley)
[2/14	The second Passover (perhaps in a lost part of a column)]
3/15	The Festival of Weeks (=The Festival of Firstfruits of Wheat)
5/3	Festival of New Wine
6/22	Festival of Oil

6/23–29? Festival of the Offering of Wood (cf. Neh 10:34

7/1 Day of Rememberance

7/10 Day of Atonement

7/15 Festival of Booths

A matter of special interest is the series of firstfruits festivals which the author describes and dates. In this system, as understood by Yadin, the day of the waving of the omer (1/26) and the festival of weeks (3/15) are separated, as the Bible prescribes, by seven full weeks. The count begins and ends on a Sunday. The same temporal span separates the festival of weeks (3/15) from the festival of new wine (5/3), and the latter occurs seven full weeks before the festival of oil (6/22). That is, the biblical prescriptions for calculating the date of the festival of weeks from the day the omer was waved have been extended to these other three firstfruits festivals. Indeed, very similar language is used in each case (see 18:10–13; 19:11–13; 21:12–14; compare *Jubilees* 32:10–14). In calculating these exact dates, Yadin was dependent on several bits of data, an important one of which is a fragmentary statement from an unpublished Qumran ms which gives the date 6/22 for a festival of oil (the Hebrew word used for oil—*hš mn*—is not the same as the one in the *Temple Scroll* for this festival—*yṣhr*). If one accepts this date as relevant for the festival of oil in the *Temple Scroll*, and if the last day of one count (i.e., the holiday itself) is also regarded as the first of the next count, every date mentioned fits the *Enoch/Jubilees* 364-day solar calendar.

6. Sectarian Texts. *1 Enoch, Jubilees*, and the *Temple Scroll* may have been written before the Qumran community settled on the shores of the Dead Sea, but the presence of copies of each testifies to the fact that they were used and studied at the Essene settlement. Hence it is not surprising to discover that the 364-day calendar is also attested among the sectarian documents. Indeed, it has been surmised that a calendrical dispute with the priestly establishment in Jerusalem was a precipitating factor in the exodus of the Essenes from Jerusalem to the Dead Sea. Evidence that the group followed a calendar that differed from the mainline one appears in 1QpHab 11:4–9 which indicates that the Wicked Priest—the archvillain for the covenanters and apparently the reigning high priest—appeared (at Qumran?) on the day of atonement. Since the ritual for this solemn day required that the high priest be at the temple, it is highly unlikely that he would have chosen this day for settling accounts with the Teacher of Righteousness. A reasonable inference is that the day of atonement fell on different days for the two protagonists because they lived by different cultic calendars.

It was clear when scholars began studying the scrolls that observance of the festivals at the proper time was a point that the authors considered worthy of emphasis (1QS 1:13–15), but the precise nature of the Qumran calendar was not demonstrated until several other texts were published. The only text which simply states that the year contains 364 days is "David's Compositions"—part of the Cave 11 *Psalms Scroll* which the editor has dated paleographically to the 1st century A.D. It asserts, as it enumerates David's literary output: "And he wrote 3,600 psalms; and songs to sing before the altar over the whole-burnt *tamid* offering every day, for all the days of the year, 364; and for the *qorban* [offering] of the Sabbaths, 52 songs; and for the *qorban* of the New Moons [the phrase should be translated "firsts of the months"] and for all the Solemn Assemblies and for the Day of Atonement, 30 songs" (11QPs^{a} 27.4–8; Sanders' translation). The last line (1.11) adds that David spoke all these "through prophecy which was given him from before the Most High."

There are several other indications in the scrolls that the same calendar was known and used. A text named *Songs of the Sabbath Sacrifices* (11QShirShabb) appears to employ it, and the *War Scroll* refers to 26 priestly "heads of courses" (1QM 2.1), whereas 1 Chr 24:7–18 lists just 24 such courses or shifts of temple duty. If there were 26 priestly groups who rotated temple service (and it is known from other sources that each served for two weeks during a year—one week in the first part, one in the second), then the number fits a 52-week year (note the 52 "fathers of the congregation" in 1.1) exactly, unlike the number 24. Further information about the priestly courses comes from an unpublished document, parts of which J. T. Milik quoted in 1957. This text (4QMišmārôt [the term for the priestly shifts]) gives the name of the priestly family which was serving in the temple on the various holidays and also the number of the

day within its week on which the festival fell. By using the list of priestly courses in 1 Chr 24:7–18, one can calculate exactly when the feasts were celebrated and every feast fits the dates known from *Jubilees* and the *Temple Scroll.* The available part of the text reads:

The first year, its festivals

On the third (day)in Maoziah—Passover	[= 1/14]
[On the first (day) in Jeda[iah]—the waving of the [omer]	[= 1/26]
On the fifth (day) in Seorim—the [Second] Passover	[= 2/14]
On the first (day) in Jeshua—the Festival of Weeks	[= 3/15]
[On] the fourth (day) in Maoziah—the Day of Rememberance	[= 7/1]
[On] the sixth (day) in Joiarib—the Day of Atonement	[= 7/10]
[On the fourth (day) in Jeda]iah—the Festival of Booths	[= 7/15]

One interesting feature of this list is that only names found in 1 Chr 24:7–18 are used. That is, though the year is divided into 26 periods of service, they are filled by 24 groups. Consequently, the time of service for each group would vary from year to year. This appears to be the meaning of the reference to the "first year" in the initial line of the *mišmārôt* text.

Milik has also discussed some texts which evidence a concern to synchronize this 364-day system with a lunisolar calendar which had 354 days in a year, with one 30-day month added every third year. He has mentioned a line from the *mišmārôt* text which reads: "in the sixth (day) in Jehezkel, on the 29th in the 22nd of the eleventh (month)." He has interpreted the extra date (the 29th) as a reference to the same date in a lunisolar calendar, while 11/22 would be its equivalent in the 364-day system. He has also alluded to a six-year priestly roster which he thinks reflects the sect's interest in synchronizing its calendar with this schematic lunisolar one. The two would synchronize every three years, but it would take six years for the time of duty of one's course to return to its original period in the year.

7. Solar and Lunar Calendars. The 364-day calendar was known and perhaps practiced from at least the 3d century B.C.E. to the 1st century A.D. If it was used over such a span of time, the issue of intercalation would have become acute as each year the calendar would deviate another 1/41 days from the true solar year. The earlier sources (*1 Enoch, Jubilees* [though see the comment on 6:31, 33 above], and the *Temple Scroll*) fail to deal with the problem, while some of the scrolls appear to show interest in synchronizing this arrangement with a schematic lunisolar calendar. It should be noted that this dearth of information about intercalation within the 364-day calendar is more than balanced by the complete lack of information in the sources about what may have been the calendar of the "mainline" Jewish community during these centuries. About this no contemporary or near contemporary source supplies any details. It may be that the 364-day calendar was followed only by fringe groups; even so, much more is known about it than about what might have been the calendar of the Jerusalem authorities in different parts of the Second Temple period. The present-day Jewish calendar evolved over several centuries in a process that can be traced in postbiblical texts. A complete list of month names can be found in *Megillat Ta‹anit* (perhaps written in the 1st century A.D.), and the Mishnah (edited in approximately A.D. 200) reflects the rabbis' knowledge about the intercalary "second Adar" (*m. Meg.* 1:4; *m. Ned.* 8:5). The 19-year cycle in which an extra month is added to seven lunar years is attributed to Hillel II (ca. 358–59) but may be post-Talmudic.

8. The 364-Day Calendar and the Date of the Last Supper. One additional note should be added about the 364-day calendar. A. Jaubert (1957) has argued that the presence of two calendars in Judaism at approximately the time of Jesus can be used to solve the old problem of when Jesus and his disciples celebrated the Last Supper. The difficulty is as follows: in the Synoptic Gospels, Jesus and his disciples celebrate the Supper as a Passover meal which was eaten near sundown on Friday as Nisan 15 began (Matt 26:17–19; Mark 14:12; Luke 22–7–13); but John implies that the meal was eaten on Thursday as Nisan 14 began (18:28; 19:14, 31, 42) and that Jesus was crucified at the time when the Passover lambs were being slaughtered. Jaubert maintained that the difference reflected use of two calendars—one by the

Synoptic writers (the 364-day system), another by John (a lunisolar calendar). Her solution, while it has proved attractive to some, founders on the complete lack of evidence elsewhere that Jesus or his disciples used the 364-day calendar. There is reason to think that the different timing for the meal in the gospel of John may be motivated more by theological than by historical concerns. That is, he wished to present Jesus as the Passover lamb of God whose death symbolized redemption. For further discussions, see *HJP²* 1: 587–601.

CALF. See ZOOLOGY.

CALF, GOLDEN. See GOLDEN CALF.

CALIGULA (EMPEROR). Gaius (Caligula) was born in 12 C.E. and was the third son of the Roman military leader Germanicus and Agrippina the elder (Suet. *Claud.* 8). As a young boy he accompanied his parents on the German frontier and the soldiers nicknamed him "Caligula" for the miniature military boots (*caligulae*) that he wore (Tac. *Ann.* 1.41.69; Suet. *Calig.* 9; and Dio Cass. 47.5).

By his 19th year, his father, mother, and two elder brothers had been murdered. After the fall of Sejanus in 32 C.E., Caligula was adopted by the Emperor Tiberius, with whom he lived on the island of Capreae. Caligula was elected pontifex in 31 C.E. and *quaestor* in 33 C.E. When Tiberius died in 37 C.E., Caligula (who had been appointed joint heir in Tiberius' will) was supported by the praetorian prefect Macro and was immediately hailed as *princeps* by the senate. Soldiers who loved the house of Germanicus enthusiastically supported the new emperor and were particularly pleased by the honor he showed to the memory of his relatives who had died treacherously by the hand of Tiberius.

Caligula ruled equitably for his first six months, after which time there was a rapid degeneration in the emperor's character (Josephus *Ant* 18.256). The emperor's insanity, manifesting itself through his inordinate lusts, megalomania, and sadism, appeared to have been precipitated by a grave illness, which was purportedly caused by a reaction in his brain to an aphrodisiac. Caligula's behavioral change was also concomitant with the death of his grandmother Antonia, who may have been a restraining influence in the young emperor's life. Unlike his predecessors, Caligula took his own claims to divinity seriously and rigorously enforced emperor worship.

At the beginning of his principate, Caligula released from prison his friend Herod Agrippa, who had been incarcerated by Tiberius. In addition to his freedom, Caligula gave Agrippa a gold chain supposedly equal in weight to the iron chain that had bound him in prison. Agrippa was appointed by the emperor to rule the territory that his uncle Philip the tetrarch had once governed until his death three years prior,

along with Abilene, which had been governed by the tetrarch Lysanias. Caligula also granted the title of "king" to Agrippa (Josephus *JW* 2.181; *Ant* 18.236ff.).

Herodias was Agrippa's sister, and wife of Antipas. Herodias, motivated by envy for her brother's elevation to the station of a client king, urged her husband to petition the emperor for a similar title. Against his will, Antipas complied with his wife's request. Agrippa used the opportunity to accuse his brother-in-law, by letter to Caligula, of treason. Caligula exiled Antipas and Herodias chose to accompany him. Galilee and Peraea, formerly under the rule of Antipas, were added at this time (39 C.E.) to the dominions of Agrippa.

While there is no direct evidence to suggest that Caligula was responsible for any formal persecution of Christians, his short reign was plagued by problems with the Jews. In 38 C.E. a severe anti-Jewish riot occurred in Alexandria which was the result of a combination of factors, including the Greek majority's rejection of the Jews' claim to full citizenship, the Jews' refusal to sacrifice to the emperor, and finally the duplicity of Flaccus, the Roman governor of Alexandria. The two parties sent delegations to Caligula in 40 C.E. Philo, who represented the Jews of Alexandria, has left a vivid account of what transpired.

Eusebius, the early Church historian, states that Philo wrote five books on the troubles of the Jews under the reign of Gaius (Euseb. *Hist. Eccl.* 2.5; see also 2.6 and 2.18). Emil Schürer, the eminent historian of the Jews in the age of Jesus, suggested that Philo's *Contra Flaccum* and the *Legatio* were the third and fourth books, the rest having perished. Other scholars have suggested, on the contrary, that the extant *Legatio* is a mutilated form of the work to which Eusebius referred, originally existing in five books (see PHILO OF ALEXANDRIA).

Another severe incident took place in 40 C.E. when the Jews of the Judaean town of Jamnia destroyed an altar that the Greeks had set up in honor of Caligula. Caligula responded by issuing a decree that the places of worship should be converted into shrines for the imperial cult. Orders were sent to Publius Petronius, the governor of Syria, to erect a statue of the emperor in the guise of Zeus in the Jerusalem Temple. Agrippa realized the potentially devastating consequences of the decree and persuaded Caligula to rescind his order. Not long afterward, Caligula and his family were murdered.

SCOTT T. CARROLL

CALL STORIES (GOSPELS). Stories of individuals being called to a life of discipleship are a common feature of religious and philosophical biography in antiquity (e.g., Philostr. *VA* 1.19; 4.1, 24; 8.21; Porph. *Plot.* 19–20; and, in general, Bieler 1935–36: 1.122–29). The Gospels contain similar accounts of the miraculous effect of Jesus' call to discipleship. What distinguishes these narratives, however, is the importance placed on the initiative of Jesus and the demand for an immediate and unconditional response on the part of the prospective disciples (Mark 1:16–20; 2:14; 5:18–19; 10:17–22; 10:46–52; Luke 5:1–11; 9:57–62; John 1:35–51). On this the tradition is unambiguous: one can become a disciple of Jesus only on the basis of a call (*TDNT* 4:444; Schweizer 1978: 394). Indeed, there is not a single instance in all the synoptic tradition of an individual *successfully* volunteering to become a disciple. Nor do the Johannine call stories differ fundamentally in this regard (John 1:35–51; cf. 6:65; 10:3–5, 14, 26–28; 15:16; 21:20–22).

Bultmann classified the call stories of the synoptic tradition under the rubric of "biographical apothegms" and compared them to Elijah's call of Elisha in 1 Kings 19 (1963: 28–29). However, if analyzed strictly on the basis of literary form, these stories are closer to the ancient rhetorical category of the *chreia*, or anecdote, a brief narrative relating a striking saying or deed of some individual. The *chreia* was a popular literary form and became one of the major vehicles of biographical characterization in antiquity (Momigliano 1971: 23, 76). This is shown by the anecdotal nature of Xenophon's *Memorabilia*, Plutarch's *Lives*, Lucian's *Demonax*, and Diogenes Laertius' *Lives of the Philosophers*, to cite only the most well known examples. It should not be surprising therefore if examples of *chreiai* are also to be found in the Gospels (Dibelius 1934: 160).

Bultmann's comparison with Elijah's call of Elisha also stands in need of correction. Although the language and structure of Elijah's call of Elisha appear to be a precedent for the synoptic call stories (3 Kgdms [LXX] 19:19–21 is similar to Mark), a careful reading reveals at least one important difference. Elisha consents to follow Elijah only on the *condition* that he be allowed to return home and bid farewell to his family. It is just this kind of precondition that is explicitly rejected by Jesus in Luke 9:61–62. Jesus instead warns his hearers that the leniency demonstrated by Elijah shall not be extended to his prospective disciples. Unless the response to Jesus' call is immediate and unconditional it is invalid (cf. Luke 9:59–60).

One looks in vain for anything similar to this in the OT or subsequent Jewish literature. Nor are there any rabbinic stories of "calling" and "following after" analogous to those in Mark and Q. Whereas in the Gospels the decisive call comes from Jesus himself, entry into a rabbinic school is based generally on the initiative of the prospective pupil (*TDNT* 4:444, 447). In contrast, Jesus is portrayed in the gospel call stories much like the wandering philosopher-teacher in Greek tradition who gathers disciples of his own choosing (Robbins 1982: 221–22, 233). A number of analogies can be found in the biographies of various philosophers, as Socrates' call of Xenophon and Crates' call of Zeno illustrate (Diog. Laert. 2.48; 7.2–3). The similarities between these accounts and the gospel call stories are striking. Cast in the form of anecdotes, they describe the sudden call of individuals engaged in the ordinary affairs of life, and their immediate response is characterized by a willingness to follow. These and other examples demonstrate that the gospel call stories exhibit many of the features of the Greek philosophical call story. They show the same typical situations and actions, and often employ the same vocabulary. They also serve the same function, namely, to draw attention to Jesus as the ideal teacher and to give expression to a particular understanding of the nature of discipleship. In other words, a Hellenistic form portraying how the ideal sage gathers disciples was adapted by certain early Christian writers to describe the relationship of Jesus to his disciples.

Not all NT call stories appear in a condensed form. Some, for example, have been expanded so that in place of a terse saying one may find a longer one or even a dialogue. The description of the setting, moreover, may require several sentences and the original saying or deed may be explained or its effects described (Dibelius 1934: 155–56). This is illustrated by the Johannine form of the call of the first disciples (John 1:35–51). Here the author has reworked the call stories of Mark 1:16–20 by elaborating the description of the setting, introducing dialogue, and focusing attention on the divine character of Jesus. In a different way, the author of Luke 5:1–11 has taken over the call stories of Mark 1:16–20 and transformed them into a story about a miraculous catch of fish. The miracle, however, assumes secondary importance, while the essential point of the call story has been retained: the disciples respond to Jesus by leaving everything and following him. The logion about "fishers of men" may have suggested this elaboration. Another example of a call story transposed into a miracle story occurs in the account of the healing of Bartimaeus in Mark 10:46–52 (Achtemeier 1978: 115–45; Steinhauser 1983: 204–6).

In order for a call to succeed, the initiative must come from Jesus himself and the prospective disciple must respond immediately and unconditionally. When either of these components is missing the story inevitably ends in failure. This is illustrated by the collection of three "unsuccessful" call stories in Luke 9:57–62 which are intended to describe inappropriate attitudes about the nature of discipleship (cf. Mark 5:18–19; 10:17–22). Indeed, they function as caricatures of the successful call story insofar as they represent basic misunderstandings of what it means to follow Jesus. The first claimant approaches Jesus with the boast, "I will follow you wherever you go"; the other two also appear willing to follow, but only if certain conditions are met: "Let me first go and bury my father" and "Let me first say farewell to those at my home." All three, however, are rejected by Jesus with an extreme, even bizarre, pronouncement. Jesus counters the heroic gesture of the first claimant by pointing dramatically to the dangers a life of discipleship would entail. In following Jesus, the homeless wanderer, one is even more exposed and vulnerable than the animals themselves (Luke 9:58; cf. Matt. 8:19–20). Similarly, Jesus' call supersedes all ties to an individual's home and family (as well as to occupation and possessions, cf. Mark 1:16–20; 2:14; 10:17–22). Not even the requirement of burying one's father can come between Jesus and his

disciple. Examples of "unsuccessful" call stories can also be found in Greek biography (e.g., Diog. Laert. 6:36: Diogenes the Cynic).

Although the gospel call stories do not contain an explicit theory of discipleship, due in large part to their anecdotal nature, they do imply one. First, they presuppose an anthropological dualism. That is, a humanity divided into two camps: in religious terms, the saved and the lost; and in philosophical terms, the wise and the foolish. This dualism, however, is concealed from the eyes of the world. The call story shows us ordinary, indeed disreputable, individuals (e.g., fishermen and tax collectors) who do not appear to enjoy the necessary qualifications for the religious life. The call by a divinely appointed agent functions in such a way as to disclose the true nature of the one called. It is an event which lies beyond human volition. One cannot decide to become a disciple of Jesus; the initiative rests solely with him. This idea is expressed clearly by Jesus in the fourth gospel: "You did not choose me, but I chose you" (John 15:16). And the transformation or conversion occurs instantaneously; there is no notion of preliminary training. In this respect, the synoptic call stories are not far from the Johannine understanding of discipleship.

A second way in which the theory of discipleship implicit in the gospel call stories may be discerned is through the sayings or pronouncements which often form the climax of these accounts, for example: "I will make you fishers of men" (Mark 1:17); "Sell what you have and give it to the poor" (Mark 10:21); "Foxes have holes, birds of the air have nests, but the son of man has nowhere to lay his head" (Luke 9:60); and "No one who puts his hand to the plow and looks back is fit for the kingdom of God" (Luke 9:62). Taken together, these sayings present a picture of discipleship characterized by lack of family, homelessness, poverty, and vulnerability. It is interesting to compare this understanding of discipleship with those collections of sayings which deal explicitly with the theme of discipleship (e.g., Mark 8:34–38; 10:28–31; Luke 14:25–33). Although these collections have some points in common with the call stories, they betray later developments, particularly by (1) stressing the necessity of martyrdom in light of the death of Jesus, (2) introducing the idea of "rewards," and (3) presenting views contrary to those found in the call stories (e.g., the idea of "counting the cost beforehand," Luke 14:28–32).

ARTHUR J. DROGE

CALLISTHENES (PERSON) [Gk *Kallisthenēs* (Καλλισθενης)]. A Syrian who helped set fire to the Temple gates in Jerusalem in the time of Judas Maccabeus (2 Macc 8:33). After Judas' victory over the Syrian general Nicanor, Callisthenes and others of the Syrian army who had taken refuge in a small house were burned alive by the Jews for their part in setting fire to the gates of the Temple. This episode may be referred to in 2 Macc 1:7–8, in which case Callisthenes would have been a follower of Jason the Oniad. Goldstein (*2 Maccabees* AB, 338–41) notes that v 33 must continue the description of the victory over Nicanor and Gorgias which has been interrupted by vv 30–33, an account of the victory over Timotheus and Bacchides. The death of Callisthenes and his followers was considered divine recompense, a favorite theme of Jason of Cyrene. Goldstein (*2 Maccabees* AB, 256, 341) cites other examples in 2 Macc 5:9–10; 9:5–6, 28; 13:6–8; 14:32–33. In Psalm 74:3–6 —(Eng 74:4–7) the setting on fire of the sanctuary has been associated with this event. However, most commentators stress that the description of this event in the psalm is too ambiguous to date historically (Anderson *Psalms* NCBC, 537–45; Kraus *Psalmen* BKAT, 514–15; Weiser *Psalms* OTL, 518–20).
RUSSELL D. NELSON

CALNEH (PLACE) [Heb *kalnēh* (כַּלְנֵה)]. Var. CALNO. A city in Syria in the vicinity of Arpad and Aleppo (Isa 10:9; here Calno, Heb *kalnô*). The conquest of Calneh by Tiglath-pileser III in his 8th year of reign (738 B.C.) was of such significance that it served as the Assyrian eponym designation for that year. This was the same year in which Menahem of Israel gave tribute to Tiglath-pileser III, and it is therefore not remarkable that this crucial conquest is commemorated in the words of both Amos and Isaiah, who perceived Calneh's defeat in recent history as an event which both foreboded the destruction in 722 B.C. of a less significant Israel (Amos 6:2) and prompted Assyria to self-delusions of invincibility (Isa 10:9). Located 300 miles N of Israel in Syria and thus closer to Assyria, it was inevitable that Calneh would experience the Assyrian threat earlier than Israel. The subsequent incorporation of Calneh into the Assyrian empire, with the accompanying payments and supplies which she was required to provide to Assyria, parallels the similar experience of Israel.

The exact location of Calneh remains unconfirmed, possible sites including Kullan Köy and Tell Ta῾yinat. In late 8th-century Assyrian texts the name appears as Kulni (a)/Kullani (a) and is probably to be identified with the Ki/unali/ua of earlier Assyrian texts, the capital and most important city of the state of Unqi (see J. D. Hawkins *RLA* 5: 597–8; 6: 305–6). If this identification is correct, then the site of Calneh is to be located somewhere in the Antioch plain on the basis of a 9th-century B.C. itinerary recording an Assyrian march through Syria (*GARI* 2, §584–85). This identification provides further parallels to Israel's experience, for deportees from other Assyrian campaigns were relocated and settled in this the former capital of Unqi. The vocalic fluctuation evident in Assyrian sources (even the reduction of the second vowel) accounts for the different spellings in Amos (*kalnēh*) and Isaiah (*kalnô*), even though the initial *patah* ("a" vowel) in both remains unaccounted for. As elsewhere, the name of the new Assyrian province was derived from the name of the most important city in the province. The Canneh of Ezek 27:23 which some scholars identify with Calneh is probably a different locale.

Although a Calneh appears in the Hebrew text of Gen 10:10 (identical in form to Amos 6:2), the S Mesopotamian context suggests that this city attributed to Nimrod should be located near the renowned cities of Babylon, Uruk, and Agade and not the Syrian location of Amos 6:2. This awareness no doubt generated traditions that the Calneh of Gen 10:10 is to be identified with sites such as Nippur (*b.Yoma* 10a), but there is no Calneh attested in well-documented S Mesopotamia, let alone of significant reputation to match the other three cities. Since a textual corruption is likely, possibly one should revocalize the text to read "and all of them" *wĕkullānâ* (RSV).
SAMUEL A. MEIER

CALVARY (PLACE). See GOLGOTHA (PLACE).

CAMEL. From the order *Artiodactyla* and the family *Camelidae* (even-toed ungulates). In the family there are six living species with two in the Old World: the dromedary (or one-humped camel: *C. dromedarius*) and the bactrian (or two-humped camel: *C. bactrianus*). (For distinctive zoological characteristics, see Clutton-Brock 1981: 121–23.) The family is generally considered to have originated in North America but migrated to Asia by the end of the Pliocene, ca. 2 million B.P., since the earliest recovered fossils from the Siwalik Deposits in India belong to this period (for recent summaries, see Howell et al. 1969; Grigson 1983). It is difficult to determine which modern species inhabited SW Asia or what the early Holocene range and distribution might have been, but for the sake of practicality, most authors have suggested that the dromedary was the species characteristic of SW Asia (Arabian peninsula) as opposed to the Inner Asian range of the bactrian (see Compagnoni and Tosi 1978 for suggested early Holocene ranges). Human association with camel remains in the Levant goes back to the Lower Paleolithic based on sparse finds at Ubeidiya in the Dead Sea area (1 million B.P.) and the Acheulean at Latamne, Syria (ca. 250,000 B.P.). Camel remains are more numerous at selected Middle Paleolithic sites such as Doura Cave in Syria (Takai 1974: 170) and Azraq in E Jordan (Clutton-Brock 1970). (For a summary of Paleolithic finds in general, see Grigson 1983: 312.) Later remains have been reported from a Pre-Pottery Neolithic B context at Ain al Assad in Azraq (Kohler 1984: 201), and from the Pottery Neolithic at Shar-ha-Golan (Stekelis 1951: 16). At no site, however, are the remains particularly numerous or widespread enough to suggest that camels were ever a dietary staple in early human context in the Near East (for overall treatments, see Ripinsky 1975; Zarins 1982). (For rock art depictions from the 7th–5th millennia B.C., showing speared camels from SW Arabia, see Anati 1968: 110 and fig. 74; Anati 1974: 234 and fig. 243; Zarins, Murad, and al-Yish 1981: pls. 36B, 34E, 35F, 11A.) By the advent of the Bronze Age, ca. 3000 B.C., wild camels seem to have disappeared or to have been driven out of their natural habitat into the more inhospitable reaches of the Arabian peninsula and our understanding of their behavior patterns and ecological preference remains unclear (Grigson 1983: 313).

Biblical references to camels are still considered controversial, especially in the Genesis passages. Table 1 lists the occurrences in Old Testament usage:

Table 1

Text	*Person/Period*	*Context*	*Sugg. Date*
NEH 7:69	Iron III	return from exile with camels	c. 530 B.C.
Ezra 2:67	Iron III	return from exile with camels	c. 530 B.C.
Isa 21:7	Iron II/III	camel riders from desert	c. 600 B.C.
30:6		camels among “beasts of the Negev”	
60:6		Midianite camels	
Ezek 25:5	IronII/III	“People of the East” and Ammonites with camels	c. 600 B.C.
Jer 49:29	Iron II/III	camels of Qedar	c. 600 B.C.
49:32		camels of the inhabitants of Hazor	
2 Kgs 8:9	Hazael/Ben Hadad	camel loads of goods	c. 850 B.C.
1 Kgs 10:2	Solomon	camels of Sheba bearing spices	c. 950

			B.C.
1 Chr 27:30	David	camels of Obil the Ishmaelite	c. 1000 B.C.
12:40		camels used as pack animals	
5:21		camels as booty from Hagrites	
1 Sam 30:17	David	the camels of Amalekites	
27:9		camels as booty from Shur	
[Job 1:3, 1:17]		"Chaldeans" raiding Job's camels	
1 Sam 15:3	Saul	camels of Amalekites	c. 1050 B.C.
Judg 6:5	Gideon	camel attacks of Midianites	c. 1150 B.C.
7:12		camel attack of Midianites	
8:21, 26		camels of Zebah and Zalmunna	
[Lev 11:4 = Deut 14:7]	Mosaic Law	prohibition against eating camel meat	
Exod 9:3	Moses	Pharaoh's camels are plagued along with other herds in Egypt	c. 1250 B.C.
Gen 37:25	Joseph	Midianites/Ismaelites going to Egypt with camel caravans	c. 1300 B.C.
Gen 32:15; 31:34; 30:43	Jacob	Jacob's flocks with Laban include camels as well as herd animals for Esau in the Seir area	
Gen 24:10–67; 12:16	Abraham	camels used for trip to Syria, included as bride price; Abraham in Egypt owns camels as part of larger herds	c.?

From this brief look, we can see that references to camels in the OT fall into three groups. The third period, the latest, corresponds to the Iron Age II–III periods. The occurrence of camels in the greater Near East during this period, 900–400 B.C., is well documented (Eph'al 1981). The second period, covering the use of camels from Joseph to Solomon, should fall within the archaeological periods labelled LB III and Iron I (1300–950 B.C.). In the OT, camels are consistently associated with people called Ishmaelites, Midianites, and Amalekites, located to the S and E of Israel and Judah proper. Therefore, it may be the case that domesticated camels were in use in the northwestern portion of the Arabian peninsula sometime in the mid-2d millennium B.C. among pastoral people with whom the Israelites had some acquaintance.

This idea (already noted by Albright *FSAC*, 257, 287; *ArchPal* 206–7), can be affirmed from both independent inscriptional and archaeological data. The earliest mention of the camel as a domesticated animal occurs in the inscriptions of Aššur-bel-kala (1074–1057 B.C.) from Assyria. In an account dated to 1069 B.C., herds of camels are mentioned as if they are curiosities to the people of Assyria (*GARI*, 55). It would appear then that the Assyrians were not familiar with domesticated camels much earlier than the late 2d millennium B.C. This is supported by other lines of evidence. For N Arabia and the S Levant, the occurrence of osteological camel remains follows the development of cultures involved in the S Arabian overland spice trade. This largely supports the pattern derivable from the Biblical references in Table 1. With direct Midianite association, however, we have only a sherd depicting a camel from Qurayya (Ingraham et al. 1981: pl. 79/14); but this sparse attestation is due to the lack of excavation. In the Wadi Arabah at Site 2, at a copper smelting camp dated to the Ramesside period (c. 1350–1150 B.C.), "several camel bones" were found with other faunal remains (Rothenberg 1972: 105; Hakker-Orion 1984: 209). In a later report, the excavators mention that a "large quantity of camel bones" was uncovered at the 13th–

12th-century-B.C. sites of Timna (Rothenberg and Glass 1983: 122, n. 50). From Tell Jemmeh on the Gaza Strip, Wapnish identifies only seven camel bones from levels attributable to the 14th–10th centuries B.C. (Wapnish 1982: 2; 1984: 171). Similarly at Heshbon in Jordan, camel remains are very infrequent from the earliest levels, 1230–1150 B.C. (Weiler 1981: table 4). Two early Iron I "fortress" sites (Har Saad, Kadesh Barnea) found in the Negev and northern Sinai dating to ca. 1000 B.C. have been interpreted to represent a fundamental shift among pastoral nomads in the region, perhaps brought on by the advent of domesticated camels (Finkelstein 1984: 200 n. 4). This may be confirmed by Hakker-Orion, who states that camel bones in some quantity were found at Har Saad and Kadesh Barnea (1984: 210).

However, for our first phase, represented by the early Genesis accounts, the evidence for camel domestication remains frustratingly elusive. Part of our problem lies in the attempts to delineate domestic from wild camels on the basis of morphological change in the skeleton alone. This is not yet possible (Hoch 1979: 607; Clutton-Brock 1981: 126; Hakker-Orion 1984: 209). Secondly, the region where this transition may have occurred first is far removed from the S Levant and N Arabia. Our best evidence to date comes from E Iran. From the site of Shahr-i-Sokhta, the excavators recovered not only osteological remains but also hair and dung. Found in a context datable to 2700 B.C., the remains led the excavators to argue that camel domestication began in Turkmenia and spread south (Compagnoni and Tosi 1978: 95–99). The domestic camel was apparently known to the inhabitants of the Indus Valley Civilization by 2300 B.C., although the species utilized remains open to question (Meadow 1984: 134 and references).

From the Arabian peninsula proper, at the site of Umm-an-Nar, analysis of the osteological camel remains suggests tentative steps toward domestication. This idea is based on the unusual number of camel bones found, the age distribution of recovered material, and the cultural context (Hoch 1979: 613). This stimulus toward domestication may well have come from the Indus Valley (Zarins 1978). Camel remains from S Arabia, supporting the thesis that the center of domestication lay in the south, are not common, but again survey and excavation have been limited (Bulliet 1975: 28–56). From Sihi, a shell midden on the S Red Sea coast, camel remains have been recovered in a late 3d–early 2d–millennium B.C. context or earlier (Zarins and Badr 1988; Grigson et al. fc.). The likelihood that camel remains will turn up at other sites of the 3d or 2d millennium B.C. is great with the recent archaeological activity along both the Red Sea coast (Tosi fc.) and highland Yemen (De Maigret 1981, 1984). Several bedouin sites from S Arabia dating to the mid–2d millennium B.C. have also yielded camel remains (Zarins et al. 1981: pls. 43A–B; Zarins et al. 1980: 23 n. 6).

Based on this observed pattern it appears that domesticated camels arrived en masse in N Arabia and the S Levant only by the latter part of the 2d millennium B.C. Essentially, this confirms the biblical evidence outlined above in Table 1. However, the problem of the earlier Genesis accounts is unresolved. Third-millennium B.C. camel remains from the S Levant are very rare. From Arad in an EB I context (ca. 2900 B.C.), a few bones have been found (Lernau 1978: 87); and from Bir Resisim in the N Negev in an EB IV context (ca. 1900 B.C.), several fragments have been reported (Hakker-Orion 1984: 209). It is unlikely that in both of these cases the remains represent domestic camels. Nonetheless, if we hold that the patriarchal stories are essentially historical in outlook, we would not be totally amiss in suggesting that domestic camels may have been known to the inhabitants of Syria-Palestine as early as the turn of the 3d millennium B.C. Conclusions concerning the utilization of the camel within the Arabian peninsula are summarized in Table 2.

Table 2
Suggested Domestication and Developmental Model for Camel Nomads of the Arabian Peninsula (After Zarins 1988)

Phase	*Camel Utilization*	*Date*	*Cultural Evolution*
V	North Arabian saddle (Shadad) Thamudic	500 B.C.	rectangular goat hair tent; minimal use of stone
IV	South Arabic cushion saddle	1000	rectangular, stone-outlined structures,

		B.C.	tapered structures
III	South Arabic saddle (Hawlani/Hadaja) pack animals; overland incence trade; change in camel status	1500 B.C.	troughs, horseshoe-shaped structures
II	nonriding; herds for milk; little group movement	2200–1200 B.C.	Umm-an-Nar, Subr, Sihi; Phase II rock art in southwest Arabia. Arad and Bir Resisim remains from the Levant?
I	wild cammel hunted	6000–2000 B.C.	Phase I rock art in southwest Arabia; osteological remains; Chalcolithic sites in Levant

CAMEL BRANDS. See WASM (CAMEL BRAND).

CAMEL'S HAIR. See DRESS AND ORNAMENTATION.

CANA OF GALILEE (PLACE) [Gk *Kana* (Κανα)]. A village mentioned in the gospel of John. It was called "of Galilee" probably to distinguish it from the Kanah of Asher in the territory of Tyre (Josh 19:28).

1. Cana in the NT. Cana appears only in the fourth gospel. In John 2:1–11 Jesus performed his first "sign" there, turning the water to wine at a wedding feast. From the text we cannot infer any topographical features of Cana, only that the home belonged to an anonymous Jewish family (v 6). However, from the incident of the healing of the son of the "royal man" or "king's man" (*basilikos*) at Cana in John 4:46–54 we can infer that Cana may have been administered by a royal representative (Avi-Yonah 1977: 94). This man petitioned Jesus to come to Capernaum to heal his son, which suggests that Capernaum must have been more or less directly accessible from Cana. Thus, Cana lay on a major road to Capernaum. Yet the father could not get to Capernaum from Cana between 1:00 P.M. (the seventh hour, v 52) and sundown, which suggests that the way to Capernaum was rugged. Nathaniel, one of the Twelve, was from Cana (John 21:2).

2. Identification. Three sites have been suggested as the probable location of Cana of Galilee: *Ain Qana,* 1.5 km N of Nazareth next to the village of Reina (Thomsen 1907: 77); *Kafr Kanna,* also known as Kefr Kenna, a major village about 5 km NE of Nazareth (Bagatti 1971: 42–47); and *Khirbet Qana,* a small ruin on a prominent mountain spur about 14 km N of Nazareth (Robinson 1841: 204; Dalman 1924). Of the three, only *Khirbet Qana* (M.R. 170070) has the consensus of scholarship since Dalman. All the facts of paragraph 1 would fit any of the proposed sites. Yet the name "Cana" means "reed" in Hebrew. *Kafr Kanna* appears to mean "the village of the roof," and has no linguistic connection with the name *qana.* "Reed" fits best the Cana in the Plain of Asochis (today's Beth Netofa valley) mentioned by Josephus: "I spent some time there in a village of Galilee which is called Cana" (*Life* 86, 206). The plain of Asochis favored the growth of reeds during and after the winter rains, as it does to this day, particularly in its eastern lower half. When the Romans destroyed Jerusalem in 70 A.D., the priestly course of Eliashib settled at *"Qana"* (Klein 1909, *Mishmaroth* 11), not *"Ain Qana."*

3. Cana in Later Tradition. That the priestly course of Eliashib settled in Cana suggests that Cana was a Jewish village, not a gentile or mixed village. By 200 A.D. there was a question of ritual cleanliness about a certain *"Qini."* "… but Rabbi (Judah the Prince) and his law court voted to decide about *'Qini'* [Cana?] and declared it clean" (*m. Ohol.* 18.9; Neubauer 1868: 276). Cana is mentioned in the Jerusalem Talmud (*j. Ter.* 46b) as the village of origin of a famous 3d-century robber, Eli of Cana (Klein 1928: 49). There is no doubt from the citations in the Christian pilgrim literature, which flourished from the 4th century onward, that Cana came to be identified with *Kafr Kanna,* perhaps because it was close to Nazareth. Eusebius in the 4th century A.D. confused Cana of "Sidon the Great of the lot of Asher" with Cana of Galilee (*Onomast.* 116.37r). In the 5th century, Jerome, although he followed Eusebius in this confusion (*Onomast.* 117.3f), seemed to believe that Cana was near Nazareth (Wilkinson 1977: 153). The Pilgrim of Piacenza (570 A.D.) found Cana only 3 miles from Sepphoris-Diocaesarea on the road to Nazareth (Wilkinson 1977: 79), which fits *Kafr Kanna.* This is the town that pilgrims visit to this day.

4. Archaeological Remains at Cana. Visitors to *Khirbet Qana* in the 19th century found the remains of a large village on a low spur of "Mt. Cana" (*Jebel Qana,* apparently modern Mt. Shekhanya) on the N side of the Beth Netofa valley. The records of many visits, including scientific survey in 1982, indicate

that Cana was laid out on the points of the compass. An enormous building on the NW side of the village dominated the site. Rock-cut tombs are to be found S and SE of the village on the lower slopes of the hill. The top of the spur is virtually honeycombed with caves and cisterns. The cisterns guaranteed a good supply of water for the village, as there are no remains of an aqueduct. A long wall runs the length of the site on the W side (Bagatti and Loffreda 1969). The entire site is in a very advantageous geographical position to house a "king's man" or "royal man" to administer the royal estates of the Valley of Asochis, as it is situated about 100 m above the valley floor. A major E-W road ran from Ptolemais-Acco in the W through the Valley of Asochis E through the Wadi Hammam to the W shores of the Sea of Galilee. From there it was easy access N and E to Capernaum or S to Tiberius. Pottery and coins from the surface of *Khirbet Qana* suggest occupation from the early Roman to the Byzantine period. A second ruin halfway down the slope on the S side appears to be a more recent ruin built from stones of the Roman-Byzantine village. This latter village was occupied as late as 1838 (Conder and Kitchener *SWP* 2: 313).

JAMES F. STRANGE

CANAAN (PERSON) [Heb *kĕna‹an* (כְּנַעַן)]. The fourth son of Ham and the father of Sidon and ten other families of the Canaanites (Gen 10:6). When Noah learned what Ham, his youngest son, had done (seeing his father uncovered and telling his brothers of it); Noah cursed Canaan, the son of Ham (Gen 9:18–27). According to the curse, Canaan would be a slave to Ham's brothers, Shem and Japheth. For a discussion of the meaning of the name Canaan, and the peoples and lands encompassed by that term, see CANAAN (PLACE). Two problems emerge from the mention of Canaan in Genesis 9: why is Canaan cursed rather than the apparent perpetrator Ham; and what is the implication of the curse for Canaan and his descendants?

A composite text, in which the narrative and the curse were originally distinct (the "youngest son" of 9:24 would then refer to Canaan, rather than Ham, and would be connected with the curse which follows) and preserved in two separate traditions, might explain origins (Neiman 1966: 133; Westermann *Genesis 1–11* BKAT, 650–51), but does not explain the present text. Some have attempted to solve the problem of why Canaan was cursed by eliminating two Hebrew words in vv 18 and 22 ("Ham, the father of"), so that Canaan, rather than Ham, becomes the principal actor in the narrative (Gunkel *Genesis* HKAT 3: 69–70; Skinner *Genesis* ICC, 182; Schottroff WMANT 30: 148 n. 3; von Rad *Genesis* OTL, 135). But this lacks textual support. The same is true of attempts to portray Ham as involved in incestuous relationships with his mother (Bassett 1971: 235) or with his father (Phillips 1980: 41). Commentators have noted how these (and other similar explanations of sexual misconduct) were intended to symbolize the sinful practices of the Canaanites (Cassuto 1964: 154–55; Wenham *Genesis 1–15* WBC, 201). The emphasis upon the identification of Ham as the father of Canaan has led to the suggestion that Ham learned how to do the evil deed from Canaan (Jacob 1934: 262–65).

Older explanations which observe Noah's blessing upon his sons (Gen 9:1) as irreversible have been used to explain Noah's inability to curse Ham. It has further been suggested that since Ham was the youngest of Noah's sons, the curse would be transferred to the youngest of Ham's sons, Canaan (cf. Cassuto 1964: 153).

Much speculation has centered around the particular circumstances represented in the figures of Japheth, Shem, and Canaan; and reflected in the curse (Schottroff WMANT 30: 149–50). Attempts have been made to date the events (or a desire for their realization) in the pre-Israelite period; e.g., that of Gunkel (*Genesis* HKAT 3: 73), where "Canaan" represents the Amorites and Hittites, who oppose the Hebrews and the Aramaeans, represented by "Shem." Skinner (*Genesis* ICC, 187) also argues for an early period. For him "Canaan" is the Amarna Canaanites, who oppose the Apiru and their allies, represented by Japheth and Shem. Note also Cassuto (1964: 168), who finds the fulfillment of this curse in the account of Genesis 14. Many scholars choose the time period of Joshua/Judges. In this case, "Canaan" (i.e., the Canaanites) oppose the Israelites (= "Shem") and the Philistines/"Sea-Peoples" (= "Japheth" [Speiser *Gen* AB, 62–63; von Rad *ROTT* 137–39; Neiman 1966: 121–33; Bassett 1971: 232; Bastomsky 1977]). The period of the Israelite Monarchy is the one chosen by Hoftijzer (1958). In his view the Israelites, represented by "Canaan," stand against "Japheth," i.e., the Philistines/Assyrians/Babylonians. The underlying assumption in all such theories is that each of the figures mentioned in the curse are intended to represent peoples or groups of peoples, rather than the individuals Canaan, Shem, and Japheth (cf. however Westermann *Genesis 1–15* WBC, 657–60).

RICHARD S. HESS

CANAAN (PLACE) [Heb *kĕna‹an* (כְּנַעַן)]. CANAANITES. A term designating the land along the E shore of the Mediterranean encompassing modern Lebanon, part of S Syria, and most of Palestine W of the Jordan. The ethnicon derived from the geographic term designates the indigenous and assimilated inhabitants of the area in antiquity, and, secondarily, the group of related Semitic languages characteristically spoken there. The substantial identity of Canaan with the land occupied by the Israelites is a central theme of the OT. (For a discussion of the prehistory and material culture of this region, see PALESTINE, ARCHAEOLOGY OF.)

The geographic name "Canaan" is spelled *kn‹n* in Northwest Semitic alphabetic texts (Ug, Heb, Phoen-Pun). The Masoretic vocalization is *kĕna‹an,* accented on the second syllable; transliterates *Chanaan,* the Vulgate *Chanaan.* The name is found syllabically written in Akkadian *Ki-na-aḫ-num* (gentilic), with the pharyngeal consonant represented by *ḫ,* and *Ki-in-a-nim,* with the pharyngeal unrepresented. The Egyptian spellings *K-i-n-‹-nw* and *K-ʒ-n-‹-n-ʒ* consistently represent the pharyngeal consonant. Western peripheral Akkadian texts of the 2d millennium most frequently attest the name with a reduced base *Kinaḫḫ-,* indicating that the final *-n* of the alphabetically written examples is probably an affixational morpheme.

The etymology of the word "Canaan" remains obscure. If it is of W Semitic origin, it probably derives from the root *kn‹* "to bend, to bow" with the afformative *-n;* the meaning "Occident" has been proposed on the basis of such a derivation (Astour 1965: 348). E. A. Speiser (1936) constructed an etymology from a putative word *kinaḫḫu,* designating blue-dyed cloth in cuneiform texts from Nuzi, and probably representing a Hurrian adoption of a Mediterranean term related to Akk *uqnû* and Gk *kyanos*. But the Hurrian word (properly spelled *qinaḫḫu*) has been shown to have an entirely different history than Speiser proposed (Landsberger 1967: 166–67). Improved attestation of 3d-millennium geographic names from

Syria-Palestine has lessened the likelihood of a Hurrian etymology for "Canaan"; its meaning should probably be sought in the Semitic lexicon (see Astour 1988).

"Canaan" is first attested as a geographic name in cuneiform texts. The ethnicon "Canaanite" is found in a text from Mari (Dossin 1973; Sasson 1984; *^{lù}ki-na-aḫ-num*). The 15th-century autobiographical text of Idrimi (from Alalaḫ) mentions "Ammia in the land of Canaan," (*ANET*, 557; Akk *ki-na-nim*). Ammia is to be identified with modern Ammiun near Tripoli. Later cuneiform texts from Alalaḫ mention Canaan as well. An economic text from Ugarit written in the wedge alphabet (*UT* 311.7; *KTU* 4.96.7) includes a Canaanite (*knʿny*) in a list of foreign merchants. This indicates that Ugarit did not include itself in the Canaanite sphere (so Rainey 1965). The Amarna correspondence refers to Canaan as an Egyptian province (*pīḫatu*, EA 36.15) that includes Tyre (EA 148.46), Byblos (EA 109.46; 131.61; 137.76), other coastal cities, and Ḫinnatūni (HANNATHON [PLACE], Josh 19:14) in the Galilee. (The name of the divinity *^{d}Be (BAD) ga-na-na* found in 3d.3d-millennium cuneiform texts from Ebla [ARET 3: 31 r. II 13; 42 III 6; VII 6; 769 II 1; ARET 4: 23 v. VIII 4] was alleged by Pettinato [1979: 103] to include the geographic name Canaan, but subsequent study of the texts has not supported this interpretation [*contra* Stolz, *TRE* 17: 540].)

The earliest mention of Canaanites in an Egyptian text is found in a list of booty from the Asian campaign of Amenhotep (Gk Amenophis) II (*ANET*, 246) late in the 15th century. The 13th-century "Israel stela" of Merneptah lists Canaan among the vanquished (*ANET*, 378; *AEL*, 77).

It is generally agreed (following Helck 1971: 246–55) that Egypt administered Syria-Palestine as three provinces: Amurru, Upi, and Canaan (Weinstein 1981; on the history of Upi, see Pitard 1987: 49–80, esp. pp. 59–60; for details see EGYPTIAN RELATIONS WITH CANAAN; Wright 1988; Dever 1987; Leonard 1989). Amurru, the northernmost province, passed to Hittite rule after the Egyptian defeat at Kadesh. Egyptian texts after this period sometimes refer to the area encompassed by Canaan and Upi by the general designation Ḫurru. After the invasion of the Sea People, "Canaan" comes to be used in a more restricted sense to designate S Palestine, and the expression "the city of Canaan" can refer specifically to Gaza (Alt 1944: 4–6; *RLA* 5: 353). The latest Egyptian reference to Canaan, the 22d-Dynasty inscription of an "envoy to the Canaan from Philistia" (so Weippert 1974: 429), has occasioned various interpretations (*RLA* 5: 354 with bibliography).

The word "Canaan" was sometimes transliterated *Chanaan* in Greek sources (PW 3: 2109), and frequently in LXX (e.g., Gen 9:22, 25; Jdt 5:9–10; 1 Macc 9:37). "Canaan" is transliterated twice in the NT (Acts 7:11; 13:9). More frequently, however, Canaan is indicated in Greek by the designation "Phoenicia" and the related ethnicon "Phoenician." The equivalence of the two terms is established by the legends of 3d-century coins from the Beirut mint: the Phoenician text *lʾdkʾ ʾš bknʿn* "Laodicea which is in Canaan" corresponds to Greek *Laodikeia he en Phoinikē* "Laodicea which is in Phoenicia" (*RLA* 5: 354 with bibliography). The equivalence is reflected in the NT, which employs the ethnicon *Chananaia* once (Matt 15:22); the rare word *Syrophoinikissa* is used in the parallel account (Mark 7:26).

A difficult passage in the *Phoenician History* of PHILO OF BYBLOS identifies a certain *Chnâ* as the first to carry the name "Phoenician" (Attridge and Oden 1981: 60–61 and n. 144). Herodianus Grammaticus (2d century C.E.; Lentz 1868: 913) and Stephanus of Byzantium (s.v. *Chnâ*) indicate that the Phoenicians were formerly called *Chnâ*. The reduced form of the name Canaan, written *Kinaḫḫ-* in Akkadian texts of the 2d millennium, may be represented in Gk *Chnâ*.

The distribution of the geographical name "Canaan" in the OT provides some measure of the significance of this word in biblical texts. The word "Canaan" occurs 80 times in the MT. Most frequently (64x, or 80 percent of its occurrences) it is found in the construction *ʾereṣ kĕnaʿan,* "land of Canaan." This construction is most frequent in Genesis, but also occurs in Exodus (6:4; 16:35), Leviticus (14:34; 18:3; 25:38), Numbers (12x), and once in Deuteronomy (32:49). In the Deuteronomistic History, the word "Canaan" is restricted to Joshua and Judges, most often in the construction "land of Canaan." Thus the Primary History accounts for 88 percent of the word's use.

The word "Canaan" is found in passages assigned by literary-critical analysis to the J, E, and P sources. See TORAH (PENTATEUCH). Its concentration in the sections of the Pentateuch which introduce and

develop the theme of promise of land to the Patriarchs (i.e., Genesis 12–50; largely in passages attributed to P), and in narratives of the conquest and settlement (Joshua-Judges), which are viewed in the Bible as a fulfillment of the promise to the Patriarchs, shows how closely bound the word "Canaan" is with the theme of promise and fulfillment (Clements 1967; Lohfink 1967). Thus, for example, the divine promise to Abraham that he and his descendants would be given "all the land of Canaan" has been called (by Brueggemann 1977: 21) the "focal verse" of the patriarchal promise theme within the Pentateuch (see also Clines 1978: 36). With the cessation of the settlement theme in Judges, the term disappears from the Primary History.

Reference to Canaan is infrequent outside the Primary History. The name is found in two prophetic books (Isa 19:18; 23:11; Zeph 2:5) and in the Psalms (105:11 [= 1 Chr 16:18]; 106:38; 135:11). In select passages, constructions using the word have been taken (see Maisler 1946) to have the meaning "merchant" (Job 41:6), "trade" (Ezek 16:29; 17:4), or "trader" (Hos 12:7; Zeph 1:11). In the Apocrypha, "Canaan" is a simple geographical name (Jdt 5:9, 10; Bar 3:22; 1 Macc 9:37), but also carries an implicit moral contrast with "Judah" (Sus 1:56). The two references to Canaan in the NT are in recitations of the Joseph story (Acts 7:11) and the conquest theme (Acts 13:19).

The boundaries of the region called "Canaan" undoubtedly changed over time. Num 34:3–12 gives the boundaries of the land that would fall to the Israelites as an inheritance, with the implication (the syntax of v 2 is vague) that it comprehends all of the "land of Canaan." The boundary list must be viewed together with similar lists elsewhere in the OT (*IDBSup*, 922). The S boundary of Canaan listed in Num 34:3–5 (attributed to P) precisely matches the S boundary of Judah given in Josh 15:2–4 (moving E to W): from the S end of the Salt Sea (= Dead Sea) to the ascent of Akrabbim, to the wilderness of Zin, S of Kadesh-barnea, Hazar-addar, to Azmon, along the Brook of Egypt (probably the Wâdī el-ʿArīsh [see EGYPT, BROOK OF (PLACE)]) to the sea (= Mediterranean). This border is essentially the same as that prescribed in the book of Ezekiel (47:19) as the S boundary of the restored Israel. The N boundary in Num 34:7–9 corresponds to Ezek 47:15–17, and seems to correspond to the boundary implicit in the Idrimi inscription, if the "entrance of Hamath" is identified as modern Lebweh (see HAMATH, ENTRANCE OF (PLACE)), an inland site not far S of Tripoli.

The literary-critical questions raised by the similarity of these lists are difficult to resolve. Josh 15:2–4 was formerly attributed to P (e.g., Eissfeldt 1965: 251); it is part of a section (Joshua 13–22) considered a later addition to the Deuteronomistic history (*NDH*, 40). The essential identity of lists in Numbers 34, Joshua 15, and Ezekiel 47 suggests that the Pentateuchal lists may be retrojected from a later period (for detailed discussion, see Keel, Küchler, and Uehlinger 1984: 1.245–50; Kallai [*HGB*, 279–83] dates them to the period of David and Solomon). A later date is in keeping with the distributional evidence that the word "Canaan" is a theologoumenon in the Primary History.

Some of its uses are, however, early and nontheological. In the archaic poem known as the Song of Deborah occurs the phrase *malkê kĕnaʿan,* "kings of Canaan" (Judg 5:19), recalling the Akkadian expression *šarrāni ša kinaḫḫi,* "kings of Canaan," from the Amarna letters (EA 30.1; 109.46). This is approximated in the later Hebrew phrase *malkê hakkĕnaʿănî* "kings of the Canaanites" (Josh 5:1) using the gentilic form of the name. Reflected in this phrase is the movement from a political-geographical reference for "Canaan" to a social and ideological reference for "Canaanite." In Josh 17:16, 18 "Canaanites" are owners of iron chariots and thus a military elite. This is reminiscent of the collocation of Canaanites and *maryanna* (chariot-owning nobility; see Leonard 1989: 8) in a list of booty taken in Palestine by the Pharaoh Amenhotep II (mid-15th century B.C.E.; *ANET*, 246).

In the Pentateuch, the word "Canaanite" is found principally in texts attributed to J (e.g., Gen 10:18, 19; 12:6; 13:7; 15:21; 24:3, 37, etc.; Exod 3:8, 17; Num 13:29; 14:25, 43, 45; 21:1, 3). The word "Canaan" never occurs in D (Deut 32:49 is attributed to P), but "Canaanite" occurs four times in D (Deut 1:7; 7:1; 11:30; 20:17). It serves as a general designation of the pre-Israelite inhabitants of the land (Gen 50:11; cf. Neh 9:24), often in a list of "nations" previously occupying Israelite territory (e.g., Gen 15:21; 34:30; Exod 3:8; 23:23, 28; 33:2; 34:11, etc.). The "Canaanites" are viewed as doomed to expulsion (Exod 33:2) or, from the Deuteronomic perspective, extermination (Deut 20:17). The persistence of Canaanites within

Israelite territory was a theological problem variously addressed by biblical writers. The Canaanite elements of the Yahwistic cultus were largely unperceived (see SACRIFICE AND SACRIFICIAL OFFERINGS [OLD TESTAMENT]), and prophetic castigations of the cult arise from ethical rather than ethnic concerns (Amos 5:21–25). Elements of the cult involving Canaanite deities other than Yahweh and practices exceptional to the Judean cult were more openly criticized by biblical writers and actively suppressed by some rulers. See CANAAN, RELIGION OF; PHOENICIAN RELIGION; HEZEKIAH KING OF JUDAH; JOSIAH (PERSON). The essential unity of the Canaanite languages was recognized by their speakers (Isa 19:18), even if regional differences could be the occasion of conflict (Judg 12:6; see also LANGUAGES [INTRODUCTORY SURVEY]).

A. Sources

Prior to the rise of Near Eastern archaeological work, our sources for Canaanite religion were confined to allusions in the OT and various classical authors, especially Philo of Byblos (preserved in excerpts in Eusebius) and Lucian of Samosata. Since then, numerous texts as well as objects have been found which shed direct light on the religion of the Canaanites. Pride of place goes to the mythological texts from Ugarit (modern Ras Shamra), a site on the Syrian coast, which though outside Canaan proper nevertheless shared in the Canaanite culture. More recent discoveries have revealed the nearby site of Ras Ibn Hani, and antecedents of some of the Ugaritic deities have been found in the 3d-millennium texts from Ebla (modern Tell Mardikh). Phoenician and Punic inscriptions reveal deviations from (as well as similarities to) the Canaanite religion attested at Ugarit. Texts from Egypt as well as other countries also shed light on Canaanite religion. In addition to texts, the discovery of temples, images, and other cultic paraphernalia have increased our knowledge of Canaanite religion.

B. The Canaanite Pantheon

1. Second-Millennium Ugarit. Canaanite religion in all its manifestations was always polytheistic. Many of the Ugaritic deities are in the Ugaritic pantheon list, which is attested in both Ugaritic (*Ugaritica* V.18B = *CTA* 29 = *KTU* 1.47) and Akkadian (*Ugaritica* V.18A) versions. The supreme Canaanite deity was the god El. He was the creator of the earth and of man, and was the begetter of the gods (the "sons of El") who are said to be seventy in number. Presumably El was also the creator of the whole universe, though we lack a creation account. He was an aged deity, called "father of years" (*ʾab šnm*), and appropriately had gray hair, and in keeping with this he was noted for his wisdom. Kindness and benignity are also mentioned among his attributes. There is no reason to suppose that the more violent El depicted in the late Philo of Byblos represents an earlier stage of Canaanite religion than the milder El of the 2d-millennium Ugaritic texts. El's dwelling place was "at the source of the rivers, amid the springs of the two oceans." Where this actually was is disputed, though it should be noted that in the Hittite-Canaanite Elkunirša myth, El (or Elkunirša as he is called, a name deriving from *ʾl qn ʾrṣ*, "El creator of the earth") dwells at the source of the river Euphrates (Mala). One may compare the location of the Garden of Eden at the source of the rivers Euphrates and Tigris in Gen 2:10–14.

El's consort was the goddess Athirat. Her full title was "Lady Athirat of the sea" (*rbt ʾatrt ym*). The popular view that this epithet should be rendered rather "She who treads on the sea" is invalid, since this presupposes the originality of the longer form, whereas the occurrence of the short form (Ašratum) occurs in Akkadian already as early as the 1st Dyn. of Babylon. Athirat was the mother of the gods. She is sometimes called *Qdš* ("holy" or "sanctuary") in the Ugaritic texts, a name which also occurs in connection with Egyptian depictions of a nude goddess wearing a Hathor headdress; Canaanite plaques with similar representations likely represent Athirat. Baal used her as an intermediary in order to get El to grant him a palace/temple, and along with *Rḥmy* she is described as having sexual intercourse with El, thereby giving birth to the gods Shaḥar (Dawn) and Shalem (Dusk). Her cult symbol, a wooden pole of some kind, perhaps a stylized tree, is alluded to a number of times in the OT ("the Asherah"), and this seems to be the point of the reference to the Asherah in the inscriptions from Kuntillet ʿAjrud in N Sinai ("Yahweh and his Asherah"). See ASHERAH (DEITY).

Although El is the chief god in the Canaanite pantheon, as attested at Ugarit, Baal is clearly the most active. He is the bringer of the rain, on which the fertility of the soil depends. He is called "the rider of the clouds" (*rkb ʾrpt*) in Ugaritic, and is responsible for the thunder and lightning, which herald the coming of the rain. Baal ("lord") was originally an epithet of the god Hadad ("thunderer"). Hadad appears already at Ebla under the name ʾAda. In the Ugaritic texts, the Baal cycle (*KTU* 1.1–6 = *CTA* 1–6) consists of three main parts: (1) his conflict with the god of the sea, Yam (*KTU* 1.1–2 = *CTA* 1–2), (2) the subsequent building of Baal's palace/temple (*KTU* 1.3–4 = *CTA* 3–4), and (3) Baal's conflict with Mot ("Death"), in

the course of which Baal dies and rises again. There is debate how far the Baal myth should be interpreted in seasonal terms. Although attempts to interpret the Baal myth as a panorama representing a complete year seem too sweeping, it is difficult to deny the presence of seasonal elements in the Baal-Mot cycle. See BAAL (DEITY).

Another question concerns the relation between Baal and El. The extreme view that Baal and El are in conflict is to be rejected, since there is evidence that Baal was appointed king by El, and El clearly regrets Baal's death at the hands of Mot and rejoices at his subsequent resurrection; however, occasions of tensions do exist. More explicit signs of hostility occur between Baal and the sons of Athirat. Baal's dwelling place was on Mt. *Ṣpn* (probably vocalized Ṣapān), the mountain known in classical times as Mt. Casius, and today as Jebel el-Aqraʿ, a mountain near Ugarit and appropriately the highest mountain in Syria. Ṣapān was itself regarded as a god.

Baal's chief consort is the goddess Anat. She is constantly by Baal's side and is devoted to him. She cuts up Mot like corn, is said to have defeated the dragon (i.e., Leviathan), and in one particularly gruesome scene is depicted wading through blood. See ANATH (DEITY). Also appearing as a consort of Baal in the Ugaritic texts is the goddess Astarte, though she is less prominent in that role than Anat. However, in Phoenician inscriptions and the OT Astarte rather than Anat appears to be Baal's consort, her name having been distorted to Ashtoreth (with the vowels of *bōšet,* "shame") in the OT by later scribes. See ASHTORETH (DEITY).

Baal's father is usually represented as Dagon, but occasionally El is designated as such. Perhaps Dagon was Baal's literal father since Dagon is listed between El and Baal in the Ugaritic pantheon; it is conceivable that Baal was actually the grandson of El. Although Dagon is frequently mentioned as the father of Baal and he appears in a number of sacrificial lists, he does not figure in any mythological texts from Ugarit. However, his dwelling place, Tuttul (in NE Syria), is mentioned in a Ugaritic snake charm text. His name suggests that he was a corn god. This deity is already attested at Ebla and was prominent among the Amorites at Mari and the OT indicates that he was worshiped by the Philistines, who must have appropriated him from the Canaanites. See DAGON (DEITY).

The craftsman of the gods, comparable to the Greek Hephaetus, was Kothan-and-Ḫasis ("skilful and clever"). Among other things he made the magic clubs with which Baal defeated Yam and built Baal's palace/temple. His dwelling place was both Crete and what is probably Egypt. He appeared at Ebla under the name of Kašalu.

At Ugarit the sun was worshiped as a goddess, Shapash. For the unusual spelling of the name at Ugarit we may postulate the development *šamšu* → *šampšu* → *šapšu* (employing the form of the name with the nominative ending). Her epithet is *nrt ʾilm,* "luminary of the gods." Among other things, she scorches the earth during Baal's stay in the underworld (as befits the summer months) but tells Mot to stop struggling with Baal when the time is up. Her nocturnal trip in the underworld is reflected at the end of the Baal myth, where she is found amid the *rpʾum* (the underworld shades). The moon does not appear to have played a particularly prominent role in Canaanite mythology, though its name is preserved in such place names in Palestine as Beth-yeraḥ and Jericho. From Ugarit we possess a text (*KTU* 1.24 = *CTA* 24) which celebrates the marriage of the moon god, Yarikh, and the goddess Nikkal. Two other deities associated with the sky in some way are Shaḥar and Shalem, whose names mean respectively "Dawn" and "Dusk." *KTU* 1.23 (= *CTA* 23) attributes their birth as a result of El's sexual intercourse with Athirat and *Rḥmy*. Sometimes it has been supposed that Shaḥar and Shalem represent respectively Venus as the morning and the evening star. However, the equivalence of Astarte with Ishtar as well as later with Aphrodite makes it virtually certain that she herself was equated with Venus. Maybe Athtar (the equivalent masculine form) was the morning star and Astarte the evening star, though explicit evidence for this in Canaanite sources is lacking. In the Baal myth Athtar is represented as being appointed to rule in Baal's stead when Baal is in the underworld, but he is said to be too small to fill the throne and so has to step down, though he still becomes king over the earth. It has often been supposed that at this point Athtar represents the waters of artificial irrigation (e.g., Gaster 1961: 127). This may be so, but the Arabic evidence to which appeal is made is ambiguous.

Although Mot is the primary deity associated with the underworld at Ugarit, he is not the only one. Another is the god Resheph, appearing already as Rasap at Ebla. At Ugarit his underworld character is indicated by his equation with Nergal, the Mesopotamian underworld god, and this is fully borne out by other Ugaritic evidence. Thus, he is referred to as the sun goddess' porter at the time of her setting (suggesting a location at the entrance of the underworld). His dwelling place is stated in a serpent charm text to be at *Bbt.*

Various other deities were also worshiped as part of the Ugaritic and wider Canaanite pantheon. A number of the Canaanite deities were worshiped in Egypt, especially during the New Kingdom, including Baal (equated with Seth), Anath, Astarte, *Qdš* (= Asherah), Resheph, and Ḥoron. (The precise function of Ḥoron, also attested at Ugarit and elsewhere, is unclear.)

2. First-Millennium Phoenicia. The name Phoenicia is given to that area N of Palestine where the Canaanites were not dispossessed by the Israelites but maintained their separate identity. The religion is partly known from inscriptions from the 1st millennium B.C. and partly from later classical sources. It shows some continuity with Canaanite religion elsewhere, but also has some distinctive features of its own.

An important god at Tyre and, because of Tyre's supremacy, a leading god of the Phoenicians generally (including Carthage) was Melqart. It has sometimes been supposed that Melqart was a form of the god Baal; however, we have no evidence to equate Melqart with Baal prior to a 2d-century-B.C. inscription from Malta, where he is called "the Baal [or lord] of Tyre" (*KAI* 47:1). The 7th-century-B.C. treaty between Baal king of Tyre and Esarhaddon king of Assyria clearly distinguishes Melqart on the one hand, and Baal-shamem and two other Baal deities on the other, the latter (unlike Melqart) manifesting themselves in the storm. It is possible that Melqart was originally a chthonic deity—he is identified with the underworld deity Resheph in a Punic inscription from Spain and with the Mesopotamian underworld god, Nergal, at Palmyra. In classical times he seems to have taken some attributes of the sun god (he sleeps during winter) and also has connections with the sea. He was commonly equated with Heracles in the classical era (e.g., *CIS* I 122; Eusebius, *Praep. Evang* 1.10.27).

Baal-shamem (lit. "Baal of the heavens") was another important god at Tyre, as well as elsewhere. The evidence implies that he is simply the well-known Canaanite storm god, Baal, attested in the OT and the Ugaritic texts. Thus, in the 7th-century-B.C. treaty between Esarhaddon and Baal king of Tyre he is associated with the storm and in the 8th-century-B.C. hieroglyphic Hittite version of the Karatepe inscription he is represented by a sign for the Hittite storm and thunder god Tarḫunt.

The chief god of Sidon was Eshmun, but he is also attested elsewhere (e.g., at Carthage). He is first mentioned in the treaty between Esarhaddon and Baal king of Tyre, and was identified by the Greeks with Asclepius, the god of healing. However, not much is known about the character of the god and the meaning of his name remains uncertain.

Adonis was the Greek name of a Phoenician deity, and must be based on the Semitic word *ʾaḏ̃n*, "lord," though strangely it has not appeared as the name of a god in Phoenician inscriptions. Classical sources indicate that he was a fertility god and his death (from a boar) and resurrection signified the annual death and rebirth of vegetation. He had to spend half the year in Hades with Persephone and was allowed to spend the other half of the year with Aphrodite. One important center of his worship was at Byblos, and Lucian of Samosata (2d century A.D.) reveals that some believed the reddish color of the river Adonis (Nahr Ibrahim) was due to the blood of Adonis. The "Gardens of Adonis" were a feature of his cult—seed boxes with plants that grew quickly and speedily withered (cf. Isa 17:10–11).

Other deities that the Phoenicians worshiped include other forms of Baal, and El, Baalat, Astarte, and Resheph.

The leading Punic deities (i.e., the deities of the Phoenician colonies in the W Mediterranean such as Carthage) were clearly the god Baal-ḥammon and his consort, the goddess Tinnit. It has been thought that Baal-ḥammon is a form of the god El, but it seems more likely that he is, as his name suggests, a manifestation of Baal. Sometimes in Punic dedicatory texts he is simply called Baal, which suggests that this is his name and not merely an epithet, "lord." Moreover, in Latin inscriptions he is called *frugifer* and

deus frugum, which suit Baal better than El, and his consort Tinnit is equated with Astarte (Baal's wife) in a text from Sarepta in Phoenicia. But whereas Punic sources refer to the recipient of human sacrifice as Baal-ḥammon, classical texts regularly refer to the recipient as Kronos, the common classical equivalent of El. However, Kronos is occasionally referred to as Baal as well as El, and Baal-ḥammon seems to be called Zeus (the more usual equivalent of Baal) in Polybius (7.9.2–3), which records Hannibal's oath in connection with his treaty with Philip V of Macedon. (On this treaty see Barré 1983.) It seems probable that Kronos' devouring of his own children led to his equation with Baal-ḥammon, the god of child sacrifice. There are two main views as to the meaning of the name Baal-ḥammon: one interpretation understands it to mean "Baal [lord] of the incense altar" (Day 1989: 37–40) while the other takes it as "lord of Amanus" (Cross *CMHE* 24–28, 35–36). The former view is more likely, since a number of depictions of Baal-ḥammon's cult feature an incense altar, whereas Mt. Amanus in N Syria was remote even from the original Phoenician homeland.

Baal-ḥammon's consort, Tinnit, the most prominent Punic goddess, who is sometimes referred to as "the face of Baal," has not been fully explicated. Some have thought that she was of N African origin, but several early attestations in Phoenicia (e.g., at Sarepta) have clarified her E origin. There is, however, uncertainty about her precise relationship to the other Canaanite goddesses and what her name means. On the supposition that Baal-ḥammon was El, it has sometimes been presumed that she was Athirat (Asherah). However, this view of Baal-ḥammon is unlikely, as we have seen. Moreover, Tinnit is known to have been equated with Astarte. We cannot be certain, but possibly she was a variant of Anath or she could have been a completely independent goddess.

Other deities worshiped in the Punic world include Melqart, Eshmun, and Resheph (see above).

One traditional source for ancient Phoenician religion is Philo of Byblos' *Phoenician History* (ca. A.D. 100) which declares itself to be dependent on a much earlier Phoenician author, Sanchuniathon. Excerpts from Philo's work have been preserved by Eusebius of Caesarea in his *Praeparatio Evangelica.* Scholarly evaluation of Philo's work as an account of ancient Phoenician and Canaanite theology has passed through different stages during the course of the last century. See PHILO OF BYBLOS. In the 19th century his work was often denigrated, but with the discovery of the Ugaritic texts, revealing the names of a number of deities mentioned by Philo, he underwent a considerable rehabilitation. In more recent years, as witnessed by the work of such scholars as J. Barr (1974) and A. I. Baumgarten (1981), there has been an increasing awareness that though Philo's work shows acquaintance with Phoenician traditions, these date from a late stage when they were subject to considerable Hellenistic influence. This Hellenistic influence is especially prominent in Philo's cosmogony. It is true that he has knowledge of a fair number of genuine Canaanite/Phoenician deities' names, e.g., Elos (El), Beelsamen (Baal-shamem), Zeus Belos (Baal), Adodos (Hadad) Dagon, Astarte, Chousor (Kothar-and-Ḫasis), and Elioun father of Ouranos (Heaven) and Ge (Earth) (cf. Gen 14:19, 22, where "El-Elyon" is creator of heaven and earth). However, the overall picture which he gives does not correspond closely with genuinely ancient sources—he lacks the important motif of Baal as a dying and rising god who was engaged in conflict with Mot, and his depiction of El as a violent god is quite different from that of the benevolent figure of the Ugaritic texts.

C. Religious Practices and Beliefs

1. Festivals, Sacrifice, Prayer. In spite of the considerable information available about the members of the Canaanite pantheon the details of the various Canaanite festivals and their accompanying rituals and liturgies remain scarce. It appears that the OT feasts of Tabernacles, Unleavened Bread, and Weeks had Canaanite prototypes (cf. Judg 9:27) and that these were essentially agricultural festivals. It is plausible to suppose that Baal's enthronement as king was celebrated at the Canaanite feast of Tabernacles, but detailed reconstructions (e.g., de Moor 1972) must remain speculative.

An important part of Canaanite religious practice consisted of sacrifice to the gods. The beginning of the Aqhat text, which describes Daniel as feeding the gods, indicates that sacrifice could be thought of as food for the gods. A number of Canaanite sacrificial terms are known, many of which are paralleled by similar expressions in the OT, though we cannot be certain that the meaning in every case is identical or that the Israelites appropriated the terms from the Canaanites, although this may be the case. Among the

parallel terms are Ugaritic *dbḥ* (Heb *zebaḥ* "sacrifice"), *š rp* (Heb *ʿlâ,* "burnt offering"), *š lm* (Heb *š elem,* "peace offering"), *š npt* (Heb *tĕnûpâ,* "wave [or "elevation"] offering") and *ndr* (Heb *neder* and *nēder,* "vow"). Other terms found in Punic may also be compared—cf. Punic *kll* (Heb *kālîl,* "whole burnt offering") and *mtnt* (Heb *mattānâ,* "gift").

There is evidence that human sacrifice was practiced within the Canaanite world, although we have no indications of it at Ugarit. There are a number of references to child sacrifice in the OT, especially in connection with the Canaanite god Molech in the valley of Hinnom outside Jerusalem (see Heider 1985; Day 1989), and classical sources attest child sacrifice among the Phoenicians. The most abundant evidence, however, is in the Punic world: not only do various classical authors attest its practice among the Carthaginians, but archaeological discoveries have revealed cemeteries of sacrificed children (commonly referred to by scholars under the biblical name of "topheth") at Motya (Mozia) in Sicily, Monte Sirai, Nora, Tharros, and Sulcis in Sardinia, and at Carthage, Sousse (Hadrumetum), and Cirta (near Constantine) in N Africa.

Another practice for which we have evidence among the Canaanites but is not certainly attested at Ugarit is sacred prostitution (see below). However, Ugarit has revealed some traces of the practice of divination, where models of livers and lungs probably linked to hepatoscopy have been found (models of livers are known from Hazor and Megiddo). A text written in Ugaritic containing omens based on unnatural births of animals has also been discovered, analogous to the Mesopotamian *šumma izbu* texts. (*KTU* 1.103 + 1.145 = *Ugaritica* VII, RS 24.247 + 24.265 + 24.268 + 24.287 + 24.328A + 24.328B.)

Not surprisingly, prayer was employed as a means of communication with the gods. An interesting example is known from Ugarit requesting deliverance should the city be under attack (*KTU* 1.119.26–36): "If a strong one attacks your gate, a warrior your walls, raise your eyes to Baal [praying]: 'O Baal, please drive away the strong one from our gate, the warrior from our walls! The bull, O Baal, we will consecrate; the vow, O Baal, we will fulfill. The male [animal], O Baal we will consecrate; the sacrifice, O Baal, we will fulfill; the libations, O Baal, we will pour out. Let us go up to the sanctuary of Baal, let us walk to and fro on the paths to the house of Baal!' Then Baal will hear your prayer—he will drive away the strong one from your gate, the warrior from your walls." Clearly this prayer, disregarding Baal's importance as a nature god, sees him as an agent in history.

2. Afterlife and Cult of the Dead. Although we lack precise details, it is clear that the Canaanites envisaged a *post mortem* existence. In the OT the shades of the dead are often referred to as the *rĕpāʾîm,* and they are similarly termed in Phoenician (*rpʾm*) and Punic (*ʾrpʾm*). It is now clear that the *rpʾum* in Ugaritic also denote the shades of the dead, and that these are deified. The most explicit text is *KTU* 1.161, where the *rpʾum* are invoked, and these include a number of deceased Ugaritic kings. Again, at the end of the Ugaritic Baal myth, we find the expressions *rpʾim/ʾilnym* in close parallelism with *ʾilm/mtm,* 'gods/dead' (*KTU* 1.6.VI.46–48 = *CTA* 6.VI.45–47), thus supporting the view that they are the deified dead. It now seems that this is the meaning of *rpʾum* in all its occurrences in Ugaritic (Caquot and Sznycer 1980: 19–20) and that it is wrong to seek a temporal reference in certain instances (e.g., the so-called Rephaim text, *KTU* 1.20–22 = *CTA* 20–22, *contra* Gray 1965: 126–30). In one Ugaritic text (*KTU* 1.108.1–3 = *Ugaritica* V.2.1–3) it seems that we have an allusion to *rpʾu* (a shade of the dead) drinking with Hadad the shepherd and Astarte; if this is the correct understanding (see ASHTAROTH [PLACE]), it bears comparison with the 8th-century B.C. Aramaic Panammua text, where the hope is expressed, "May the soul of Panammua eat with Hadad, and may the soul of Panammua drink with Hadad" (*KAI* 214: 21–22).

One institution which has attracted increased attention in recent years (cf. Greenfield 1974) is the *marzēaḥ,* which is attested in the Canaanite world at Ugarit (both in Akkadian and Ugaritic texts), the OT (Jer 16:5; Amos 6:7), at Elephantine, and Piraeus, and in Nabatean, Palmyrene, Punic, and rabbinic texts. It took the form of an association involving banquets and there is evidence from Ugarit (the Rephaim text), Jer 16:5, a Nabatean text, and rabbinic tradition that these could be associated with the cult of the dead. However, other purposes may have been involved. (See DEAD, CULT OF THE; ANCESTOR WORSHIP.)

There is evidence that the Ugaritic kings were thought of as divine after their death, and probably they were also considered divine during their earthly reign. The list of Ugaritic kings (*KTU* 1.113) precedes each name with the word *ʾil* "god," but this could simply allude to their posthumous deification. However, in the Keret text, words are expressed which suggest that king Keret (admittedly not king of Ugarit) was considered divine during his lifetime. A son of his declares, "How can it be said [that] Keret is a son of El, the progeny of Laṭipan and *Qdš*? Or shall gods die? Shall the progeny of Laṭipan not live?" (*KTU* 1.16.I.20–23 = *CTA* 16.I.20–23). Keret's daughter Thitmanat expresses similar sentiments in *KTU* 1.16.II.43–44, 48–49 (= *CTA* 16.II.105–6, 110–11). Furthermore, El says that Keret's (presumably eldest) son Yaṣṣib … will suck the milk of Athirat … drain the breast of the virgin [Anath], the suckling nurses of [the gods]" (*KTU* 1.15.II.25–28 = *CTA* 15.II.25–28).

The king's role in the cult included a ritual purification bath (e.g., *Ugaritica* V.12.6; *CTA* 36.10; *KTU* 1.119.5). In addition, Tabnit and Eshmunazar, two kings of Sidon, also served as priests of Astarte (*KAI* 13.1, 2). It is clear that as in ancient Israel, a high ethical ideal was expected of the king, since it was his duty to protect the poor, the widow, and the fatherless (cf. *KTU* 1.16.VI.45–50 = *CTA* 16.VI.45–50).

D. Canaanite Religion and the OT

The relation of the religion of Israel to the religion of Canaan consists of two parts. On the one hand, the OT stands steadfastly opposed to the polytheism and fertility cult practices of the religion of Canaan and firmly in favor of the exclusive worship of Yahweh, the God of Israel. On the other hand, the OT has appropriated elements from the religion of Canaan, baptizing them in a form compatible with Israel's own distinctive faith.

1. El and Yahweh. The chief god of the Canaanites, El, is equated in the OT with Yahweh. Thus, the patriarchal narratives depict them as worshiping various manifestations of El—El-Shaddai in particular, but also El-Bethel, El-Olam, El Elohei Israel, El-Roi, and El-Elyon—and these are understood as revelations of Yahweh (e.g., Exod 6:2–3). It has even been suggested by F. M. Cross (*CMHE*, 68–71) that the name Yahweh derived from part of a cult name of El, *ʾil dū yahwī ṣabaʾōt*, "El who creates hosts." However, against this hypothesis it may be argued: (1) the formula in question is nowhere attested and is highly speculative; (2) the character of El is uniformly benevolent in the Ugaritic texts, whereas Yahweh has a fierce side as well as a kind one; and (3) this view presupposes that the name Yahweh means "he creates" (understood as a *Hipʿil*), whereas it more likely means "he is" (the verb *hyh*, "to be," is nowhere attested in the *Hipʿil* in Hebrew). Perhaps in the time of Moses, as certain biblical references suggest, El was equated with Yahweh, who probably was originally the Midianite god of Mt. Sinai. Whereas the OT abominated Baal, it was happy to equate Yahweh with El, who was the supreme creator god noted for his wisdom, and was not associated with the fertility cult in the way that Baal was.

In his identification with El, Yahweh also appropriated "the sons of El," so that "the sons of God" formed his heavenly court (cf. Job 1:6; 2:1). The notion that they were seventy in number lived on, since Deut 32:8 states that "the Most High … fixed the bounds of the peoples according to the number of the sons of God" (so LXX; 4QDeut), from which evolved in Jewish apocalyptic literature the notion of seventy guardian angels of the nations. Thus, as absolute monotheism took over from monolatry in Israel, those who had originally been in the pantheon of the gods were demoted to the status of angels.

In being equated with El, it is not surprising that in syncretistic circles Yahweh also appropriated El's consort Athirat, or Asherah as she is known in the OT. Her cult symbol, known as the Asherah, was a wooden pole, perhaps in the form of a stylized tree. It is mentioned in the OT a number of times and appears to be the point of the inscriptions, "Yahweh and his Asherah" from Kuntillet ʿAjrud in N Sinai.

2. OT Use of Baal Motifs. Although the OT condemns the Baal cult, it nevertheless adopts some of its motifs. Hosea, who is at pains to emphasize that Yahweh, not Baal, brings fertility to the land (Hos 2:10—Eng 2:8), applies the imagery of death and resurrection to Israel's coming exile and restoration (Hos 5:14–6:3; 13:1–14:7). That this imagery is actually derived from the fertility cult of Baal is supported by the allusion to the coming of the rain in connection with the resurrection imagery in Hos 6:3 and the evident irony of the fact that Hosea declares that Israel "incurred guilt through Baal and died" (Hos 13:1).

The OT also appropriates the motif of Baal's conflict with Leviathan (also called "dragon," "twisting serpent") and Yam and applies it to Yahweh. Sometimes the imagery is associated with the creation of the world (e.g., Ps 74:12–17), and this can also be demythologized so that it is simply a case of God's controlling (rather than fighting with) the waters, as in Genesis 1. Sometimes the imagery is historicized, so that the sea becomes a term for the hostile nations (cf. Ps 144:7) and the dragon can symbolize a particular nation, such as Egypt or Babylon (e.g., Isa 30:7; Jer 51:34). Again, the imagery can be projected into the future and eschatologized (cf. Isa 27:1; Daniel 7). A related theme to that of the divine victory over the waters is divine kingship. Just as Baal became king following his victory over Yam, so the OT associates Yahweh's kingship with his defeat of the chaos waters (cf. Ps 74:12; 93:1–2). The name of Baal's sacred mountain, Mt. Ṣapān, is applied to Mt. Zion, the seat of Yahweh's dwelling in Ps 48:3—Eng 48:2, "the heights of Zaphon" (cf. Isa 14:13). Moreover, the description of Yahweh's manifestation in the thunderstorm tends to echo that of the storm god, Baal, and this is particularly striking in Psalm 29.

3. The High Places, Sacred Prostitution, and the Molech Cult. The Asherim formed part of the cultic paraphernalia of the "high places" (*bāmôt*) (see also HIGH PLACE), the local sanctuaries where a Baalized Yahweh cult was practiced in ancient Israel until their abolition by Josiah in 621 B.C. They were frequently located on hills and the cult practices associated with them are described as taking place "on every high hill and under every green tree" (e.g., 2 Kgs 17:10). In addition to the Asherim, stone pillars (*maṣṣēbôt*) symbolizing the male deity, altars, and incense altars were among the characteristic features of these sites. The OT also suggests that rites of sacred prostitution were characteristic of the Baalized Yahweh worship, presumably a form of imitative magic in order to encourage the fertility of the land. That sacred prostitution was a feature of the religion is indicated by the parallelism of the word *z̃n̂,* "prostitute," with *qĕdēšâ,* lit. "holy one," in Deut 23:18–19 and Gen 38–15, 22–23 and of *zōñt,* "prostitutes," with *qedēš̃t*, lit. "holy ones," in Hos 4:14. The masculine form *qādēš* (Deut 23:18—Eng 23:17; 1 Kgs 14:24; 22:47—Eng 22:46), plural *qĕdēšîm* (1 Kgs 15:12; 2 Kgs 23:7) must therefore allude to male cult prostitution. It is not certain whether the *qdš m* mentioned in the Ugaritic texts were similarly cult prostitutes. Outside the OT, classical allusions confirm the practice of sacred prostitution among the Phoenicians. See PROSTITUTION (CULTIC).

The OT sometimes makes reference to a god called Molech, to whom gruesome rites of child sacrifice are made. Some scholars have denied that Molech is the name of a god, claiming it to be a sacrificial term cognate with Punic *molk* (Eissfeldt 1935), while others maintain that no human sacrifice was involved but simply a dedication in fire (Weinfeld 1972). However, both these views are forced. There is evidence that *mlk* was the name of a Canaanite god (e.g., at Ugarit), and it is most likely that OT Molech is a reference to him, the vowels having been distorted with those of the word *bōšet,* "shame" (cf. how the OT form of Ashtart is likewise distorted to read Ashtoreth; so Day [1989]). Probably he was an underworld god (Heider 1985; Day 1989). Another Canaanite underworld god who has left traces in the OT is Resheph (e.g., Ps 78:48–49; Hab 3:5), who seems to have become a destructive angel in Yahweh's entourage.

4. Israelite Calendar and Kingship. The important dividing line in the agricultural year in Canaan comes with the autumn when the rainy season commences following the months of dryness and summer sun. This must have been the time of the Canaanite new year, just as it was in preexilic Israel (cf. Exod 23:16; 34:22), prior to the adoption of the Babylonian spring new year calendar at the time of the Exile or just before. The festival in the autumn was the feast of Tabernacles, when the corn, wine, and oil were gathered. The Canaanite equivalent of this feast is recorded in Judg 9:27. The other major feasts, those of Weeks and Unleavened Bread, being in origin agricultural festivals, must also have been appropriated from the Canaanites. Some sacrificial practices may well have been adopted (see above).

It was not until about 1000 B.C. that the Israelites adopted the institution of kingship. Since kingship was a new institution for them, it is to be expected that features should be borrowed from the surrounding nations (cf. 1 Sam 8:20). Influence from the Canaanite kingship ideology cannot be denied. The most explicit evidence for this comes from Ps 110:4, where the Davidic king is hailed as "a priest for ever after the order of Melchizedek." Since Melchizedek is represented as a pre-Israelite, Jebusite priest-king in Jerusalem in Gen 14:18–20, it appears that Ps 110 involves a fusion of Israelite with the Jebusite royal

ideology. This is most naturally understood as having come about soon after David's conquest of Jerusalem. The Jebusite deity, (El-)Elyon (Gen 14:18, 19, 22), became fused with Yahweh, though it should probably not be supposed that David's priest, Zadok, was originally a Jebusite priest. If he had been, then neither of David's two chief priests (Zadok, Abiathar) would have been a native southern Israelite, which would be surprising. 1 Chr 12:28 may support F. M. Cross' view (*CMHE* 207–15) that Zadok had already been David's priest at Hebron.

In various ways, therefore, it is apparent that Canaanite religion has exerted an influence on the OT, in spite of the condemnation of that religion which the OT often expresses. For further discussion see Albright *ARI, YGC;* Donner and Röllig *KAI;* Eissfeldt *KlSchr;* Gibson *TSSI;* and Gordon *UT.*

CANAANITE LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

CANDACE (PERSON) [Gk *Kandakē* (Κανδακη)]. Title of the person who employed the Ethiopian eunuch converted by Philip (Acts 8:27–39). Candace is not a proper name but a title (like the word "Pharaoh"); in fact, it was one of the first Ethiopic words clearly identified by scholars. It means Queen, though it also seems to have referred to the Queen Mother. Bion of Soli, who wrote a work on Africa probably in the 2d century B.C., says that the Queen Mother, called the Candace, was the real head of the government of the so-called kingdom of Meroe, not in modern Ethiopia proper, but rather along the Nile in modern Sudan. The title Candace may have been a hereditary one, since it is attested in various periods before and after the NT era in the relevant classical literature (cf. Strab. 17.1.54; Dio Cass. 54.5.4–5; Pliny *HN* 6.35.186; Ps.-Callisth. 3.18). Thus, the Candace mentioned only once in the NT (Acts 8:27) cannot be clearly identified because we are not given a proper name (Cadbury 1955: 15–18). Eunuchs were frequently used in ancient Near Eastern courts as guards of the harem or sometimes of the treasury (see ETHIOPIAN EUNUCH).

CANNEH (PLACE) [Heb *kannēh* (כַּנֵּה)]. A N Mesopotamian city with whom Tyre traded in textiles (Ezek 27:23). Assyrian texts of the 8th and 7th centuries B.C. contain numerous references to individuals involved in economic transactions who are from Kannu›, a city whose precise geographical location is unknown (see Postgate *RLA* 5: 390). Since this city provides the most likely counterpart to the Canneh of the MT in Ezek 27:23 (once improperly identified with Calneh), one learns from Assyrian sources that it was strategically located on a royal Assyrian highway which facilitated the city's development as a center of trade. Citizens of Canneh are attested long before the time of Ezekiel transporting hundreds of horses for the Assyrian empire (Waterman 1930–36: 529) and engaging in slave sales. Because the city is listed in Ezek 27:23 between the two other well-known locales Haran and Eden (i.e., Beth-eden), Canneh also must have achieved some international stature as a comparable commercial center. The Assyrian evidence indicates that the city was a center for the cult of the god Apladad. The etymology of Kannu›/Canneh remains unclear, for a proposed Aramaic etymology from *ganno›* "the enclosure" would appear in Hebrew with an initial voiced consonant. The Targum equates Canneh with Nisibis.

CANON. The word "canon" comes from the Gk *kanōn,* "measuring stick." By extension it came to mean "rule" or "standard," a tool used for determining proper measurement. Consequently, the word has come to be used with reference to the corpus of scriptural writings that is considered authoritative and standard for defining and determining "orthodox" religious beliefs and practices. Books not considered

authoritative and standard are often called "noncanonical" or "extracanonical." Generally speaking, the corpus of authoritative books is called the "Bible," although obviously the Christian Bible (or canon) differs from that of Judaism. This entry consists of two entries: one covering the canon of the Hebrew Bible (i.e., the Christian "Old Testament"), and another covering the specifically Christian writings comprising the "New Testament." See also APOCRYPHA (OT and NT) articles.

E. Canon and Inspiration

A. Introduction

1. Canon in Judaism and Christianity. Some of the religions of the world are "scriptured" such as Judaism, the Samaritans, Christianity, Islam, Confucianism, Taoism, Buddhism, Hinduism, and Zoroastrianism; others are not (W. C. Smith 1977). Judaism and Christianity claim to have Holy Scriptures inspired by God; the Christian includes the Jewish, but the Jewish does not include any of the peculiarly Christian "Second [or New] Testament." That which is common to the two, though in a different order of contents, in most Protestant Bibles is traditionally called the "Old Testament" by Christians but simply the "Bible" by Jews. The Bible of the Samaritans is limited to the Pentateuch. The Bible of the early church before there was a NT canon, that which was most often cited in NT and most Christian literature, was a Greek version of the OT containing many more books than the current Protestant OT or Jewish Bible. The Protestant/Jewish "First Testament" is often inexactly called the Hebrew Bible. In more accurate terms the OT (whether referring to the LXX or the current Protestant OT) may also be called the First Testament. Until recent times the Christian OT, whether Orthodox, Catholic, or Protestant, included more books than the Jewish Bible included; it was not until the late 19th century

that Protestants began to exclude the Jewish so-called apocrypha, or deuterocanonical books, which surviving Pharisaic-rabbinic Judaism had excluded from its Bible at least by the end of the 1st century of the common era. Samaritans, also heirs of ancient Judaism, accept only the Pentateuch (Torah) as canon. Muhammad, apparently the single author of the Koran, adapted traditions from both Bibles or testaments into the 7th-century-C.E. Bible of Islam; by contrast, both Judaism and Christianity have accepted the fact of multiple authorship of their canons as well as pseudonymity of some of the books in each. Whereas the Koran is viewed in Islam as a direct revelation from God, the Jewish and Christian canons are viewed as human testimonies to God's revelations (Pokorny 1984: 486–96). When one uses the word "canon" one must specify to which denomination or community of faith it refers even within Judaism and Christianity; within both there is now and was in antiquity more than one canon in the sense of limited lists of sacred books considered canonical. The Church of Latter-Day Saints is perhaps the latest to claim the Christian canon to be open-ended (Davies 1986). And in recent times the word "canon" is used to refer to the rabbinic corpus in addition to the Bible or even instead of the Bible (Neusner 1987: 43–51).

2. Etymology of the Word "Canon." The word "canon" comes from the Greek *kanōn* which was derived from a Semitic root (Hebrew *qāneh,* Assyrian *qaň,* [Sumerian-]Akkadian *qin,* Ugaritic *qn*). It passed into Greek as *kanna* or *kanē,* into Latin as *canna,* and English as *cane.* It originally meant "reed" (English "cannon") and came to mean something firm and straight. In Greek the word was used to indicate a stave, a weaver's rod, a curtain rod, a bedpost, and a stick kept for drawing a straight line or as a constant reference for measuring such as level, plumb line, or ruler. It then took on metaphoric meanings such as model, standard, paradigm, boundary, chronological list, and tax or tariff schedule. In the NT "canon" means rule, standard (Phil 3:16 in some mss; Gal 6:16), or limit (2 Cor 10:13, 15–16). In early church literature it came to be used to refer to biblical law, an ideal person, an article of faith, doctrine, catalog, table of contents, a list of persons ordained or sainted (Metzger 1987: 289–93). Origen (d. 254) may have used the word in the sense of a list of inspired books, but Athanasius (d. 373) was the first known to have done so and the first in his Easter letter of 367 to include the 27 books of the NT.

3. Other Terms Used. The Bible (OT) of the early churches was referred to as "Scripture" (John 2:22; Acts 8:32; 2 Tim 3:16; etc.) or "the scriptures" (Mark 12:24; 1 Cor 15:3–4, etc.). Other terms used were "holy scriptures," "the writings," "the sacred scriptures," "the book," "the sacred books." Use of such terms does not, however, indicate exactly which books were meant beyond the Law and the Prophets in the Jewish tripartite canon (Law, Prophets, and Writings). And doubt has been expressed as to whether the term "Scripture" was synonymous with "canon" (Sundberg *IDBSup,* 137; cf. Metzger 1987: 30).

The same is true of terms used in Judaism where the word "books" (*sĕpārîm*) meant sacred writings but without precise definition (Dan 9:2; Mishnah, etc.). The term "holy books" (*siprê haqqōdeš*), used in medieval commentaries, was also indefinite in reference in that it was used to refer to all Jewish religious literature. In the Greek prologue to Ecclesiasticus (Ben Sira), which was translated (traditionally 132 B.C.E.) by the grandson of the author, the phrases "the other books of our fathers" and "the rest of the books" are also indefinite in reference. In Tannaitic times the term "outside books" (*sĕpārîm hîtzōnîm*) was coined to refer to books not in the Jewish canon (*Sanh.* 10:1), but even then it was used mainly to refer to non-Jewish or nonrabbinic literature, not specifically to refer to Jewish writing outside the Jewish Bible.

More precise in designation, though not content, is the word *miqrāʾ* ("reading"; see Arabic *qurʾan*) referring to Scripture and based on the custom of reading aloud for the assembled faithful in a dominantly oral culture, continued today as oral lectionary readings in most worship services Jewish and Christian; it was and is frequently used to indicate Scripture, as against Mishnah, Midrash, or other Jewish literature.

Another term, "holy writings" (*kitbê haqqōdeš*), is used to refer to holy or inspired writings but not exclusively to the Bible (*Šabb.* 16:1; *B. Bat.* 1: end; *t. Beṣa* 4 [Blau *JEnc,* 141]), another indication of the necessity to distinguish between "inspired" and "canonical" (Leiman 1976: 127; Metzger 1987: 254–57); the term is reflected in Greek in Rom 1:2; John 5:47; 2 Tim 3:15–16; *Ant* 1.13; 10.63; etc.

The word "Torah," like many others in early Jewish literature, has both a narrow (*sensus strictus*) and a broad meaning (*sensus latus*). While it can refer strictly to the Pentateuch it may also refer to the whole

Bible; but it may quite broadly refer to all Jewish religious literature, or indeed be used as a virtual synonym of Judaism itself (Sanders 1987: 111–14). Similarly the word *nomos* in the NT and elsewhere may mean "law," or it may mean custom, instruction, or doctrine (Pasinya 1973). The Pentateuch itself is basically a blend of narrative and law (Sanders 1987: 43–60, 115–23); indeed one great Jewish philosopher (Heschel 1972) believed that Judaism itself is made up of *halākāh* and *haggādāh* (law and narrative).

Another term used of Scripture is *hakkātûb,* "that which is written," but the term is usually accompanied by the name of a book of the Bible; "all that which is written" or perhaps "all Scripture" is early and may be reflected in 2 Tim 3:16 (*pasa graphē*). The term "covenant" or "testament" seems to have been principally a Christian term of reference for the OT (2 Cor 3:14), though Sirach apparently used "book of the covenant" (24:23) to refer to the Pentateuch (cf. Exod 24:7; 2 Kgs 23:2, 21 where the same Greek term translates the Hebrew *sēper habberît*).

Other terms used include the expression "those [books] that soil the hands" (*Yad.* 3:5; 4:5, 6), which is as close perhaps as may be found to what is commonly meant by the term "canon"; and yet it is not really clear how the term arose (*JEnc* 1: 141) or even if it was used to mean "canonical" *in sensu stricto* (Leiman 1976: 102–20).

Finally, one of the most common terms used to refer to the Bible in Talmud and Midrash, and perhaps the most common in Jewish speech in any modern language, is *Tanak,* an acrostic made up of the first letters of the three divisions of the Hebrew or Jewish Bible: *Tōrāh* (Pentateuch), *Nebî'îm* (Prophets), and *Ketûbîm* (Writings or Hagiographa).

4. Basic Uses of the Word "Canon." There are two basic uses of the word "canon": the one refers to the shape of a limited body of sacred literature; the other refers to its function. Traditionally it is viewed as both an authoritative collection of books (*norma normata*—shape) and a collection of authoritative books (*norma normans*—function; Metzger 1987: 282–88). The word "shape" refers, however, to more than the number and order of books contained in a community's canon; and the word "function" refers to more than how a community used its canon. Both terms include consideration of pre- and proto-canonical literary and historical factors as well as factors resulting from eventual stabilization of text and canon.

B. External Shape of Canon

1. Extrabiblical References. The designation "Tanak" accurately suggests the basic tripartite shape of the Jewish Bible: Torah, Prophets, and Writings. Beginning in the 2d century B.C.E. the third division was vaguely indicated in the prologue to Ecclesiasticus (Ben Sira) written by the author's grandson in 132 B.C.E. (or 116 [Kahle 1959: 216]; or 110 [Bickermann 1944: 344]). He apparently knew only paraphrastic expressions such as "… and the others that followed them," or "… the other books of our fathers," or "… and the rest of the books." Much has been made by some of the vague expression in Philo's *Vita Cont* 25 which mentions "laws and oracles delivered through the mouth of prophets, and psalms …"; or the phrase "They read the holy writings and seek wisdom from their ancestral philosophy by taking it as an allegory …" (*Vita Cont* 28). Such expressions can be taken to indicate a closed canon of the third division, the Writings, in pre-Christian times only by inference; the evidence is not clear (cf. Leiman 1976: 131–32; Beckwith 1985: 110–11).

The first two divisions, the Law and the Prophets, are attested to in the Second or New Testament (Matt 5:17; 7:12; 22:40; Luke 16:16; John 13:15; 24:14; Rom 3:21 [see "Moses and the Prophets" in Luke 16:29, 31]), but the third division remained amorphous (without clear shape) in all such designations until the end of the 1st century C.E.; in fact it is not clear when the term "Tanak" itself first appeared (Aicher 1906: 1–53). Recent in-depth study of the function of Scripture in the Mishnah affords no evidence of the tripartite canon in the ways in which Scripture is cited or alluded to beyond the Torah (Pettit 1988). The tripartite division, with the third section clearly not yet having a stable title such as Writings (or Hagiographa), is also indicated in Sirach 39:1; 2 Macc 2:13–14; and Luke 24:44. In Luke 24:44 the phrase "… Law of Moses, Prophets and Psalms …" is reported said by the resurrected Jesus to the disciples in one of his last meetings with them. The inarticulate *psalmois* in the Lukan phrase could indicate any collection of Jewish religious hymns, but it probably designated a collection of psalms such

as we know in the biblical book of Psalms, but not in all probability the stabilized Psalter witnessed in 4th–5th-century-C.E. and later LXX mss or in 10th-century-C.E. and later Masoretic mss, as the various scrolls and fragments of psalms among the Dead Sea Scrolls would suggest. If one took Philo or others as witness to the canon there might be doubt as to how far it extended at the turn of the era beyond the Pentateuch (Barthélemy 1984: 10–14); but if one took the Qumran library or the NT as witness in the same time frame one might wonder if indeed the number of books considered functionally canonical were not still indefinite (Barthélemy 1984: 15–19).

The long encomium to famous men in Ben Sirach 44–49 indicates that the author of Ecclesiasticus knew the Law and the Prophets as we have them, even the title "The Twelve Prophets"; and he seems to cite Mal 3:23. He also apparently knew a good portion of the Writings. He reflects the very old tradition (Amos 6:5) that David was a musician: "In all his works he praised the Holy One Most High with words of glory; with his whole heart he sang (*húmnēse*) and loved Him that made him. He also set singers before the altar …" (Sir 47:8–9). He also knew the old tradition that foreigners wondered at David's songs, proverbs, parables, and interpretations (47:17). But he does not thereby indicate, except by the broadest stretch of will (as some have claimed: Leiman 1976: 29; Beckwith 1985: 73), that Ben Sira knew the Psalter as we have it in medieval Masoretic mss.

2 Maccabees explicitly mentions the covenant with Abraham, Isaac, and Jacob (1:2), as well as traditions about Moses and Solomon (2:4–12), and then deals considerably with the work (1:20–2:15), writings, and commentaries of Nehemiah (2:13); it also reflects on the prior prophecies of Jeremiah (2:1–7). The crucial passage states that Nehemiah founded a library collecting literature dealing with official acts or matters "concerning kings and prophets, as well as concerning David, and correspondence of kings concerning sacred gifts"; that Judas Maccabeus recovered the collection scattered because of the war (168–165 B.C.E.); and that it was still extant in the writer's time (2:13–14). To deny double-duty to the earlier preposition *peri* functioning in the expression *ta tou David* in 2:13, and therefore to understand the neuter plural phrase as "the psalms of David," is unwarranted; 2 Macc 2:13 refers to royal records, probably Samuel and Kings, and quite possibly a Davidic collection of psalms (cf. Beckwith 1985: 150–52). But broad claims about the Psalter and the whole Hagiographa as we know them being already in the shape we have them or already canonical when Judas engaged in his literary restoration (Beckwith 1985: 434–37) cannot be founded on 2 Maccabees.

The stabilized Jewish canon attested to by the end of the 1st century C.E. included 24 books (*4 Esdras* 14:44–46). The textus receptus or early printed editions of Jacob ben Hayyim based on European Hebrew Bible mss of the time (Blau 1902: 141, 144, col. viii) had the following order: the 5 of the Pentateuch; the 8 of the Prophets (Joshua, Judges, Samuel, Kings, Isaiah, Jeremiah, Ezekiel, and the Twelve Minor Prophets); and the 11 of the Writings (Psalms, Proverbs, Job, Song of Solomon, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra-Nehemiah, and Chronicles).

There is a different order in the third section in earlier Tiberian Masoretic mss on which current printed editions (cf. Yeivin 1980: 38, §71) of the Hebrew-Aramaic Bible are based, as we shall see; but the count of 24 remains the same. Josephus (*AgAp* 1.39), Origen (Eusebius, *Hist. eccl.* 2.25), and Jerome (but only in his preface to Samuel and Kings) counted 22 books, the number of the letters of the Hebrew alphabet; and such a tradition may have been fairly widespread at one time. Such a count would be possible if Ruth were included on the same (Greek translation or even Hebrew) scroll with Judges (or with Psalms), and Lamentations with Jeremiah (*JEnc* 1: 142; Leiman 1976: 133–34). On the other hand, in the case of Josephus there may simply have been only 22 books to count as canonical by the beginning of the fourth quarter of the 1st century C.E. (Talmon 1987: 68). It is clear that too much certainty about Josephus' canon has been drawn from *AgAp* 1.37–43 (Leiman 1976: 31–34; but see n. 155!). The tradition in most Jewish communities after the 1st century C.E. was consistently a count of 24 books except in a very few Midrashim (e.g., *Num. Rab.* 18:21) where the Minor Prophets were separately counted to render 35. Ezekiel, Proverbs, the Song of Songs, Ecclesiastes, and Esther were disputed as late as the early 2d century but eventually won full acceptance in the canon. In the opinion of some (Leiman 1976: 119–20; Beckwith 1985: 318–23; and Talmon 1987: 75–79) the five books were already considered canonical and

the passages in rabbinic literature which record the debate assume that they were; the same passages have been read by most others to indicate a genuine debate about their canonical status.

2. Masoretic Text. The order of books beyond 2 Kings has varied to some extent even down to the 20th century as may be noted in the fact that the current student editions of the Hebrew Bible (*BHK* and *BHS*) still place Chronicles at the end of the third division, or Writings, even though the editors claim to use exclusively the Leningradensis ms, the oldest full codex of the Tanak in existence dating to the late 10th/early 11th century, which like its older (though incomplete) mate, Aleppensis (925 B.C.E.), and numerous other mss dating before the 12th century and after, has Chronicles as the first book in that division (see *BHS* xi), as well as a generally different internal order. The third section aside from Chronicles always begins with Psalms and ends with Daniel and Ezra-Nehemiah, no matter whether Chronicles was placed first before Psalms or last after Ezra-Nehemiah.

It is probable that the sequence Genesis through 2 Kings was stabilized in content and order probably by the middle of the 6th century B.C.E. (Freedman *IDBSup*, 131–32), certainly by the middle of the 5th when the Pentateuch or first five books in that sequence was recognized by "all the people as one person," that is, by the whole community, as the "Book of the Torah of Moses" (Neh 8:1) or "The Torah" (Neh 8:2) in what was undoubtedly quite an elaborate ceremony in the Water Gate Square in Jerusalem in the middle (458? B.C.E.) of the 5th century. The Pentateuch (and not the Hexateuch or even Octateuch—that is, Genesis to Deuteronomy and not Genesis to Joshua or even Kings) became the Torah for Judaism for all time because of the triumph of the book of Deuteronomy and the school of thinkers, writers, and editors which its triumph spawned in the exilic 6th-century period (the Deuteronomists and others; Sanders 1972: 9–20). The Torah which was read that day in Jerusalem had been brought there by Ezra from the large exilic community in Persian-occupied Babylonia. But the sequel Genesis to Kings, no matter that Ezra's Judaism needed to break it into two liturgical divisions (called Torah and Early Prophets), was undoubtedly a stabilized written (hi)story fairly much as we now have it in the Tanak by the middle of the 6th century B.C.E. Since that sequence of books, in contrast to all that follows in the Jewish canon, is clearly a story line beginning with creation and ending with the Babylonian destruction of Jerusalem and the exile, the order of the books Genesis to Kings was secured early on even when the text was written on scrolls, well before the invention of the codex in the 1st centuries C.E. Beginning with the Latter Prophets or the Books of the Three, there has been considerable variation. "The order of the Books in the Torah and the Former Prophets has been established from earliest times; however the order of the books in the Latter Prophets and the Writings is not fixed" (Yeivin 1980: 38).

The two great Tiberian mss, Leningradensis and Aleppensis (A), dating to the early 10th and 11th centuries, where A is extant agree on the following order after Kings: Isaiah, Jeremiah, Ezekiel, and the Twelve Minor Prophets (the order indicated already in Sirach 48:22 and 49:6–8); Chronicles, Psalms, Job, Proverbs, Ruth, Song of Songs, Ecclesiastes, Lamentations, Esther, Daniel, Ezra-Nehemiah. By contrast, a Baraita in the Talmud (*B. Bat.* 14b), which at the earliest dates to the 2d century C.E., and a number of mss later than the Tiberian (Blau 1902: 143–44) agree on the order: Jeremiah, Ezekiel, Isaiah, and the Twelve; Ruth, Psalms, Job, Proverbs, Ecclesiastes, Song of Songs, Lamentations, Daniel, Esther, Ezra-Nehemiah, Chronicles.

Even the practice of grouping the Five Scrolls together (Megilloth—Ruth, Song of Songs, Ecclesiastes, Lamentations, Esther) was sometimes abandoned in favor of placing Ruth at the beginning of the Writings. The order of the Five Scrolls varies considerably in the various manuscripts with no apparent pattern evident. With the advent of printing, early editions of the Jewish Bible placed the five in the calendar order of the four feasts and one fast at which each was read: The Song of Songs (Passover), Ruth (Weeks), Lamentations (9th of Ab), Ecclesiastes (Tabernacles), and Esther (Purim) (see *JEnc*, 144 and *IDB* 1: 509); but apparently no medieval mss so ordered them.

Clearly one has to be cautious in constructing theories about "the shape" of the Jewish canon beyond the very secure (hi)story line beginning with the Torah and ending in 2 Kings, and the fact that the books of the three Major Prophets and the Twelve Minor Prophets always followed the record of that (hi)story; but even the order of these within the two categories may have been due as much to lengths of the books as to

chronological order or any other factor (*JEnc*, 143; Metzger 1987: 295–300; see the convenient lists in Beckwith 1985: 450–64.)

3. Jabneh. In the past century, since the work of Graetz (1886: 281–98) but especially Buhl (1892: 24), it has been commonplace to refer to the gathering of rabbis at the Palestinian coastal town of Jabneh (Jamnia in Greek) as an authoritative council at which the canonization of the Tanak was completed. For some six decades in the first part of the current century a sort of formula was passed from one student generation to another: the Pentateuch was canonized by 400 B.C.E., the Prophets by 200 B.C.E., and the Writings at Jamnia by about 90 C.E. (Pfeiffer 1948: 64; *IDB* 1: 501–14; Jepsen 1959: 114). The discovery of the Dead Sea Scrolls, both the Qumran literature and other scrolls and fragments from other caves in the area, changed all that.

A pivotal study published in 1964 by J. P. Lewis exposed the misunderstandings and misreadings by Graetz and others of the rabbinic evidence concerning Jabneh. Lewis investigated each passage and came to the conclusion that while there was a gathering at Jabneh it did not function as an authoritative council, in the later sense of the great church councils, which somehow for all time closed the canon. Lewis' work has gained wide acceptance even though it has been used to argue otherwise opposing points of view (Sanders 1987: 9–39; Freedman *IDBSup*, 135; Leiman 1976: 120–24; Barthélemy 1984: 9–45; Beckwith 1985: 276–77; Talmon 1987: 71). For some (Sanders, Barthélemy, Talmon) it means that factors other than conciliar or official decisions must be sought in the sociopolitical realm; for others (Leiman, Beckwith) it has meant that the canon was officially closed up to two centuries earlier and that discussions reported concerning what "soiled the hands" by the end of the 1st century C.E. were about books already canonized.

4. Septuagint. The so-called Septuagint (LXX) presents quite a different picture of the shape of the OT canon. Greek translations of the Jewish Bible seem to have begun in the 3d century B.C.E., first apparently the Torah and then the other books, and some of the others seem to have been in existence by the time of the translation of Ben Sira into Greek (see above). Most Greek First (or Old) Testament mss and most available early lists (see Swete 1902: 201–10) indicate that the (hi)story sequence Genesis through Chronicles was fairly constant. There is little to suggest in the LXX mss or early church lists that the Pentateuch (Torah) was thought of as a separate entity; it was primarily (hi)story in the same sense as the books that followed. Ruth often followed Judges and preceded the four books of Kingdoms (i.e., 1–2 Samuel plus 1–2 Kings), which were immediately then followed by the revisionist (hi)story of all that had been recounted up to that point, supplied by Chronicles (*Paraleipomena*).

In fact, there is no tripartite division in the Greek First Testament, as in the later Hebrew-Aramaic mss and lists noted above, suggesting that such a division after the Pentateuch was either not yet known, or more likely, not of full canonical status by the time of the Roman destruction of Jerusalem and the break of Christianity from Judaism. The further fact that after Chronicles the order of books in the LXX varied widely and without a clear pattern would also indicate that by the time of that break the full canonical process was not yet complete—unless some convincing polemical reasons could be advanced for the varying orders, or for the fact that libertarian variance took place at all; and none has been advanced. All the Greek OT mss were preserved by the churches (Kraft 1978: 225) and might possibly reflect an undetected polemic of order of books. All the principal Greek OT mss were in codex form and hence relatively (though not absolutely) stable in terms of order of books within the mss (Beckwith 1985: 194).

The Twelve Minor Prophets in Hebrew mss were always copied on one scroll; the order of them was fairly stable, usually beginning with Hosea and ending with Malachi in the order found in modern translations. But Greek OT translations and lists show variance within the Twelve; Codices B (Vaticanus) and A (Alexandrinus), e.g., both put Amos and Micah after Hosea before Joel; and the order Hosea, Amos, Joel, Obadiah, Jonah, Micah, Nahum, etc. is also found (Swete 1902: 202); beginning with Nahum the order seems quite stable through to Malachi.

The three Major Prophets with Daniel may appear after the Twelve (B and A) or before them (Sinaiticus); or they may be separated by the Twelve with Daniel and Ezekiel following the Minor Prophets (Melito's list). The (hi)storical books beginning with Genesis may go through *4 Maccabees*

(Sinaiticus) before the Prophets, or Maccabees may be put last (Origen). Other such observations could be made, but all would support the view that there was no Alexandrian canon in the sense that the term normally conveys with regard to shape or structure (Sundberg 1964; Freedman *IDBSup*, 135).

5. Dead Sea Scrolls. The so-called Dead Sea Scrolls, discovered between 1947 and 1961 (with perhaps others yet to come in), include the scrolls and tens of thousands of fragments of scrolls found in the eleven caves just N of the Wadi Qumran at the NW end of the Dead Sea, as well as others found in Judean desert caves (Murraba‹at, Ḥever, Ṣe›elim, Mishmar) containing literature dating between the two Jewish Revolts (70 to 135 C.E.), in the Palace/Fortress at Masada (68–73), and in caves in the Wadi ed-Daliyeh SE of Nablus (4th century B.C.E.; see Sanders 1973b and Wise 1986a; 1986b). Their discovery has caused a review of nearly every aspect of biblical study including that of questions relating to the canons of Judaism and Christianity and denominations and groups within them. All of the literature emanating from the Qumran caves (except for the few found in caves 3 and 7, and maybe 6) seems to have originally been part of a denominational, theological library belonging to a single Jewish group which treasured them in the period between its founding in the middle of the 2d century B.C.E. until its disintegration and dispersion at the hands of Roman troops in the spring of 68 C.E.

All of the discoveries from all of the areas noted date from before the development of codices; all of it, with the very few exceptions of writing on ostraca and wood, was found or was originally in scroll form whether written on leather or papyrus, and in one case on copper (Cave 3). This makes the question of the shape of the canon at Qumran, even indeed in Judaism during the time of the writing, copying, and reading of the scrolls, difficult to discern; this is the reason, as noted above, that opinions about the shape of the Jewish canon precisely during the period of the scrolls still vary considerably.

Every book of the Jewish Bible with the single exception of Esther has been identified among the scrolls and fragments from the eleven Qumran caves. Some 30 copies of a Psalter or Psalters have been identified, about 25 copies of Deuteronomy, 20 of Isaiah, 15 of Genesis, 15 of Exodus, 8 of Leviticus, 6 of Numbers, 8 of the Minor Prophets, 8 of Daniel, 8 of Numbers, 6 of Ezekiel, 5 of Job, 4 of Samuels, 4 of Jeremiah, 4 of Ruth, 4 of Song of Songs, 4 of Lamentations, 3 of Judges, 3 of Kings, 2 of Joshua, 2 of Proverbs, 2 of Qohelet, and a single fragment each surviving of Ezra-Nehemiah and of Chronicles (cf. Barthélemy 1984: 15).

Caution is in order. One might be tempted to suggest that even the Pentateuch was out of shape at Qumran because of the great popularity, apparently, of Genesis, Exodus, and Deuteronomy, but fewer examples of Leviticus and Numbers. We simply do not know if we have everything they had in their library, probably indeed not. The great interest in laws of holiness and purity evident in their own denominational literature would indicate considerable interest in Leviticus. The complete lack of a representative fragment of Esther may or may not be significant with regard to whether that book was included in the Qumran biblical canon, or yet at the time in the general Jewish canon; even the fact that it was one of the five books disputed after the fall of Jerusalem in 70 may or may not be emphasized now by the lack of Esther at Qumran. Failure to find evidence of the presence of Psalm 110 in any of the many Psalter copies represented is mitigated by the fact that the figure of Melchizedech, important in Psalm 110, was prominent in the angelology of Qumran thinking; yet, Psalm 110 is not needed to deem Melchizedech a canonical figure since he is prominent also in Genesis 14 (cf. Hebrews 6–7). Psalm 111 is also lacking representation.

More interesting is the shape, or perhaps lack of it, of the Psalter at Qumran. Even though there were apparently more copies (30) of the Psalter at Qumran than of any other book, 35 of the 150 psalms in the Masoretic canon are lacking even on fragments (Sanders 1967: 143–49); and there seems to be no pattern to the lack. There is no block of Masoretic psalms missing (Sanders 1967: 146–48). Even more striking is the fact that the longest, most continuous scroll of Psalms, 11QPs^{a}, contains not only 41 psalms known from the Masoretic (familiar) Psalter, but also contains 8 compositions heretofore either unknown (4) or known in Greek and/or Syriac translations (4). The scroll is about 4.75 m (almost 15.5 ft) long, containing 33 columns, with the order of at least 46 of the 48 compositions contained in the extant leather beyond doubt. This makes the Cave 11 Psalms Scroll one of the longest and best preserved of all the Qumran

Scrolls; even though the bottom third of each column is lacking (due to decomposition over the 1900 years in the cave), careful measurement of the lacunae indicates the order and sequence of psalms on the scroll is certain except for the precise placement of one of the fragments of the scroll (fragment E), and even that is virtually certain.

11QPs^{b}, though surviving in only six fragments, appears to be a copy of the same Psalter; it includes one of the non-Masoretic psalms also in 11QPs^{a} and has the same non-Masoretic order as the latter of the traditional psalms preserved in it. 4QPs^{f} includes another of the non-Masoretic psalms also in 11QPs^{a}, though not the same, and has Masoretic psalms as well. 4QPs^{b}, 11QPs^{g}, and 11QPsAp^{a} also exhibit evidence that the Psalter as we know it was not yet stabilized or that the folk at Qumran had not endorsed it for themselves (Talmon 1987: 73). It is clear that the folk at Qumran knew and used many non-Masoretic psalms of the biblical type (4Q380 and 381 in Schuller 1986: 61–265) as well as others familiar to us now only from Qumran such as the Hodayot (4QH) and the Songs of the Sabbath Sacrifice (4Q400–407 and 11QShirShabb in Newsom 1985: 85–387). It is difficult to know how "canonical" these latter were considered by the folk at Qumran, but they figure in discussions of canon only in a broad sense of what was available to a Jewish denomination in the time before the stabilization of the Masoretic is certain. Those collections, however, like 11QPs^{a} and the others noted above, do indeed enter into consideration of stabilization of the proto-MT Psalter. Either they are viewed as evidence of the last stages before stabilization (Sanders 1967: 9–21; 1968: 284–98 [esp. n. 10]; 1973a: 134–48; 1974: 79–99; Meyer 1968: 213–19; Wilson 1985; Wise 1986a: 143–48; Barton 1986: 86), or they are viewed as liturgical collections drawn from an already canonized Psalter with noncanonical compositions mixed in for specific liturgical purposes (Goshen-Gottstein 1966: 22–23; Talmon 1966; Skehan 1973) which are as yet unclear. "The Psalter provides us a sort of revealing microcosm of the fluidity existing on the frontiers of what books were sacred at certain times and for certain members of the community at Qumran" (Barthélemy 1984: 19). Psalters of up to 200 psalms are reported as late as the middle ages (Sanders 1967: 157–58; 1968: 294).

Just as the Psalter at Qumran seems not yet to have been stabilized in terms of content and order, so also the third section of the canon, the Writings, would appear to have been still open, parallel to the witness of the LXX. The Qumran library contained much in the original languages of what are called apocrypha and pseudepigrapha (Sanders 1973a; fc.; Fitzmyer 1977) as well as literary works heretofore unknown. It is simply not possible to be sure how many of these were considered canonical in function in the thinking of the Qumran faithful. Superficial criteria such as care in copying, mode of format in terms of column width and length, practice of using paleo-Hebrew script, whether or not a pesher-type commentary was written only on what was there considered canonical, or any other such, are not determinative. In eastern Christian churches the lengths of canons vary still, up to 81 books in the Ethiopian Orthodox canon (Cowley 1974: 318–23; Kealy 1979: 13–26; Sanders 1984a: 12; cf. Beckwith 1985: 478–505).

6. Sociopolitical Factors and Community Needs. One point on which there is clarity and general agreement is that the gathering of rabbis at the Palestinian coastal town of Jabneh (Jamnia) after the fall of Jerusalem up to about 90 C.E. cannot be considered a canonizing council (Lewis 1964: 125–32; Sanders 1987: 13; Leiman 1976: 120–24; Beckwith 1985: 4–7). The significance of that general conviction, however, varies. For the most part it is taken to mean that such conciliar bodies simply did not exist in early Judaism and that to understand Jamnia as such is a reading back of the hierarchical authority of later church councils. The canonical process was more realistically one of bodies of literature passing the tests of time and space in terms of their value for many scattered believing communities. Canonicity was recognized by communities of faith with common identity as having in effect already taken place because of sociopolitical factors and community needs (Sandmel 1966: 207; Sanders 1987: 125–51; 1984a: 1–20; Barthélemy 1984: 30–37; Talmon 1987: 67–72) and not because of deliberate or conciliar decisions; councils for the most part only ratify what has already happened among the people. But it has also been taken more radically to mean that canonization of the Writings had already taken place either *de facto* (Leiman) or *de jure* (Beckwith) by the 2d century B.C.E., and that variance from that canon, whether in the Dead Sea Scrolls or the LXX, should be taken as benign aberration. It is more likely that surviving

Pharisaic-rabbinic Judaism after 70 C.E. trimmed the lush growth of apocalyptic and other literature (Freedman *IDBSup*, 135; Kaestli 1984: 71–102), which had become erratically diverse and in danger of abandoning Judaism's basic monotheizing faith. A part of that lush growth, from the standpoint of Pharisaic-rabbinic Judaism, may have been early Christian literature and practice. Clear evidence for a date earlier than the end of the 1st century C.E. is at best weak and unconvincing (cf. Talmon 1987: 74–79).

7. Stabilization of Text and Canon. Parallel to stabilization of canon was stabilization of the text of books after the Pentateuch. The Torah, whether in text or versions, exhibits remarkable stability in all the witnesses available. Even the some six thousand variants in the Samaritan Pentateuch are, except for a few, largely minor and fall within a range of relative stability. While the actual books of the prophetic corpus may well have been set in an early form about the same time the Torah was being edited, or even perhaps earlier (Freedman 1962: 250–65), the stabilization of the text of the prophetic corpus has been convincingly described as having taken place during the 1st centuries B.C.E. and C.E. (Greenberg 1956: 157–67; *QHBT*, 1–41, 321–400; Barthélemy *IDBSup*, 878–84; Albrektson 1978: 49–65). The variance of texts in the prophets has been understood both as exhibiting distinct families of text types (*QHBT*, 177–95, 306–20; Ulrich 1978) and as simply indicating textual fluidity and variety (Goshen-Gottstein 1965: 17; Sanders 1987: 125–51; Talmon 1987: 45–79; Tov 1988: 28–37) up to what apparently was full stabilization of the text by the middle of the fourth quarter of the 1st century C.E., as witnessed by the proto-Masoretic texts from the Judean desert sites other than Qumran and by the more literal translations into Greek at the end of the 1st century C.E. Stabilization of the Writings in the proto-Masoretic tradition seems to have been complete by the end of the 1st century C.E. (Barthélemy *IDBSup*, 878–84; Tov 1982: 19–27; 1986: 181–85).

C. Internal Shape of Canon

1. Canon as Context. Recent discussions about the shape of the canon have moved beyond issues of fluidity and stability of text and canon to observations about how the shape of a canon provides a context in which to read the individual contributions contained in it. The juxtaposition in the order, where stable, of those contributions, whether sources within a book or the books interrelating among themselves, can influence how each is read. Context influences understanding of text. Canon in this sense is the primary and most authoritative context in which to read the various parts of it (Childs 1978; *IOTS*). There are other contexts in which it is read and these are important as well: these include the community of faith and cultic setting in which a text was and is read, as well as the historical and sociopolitical situation or setting in which a text is composed and in which it is later read and reread; equally important is the hermeneutical context in which a text is heard or read. Whenever a text is read three factors must be kept in mind: the text itself; the sociopolitical situation in which it arose and in which it is read; and the hermeneutics by which it is caused to function when repeated/recited (Sanders 1984a: 77–78). The internal shape of canon focuses on the literary and intertextual chemistry, as it were, of texts in their relation to other texts which had arisen out of different original contexts but are now, in canon, compressed into a canonical-literary whole.

One might contrast the Koran to the Bible. The Koran is the record, supposedly, of a direct revelation of God to a human and to humans; the Bible is the record of human responses to God's revelations. The Bible comes from many different human hands over a 1500-year period of formation from the Bronze Age to the Roman Period. Most of recent biblical criticism has attempted to discern the provenance and source of each literary unit in it as well as the messages of each unit as originally intended. This is in effect a deconstructionist exercise; the original parts are unraveled and examined each in its own right, and only subsequently in the immediate context of the larger literary unit or book to which it belongs. But the Bible is a text in itself. It all hangs together in a larger literary context so that each of the discernible units small and large, including books, may take on new hues and connotations within the whole. Sometimes this resignification of texts may be attributed to an editor, or redactor, who may or may not have altered the sources used to integrate them into a new discernible literary unit; but sometimes it is due to the intertextuality of canonical context (*IOTS*, 46–83).

2. Canon and One God. The (hi)story which begins in Genesis and ends in 2 Kings is made up of a number of ancient sources which are woven together to recount a rather remarkable story focused on the purposes, will, and acts of One God, Creator of heaven and earth and all that in them is. The views in the smaller units of who and what God was or is vary considerably, but they are all woven together in such a way as to present a monotheizing view of the One God who is made up quite clearly of various communities' views of numerous local, tutelary, high, earthly, and heavenly deities, gods, and goddesses, exhibiting their various characteristics and activities (e.g., Gen 6:1–4; Deut 32:8; Hos 2:10—Eng 2:8; etc.). The result is that the God who emerges in the resultant (hi)story is both a high god and a local deity, both a moving and a stationary god, both male and female (e.g., Gen 1:26–28; Jer 31:32), both national and international: creator, sustainer-nurturer, judge, and redeemer. The various surviving names of God in the text become epithets or occasional names; there is a tradition that God has seventy names.

3. Canon and (Hi)story. Beginning with Genesis 12 the story begins to focus on one family, the progenitors of which were Abraham and Sarah. Modern critical study has shown that the stories of the patriarchs and matriarchs in Genesis stem from various ancient sources, but in the Genesis text they are presented as succeeding generations of the Abraham-Sarah family promised in Genesis 12 and 15. Exodus tells of a slave rebellion organized and led by a person named Moses, heir of the same family; in fact the slaves though diverse in background are presented as descendants in the same family. The story as woven incorporates a long stop at the foot of Mt. Sinai and a trek of 40 years in the Sinai desert with efforts to enter the Promised Land of Canaan thwarted until the escaped slaves find themselves on the E bank of the Jordan in the plains of Moab listening to a very long speech by Moses just before his death (most of the Book of Deuteronomy). The (hi)story continues on into the book of Joshua with the settlement in the land, the book of Judges and the Philistine threats to the whole venture, the establishment of a monarchy in Samuel under Saul and David, and then the greatest rise and fall in the Bible of earthly success followed by the split of Solomon's kingdom and the total demise of the Hebrew monarchy at the end of the Book of Kings. The Abraham-Sarah family finds itself at the end of the (hi)story in destitution. That which had started with great promises which indeed were fulfilled in the glorious climax of the reigns of David and Solomon (2 Samuel 5 to 1 Kings 10) ends ignominiously. How so?

The only answer to that question lies in the full canonical text, and that fact was recognized in every shape of the canon noted above. It is still recognizable today but only if all the sources woven together are read as the text is inherited. Scholarship has discerned and tried to name some of the sources which are woven together to make the story: a Jahwist source (J) which was basically southern or Judean; an Elohist source (E) which was northern or Ephraimitic; the book of Deuteronomy (D) and a school of editors and writers which the book spawned, called Deuteronomist (Dtr); perhaps a source or perhaps only editors who seem to have a priestly perspective (P); records from the courts of both N and S; and various other minor sources. Efforts have been made to extricate some of the sources by unraveling the woven canonical text to discern earlier views of the (hi)story (such as Coote and Ord 1988); and they are viable efforts insofar as reconstruction of the sources, or even perhaps the actual history, is concerned. But none of them alone can answer the above question, only the full text as finally shaped.

The answer to the question of the apparent failure lies first in the affirmations found several times but especially in some of the great hymns, such as the Songs of the Sea (Exod 15:1–7), of Moses (Deut 32:39), and of Hannah (1 Sam 2:6–7): that God is the God of the risings and the fallings of the powerful as well as the God of death and of life, of victory and defeat (the same theme is at the heart of the Song of Mary [Luke 1:46–55] in which Luke situates the failure of Jesus as a political messiah). The fulfillment of the promises as well as the demise of the two kingdoms is set in the larger theocentric and monotheizing perspective which no one source alone can provide, not even the most monotheizing book of the Bible, Deuteronomy. The God who emerges from the whole can no longer be identified with any one deity of any of the sources but is the God of all life's experiences, what humans would call good as well as what they would call bad—such as defeats and failings. In the same manner the story that emerges cannot be found in any one of the sources alone. Just as the genre called gospel arose at a later time to explain the apparent failure of the ministry of a wisdom/prophetic teacher from the Galilee in a theocentric

monotheizing mode, so the (hi)story which begins in Genesis and moves on through Kings had no exact parallel. And it is difficult to identify one grand, final redactor who did it all because some of the most primitive materials in the story adumbrate the message of the story as a whole. The answer lies in the whole and not in the parts, not even in the intentionality of one final genius, some supposed final redactor.

The answer may be put in the following way: (a) it is not God who let us down in the defeats; (b) it is we by our sins who had let God down in disobedience and polytheistic rebellion; (c) God had in fact sent prophets early and betimes to tell us that is the way it is in the divine economy; (d) but if in destitution we take it to heart that God meant what Moses and the prophets had been saying, then God will be more than pleased to restore Israel, even though in a transformed state if need be.

4. Torah and Prophets. These four points are not stated as such in any one passage in the story (Brueggeman and Wolff 1982: 101–41); they emerge from the whole. The tripartite Jewish canon is shaped in such a way that these four points are celebrated over and over again. After the story is told and the defeat is underscored by the ignominy of the one surviving king of the Davidic dynasty living under house arrest in Babylon (2 Kgs 25: 27–30), then 15 case histories are presented in the Latter Prophets to illustrate the points made: Isaiah, Jeremiah, Ezekiel, Hosea, etc. (i.e., the Books of the Three Prophets plus the Book of the Twelve), which follow the Genesis-to-Kings (hi)story. Israel had indeed been warned often and betimes, and well before it all happened. But even these 15 prophetic messages had been well anticipated by the messages of the prophets who showed up from time to time in the (hi)story itself: Samuel, Nathan, Ahijah, Elijah, Elisha, Micaiah ben Imlah, and others in the Former Prophets (Judges to Kings) anticipated by Samuel's mother's hymn (1 Sam 2:1–10).

Most of the 15 speak both of God's being God of risings and God of fallings, fallings and risings. Most of them end with the fourth point of the answer stressed: God can and will effect restoration if Israel accepts divine discipline, the purging and the cleansing (Sanders 1955: 101–4, 117–19), even the open-heart surgery to be effected by God in the adversity (Hos 5:15–6:1; Jer 30:17; 31:31–34; Ezek 36:26–27). This had been anticipated already in Torah: whereas Jeremiah early in his ministry, and indeed an early level of Deuteronomy, exhorted the people to circumcise their hearts (Jer 4:4; Deut 10:16), Deuteronomy finally says that if the people do indeed in destitution take the whole lesson to heart, God himself will do the circumcising (Deut 30:6) even though the people had failed to do so. Suffering was understood both as God's punishment for sins and as God's restorative and re-creating activity (Sanders 1972: 73–90).

The prophets also make the point time and again that God is the God of the risings and fallings of other peoples as well as of Israel. This is explicitly stated in Amos 9:7, but it is underscored in the so-called oracles against the nations contained in most of the prophetic books. Nahum and Obadiah cannot finally be read in isolation from the rest of the corpus, but should be read on the contrary as oracles against foreign nations in the same sense as the collections of such in the other prophetic books. No one book, especially of the Twelve Minor Prophets, tells the whole story; each must be read in the light of the whole. Amos' great sermon at Bethel (Amos 1:3–3:2) as received in the Amos text starts with oracles against Israel's neighbors and ends with similar indictments and sentences against Judah and Israel, as well as a theological defense of God's being Israel's judge (Amos 2:9–3:2) as well as judge of all God's creation (Amos 9:2–6). None of the points Amos makes, when the book is read in its canonical order (even given the slight variations in order in the Minor Prophets), are a surprise since they have already been made in numerous ways in the basic Torah story. Nahum and Jonah speak in solid canonical cadences of God as both judge and redeemer of Nineveh, the capital of one of Israel's worst enemies. Each can and should be read for itself in terms of the needs of the community doing the reading; but theologically they are complementary.

5. One God and (Hi)story. The Bible comes from differing sources over a 1500-year period ranging from the Bronze Age to the Hellenistic-Roman. This is surely the case with the Christian Bible as a whole, but it is also the case with the LXX and arguably the case with the Jewish Hebrew/Aramaic Bible. It is written in the mores and idioms of the five culture eras of those 1500 years. While it is not strictly speaking a monotheistic literature, the Bible is a monotheizing literature in the sense of exhibiting in all the periods of its formation a struggle against the various forms and expressions, mores and idioms, of the

polytheisms of those times. One of the reasons the canonical shapes of the canons, Jewish and Christian, which eventuate from the canonical process are important is that it is only from the whole that we learn how to read the parts. It is important never to absolutize the primary religious language of any of the texts it contains, especially those which exhibit pretty clearly early tribalistic views of the deities (Exod 4:24–26; 1 Sam 15:2–3) in the divine compression called God.

That which the great hymns call the risings and fallings of empires and mighty people, over which God is Lord of history, may also be called "powerflows." For most of Israel's early history Egypt had hegemony over the Palestinian area and the peoples that inhabited it, especially Israel and Judah. Then, about the middle of the 8th century B.C.E., Egypt's power waned while Assyria's waxed in the area. Toward the end of the 7th century, while Egypt tried to reassert hegemony, it was Babylonia which gained the day and remained so until the middle of the 6th century when Persia dominated the whole area, even some of the Greek cities. Persia then had hegemony over the whole area until Alexander the Great came out of Macedonia and conquered the known world. The Greek conquest of the Semitic and non-Semitic worlds of the East created a phenomenon called Hellenism which came to influence Judaism as profoundly as any culture in all its history. Rome then began to assert itself and became the dominant power in Jerusalem from 63 B.C.E. for centuries to come.

The biblical assertion that the one true God is the Lord of history takes on poignant significance when seen in the light of such an overview. All of those cultures contributed to an understanding of the one God (Mendenhall 1973: 198–214) and contributed to attempts to verbalize that understanding through the mores and idioms of those cultures. Such pluralism within a canon provides a self-corrective apparatus within its bounds; no one group of idioms should be absolutized over another. Recognition of this canonical given, or gift, would deter the pervasive tendency to locate a canon within the canon and then to abuse the rest by insisting that it all agrees with the parts chosen. This is one reason it is very important not to decanonize the NT by focusing only on a synchronic understanding of its literature within the Hellenistic culture only. Such a canonical overview of the Bible's shape is also important in understanding its assertions that God is the God of death and life, the risings and the fallings of empires. No government lasts so long, not even the eventual Roman empire, as to escape the observation that the God of the canon is not stumped by the failings nor particularly impressed by the successes.

Judaism as we know it arose (Ezekiel 37) out of the failure of the two kingdoms, and it still exists 2600 years later. And it does so in great measure because of the theological history that is related in Genesis to Kings. The great prophets whose ministries are described in the 15 books of the corpus called Latter Prophets lived, beginning with Amos, when the "powerflows" in the ANE had their greatest effect on the Abraham-Sarah folk. When Persia then became dominant over two centuries later, prophecy reached its zenith with the Isaiah of the exile (Isaiah 40–55) and was believed to have ceased completely with the introduction of the Torah to Jerusalem which Ezra brought back with him from Babylonia (Nehemiah 8) where it had been edited into the short version of the story we call the Pentateuch. It was because of the now-firm belief that God is God in fallings as well as risings, and can wrest life out of death (Deut 32:39), that the story of the settlement in the land of Canaan could be left out of the Pentateuch. One could be an observant, believing Jew without having to live in Palestine, as much a hope as that would always remain (Sanders 1972: 1–53). The function of canon, as we shall see, is to provide ever-new generations with identity (faith) and direction for life (obedience). Hence the practice arose very early in Judaism of reading the Torah in annual (rarely triennial) cycles so that the people could identify with the Abraham-Sarah call and venture. One could indeed continue to live in Babylonia (the largest Jewish community in the world until the Middle Ages, and the community which gave Judaism its official Talmud) and still be a faithful Jew.

6. One God and Hagiographa. The Jewish canon does not end, as does the Christian First Testament, with the prophetic corpus. On the contrary, there is still the third section, the Hagiographa. In the majority of the best Tiberian and Spanish mss, this section begins with Chronicles, a revisionist history of the whole story focusing on the Temple and Temple worship of God, with emphasis on David and Solomon, and with a retelling of many episodes giving hope that one can indeed be obedient. The Genesis to Kings

(hi)story had as its major burden its explanation of the failures and defeats and hence gives a fairly pessimistic picture of human efforts at monotheizing obedience and loyalty to God. Chronicles has a quite different perspective on human capacity to obey. Some of the realism of Samuel and Kings is retuned to give hope that Jews, wherever they might be, hopefully in and around Jerusalem, could please God. A Jew is called to the service of God and Judaism is the expression of that service (Neusner 1984: 90–98). The center and heart of Judaism is *ʿabôdāh,* "service" in both senses: worship and obedience. Many Jews, precisely the remnant that did not assimilate to a dominant non-Jewish culture in which they lived, must have asked many times how they could live so as to serve and please God. One needs to have hope, first and foremost, that it is possible to live a meaningful, that is, an obedient life.

While Judaism, like that of old Israel and Judah, is community- and covenant-oriented, it also is largely family-oriented and considerably more focused on the individual. Jeremiah and Ezekiel had both prepared the remnant for understanding individual responsibility (Jer 31:29–34; Ezekiel 18) and for the hope it could bring; individuals would not have to bear responsibility any longer for all the old sins of the earlier generations (Isa 40:1–3) despite the realism in the old view (Exod 34:7). Chronicles not only offers hope and some examples of obedience, in its review of the old history, it ends on a note of real hope, the edict of Cyrus, King of Persia, that Jews could return to Jerusalem and rebuild the temple (2 Chr 36:22–23). In many of the best mss the Psalter begins immediately after Chronicles with Psalm 1 on the same column as the happy account of Cyrus' edict: "Happy is the person who walks not in the counsel of the wicked … but whose delight is in the Torah of God on which he meditates day and night" (Ps 1:1–2). Many of the old royal and community psalms in the Masoretic Psalter are resignified in their canonical context into psalms the individual or the family can identify with no matter their original intent or use.

In those same mss the Psalter is followed by Job and Proverbs, then the five scrolls, and finally (hi)story is resumed with Daniel and Ezra-Nehemiah closing the Jewish canon. In such a shaping there is a return to recounting (hi)story and a closing of the ranks to avoid extinction of Judaism by assimilation, but the emphasis is on hope and the opportunity for individuals and families to live obedient lives. It has been suggested that the Writings in their canonical shape, no matter in what order the individual books are found, provided for Judaism a way to live and exist *in stasis* (Morgan 1990), in community, in whatever locale Judaism was practiced. But its steady assumption is belief in One God. Job takes monotheism more seriously perhaps than any other book dealing with undeserved suffering. The 31 chapters of the Book of Proverbs provide all kinds of suggestions for living obedient lives under One God in all the areas which the laws in the Pentateuch perhaps do not touch.

The five scrolls are read during annual feasts and a fast and deal with ways to understand living under One God (even if God is not mentioned, as in the Book of Esther) on the heights as well as in the dark passages of life. Qohelet says it is normal to question how anyone can believe in One God, and it is important to do so. Doubt is an essential part of faith, otherwise it may be only superstition. The Song of Songs celebrates God's gift of *nepeš* or *eros* and resonates both with the first commandment in the Bible, to be fruitful and multiply (Gen 1:22 and 28), and with the *Shemaʿ,* in which is the command to love God with all the *nepeš* or self (Deut 6:5). Daniel looks at the larger picture of fortunes rising and falling and how a Jew who truly believes in One God can tolerate living under oppression and even persecution.

7. Septuagint. The LXX provides a quite different context for everything after the Pentateuch. The theological history expressed in the Jewish canon is considerably resignified by the different number and order of books in LXX manuscripts, but there is a strong sense of (hi)story nonetheless. While it is undoubtedly true that there was no Alexandrian canon as such (Sundberg 1964; *IDBSup,* 136–140), codices of the LXX provide interesting contexts for reading the different books in them. Whereas the tripartite Masoretic canon openly stresses a prophetic understanding and perspective on nations' risings and fallings, especially Israel's, under the aegis of the one true God, and then how surviving Jews can live lives of service and obedience, the LXX mss tend to put the historical books together in the order of 1–4 Kingdoms (Samuel-Kings), Chronicles, Ezra-Nehemiah, Esther (Sinaiticus; cf. Vaticanus and Alexandrinus). Ruth is placed right after Judges, or in some just before it. Tobit, Judith, and 1–4 Maccabees are in nearly all LXX mss and extend the sense of history into the Hellenistic-Roman period.

It, too, is a theological history in a monotheizing mode but the accents are different and history tends to a speculative perspective with accommodation to the messianic and apocalyptic view of the goals of history. Daniel is grouped with the prophets, often after Ezekiel.

The LXX, while originating in Jewish communities where Greek was the principal language and Hebrew and Aramaic were less well known, was ultimately preserved by Christianity (Kraft 1978). The so-called LXX was the Bible of the early church (Sundberg 1964; McDonald fc.) until the formation of the strictly Christian canon which was by the 4th century C.E. made up of the Greek First (or "Old") Testament (of varying content and order after the Pentateuch) and the peculiarly Christian Second (or "New") Testament (of varying content and order—Metzger 1987: 191–250, 295–300). It was not until Jerome devoted 35 years of his life (d. 420 C.E.) to learning and translating Hebrew/Aramaic mss of the First Testament with a rabbi in Bethlehem that the kind of stability represented by mss of the Vulgate entered the picture, and even then not until well after his death. While Jerome did not adopt the content and order of the Jewish canon but kept those of the LXX as he knew it, by translating a clearly proto-Masoretic copy of the text of the Jewish Bible he in large measure brought the Vulgate into closer textual (though not canonical) relation to what we know as the MT, undoubtedly because of the proto-MT biblical mss of his Bethlehem mentor. From the end of the 1st century of our era up to that point the Greek First Testament was a peculiarly Christian tradition and may well reflect Christian interests if not in the actual texts then in the inclusion and order of books after the Pentateuch (Kraft 1978: 207–26). Jerome not only succeeded in regard to the Roman Catholic Church (though not the Eastern churches), his attitude of pursuing the *Hebraica Veritas* of the text was adopted by the 16th-century Reformers in Europe; in fact Protestantism, while keeping a generally LXX sense of the order of books after the Pentateuch, limited the content to that of the Jewish canon, even bracketing the so-called deuterocanonicals or apocrypha in a kind of appendix. As noted above, it was not until the 19th century that any editions of the Protestant Bible were published with only the content, though still not the order, of the Jewish canon in the First Testament.

D. Canon as Function

1. Canon as Process. The other meaning of "canon," *norma normans,* or "collection of authoritative books," with focus on how the canon functions in the believing communities that find their identity in a canon and base programs of obedience on it, has also received attention in recent study (Sanders 1975; 1984a; 1984b; 1987; Knight 1975; Fishbane 1985). This aspect of study of canon does not totally ignore questions of inclusion/exclusion and the juxtaposition of the contents of a canon, but its focus is on early traditioning processes and the role they played in development of the concept of canon and its function in believing communities, and hence may cut across and challenge readings done in canonical context (see C.1.–C.4. above). Canon understood as process valorizes biblical pluralism and intracanonical dialogue.

It has often been observed that the event of discovery of the scroll of Deuteronomy in 621 B.C.E. and its adoption by King Josiah as the authority for his reformation (2 Kings 22–23) was the beginning of the actual canon (Pfeiffer 1948: 50–70; *IDB* 1: 502–7). There is recorded in the Bible itself royal and official activity by Josiah that suggests a recognition of the authority of the scroll by the community in Jerusalem under Josiah's sponsorship (2 Kgs 22:8–16; 23:1–3); the scroll functioned as legitimizing authority for Josiah's reformation and seems to have been adopted as authoritative at least throughout Josiah's reign, but apparently not thereafter as long as the monarchy lasted, which was almost another quarter century (2 Kgs 23:25). After the kingdom of Judah was destroyed (587 B.C.E.) when those in exile (especially in Babylon) began to reflect on what had happened (Sanders 1987: 18–30), Deuteronomy became the cornerstone of the eventual canon (Sanders 1987: 175–91). Its position as the climax of the eventual Torah with its massive emphasis on belief in One God (Lohfink 1963) gave it pride of place in the whole eventual canon with influence backward to Genesis and forward through the rest of the whole canon, whether MT or LXX (Sanders fc.). But the prehistory of canon as function antedates Deuteronomy. Deuteronomy could function as it did for Josiah and the whole community of Judah because there had been authoritative traditions functioning in a similar manner well before it. When the Pentateuch as Torah came into being on the demise of prophecy in the time of Ezra, with Deuteronomy as its capstone, it

functioned as canon (*norma normans*) for Judaism well before canon as an authoritative collection of books came into being (Aicher 1906: 10; Sanders 1972: 1–9).

Canon *as function* antedates canon *as shape.* The function of a written canon has antecedents in the very process by which the concept arose, that is, in the function of authoritative traditions when there was as yet no written literature deemed canonical in the sense of *norma normata,* or shape. One of the results of form-critical study of the First ("Old") Testament has been recognition of the function of early recitals of Israel's early and formative history under God (von Rad *PHOE* 1–78; Wright 1952; Sanders 1972: 1–30; 1975: 75–106; Groves 1987: 7–62). It has long been recognized that most all texts build on earlier texts and traditions. This, too, is properly called intertextuality. We used the term above to refer to how reading a text within an intertextual context such as canon may be different from reading that same text as a totally independent literary unit, as is done in historical, form, and even redaction criticism. But recognition of how a later text "rings in the changes," as it were, on earlier traditions and texts by citing, paraphrasing, alluding to them, or imitating their form, is also intertextuality. In a sense all texts are to some degree intertextual since all new texts in order to be read with understanding presuppose what has gone before in the community's traditions, oral or written. This is recognized as well by others than form critics in the case of the Jewish Bible (Sandmel 1961: 105–22; Fishbane 1985: 91–524).

2. Textual Fluidity. All such observations point to the early function of traditions and texts in nearly all parts and forms of literature within the Bible. One of the most interesting aspects of intrabiblical intertextuality is the fluidity of citation and allusion. Exact quotation is rare such as the verbatim citation of Micah 3:12 in Jer 26:18; attribution is also rare within the Jewish canon (outside the historical books where even so it is not common until Chronicles) such as the mention of Jeremiah's prophecy in Ezra 1:1. But fluid references to earlier traditions abound, and these include reference to the authoritative traditions known from the biblical stories relating the great episodes in the Hexateuch as well as in the Davidic traditions (Sanders 1972: 1–30). When they were alluded to or cited for the most part it was done for the authoritative value in them recognizable by the believing community for which the new speech or text was being composed. They were brought to mind to argue a point. And because a great deal of the Bible in its early forms was oral, fluidity presented a great advantage; the tradition referred to could be shaped to fit the new argument. It did not have to be an exact citation. This situation continues to be the case right on through the literature of Early Judaism, Apocrypha, Pseuepigrapha, Dead Sea Scrolls, even Philo and Josephus, including the Christian Second Testament. It should be clearly understood that the fluidity of citation one sees in all that massive amount of literature is not primarily to be attributed to poor memory, which was not a truly pertinent factor (Balch 1988). Relative fluidity and adaptability were major characteristics of the whole history of formation of the Bible from earliest times through to the stabilization of texts discussed above complete by the end of the 1st century of our era, including citations (Sanders 1987: 9–40; 125–51). Being a written text *and* officially adopted by King Josiah as the foundation of national policy, Deuteronomy began a process of shift from relative fluidity to relative stability that still was not finally complete by the end of the 1st century C.E. (Sanders 1987: 175–91).

3. Adaptability and Stability. Adaptability is a major characteristic of the very concept of canon. Throughout the period of canonical process in antiquity up to stabilization of text and canon, and even to a limited extent beyond it down to today, a canon is marked by its malleability; citations and allusions throughout the literature of Early Judaism including the Second Testament exhibit the relative adaptability of authoritative texts and traditions. Free choice among numerous modern translations of the Bible is an exponent of fluidity of text today. Rewriting of earlier authoritative texts was common, and so was reshaping them a bit to fit the new argument or affirmation of faith. To call a tradition or text "canonical" is to say it will be available for later communities to apply to their new situations. Even when stabilization of text became a major factor, ways were found to get canonical texts to fit later problems, and the need to render the stable adaptable induced hermeneutical regulations to control the exercise (Sanders 1987: 142–51).

But a community's need to adapt what had been accepted as authoritative meant that those texts exhibiting multivalency were appealed to time and again, and thus acquired a special, and eventually a

canonical, status (Talmon 1987: 67–69). Another characteristic of canon, at least in the case of both the Jewish and the Christian, in contrast perhaps to the Koran, is the compression, noted above, of various genres and kinds of literature by many different authors over almost 1500 years. Of necessity that very fact of compression of such diverse literature renders the canon pluralistic to a limited extent. The adaptability of canonical literature may therefore be found in its internal contradictions. When the community later needed the challenge of one portion it was there; when it needed the comfort of another, that too was there. When the community needed to settle and build, when it faced the challenges of peace and political stability, there were portions to call on to validate the activity; when the community faced upheaval and disruption and had once more to be uprooted, there were portions to call on to validate the activity. Multivalency of a single passage, and the pluralism of the whole, meant that accuracy of citation, when that became a necessity in itself after full stabilization, did not curtail the ability of a community to adapt the canonical to new phases of life. Even so, if need be, mixing and matching of passages from different portions of Scripture could yield the adaptability needed. The limited pluralism that is in a canon also provides it with a built-in self-corrective, a sort of prophetic, apparatus. For example, a policy or program might be constructed on certain portions of Scripture; then, when it would need modifying, corrections could also be rooted in Scripture (Sanders 1984b: 341–62).

One of the most interesting observations of community use of canon is the pervasive tendency to deny its pluralism. It is supposedly thought that to be honest about a canon's pluralism would be to deny its authority. God cannot be self-contradictory, it is argued (as though limited human experience and intelligence is capable of judging the fullness of the Integrity of Reality, that is the Oneness of God). Canons, precisely because they are human responses to divine revelation, of necessity reflect the ambiguity of reality. Denial of this point, supposedly out of fear of loss of canonical authority, has sometimes led to the danger of idolatry of the Bible, precisely worshiping what is believed to be a gift of God instead of worshiping God the Giver of all gifts; that tendency in some communities of faith has been called bibliolatry. To deny the Bible's pluralism is to deny its prophetic voice when a challenge to what has been constructed on it might later be needed, its built-in self-corrective apparatus.

4. Canonical Hermeneutics. The mid-term between the fluidity or adaptability of traditions and texts and their stability is hermeneutics (Sanders 1987: 61–73). It is always important to ask *how* the text or tradition was being read in the new situation. Jesus is reported to have asked a contemporary, "What is written in Torah and how do you read it [Luke 10:26]?" What is the pertinent text and by what hermeneutic do you read it? What is the conceptuality lying back of the (newer) text being studied and what is the view of reality at play when the older tradition is being called upon? These are crucial questions, and they need to be asked whenever intertextuality is identified in study of a text (Neusner 1983: 43–51). The prophets often surprised, even shocked their contemporaries by the ways in which they caused a tradition to function (Sanders 1987: 87–105) in their arguments and challenges to their people. Study of controversy passages including the disputations between so-called true and false prophets is very revealing in terms of how hermeneutics can cause a text or tradition to be applied to a new situation in two opposing ways.

a. Challenge. Amos' fluid citation of the basic Torah story in 2:9–11 points to a contrast between the people's current activity and what God had done for them in the Exodus-to-Entrance story; in fact, the contrast is highlighted by the Amos text having God refer first to the divine gift of land (v 9), precisely because Amos' indictment of his contemporaries focused on their maltreatment of the poor and the needy in the land which God had given them (2:6–8). The force of God's "remembering" that (as well as God's lifting their heads out of the dust of the earth [cf. 2:7] of Egypt when they were the poor and needy) is poignant indeed. But when then a hearer apparently intervened contradicting Amos' use of those authoritative traditions, Amos agreed with the main point made, namely that they were the only family on earth God knew in the way he knew Israel, but went on to claim that authoritative tradition as the very base of his argument that God would therefore punish them for their iniquities (3:2). The opponent had assumed that the tradition meant that God was their God and would take care of them no matter what. The difference in hermeneutics is that Amos understands God also to be the Creator God of all peoples (9:2–7)

and hence free to judge Israel as well as others. The same distinction in hermeneutics, or how the so-called true prophets read Israel's common authoritative traditions, can be traced throughout the prophetic corpus: God is both Redeemer of Israel and Creator of all peoples, hence free to express grace to Israel and to others, and free to judge Israel as well as others (Sanders 1987: 87–105).

Hermeneutics make a difference no matter what tradition is being called on, as Isaiah showed in adducing the Davidic royal traditions in a challenging way in his time (Isa 1:21–27; 28:9–22; et passim). What must be kept in mind is that there are three factors always at play in adapting authoritative traditions, hence canon: (1) the text or tradition called on; (2) the sociopolitical and historical situation to which the text is being adapted; and (3) the implicit hermeneutics used to apply the tradition or text. If one denies the importance of any one of the three the very canonical dimension of the exercise may be missed. This is especially the case when the historical provenance of a text, such as the ones just noted in Amos and Isaiah, is bracketed or reduced in importance (*IOTS*, 56–57); to reduce canonical context to its literary aspect only, as important as that is (see C.1. above), is to reduce the very canonical dimension of the text (Sanders 1987: 153–74), and may indeed reduce its relevance or adaptability to later settings by focusing only on the hermeneutic moves on the literary level. The application of the tradition about the call of Abraham and Sarah and God's promise of land, which the people cited to Ezekiel to offer themselves hope upon receipt of the news of the fall of Jerusalem, is refuted by Ezekiel (33:23–29) but affirmed by the prophet of the exile (Isa 51:1–3). Sociopolitical and historical context has to be carefully discerned as to what the needs of the community are in order to choose a text or tradition to apply and then choose the hermeneutics by which to apply it. The ancient and the new sociopolitical contexts have to be exegeted as carefully as does the text (Gottwald 1985: 301–21).

b. Comfort. The pluralism characteristic of the Bible means that we should be cautious in using the terms "true" or "false" with regard to the prophets in the controversy passages or to their theology, for that which is "false" in one historical setting may well be true in another. There is an ancient, anonymous saying to the effect that the same text may afflict the comfortable and also comfort the afflicted. The prophetic corpus as well as the Gospels are full of passages which indicate that the older text or tradition read or cited or alluded to could be understood by the people as comforting but is applied by the prophet or Jesus so as to challenge (Luke 4:16–30; Sanders 1975: 75–106).

The hermeneutic that emerges from study of the implicit hermeneutics in most passages which exhibit such intertextuality is a theocentric monotheizing hermeneutic, that is, the focus is on what the One God of All has done in given human situations and then what God would yet do in another. There are passages, however, in which God's dominion over all creation is not the view of reality underlying the individual text. There are texts in both testaments which seem to present a tribal view of God; these are often the ones called on by communities of faith when out of fear they feel they need to battle an enemy of some sort or need to feel they are right and others wrong. Judaism and Christianity have often called on such texts in time of conflict; and they are there.

The question then arises as to whether it is canonically legitimate to read such passages with a hermeneutic different from the one implicit in the text. Is it canonically fair to superimpose a hermeneutic that seems to emerge from most biblical passages upon those that do not? Is it canonically legitimate to read the parts in the light of the whole? The answer is Yes (see C.1.–C.7. above). Most of the prophets did so; Jesus did so. The hermeneutical move is first to theologize in reading all passages, using a theocentric monotheizing view of reality, and then only thereafter to moralize, or ask what it means for the new situation in which it is being read. To do so would, in a prophetic manner, turn the passage inside-out, as it were, and expose modern tendencies to tribalize God just as the old text seems to do. The next move would then be to ask if the One God of All was instead commanding the enemy to challenge us. Very important in reading any passage is to be conscious of the particular party in it with which we readers are identifying. Nathan in effect told David that he should identify with the rich man in the mirror of the parable he had told, enabling David to judge himself (2 Sam 12:1–14). Jeremiah castigated the slaveholders in his time for reenslaving their slaves after they had freed them, and he did so by preaching on the tradition we know in Genesis about Abraham and the covenant between the pieces of the carcasses

of the sacrificial animals (Gen 15:17–21). Normally the people would, without thinking, use the hermeneutic of God as the covenant God of Israel and hence their God; that is, normally they would identify with Abraham in reading or hearing the tradition. But Jeremiah, on the contrary, said they should identify that time, in that situation (not at all times), with the carcasses cut in two, for that is what would happen to them (Jer 34:17–22). Isaiah agreed with his contemporaries that God had indeed risen as Holy Warrior to assist David in his battles with the Philistines on Mt. Perazim and in the Valley of Gibeon (2 Sam 5:17–25; 1 Chr 14:8–16) and also agreed that God was still Holy Warrior, but in their time (probably 701 B.C.E.) God would instead be at the head of the enemy troops entering Israel (Isa 28:21–22). Jesus agreed that God was sending the messiah to announce good news to the poor and release to captives; but in contrast to the way Isa 61:1–2 was typically understood by his contemporaries (as comfort for their national suffering under Roman oppression), Jesus believed God was free instead to extend grace and comfort to whomever (Luke 4:16–30).

The triumph of the Deuteronomic emphasis on God's being the One God of All, when linked up in the canonical compression of all the Bible with such implicit hermeneutics as seen in the above examples, is also canonical warrant for reading the parts in the light of the whole. This means that the original "intentionality" of individual authors may canonically be overridden in the adaptation of a passage to a new situation. This is in part what is meant by understanding the Bible as canon. It would mean reading the NT not only synchronically in its Hellenistic context, though that is important to do, but also reading it diachronically or canonically in the light of the monotheizing hermeneutic of the canon as a whole.

It does not mean, however, that authorial intentionality is denied altogether. On the contrary, careful exegesis of individual passages is a part of the ongoing canonical process of intrabiblical dialogue; and the one applying a passage may decide that the need of the community for comfort is greater than its need for challenge. Prophetic imagination (Brueggeman 1978) requires that the preacher or teacher doing the adapting ask who, in an increasingly smaller world today, is being threatened when comfort for one's own community is being affirmed. It may indeed be decided that comfort is important, as the Isaiah of the exile knew. One cannot deny the hermeneutics of the so-called false prophets in the preexilic period without denying the very same hermeneutics used by the Babylonian Isaiah (chaps 40–55) when Israel was on the verge of extinction. There is richness in the dialogue between disagreeing colleagues in the same situation, just as there is richness in the pluralism of the canon as a whole.

5. God and "Powerflows." The canon as a whole indicates clearly that God is the God of both the risings and the fallings of life, the victories and the defeats, life and death, the great reversals of which life is made—all the human "powerflows" and all the pluralism of the ambiguity of reality. But in and through it all the Bible as a whole, as canon, celebrates the Oneness of God, that is, the Integrity of Reality. That Integrity is not measurable by any human means (Isa 40:12–26; Job 28). It may not be possible even to comprehend it just as perhaps no one contributor to the whole could understand the full canonical Reality. It may be that only a faith based on these compressed texts as canon can even apprehend it.

God's Oneness or Reality's Integrity is both ontological and ethical. It is a Oneness both in being and in character, and just as there may be no human means of measuring the being so there may be no human means (as the Book of Job seems to say) to affirm, in any one generation, the ethical integrity of God as Reality. A thorough reading of the Bible as canon induces the belief that there is moral fiber to the universe despite all the obvious and evident injustice. God did not just create the world and leave it be. God did not just liberate some slaves from Egyptian bondage and leave them be. God became involved and addressed an assembled community on a mountain, more than once perhaps (Matthew 5–7), with clear suggestions as to how to integrate their own lives with respect to the divine will. God is not only Creator and hence free; God is also Redeemer and hence involved with creation. God made justice the line and righteousness the plummet (Isa 28:17) every bit as much as God made the world in the first place. The Bible as text compressed into canon gives, in multiple and widely varying situations, hermeneutic clues on how to apply those suggestions in ever-new situations as they arise. To call a Bible

a community's canon is to say that it continues to be relevant and adaptable to the needs of that community, and of the world.

E. Canon and Inspiration

The traditional view of the inspiration of Scripture holds that God or God's Holy Spirit inspired the individual writers and contributors to the scriptural canon. This seems to receive support in the believed authorship of Moses, first of the scroll found in the Temple in 621 B.C.E. (even though the account in Kings is not clear on the point [2 Kgs 23:25]), and then of the fully compiled Torah Ezra brought with him from Babylonia to Jerusalem (Neh 8:1). Josephus lends credence to the view in his defense of the source he principally used in writing his first work, *The Jewish War*. In the defense he notes that the authors of his source, the 22 books of Jewish Scripture, were prophets inspired by God (*AgAp* 1.37). In this line of thinking tradition developed the view that all the authors of Scripture lived before the demise of prophecy and hence of such inspiration (Leiman 1976: 128; Talmon 1987: 58–59).

It has been recognized, however, that "inspired" and "canonical" are not synonymous terms (Leiman 1976: 127). On the contrary, many in Judaism and Christianity are said to have been "inspired by God," yet their writings are not in any community's canon (Metzger 1987: 254–57); whether or not these can be called Scripture is disputed (Sundberg, *IDBSup*, 139; cf. Metzger 1987: 30). In any case, the concept of inspiration is a broader one than that of canon. Jewish views of the broad concept of Torah, Roman Catholic doctrine, and even such a traditionist as John Calvin insist on a far broader activity of divine inspiration than only on a canon. Even the most traditional statement in the NT on the matter (2 Tim 3:16; cf. John 11:51) is not exclusivist; in fact, it is ambiguous.

Nonetheless, the view persists in many circles, openly in some conservative Protestant groups but also covertly in some scholarship, that inspiration of Scripture means divine inspiration of the individual contributors in antiquity. The image has been that of God or the divine spirit impacting each individual whose words were then more or less accurately heard, understood, transmitted orally, and/or recorded for posterity. This focus on the ancient individuals is even evident in deconstructionist scholarship that unravels the several contributors to various literary units and books, labeling certain portions of the Bible "primary" (or genuine) and "secondary" (or even spurious). This has unfortunately caused otherwise honest, serious (but conservative) students of Scripture to overlook any number of important data in order to continue to sponsor single-person authorship of certain canonical books.

There is nothing, however, in Jewish or Christian Scripture or even tradition to hinder a different, more realistic view of the inspiration of Scripture, particularly of a canon of a given community of faith. That view (Sanders 1984a: xv–xviii; see Knight 1975: 5–54) has its roots in Scripture and tradition, both Jewish and Christian. Taking up the very traditional view of the work of God or God's Spirit (*Shekinah* in Hebrew) being far broader than on a canon only or only on certain individuals, one can just as faithfully affirm the work of the Spirit all along the path of formation of the Bible, or a canon, as on those individuals whose names happen to be recorded (Simon 1685: "Preface de l'auteur").

The broader pneumatic activity would include the so-called secondary passages as well as the so-called primary ones. It would include the work of editors and redactors and scribes. It would include the pseudepigraphic writings now recognized to pervade both biblical testaments (Pokorny 1984: 496; Metzger 1987: 284–85). It would include recognition of how much ancient Israel and the early church learned from others through international wisdom and of the hermeneutics by which such wisdom was adapted into Israel's and Judaism's monotheizing struggles throughout the history of the formation of the canon. It would include recognition of how the traditioning process through that history included dialogue with the wisdom and thinking of others, and celebration of how the same process continues to the present. It would include the canonical process of repeating, reciting, and recommending to the next generation and to neighboring communities certain texts (Sanders 1987: 160–66), the broad acceptance of which favored these for final incorporation in the community's canon (Talmon 1987: 67–68). It would exclude the untenable effort on the part of a believing community to limit the work of God or of God's Spirit, and would challenge the tendency in some so-called fundamentalist circles toward bibliolatry, which is an abuse of the concept of canon, and is itself a form of idolatry.

Understanding canon as having been guided by the Spirit through all its stages of formation permits it to continue functioning for a believing community as paradigm of how that Reality called "God" impacted the vision and thinking of ancestors in the faith—and how it may continue to do so in the present.

4. The Hermeneutical Value of the Canon

———

A. Introduction

In reference to the NT, the term "canon" calls special attention both to its form, that is, a fixed collection of precisely 27 early Christian documents, and to its function, that is, literature that is normative for the faith and life of the Christian community. Both of these connotations belonged to the Greek word *kanōn:* from its fundamental sense, "a tool for measurement," there arose the extended meanings "list," "catalog" (probably derived from the series of calibrations on a measuring tool), and also "norm," "standard." When the term began in the 4th century to be applied to Christian writings it was with the sense of "list": a document was said to be "in the canon" or "canonical" if it was "on the list" of those writings which were read, or were permitted to be read, in Christian assemblies of worship. The word "canon" had previously been used in Christian as in secular circles also in the sense of "norm" or "standard," and though this was not its initial meaning in reference to Christian writings, it followed close behind, since those writings which were used for liturgical reading were certainly regarded as authoritative.

It is customary in modern discussion and necessary for clarity to observe a distinction between the concepts "scripture" and "canon." "Scripture" signifies writings that are considered religiously authoritative, without regard to their precise number or a fixed collection; "canon," however, is a matter of a definitive, closed list of such writings. Thus the availability of scripture does not imply a canon, but a canon presupposes scripture and delimits its scope. At its inception Christianity inherited from Judaism a rich trove of scripture, including the Law of Moses, the prophetic books, and a great variety of other writings that were authoritative for various groups of Jews, but it did not inherit a canon, for Judaism had not in the 1st century made a list or collection setting limits to its scripture. Christianity, in turn, produced a large body of its own literature (letters, gospels, narratives of apostolic acts, apocalypses, church orders, etc.), much of which became authoritative for various Christian groups, and so came to be regarded as scripture alongside Jewish scripture. But Christianity did not for a long time attempt to create a canon. Not until the end of the 2d century did Christians begin to take an interest in defining the scope of authoritative Jewish writings (Melito, in Eusebius *Hist. Eccl.* 4.26.13–14) and thus begin to think in terms of an "Old Testament" canon, an issue that continued to be debated into the 5th century. And not until the 4th century did Christians begin to draw up lists of authoritative Christian writings and thus attempt to form a "New Testament" canon, the extent of which was not fully agreed even in the 5th century. Hence during most of its first four centuries, the church had scripture, but no set canon.

The designations "Old Testament" and "New Testament" by which the Christian collections of Jewish and Christian scripture came to be known are obviously correlative, implying each other. But originally these phrases had nothing to do with such writings; they referred instead to the covenant (Gk *diathēkē;* Lat *testamentum*) of God, first with Israel, then with the Christian community. Although the "old covenant," by virtue of having a law, could be said to be "written" and "read," the "new covenant" did not have a literary dimension (2 Cor 3:4–18). When in the late 2d century covenant terminology began to be applied to Jewish and Christian scripture (Melito, Clement), the sense was that these were books pertaining to or belonging to the old or the new covenant, not that these books were themselves the covenants.

B. History of the NT Canon

1. General. Although Christianity had recourse from the beginning to Jewish scripture, Christianity was not originally a scriptural religion in the same sense as Judaism. The faith of the earliest Christian community was evoked by and centered on a person, Jesus of Nazareth, and he was apprehended by them

not first of all in texts but in preaching, in oral traditions of his words and deeds, and in charismatic experience. Only secondarily were the scriptures of Judaism called into service for the exposition and defense of the Christian faith; they did not constitute its basis. The primary authorities for earliest Christianity were rather "the Lord" (Jesus' teaching and acts, preserved mainly in oral traditions) and "the apostles" (the teachings of the witnesses to Jesus). The appeal to Jewish scripture was made only in the light of these, and consequently the early Christian use of Jewish scripture was selective in both content and method of interpretation, stressing its prophetic and messianic elements.

Christian writings began to be composed by the middle of the 1st century, and gradually increased in number and variety, but none of them was composed as scripture. Though some religious authority might be claimed by their authors (when they were not anonymous) or might lie in their content (when it was traditional), this did not constitute them as scripture for their authors or their readers. Throughout the 1st century and far into the 2d, whenever scripture (*graphe*) was mentioned or cited, it was the Jewish scriptures that were in view. Only very gradually, through their use in worship and teaching alongside the Jewish scripture, did Christian writings acquire the status of scripture in the church. And only after a large number of writings had come to be valued in this way was it necessary to define their number and to fix a canon. The history of the NT canon, then, was a process extending from the composition of Christian literature in the 1st and early 2d centuries, through the spread, use, and progressive esteem of these writings in the 2d and 3d centuries, to the determination of a fixed list of authoritative Christian scripture in the 4th and 5th centuries. This process was not only lengthy but also uneven, moving at a different pace and even in somewhat different directions among the religional constituencies of the ancient church. Further, the process was not always deliberate or self-conscious, but was often influenced simply by historical circumstance. Indeed it is remarkable how little explicit evidence remains about the development of the NT canon. To reconstruct its history it is necessary to rely on (1) the actual use of early Christian documents by Christian writers of the 2d through the 5th centuries, noting the frequency and manner of their citations and inferring the value they attached to them; (2) explicit discussions and judgments by individual writers or ecclesiastical councils about the authority of various documents; and (3) the contents and arrangements of ancient manuscripts, together with the various aids (concordances, prologues, etc.) they include. All of these must be evaluated in the light of what is otherwise known about the history of the ancient church, of which the history of the canon is a part, and to which it is deeply indebted.

2. The History of Component Collections. The NT canon is not so much a collection of individual documents as it is a collection of collections: its major components are a collection of gospels, a collection of letters of Paul, a collection of "catholic epistles." Outside these stand only two documents, Acts and Revelation. Each of these smaller collections had its own distinctive history, and must be treated individually.

a. The Letters of Paul. Paul's letters, the earliest surviving Christian writings, were also the earliest to be collected. They were unlikely candidates for scriptural regard because they are actual letters closely tailored to the particular circumstances of the individual congregations to which they were sent, and their general relevance and value were not clear to all (Dahl 1962). On the other hand, Paul was reputed over a wide area, and his letters did claim the authority of an apostle of Christ. By the early 2d century Paul's letters had been gathered up and were known as a group by Ignatius, Polycarp, and the author of 2 Peter (3:15–16). It is not clear how much this development owed to an informal exchange of the letters among Paul's churches (cf. Col 4:16; Mowry 1944), and how much it was due to the careful efforts of an individual (Goodspeed 1933; Schmithals 1972) or a group of Paul's associates and admirers who after the apostle's death sought to promote Paul's teaching by preserving, collecting, and disseminating his letters (Schenke 1975), but the last possibility gains plausibility from the presence in the collection of pseudonymous writings and evidence of editorial reworking.

The earliest known form of the collection of Paul's letters contained 10 letters, omitting the Pastorals. These 10 letters were presented as "letters to seven churches," letters to the same community being taken together (1–2 Corinthians, 1–2 Thessalonians, Colossians, Philemon). This collection seems to have been

available in two different editions, one with the letters arranged by decreasing length, giving the order Corinthians, Romans, Ephesians, Thessalonians, Galatians, Philippians, Colossians (+ Philemon) (Finegan 1956; Frede 1969; Dahl 1978), and the other, apparently attempting to order the letters chronologically, giving the order Galatians, Corinthians, Romans, Thessalonians, Ephesians (=Laodiceans), Colossians [+Philemon], Philippians (Frede 1964; Dahl 1978). The latter order is attested for Marcion (ca. 140) but also for Syrian sources and is presupposed by the prologues to the Pauline epistles that occur in many Latin manuscripts. This order was once thought to be a creation of Marcion, but it is now clear that Marcion simply took over a preexisting edition of the letters of Paul, retaining its sequence (Dahl 1978) as well as many of its peculiar textual features (Clabeaux 1989). The collection of 10 letters was eventually, but already in the 2d century, superseded by a collection of 13 letters, the Pastorals being added. In this edition the "seven churches" rubric was abandoned, and the letters were ordered individually longest to shortest, with the personal letters being placed after the community letters. This resulted in the sequence familiar to modern readers of the New Testament.

In spite of the availability of Paul's collected letters by the early 2d century, most Christian writers of the 2d century show little knowledge or use of them. Only Marcion and the gnostics seem to have relied heavily on them. This circumstance has sometimes been thought to show that Paul became discredited by heterodox appeals to his letters and so was ignored by more traditional writers. But this is not likely. No Christian writers of this period show an animus toward Paul and his letters; the issues and genres of 2d-century Christian literature did not encourage strong dependence on Paul; and there is a progressive tendency in the period to an ever greater use of the letters (Rensberger 1981; Lindemann 1979). By the end of the 2d century Paul's letters were heavily invoked by Clement of Alexandria, Tertullian in North Africa, and Irenaeus in Gaul, and had attained fully scriptural status over a very wide area, a fact which implies their long and broad usage through most of the 2d century.

The Epistle to the Hebrews, which even the ancient church doubted was written by Paul, nevertheless came ultimately to be attached to the collection of Pauline letters, ordinarily at the end, after the personal letters. This document had been respected and used in the Egyptian church from an early time, and it appears within the Pauline collection (standing second after Romans) in the earliest extant manuscript of the Pauline collection, P^{46} (which has an Egyptian provenance). In the Western church, however, Hebrews had little popularity, and its authority did not become established there until the 4th century. Hebrews did not belong to the earliest editions of Paul's letters (cf. Anderson 1966; Aland 1979).

b. The Gospels. From the beginning Christianity attributed the highest authority to "the Lord," preserving in memory and transmitting by word of mouth accounts of his teachings and acts. The earliest gospels are partial deposits of this oral tradition, but the oral tradition was so rich in content and established by custom that it persisted well beyond the first written gospels and was respected, and often preferred to written accounts, until about the middle of the 2d century (Koester 1957; Kürzinger 1983). Drawing on it, gospels continued to be written during the 2d century (Koester 1980; Cameron 1982). The composition of written gospels was an effort, on the one hand, to collect and codify Jesus-traditions, but, on the other, also to interpret them for particular situations. No less than the letters of Paul, the gospels are occasional documents, composed in and directed to specific local Christian groups, and so each has a distinctive character. Accordingly, it was at first customary for a given Christian community to know and use only one such document.

It was somewhat contrary to their character as interpretations of Jesus-traditions that the gospels were valued first as historical records, not as scripture. This view became problematic as Christian communities became acquainted with multiple gospels and noticed discrepancies among them that were not easily reconciled. This, together with the custom of using only one gospel and the idea that the Christian message (itself traditionally known as "the gospel") was unitary and coherent, worked against any easy acknowledgment of numerous gospels. Thus the history of gospel literature in the 2d century was governed by two opposing tendencies: the desire for a comprehensive and theologically adequate gospel led to a proliferation of such writings, but the desire for a single, self-consistent gospel worked to reduce the number, either by advocating one gospel against others or by conflating several such documents into

one (Cullman 1956; Merkel 1971; 1978). The prime example of this last tendency is the *Diatessaron* of Tatian (ca. 170), which ingeniously weaves together in one narrative most of the contents of Matthew, Mark, Luke, and John, and adds some elements from oral tradition. This effort (and its broad popularity) symptomizes the problem posed by multiple gospels, and shows also that although the gospels were much valued for their contents, they had not acquired sacrosanct status as individual texts. Their texts were not beyond alteration in the earlier 2d century either, as significant additions were clearly made to Mark (the various longer endings after 16:8) and John (chap. 21, and 7:53–8:11).

Justin Martyr (ca. 150) is the first Christian writer to show a knowledge and appreciation of several gospels, which he called "memoirs" (*apomneumonēmata*) of the apostles, thus revealing his historical estimate of them. But he seems not too have known John, and draws often on oral tradition or on other gospels not known to us, and so did not invest exclusive authority in the gospels that ultimately became canonical. John was little known or used by 2d century Christian writers, except among gnostics, who valued it highly (J. N. Sanders 1943; Hillmer 1966). This may explain its unpopularity, but perhaps the strongest reservations about John arose from recognition of its extensive differences in outline, substance, and style from other, more popular gospels. Rather than try to reconcile these, it was easier to neglect John altogether.

The collection of four gospels (Matthew, Mark, Luke, John) which came to be incorporated in the canon arose only near the end of the 2d century, and first in the Western church. Irenaeus (ca. 180) had to argue inventively for it (*Haer.* 3.11.8–9), while in the Eastern church much use was still being made of other gospels (e.g., Clement [Ruwet 1948], Serapion [Eus. *Hist. Eccl.* 6.12.2]). This collection was a compromise among the competing tendencies, resources, and needs of earlier usage, and struck a balance between an indefinite plurality of gospels and exclusive use of one gospel. The collection as such was thought of and entitled as *the* gospel, and each member of the collection was known as the gospel *according to* its putative author. In this "fourfold gospel" the tension between plurality and unity was not resolved, but was perpetuated in manageable form. It is notable that the Gospels acquired their scriptural standing as a group and not individually, and that religious authority was vested in their collective witness.

The collection of four gospels rapidly gained acceptance, and seems to have been broadly established by the middle of the 3d century, but its arrangement varied for some time. The Western church preferred the order Matthew, John, Luke, Mark, thus giving precedence to the two gospels supposedly composed by apostles over those supposedly composed by disciples of apostles. The Eastern church sponsored the order Matthew, Mark, Luke, John, possibly intending a chronological arrangement. The adoption of the Eastern order by Jerome for the Vulgate led to its subsequent dominance also in the West.

c. The Catholic Epistles. The third collection component of the canon was the latest to coalesce. Of the various documents in this collection only 1 Peter and 1 John had much currency in the 2d and 3d centuries. The rest (James, 2 Peter, 2–3 John, Jude) had only local and regional use, and in spite of the claims of some of them, there was no early or strong acknowledgment of their apostolic authorship, and so they remained obscure and questionable well into the 4th century. It is from Eusebius (*Hist. Eccl.* 2.23.25) that we first hear of "Catholic Epistles" as a group of 7 letters, and such a collection probably arose only in the 3d century. It may have been formed in an effort to document a common witness of primitive apostles, perhaps especially of the "pillar apostles" (cf. Gal 2:9; Lührmann 1981), and to balance the imposing collection of Paul's letters.

d. Acts and Revelation. Although the gospel of Luke and the Acts of the Apostles were composed as two volumes of a unitary work, they were early separated and had distinctive subsequent histories. Acts came into general usage later than Luke. Justin Martyr is the first writer to show any knowledge of it, but it was only near the end of the 2d century that real importance began to accrue to Acts, possibly as a result of conflicts with Marcionite and gnostic groups. Acts served to underline the view of mainstream Christianity in the late 2d century that the apostles acted and taught with authoritative consensus, and that Paul was at one with the collective apostolic witness. Thus Acts became useful in documenting the concept of apostolic tradition. The position of Acts among other documents in early canon lists and

manuscripts varies considerably. It is often placed with the Catholic Epistles (before or after), often with the Pauline letters (before or after), and sometimes with the four gospels (always after).

The Revelation to John had a controversial career in the ancient church. In the Western church it was well received and by the end of the 2d century was widely cited as scripture. It was also current and respected in the East in the 2d century, but was generally interpreted allegorically. In the 3d century, however, a dispute arose in Egypt as to whether the book should be read literally or allegorically. Dionysius, bishop of Alexandria, defended the allegorists' view, and was led by many acute observations to deny the apostolic origin of the book (Eus. *Hist. Eccl.* 7.25). Subsequently, Eastern Christians tended to reject Revelation. Even in the West the authority of Revelation came into dispute because of its use by Montanists, and both the authenticity and authority of Revelation (as well as the gospel of John) were strongly questioned by the Roman churchman, Gaius, in the early 3d century, but without much effect on Western usage. The full recognition of Revelation in the East did not come about until the late 4th century, and even then with the understanding that it was to be interpreted in nonmillennial terms.

e. Other Writings. Even though the NT canon came to be constituted mainly by bringing together smaller collections that had evolved in the first three centuries, it must be emphasized that the history of the canon was selective as well as collective, and that the canon which finally emerged contained only a fraction of the Christian literature that had been produced in the early period. Many other writings (gospels, acts, letters, and apocalypses) achieved wide currency and attained the status of scripture in some areas without in the end becoming canonical. So, for example, the *Apocalypse of Peter* and the *Shepherd of Hermas* were scarcely less popular than the Revelation to John in the 2d century; the *Gospel of Thomas* and the *Gospel of Peter* were reckoned by some no less authoritative than any other gospel; the letters known as *1 Clement* and *Barnabas* were esteemed and quoted as scripture by many; the *Acts of Paul* also was held in high regard in some areas, as was the manual of church order known as the *Didache*. But any or all of these, and perhaps some others, might have been included in the canon but for various reasons were not.

3. Developments in the 4th and 5th Centuries. By the end of the 2d century a considerable amount of early Christian literature was in broad circulation. The collected letters of Paul were well established, widely used, and considered to have scriptural standing. The collection of four gospels had more recently been formed and was gaining recognition. 1 Peter and 1 John were highly respected as scripture, but belonged to no collection, and many other writings had broad currency and scriptural or quasi-scriptural status. But there was as yet no canon of Christian scripture, for no effort had been made to define the scope of authoritative literature. This situation prevailed throughout the 3d century and into the 4th. Only in the 4th century did attempts begin to evaluate the legacy of early Christian literature as a whole and to determine precisely what documents commanded the authority to be used in the church, and what did not. The 4th and 5th centuries therefore are the period of canon formation proper, when actual lists of authoritative books were drawn up. The most important of these are the following:

a. The Muratorian Canon. The date and provenance of this list are in debate. For a long time the Muratorian Canon was taken to be a Roman (or at least Italian) product of the late 2d or early 3d century, but it would be unique at such an early time, and there are good reasons to consider it an Eastern list of the 4th century (Sundberg 1973; cf. Ferguson 1982). The document is fragmentary and badly translated into Latin, but lists the following books: four gospels, Acts, 13 letters of Paul (omitting Hebrews), Jude, 1–2 John, the Wisdom of Solomon (?), Revelation, *Apocalypse of Peter.* The omission of most of the "Catholic Epistles" is notable, and so is the inclusion of the Wisdom of Solomon in a list of Christian books. Specifically rejected, on the other hand, are the *Shepherd of Hermas,* a pseudo-Pauline letter to the Laodiceans and another to the Alexandrians (both attributed to Marcionites), and some unnamed books of heterodox groups. We have here, then, a list of 24 documents accepted for reading in the church, including two that did not finally become canonical, but excluding five that did.

b. Eusebius. In his *Church History,* written in the first decades of the 4th century, Eusebius variously comments on the uses made of early Christian writings by previous Christian figures, but in *Hist. Eccl.* 3.25 he provides a summary list of these writings in three categories: (1) acknowledged books

(*homologoumenoi*), i.e., those accepted without qualification; (2) disputed books (*antilegomenoi*), i.e., those whose genuineness or authority is questioned; and (3) heretical works, i.e., those that are firmly rejected. The acknowledged writings include four gospels, Acts, the (14) letters of Paul, 1 John, and 1 Peter. He also allows that Revelation *may* be placed in this group "if it seem desirable." The disputed books are James, Jude, 2 Peter, 2–3 John, the *Acts of Paul,* the *Shepherd of Hermas,* the *Apocalypse of Peter,* the *Epistle of Barnabas,* and the *Didache.* He also allows that Revelation *may* be classed among these books "if this view prevail," and notes that some would place the gospel of the Hebrews also in this category. Rejected books are the gospels of Peter, Thomas, and Matthias, among others, and the Acts of Andrew, John, and others. The acknowledged books, then, are 21 (22 with Revelation), and the disputed books are 10 (11 with Revelation). This list must reflect what Eusebius took to be the situation obtaining in his time and among the churches of his acquaintance. The ambiguity about Revelation was felt widely in the East, and surely also by Eusebius himself.

c. Other Canonical Lists. Another list is found in codex Claromontanus, a 6th-century Greek-Latin manuscript of the Pauline letters. The list it contains is much earlier than the manuscript itself, and probably derives from the 4th century and an Eastern setting. It contains, in order, the following items: four gospels, 10 letters of Paul (omitting Philippians and 1–2 Thessalonians, certainly accidentally), the seven "Catholic Epistles," *Barnabas,* Revelation, Acts, the *Shepherd of Hermas,* the *Acts of Paul,* and the *Apocalypse of Peter.* Here are 30 documents (if we include the 3 neglected Pauline letters). (Hebrews may also have been unintentionally left out.) Of these 30, four were not ultimately to become canonical.

The so-called Cheltenham Canon, a further list of authoritative Christian books, probably was drawn up in North Africa near the mid-4th century. It offers 24 books, with the claim that "our fathers approved that these books are canonical and that the men of old have said this": four gospels, 13 letters of Paul, Acts, Revelation, 1–3 John, and 1–2 Peter. Thus James, Jude, and Hebrews lack.

Of special note is the list of canonical books given by Athanasius, bishop of Alexandria, in his 39th Festal Letter issued on Easter of 367, for this list is the first to name as exclusively authoritative precisely the 27 documents that finally came to constitute the New Testament as we know it. He was the first Christian writer after Origen to affirm the full authority of Revelation, and must have been influenced in this by his many contacts with the Western churches, especially in Rome.

Athanasius' views were not decisive for the East as a whole, however. Tatian's *Diatessaron* continued to have considerable popularity in the East, especially in the Syrian churches, which tended still in the 4th and 5th centuries to admit in addition only Acts and the Pauline letters, though late in the 4th (Chrysostom) and early in the 5th (the Peshitta, Theodoret) recognition was extended to James, 1 Peter, and 1 John. Even so, the Syrian church typically admitted only 22 books as canonical.

Among the 4th-century lists there was still notable variation, especially in the regard for Hebrews, Revelation, 2–3 John, 2 Peter, and Jude, and other writings occasionally claim attention. It is interesting, for example, that one of the oldest and most important manuscripts of the entire NT, codex Sinaiticus (4th century), contains, along with the 27 books of Athanasius, the *Epistle of Barnabas* and the *Shepherd of Hermas.* So although the four gospels, Acts, the letters of Paul, 1 Peter, and 1 John were almost universally accepted, everything else was to some degree questionable. The resolution of such uncertainties fell largely to ecclesiastical councils of the late 4th and early 5th centuries. The Council of Laodicea (363) held that "the canonical books" were 26 in number (omitting Revelation in the Eastern manner), while the North African councils of Hippo (393) and Carthage (397) named the 27 books of our New Testament, but in accepting Hebrews distinguished it from the letters of Paul. It is worth stating, however, that no *ecumenical* council of the ancient church ever undertook to define the scope of the canon.

4. Influences in the Formation of the NT Canon. A process that extended through four centuries will obviously have been subject to many influential factors. So long as it was (wrongly) supposed that the canon had virtually come to full form by the end of the 2d century, the tendency was to see its chief causes in the conflicts with heterodox movements of the 2d century. It has been held, for example, that Marcion, who based his teaching on an edition of the Pauline letters plus a form of the gospel of Luke,

forced the church to form its own canon in response. It has also been claimed that the gnostics, who produced many writings of their own and appealed to secret apostolic traditions, were opposed by the shaping of a canon that excluded their documents and presented instead a set of broadly recognized and accessible writings containing apostolic and catholic teaching. And it has been maintained that the Montanists, by their claim of charismatic authority and new revelations, provided the motivation for the church to close its canon and restrict revelation to traditional authoritative documents. But none of these arguments is valid: Marcion was not a "first cause" of canon formation, but a case of arrested development, since Paul's letters had previously been collected and were widely valued before him; the gnostic groups tended to value most of the same literature as other Christians, and differed rather in the philosophical assumptions and interpretive methods with which they approached this literature; and in response to the Montanists the church did not deny the continuing activity of the spirit or limit revelation to a limited number of books. Although the heterodox movements of the 2d century threw into relief the question of the resources, authorities, and boundaries of the Christian faith, they do not appear to have had any direct impact on the history of the canon.

The chief determinants of the history of the canon were, rather, the historical origins of the church's faith and the traditional usages of the church's worship and teaching. Since Christianity vested revelatory and redemptive significance in a particular historical person and a specific historical period, the church had always to hark back to Jesus and the events of his life, death, and resurrection. This resource was at first available in the direct testimony of apostles and in a lively and authoritative oral tradition. But with the lapse of time, the demise of the apostolic generation, and the dissipation of oral tradition, it was increasingly necessary to value written materials. This led to the preservation of some early literature (e.g., Paul's letters) and to the composition of additional literature deeply indebted to early tradition, and elevated the importance of these documents as means by which the church sustained its access to the events and to the witness which constituted its *raison d'etre.* The question, however, as to which documents provided this access, and therefore were authoritative, was answered by reference to the actual experience of the church with this literature. Those writings that proved, over time, to be most useful in sustaining, informing, and guiding the church in its worship, preaching, and teaching came to be the most highly valued, and gained a special authority in virtue of their usefulness.

Given this basic impulse and the context in which it played out, there were many specific factors that conditioned the history of the canon. The judgments of respected theologians, for example, Origen and Athanasius in the East, and Jerome and Augustine in the West, were influential, especially for the fates of particular books. Athanasius' sponsorship of Revelation in the East finally overcame the reservations fostered by Dionysius' criticisms, and the acceptance of Hebrews in the West was largely the result of its use by Hilary, Ambrose, Rufinus, and Jerome. Also visible are the effects of the great ecclesiastical centers, Antioch, Alexandria, and Rome. The conservatism of Antiochene Christianity and its tendency to literal-historical interpretation are reflected in the rather narrow collection of scriptures that persisted so long in that region. The open, speculative bent of Alexandrian Christianity and its penchant for allegorical exegesis are mirrored in the expansive body of literature valued as scripture in Egypt. In the history of the canon, as in doctrinal matters, Rome tended to take a middle way between these extremes. Further, particular doctrinal or disciplinary issues sometimes affected the status of certain books. Hebrews, because of its teaching against a second repentance after baptism, was disadvantaged by developing penetential practices in the West; Revelation was called into question in the East and West because of its use by millennialists (*Hist. Eccl.* 7.25; 3.28.1–5); John was once disputed in the West as a result of Montanist appeals to its teaching about the paraclete, and the *Gospel of Peter* was rejected in Syria because of alleged docetic elements (*Hist. Eccl.* 6.12.2). The experience of persecution, which sometimes involved the confiscation and destruction of Christian scriptures, perhaps provided occasion to discriminate between those books held to be sacred and preserved from the authorities, and those that might be surrendered under duress. Even so mundane a matter as the technology of book manufacture may have played a role, for almost from the beginning Christianity made use of the codex (leaf book) rather than the roll in transcribing its scripture (Roberts and Skeat 1983). But it was not until the 4th

century that codices were produced that were large enough to encompass most or all of Christian scripture, and it may not be mere coincidence that the canon acquired a relatively fixed content only when it was possible to transcribe the various writings in a single book. And, so far as canonization is understood as a matter of devising a fixed and closed list of scriptures, the decisions of ecclesiastical councils had their effects. No such decisions are known before the 4th century, by which time many documents had secured such established use that councils could only ratify their standing. But ecclesiastical mandates were important in bringing some disputed writings (e.g., Hebrews, Revelation, 2 Peter, Jude) to full canonical regard, and in discounting others. But perhaps the preeminent factor was the actual historic practice of leading churches. The determination of a list of writings which might be read in liturgical assembly was largely a matter of making regulative what had long been merely customary. Only in cases where custom differed were specific decisions required.

All of this indicates that the history of the canon was not an isolated process, but belonged fully to the ongoing life of the ancient church and was in its own ways responsive to the forces broadly operative in the early history of the church.

5. Criteria of Canonicity. Though it was indebted to historical forces, the formation of the canon was not haphazard. The church also reflected critically on its literature and, in setting certain documents apart as peculiarly authoritative, it invoked various principles (Flessemann-van Leer 1954; Ohlig 1972). Prominent considerations were that canonical documents should be apostolic, catholic, orthodox, and in traditional use.

The apostolic character of a writing was often articulated in terms of authorship by an apostle, but it was actually a broader concept than this, and could signify, besides actual authorship, derivation from the time of the apostles, or even simply agreement with what the church took to be apostolic teaching. Even the ancient church did not claim that every authoritative document was written by an apostle, but it did consider that canonical writings should come from the earliest times of the church. For a writing to be catholic, it had to be relevant to the church at large. This criterion embodies the church's preference for broadly accessible and pertinent documents as opposed to esoteric ones. But this preference did not, obviously, exclude documents originally addressed to strictly local churches or even to individuals. It was rather a matter of their availability and their utility to the whole church. The criterion of orthodoxy signified that no document could be acknowledged as authoritative unless it conformed to, or at least did not contradict, what the church took to be its proper teaching. This presumes that the true faith of the church could be known independently of Scripture, specifically in what was known as "the rule of faith" (*regula fidei*), a traditional summary statement of the basic Christian confession. Hence there was no idea that Scripture was the sole repository of authoritative teaching. Rather, the authority of Scripture could be gauged against authoritative but unwritten tradition. No less important was the criterion of traditional usage, that is, whether a writing had been employed from an early time and in most churches. This principle came strongly into play only in the 3d and 4th centuries when the church had a retrospect on its past. But in fact customary usage had been the major force in promoting the authority of various documents before it was articulated as a principle of canonicity.

None of these criteria, however, was absolutely definitive. Thus while Paul's letters were undoubtedly apostolic in the strictest sense, because of their particularity they did not satisfy very well the ideal of catholicity. Or, although there was a persistent uncertainty about the apostolic authorship of Hebrews, it was acknowledged as canonical nevertheless. Or again, although Jude and 2 Peter, for example, had not enjoyed a longstanding tradition of use, this did not finally count decisively against them. Clearly, then, the criteria of canonicity were not applied with great rigor or consistency, and were not narrowly understood. While their use indicates a measure of deliberation and judgment in the history of the canon, it is difficult to regard apostolicity, catholicity, or orthodoxy as the effective reasons why any document gained canonical status. The criterion that was most fully operative was traditional use, and this has reference not to the intrinsic character of a writing but to the church's actual practice.

It remains to be noted that inspiration was not a criterion of canonicity in the ancient church. It was not claimed that the canonical documents were uniquely or exclusively inspired. The reason for this was the

conviction that inspiration characterized the church as a whole. Since the concept of inspiration was much broader than the concept of scripture, it provided no basis for distinguishing among writings produced within the church (Kalin 1967; Sundberg 1975).

C. The Theological and Hermeneutical Significance of the NT Canon

The theological and hermeneutical significance of the canon has come under reassessment as a result both of the history of the canon and of modern exegesis of the canonical documents. Of the various issues that have arisen in modern discussion the following are the most prominent.

1. The Scope of the Canon. The traditional contents of the canon are difficult to justify in the light of modern knowledge. The canon as we know it resulted from a complex interplay of contingent factors, and from a historical point of view its limits seem fortuitous. It is easily conceivable that the canon might have been larger or smaller, and that it might have contained other documents instead of or in addition to those that stand in it. Further, the contents of the canon cannot be fully defended on the criteria adduced by the ancient church, for not all of them are apostolic or catholic in any strict sense, and some of them had not enjoyed broad and longstanding use. Finally, the limits of the canon were never officially defined by the ancient church, and have never constituted an article of doctrine. In this situation, two different claims have been made on behalf of the traditional scope of the canon. Protestant scholars have often maintained that the canonical documents possess an intrinsic and self-authenticating authority, and that the canon evolved more or less spontaneously through the religious intuition and experience of the early Christian communities. Catholic scholars, on the other hand, have claimed that the authority of the canonical documents derives from their recognition by the church in accordance with its own tradition and teaching. At issue is the relationship between the authority of the canon and the authority of the church. In fact, this relationship is historically ambiguous. The judgments about the limits of the canon by bishops and councils in the 4th and 5th centuries did not merely ratify a status which the documents had already acquired for themselves, for some of the writings then designated canonical had not previously been widely taken as authoritative. Yet the very high regard in which the gospels or the letters of Paul were held from an early time owed nothing to ecclesiastical decisions, and the church could only acknowledge their authority, not decide it. So, as a closed collection and with a view to its outer limits, the canon is very much a product of the church, but much of the contents of the canon rose to authority by virtue of their self-evident value.

In the interest of maintaining the critical independence of the canon of Scripture over against the church, some Protestant scholars have argued that in principle the canon remains open to revision, even if no change in its scope is actually envisioned. Catholic scholars, however, fully affirm the traditional boundaries of the canon as the authoritative work of the ancient church, and thus conceive the canon of Scripture and the teaching authority of the church to be indivisible. Here it is clear that the theological authority of the canon is differently conceived in different confessional traditions of Christianity.

2. Scripture and Tradition. The same question emerges in a different guise when the relation of Scripture and tradition is explored. The history of the canon shows that the contents of the canon were largely determined by ecclesiastical tradition (traditional usage, traditional ideas of authorship, and the appeal to traditional teaching), such that to acknowledge the authority of the canon is to acknowledge the authority of the tradition which gave rise to it. This point is now freely conceded by Protestant scholars (Cullmann 1956b; Ebeling 1968b). For its part, exegesis has shown further how deeply individual documents of the canon are themselves indebted to earlier kerygmatic, liturgical, parenetic, and exegetical traditions, and indeed exhibit the development of tradition among themselves (e.g., the elaboration of Pauline teaching in the pseudonymous Pauline letters). Thus it can be said that tradition precedes Scripture, is presumed by Scripture, and persists in Scripture. It is appropriate enough, then, to see Scripture itself as “a specific form of tradition” or as “a transcription of tradition at a particular stage” (Ebeling 1968b; Best 1979; Hahn 1980). For these reasons it has become impossible any longer to juxtapose Scripture and tradition as alternatives. Rather, they stand in an organic relationship which precludes the exaltation of either against the other as a theological authority.

3. The Function of the Canon as a Norm. The use of the canon of scripture as a theological norm has required rethinking as a result of exegesis. The historical-critical exegesis of canonical documents has revealed among them a great diversity of theological orientations which are not easily reconciled with each other: Jewish Christianity, various types of Hellenistic Christianity, apocalyptic Christianity, and early Catholic Christianity, to name the most obvious. In this respect the canon seems accurately to reflect theological variegations characteristic of the early church (Dunn 1977). But because it presents no thorough theological consistency, the canon as such, and taken as a whole, cannot serve as a sharply effective theological norm (Käsemann 1964). Once a wholistic, formal conception of the canon is given up in view of its inner diversity, its authority must be conceived in a different way. This is often done, especially by Protestant thinkers, by appealing to a "canon in the canon," that is, a principle or center which is taken as the essential and controlling element within the larger canon, and which may serve as an interpretive criterion of the whole. Efforts to formulate such a principle have been various (Schrage 1976), including, among others, the original preaching of Jesus, the oldest recoverable form of the kerygma, and the Pauline theme of the justification of the ungodly. Other, mostly Catholic, scholars have criticized this approach as reductive, selective, and arbitrary, and have insisted on affirming the unity and coherence of the canon as a whole (Küng 1963). In their view the meaning of Scripture is sufficiently mediated by the tradition and teaching office of the church. But each view is in its own way an assertion that the formal canon cannot of itself function as a theological norm.

What needs special recognition in this debate is that the canon is pluralistic in principle. The effort to discover in it a uniform and coherent norm would seem to be contrary even to the intentions of the ancient church, which canonized no single theological position but a range of theological viewpoints. This is indicated well enough by the repudiation of Marcion's exclusively Pauline canon in favor of a broader but less consistent collection, and the rejection of Tatian's *Diatessaron* in favor of the multiple witness of four gospels. It remains true that every interpreter of the NT and every confessional standpoint within Christianity proceeds, tacitly or explicitly, with an interpretive principle or perspective which elicits from the canon a particular pattern of meaning. This is inescapable if the canon is to inform theological reflection and not remain diffusely meaningless. But just here the importance of the canon as a whole, in all its diversity, can be seen: although it requires a limitation and specification of its meaning to exercise a normative function, it nevertheless resists the absolutizing of any particular appropriation, and thus maintains the potentialities of interpretation against narrow, ideological foreclosures.

4. The Hermeneutical Value of the Canon. The historical-critical study of the canonical documents has customarily approached them in disregard of the canon. Its interest is in individual writings interpreted in terms of the diverse, particular circumstances in which they arose. Their literary context in the canon is not relevant to that aim. But in recent years there has been a growing interest in the relevance of the canon for theological exegesis, and this approach has gained the name "canonical criticism." This enterprise has taken two main forms. One has urged that the theological interpretation of Scripture is properly attentive to the canon when it takes as its basis the "final [canonical] form" of a given text, as distinct from sources that can be identified behind the text or as distinct from an original form of the text, and interprets that text in terms of its "full canonical context," as distinct from its original historical context. Thus the literary and theological context furnished by the canon itself is made the touchstone of interpretation. No document, on this view, should be read in isolation; rather each should be read with a view to the interrelationships established by the canon between it and other canonical documents. What arises from such a reading is the "canonical sense" of the text, which is taken to be the theologically normative meaning of the text (Childs 1979; 1984). Another form of canonical criticism attends not to the final form of a text or its intracanonical relationships, but to the canonical process exhibited within the texts, that is, the hermeneutical dynamics by which authoritative (preliterary) traditions were not only stabilized in writing, but were subsequently and repeatedly revised and adapted, reformulated and rewritten, so as to make them freshly relevant to the changing circumstances and needs of the religious community. The interpretive paradigms that can be observed in this process as it is enshrined in and even

continued by the canonical literature may then become useful means for the modern appropriation of the canonical documents themselves (J. A. Sanders 1976; 1984).

It is assuredly true that the formation of the New Testament canon held hermeneutical consequences for the documents that were included in it: new meanings accrued to the texts by their placement in that new context. While this "canonical sense" deserves recognition, it is not usually easy to identify, and is often merely impressionistic. Furthermore, it is not at all clear that the alleged "canonical sense" of a document has or ought to have a better claim to theological authority than the meaning that attaches to an individual document taken by itself or in connection with a smaller group of related documents. For it was these latter meanings that commended the documents to the church and resulted in their incorporation into the canon. An adequate hermeneutic of the canon cannot therefore be indifferent to detailed historical criticism or to the history of the canon. At the same time, the canon is something both more and different than the sum of its parts, and historical criticism cannot fully illumine the NT without reflecting on the hermeneutical significance of the canon.

CANON, MURATORIAN. See MURATORIAN FRAGMENT.

CANONICAL CRITICISM. The term "canonical criticism" does not adequately convey the range of approaches or the variety of methodologies employed by scholars who are often associated with it. Even scholars who have come to reject the term, e.g., Brevard Childs, may still be regarded by other scholars as its leading practitioners. What is clear is that canonical criticism is less a formal "criticism" than an approach or series of approaches that seeks to raise neglected questions about the form and function of scripture, both Jewish and Christian.

    1. Canonical Dimension and Biblical Interpretation
    2. "Shape" of Biblical Books
    3. Examples of a Canonical Approach

C. Conclusion

A. Introduction

Approaches currently associated with "canonical criticism," regardless of how it is specifically defined, presuppose the triumph of historical criticism over premodern historical notions about the authorship and formation of biblical books. While many of the proposals associated with a canonical approach rejuvenate traditional questions about the nature and authority of scripture, they do so only through significant innovation and with the hope of a greater degree of historical precision than one could have expected of similar premodern treatments. In this way, biblical fundamentalists find that some subjects neglected by older historical critics are taken up once again, though expressed in the light of critical historical conclusions alien to fundamentalist views regarding the history of the Bible. Canonical criticism, regardless of the theological spectrum that may find it appealing, is a response from within a more liberal, rather than a conservative, assessment of the biblical prehistory.

Canonical approaches in general strive to articulate a perspective on the relationship between biblical studies and the study of religion and theology. In premodern Christian studies of the Bible, both Roman Catholics and Protestants agreed that the "literal sense" of scripture provided the principal authority for Christian doctrine and that this sense, as distinguished from "spiritual senses," could be identified, at least in part, with the "author's intent." Since the 15th century, Nicholas of Lyra and many other Christian exegetes resorted to the idea of a double "literal sense," especially for the OT: one aimed at a grammatical, historical, and religious dimension common to both Jews and Christians; the other based on the role of the OT within Christian scripture as a norm of distinctly Christian doctrines. In the early modern period, biblical scholars frequently sought through a "historical" approach to secure neutral, scientific consensus regarding what a biblical text "meant" distinct from ecclesiastical or sectarian assessments of what it "means." This allegedly neutral meaning of the Bible often became identified with the traditional religious goal of describing the "literal sense" of scripture as a prior step to theological interpretation.

In the past few decades, the confidence that the literal sense of scripture can be equated with the results of historical criticism has been seriously reexamined. At the outset, biblical criticism has convincingly shown that the Bible is a multilayered, editorial composite of diverse texts and traditions. Any effort to describe the "original" historical traditions, as against the "secondary" one now preserved with them in the Bible, is highly speculative and, more significantly, must isolate older traditions away from their context within scripture. Such historical analysis leads properly to an effort to recover the "original" form and function of ancient Israelite traditions and to conjecture about the original prebiblical social settings in which they were once heard or read. If the "literal sense" is identified rigorously with the intent of the first "authors" of such traditions, then the intent will, in most instances, be prebiblical in so far as these authors rarely, if ever, "intended" to write "biblical" traditions. Many of these traditions only became identified as "biblical" at a later time and were publically established as such when they were assigned a place within a scripture by editors. Consequently, the "meaning of the biblical text" cannot be equated uncritically with the historical intent of a modern conception of the "original" authors, without losing precisely what the traditional formulation sought to preserve.

A modern understanding of the form and function of a scripture implies a shift in the semantic import of its antecedent traditions. The canonical context of the Bible exhibits moments of both formal preservation and contextual modification, both historical retention and ahistorical, or topical, reorientation. Just as the semantic force of words is not secured solely by appeal to their etymologies but gains specific import within the context of a particular sentence, so the context of scripture inevitably influences how earlier traditions come to make sense as a part of scripture. This transformation in the meaning of texts and traditions occurs through a complex, sociopolitical process of literary production leading to the public recognition of both a particular religion and the canonization of its scripture. This process is historically serendipitous, but reflects in general terms a dialectical relationship between canon and community, between the formation of a scripture and the identification of the community of faith that treasures it. In

sociological terms, a scripture may be considered a social contract between differing groups that assume a common purpose and status before God. While the context of a scripture establishes a restrictive framework in which religious interpretation takes place, the context itself is composed of the favored traditions of different groups, ordered in, at times, a remarkably unharmonized fashion.

In sum, the semantic function of a scripture often exceeds or contravenes the original intent of various historical authors/redactors who can be reconstructed within the prehistory of the canon. In the place of a modern reconstruction of historical authors, Jewish and Christian scripture presents key figures—Moses, David, Isaiah, Jeremiah, Luke, John, Paul—as "biblical" persons whose "intents" can only be found in the canonical context. The very realism of these biographical presentations, together with some degree of modern historical support for their historicity, may tempt interpreters to replace the biblical portrayal with more historically "accurate" biographies. However, such a substitution usually sacrifices the context of scripture and misses the possibility of a biblical anthropology. Only the biblical context warrants such a wedding of word and *persona* that presumes to render the nature of ultimate reality through the reception of scripture as a human witness to divine revelation.

B. "Canon" and Canonical Approaches

As early as the 2d century, Christians could speak of the Bible as "canonical," as well as divinely "inspired." Only later did Athanasius (ca. 350 C.E.) identify *ta biblia* ("the books" of scripture) with the noun *kanon* (a list of normative books). The same usage in Judaism belongs only to the modern period, though, as in Christianity, Jewish scriptures possesses a special normative quality—it is "spoken by God" and "defiles the hands." In both Christianity and Judaism, the identification of books belonging to scripture preceded by several centuries the determination of a *textus receptus,* or fixed textual tradition. Prebiblical uses of the word "canon" reflect well the ambiguities attendant to the formation of a "normative" scripture.

As a Semitic loan word transliterated into Greek and Latin, "canon" can denote (1) an ideal, standard, central criterion, or essential summation and/or (2) a list, catalog, or measure. Something "canonical" may not yet be situated in a fixed list or collection of similar canonical things. So, biblical traditions and even whole books may be viewed as "canonical" long before they belong to a fixed "canon" or list of such books. A scripture is, of course, only one special type of canonical text or tradition. Other canons may include oral Torah, *magisteria,* special exegetical traditions, the inspired interpretation of a rabbi, or a contemporary word of Christian prophecy. These extrabiblical canons may seem more immediately influential for practical religious life than the scripture. The practice of religion is, of course, further subject to still other secular authorities or canons. Nonetheless, scripture is, at least in theory, assigned a superior place as a norm of faith within Judaism and Christianity.

Premodern handbooks or introductions usually began by considering the subjects of text and canon. As the more rigorous historical orientation of the modern period came to dominate, canonical issues seemed to belong only to the last steps in a long process, at great distance from the original historical events upon which the revelatory claims of a religion depends. Therefore, modern scholars, whether conservative or liberal on questions of biblical history, tended to shift the treatment of these subjects to the back of introductions, following the lead of such major orthodox interpreters as J. G. Carpzov (1721). This same priority of biblical history to biblical text informed much of the recent "Biblical Theology Movement" which often focused the theological worth of the Bible to the "acts of God in history" or defined the biblical witness in terms of an "actualized" report about a historical event. The canon could be viewed, according to this model, as merely a late and flawed premodern effort to preserve efficacious "confessions" about history. A canonical approach challenges the assumption that the earliest historical events play such a determinative role in the capacity of scripture to have authority or to render reality. Without denying the value of information gained by means of any critical investigation, a canonical approach seeks to understand a different issue: how a biblical text is normative within religious interpretation, that is to say, how the context of ancient traditions within scripture functions as an arena in which certain religious questions are asked and answered. In this approach, one seeks to recognize the textual warrants and rules whereby a scripture makes specific religious claims, perpetuates paradoxical

and ambiguous expressions of faith, engenders the need for repeated interpretation, and imposes upon the reader a vision of the world that God has made.

Though various canonical approaches explore the same neglected perspective on the nature of a biblical text, their chief interpreters do not always agree on terminology, on methods of analysis, or on the practical implications for the future of biblical interpretation and commentary. James Sanders first coined the term "canon criticism" and popularized it through his *Torah and Canon* (1972). Through the study of interpretations within the Bible, which he calls "comparative midrash," Sanders sought to find a "canonical hermeneutic" that would explain why the same normative traditions could properly be interpreted with contradictory implications at different times and places. Later, in *Canon and Community* (1984) he changed the terminology from "canon criticism" to "canonical criticism," stressing its alignment with other critical methods. Brevard Childs, for one, initially used the term "canon criticism" in the 1970s (e.g., *Exodus* OTL) but dropped it as a misleading label for his own approach. It does not occur in either his *Introduction to the Old Testament as Scripture* (*IOTS*) or *The New Testament as Canon* (*NTC*). For Childs, "canon criticism" wrongly suggested a "criticism" parallel to other standard biblical methodologies (e.g., source, form, and redaction criticism).

Childs prefers to speak of a "canonical approach," highlighting how "the canonical shape" of a biblical book established possibilities and limits to its interpretation as a part of Jewish and Christian scripture. He starts with "the final text" of scripture, without uncritically accepting the *textus receptus,* and makes observations about how diverse, even contradictory, traditions share a canonical context together. Rather than allowing the reader to pick and choose what elements of traditions seem the most appealing, this canonical context deepened the demand for interpretation in specific ways and in certain significant theological directions. Leaning more in the direction of Childs than Sanders, Rolf Rendtorff's *The Old Testament: An Introduction* (1983, ET 1986) finds evidence of additional unifying "literary" features in a *Kompositionsgeschichte* ("composition criticism" or "history of composition") for each biblical book. Rendtorff stresses the inability of form criticism to account for how the "literary" dimension of the biblical text extended the audience and often detached traditions from their historical moorings for the purpose of establishing another theological way of receiving these traditions within Judaism and Christianity.

Related studies include I. L. Seeligmann's seminal study of "canon conscious" exegesis within the Bible. Nahum Sarna and Michael Fishbane have elaborated cases of "inner-biblical" interpretation that similarly presume plays upon fixed normative traditions, anticipating in some instances later types of Jewish midrashic interpretation of scripture. More radically, the French school of "anthological midrash" (e.g., A. A. Robert, R. Bloch *DBSup* 5: 1263–81) sought to describe a particular type of inner-biblical interpretation that reemploys words and phrases from canonical traditions in order to compose whole portions (e.g., parts of Proverbs 1–9) of some late biblical books. A number of redaction-critical studies, such as those of Ackroyd, Blenkinsopp, Clements, and Sheppard, have called attention to the special nature of canonical traditions from the perspective of later editors. Certain "canon conscious" redactions tell readers how some biblical books should be read in the context of others (Sheppard *EncRel* 3: 62–69). An editor's use of certain esoteric techniques in the alteration and placement of a tradition suggest self-conscious terms of restriction and freedom in how biblical authors/editors handled the preceding normative traditions. These traditions can be seen to function within the formation of the Bible with a special "semantic depth" (Clements), "vitality" (Ackroyd), "adaptability" (Sanders), or within an implicit "scriptural vision" (Fishbane), or with a special potential for "actualization" (Childs). This highly tendentious sketch of scholarly activities that are often associated with "canon criticism" illustrates some of the diversity in the present debate. In order to convey what is at stake in these newer approaches, a more general discussion of the canonical dimension will be followed by some examples of implications for assessing biblical literature.

1. Canonical Dimension and Biblical Interpretation. The present diversity in canonical approaches has led to a variety of proposals regarding the future of biblical interpretation. Sanders' and Fishbane's concern with "inner-biblical" interpretation suggests a continuity between the prebiblical interpretation of

normative traditions and the later postbiblical interpretations of scripture in Judaism and Christianity. As Fishbane finds anticipations of later Jewish midrash, so Sanders detects a midrashic "canonical hermeneutic," already forged among Israel's ancient prophets and continuing into the postbiblical period. Sanders argues that contemporary theological exegesis should employ the same hermeneutic he has found here and there in ancient Israel and throughout the process of canonization. In religious terms he identifies this hermeneutic with "the ancient struggles of our ancestors in the faith to monotheize, to pursue the oneness of God, over against all kinds of polytheisms and fragmentations of truth" (1984: 17). The canonization of scripture represents the freezing of only one imperfect moment within that same process of interpretation. In Sanders' view, this hermeneutical criterion allows one to distinguish true from false prophecy in ancient Israel and can be applied similarly today to discern true and false biblical preaching in Christian churches.

Conversely, Childs, Rendtorff, and Sheppard have emphasized elements of discontinuity between the prescriptural functions of ancient traditions and the new roles they play within "the canonical context" of Jewish and Christian Bibles. While acknowledging different levels of authority and canonicity in the prehistory of the Bible, these scholars start with the canonical context as a way to assess how earlier traditions have been put together to form a new literary entity. Because the historical forces behind the formation of biblical books are so heterogeneous, Childs concludes: "The history of the canonical process does not seem to be an avenue through which one can greatly illuminate the present canonical text" (*IOTS* 67). Only the present "shape" (Childs) or "composition" (Rendtorff) of a biblical book survives as evidence of how the community of faith ordered past traditions as a normative witness to divine revelation. Besides indicating a specific inner-textuality and a unity of subject matter, the canonical context, also, gives permanence to unresolved differences between traditions, delimits functional ambiguities, and perpetuates undecoded symbolism integral to a religion's understanding of divine mysteries yet to be fully revealed. Clearly, many ancient historical features are retained within this later context, though the formation of scripture tends to insure that "texts are less bound up with particular events and situations" (Rendtorff 1986: 125).

The hermeneutical significance of the canonical context of scripture depends partly on how a religion construes the relation between the biblical witness and its revealed subject matter. Rabbinic Judaism sought to interpret the written Torah of scripture chiefly through midrashic methods, honoring the parallel testimony of oral Torah (Mishnah and the Talmud[s]). Christianity moved in another hermeneutical direction. With the addition of a "New Testament" and the transformation of Hebrew scripture into "Old Testament," a new literary horizon emerged. At least by the middle of the 2d century, Christian leaders asserted that priority in dogmatic disputes should be given to a nonmidrashic, "plain" or "literal sense." Similarly, Christians sought to understand the relation of the Torah to the Gospel. A prophetic interpretation often predominated and certain texts lent themselves more readily than others to Christian messianic explication. Though Christianity did not share the oral Torah of Judaism, it did not lack its own extrabiblical authorities in the form of creeds, binding church decisions, local ecclesial laws, and so forth. Though the practice of biblical interpretation differs between Judaism and Christianity, both frequently show a similar concern for warrants implicit within the canonical "shape" of books. In this respect, crucial religious features of the Hebrew Bible are fully retained in Christian scripture in spite of the semantic transformation that takes place when Christians appropriate the Hebrew Bible as the "Old Testament" within the context of the "New." At a minimum, the canonical context is a highly significant factor, but not the only one that may influence the nature of biblical interpretation.

2. "Shape" of Biblical Books. Childs has chosen the term "shape" to describe the distinctive features of biblical books when they are read as scripture. This trope may connote too readily a trait of harmony or full coherence of traditions in books, comparable to geometric symmetry. Nevertheless, Childs uses "shape" carefully to describe the boundaries and orchestration of semantic possibilities of traditions within a biblical book from the perspective of its form and function as scripture. From the 1st centuries of Christianity up to the modern period, Christians have often sought to preserve the same scriptural dimension by an appeal to the "scope" of a biblical book. At times, the "scope" (*skopos*) has pertained to

an element in the church's "rule of faith," as in Athanasius' refutation of the Arians' use of Proverbs; at other times, it denoted a more literary appeal to the beginnings and endings of biblical books, to titles, and other transitional markers within a biblical text. The latter usage can be readily seen in the rules of Flacius in the middle of the 16th century and commonly among English Protestants in the late 16th century until the end of the 19th. The indices of the scope of a text were supposed to provide clues regarding the normative "purpose" of the text, coinciding with the "intent" of the inspired author.

In the premodern period, Christian interpreters commonly assumed that the literal sense of scripture was identical with the biblical author's "intent." What becomes obvious is that in these formulations the "biblical author," the central figure associated with a particular book, is not identical with a "historical author" reconstructed by modern historical criticism. A canonical approach can try to express what the older formulation sought to describe in another way, informed by a modern understanding of history and religion. This alternative expression of how the biblical text relates to its subject matter must take into account a different perception of diachronic dimensions and involves a critical awareness of the semantic import of traditions shifted from their origins, through transmission and editing, to their later places among biblical texts. The shape of a biblical book and its canonical context within scripture provide an essential guide as to how the intents of various historical authors and editors pertain to the presentation of a biblical author and a biblical book. Moreover, the canonical context indicates how the presentations of key biblical figures have been linked to the "canonical intention" of the biblical text. In these two ways, the aim of the older identification of literal sense with the author's intent is maintained but expressed in new ways that respond to the impact of historical criticism and the contemporary perception of differences in a biblical text.

3. Examples of a Canonical Approach. The form of the Pentateuch ("the book of Moses," Josh 1:7) corresponds to its function as scriptural "Torah" in various ways. First, as Sanders has eloquently shown, it situates the law of God prior to the actual conquest of the land. The Torah could be received by future readers of the Jewish Diaspora as an address to people who themselves yearn to enter into a promised land. The laws, regardless of what we may say about their original historical settings, refer in this context to a revealed Torah rather than to law codes that reflect merely compromises to the experiences of life at various times in the land.

Second, while "the Torah" denotes a single, coherent instruction from God, it is represented in the narrative form through different Mosaic mediations: as shown in the legal collections of Exodus, Leviticus, Numbers, and, then, those of Deuteronomy. While each of these collections now shares substantially the same Decalog (Exod 20:2–14 and Deut 5:6–18), the other laws contain many disagreements, even within laws governing the same offense. While historical criticism can provide one account for these differences, the canonical context now relates them according to another religious implication. In the context of the Mosaic Torah, the laws found in Exodus, Leviticus, and Numbers belong to the legislation as given to Moses in the region of Sinai, while the laws presented in Deuteronomy belong to Moses' subsequent "interpretation" of them on the plains of Moab to the next generation (Deut 1:5). Based on the role of these laws in scripture, the historical etymology of these traditions is less important than the canonical context which depicts Moses as "interpreting" the earlier laws to the changing circumstances of a later generation. This contextual precedent was recognized by rabbinic Judaism and perpetuated by the acceptance of the oral Torah (the Mishnah and Talmud[s]), that accompanies the interpretation of the written Torah. It was also allegedly perpetuated by Moses through the Elders.

Third, Moses appears in these books as a vivid flesh-and-blood figure with strengths and weaknesses like our own. Genesis elaborates the genealogical record leading to his birth in Exodus, and the five-book Torah concludes in the last chapters of Deuteronomy with an account of his death. This presentation of his life provides a key unifying feature corresponding to the unity of the revealed Torah which this five-book collection mediates. Moses' unique status as the prophet par excellence (Deut 34:10–12) indicates the special role these books play within the scripture as a whole. Though modern critics suspect correctly that a historical Moses could not have written all of these traditions, the biblical portrayal of Moses and the

events of his life belong to the very syntax of these books in their form and function as scripture. Modern critics have often sought to improve on the historical elements in this presentation by searching for the "historical" Moses. If such a search claims to pursue "biblical" faith, then it has confused uncritically the mode of understanding congruent to the realism of a scripture with the mode of understanding congruent to a realism pertaining to conceptions of a modern "history."

As Judaism now finds in scripture and in oral Torah different literary manifestations of law as inspired human witnesses to the one Torah that God has given to a chosen people, so Christianity possesses in the NT four different Gospels, as well as Romans and James, despite the confession that there is actually only one Gospel of Jesus Christ. From this perspective the biblical canons do not end interpretation by harmonizing as much as they ground and perpetuate the need for fresh interpretation of the Bible by each generation of believers. Though both Judaism and Christianity resist the expansion of scripture by new revelation, each generation seeks to express the Torah or the Gospel, with the aid of scripture, more precisely and in pragmatically more pertinent ways than preceding generations. Therefore, the scripture harbors in its own contextual ambiguities the potential for a criticism of each believer's current ruling metaphors while, at the same time, it delimits a specific arena in which a grand quest for the revelation of reality can take place.

In both the OT and NT, collections of tradition outside of the Mosaic Torah and the Gospels have been assigned a special context and function together as parts of scripture. What might be regarded as historical anachronisms frequently contribute to the canonical context and religious import of ancient traditions. Though the activity of many of the OT prophets precedes historically the period when the present Mosaic Torah was formed, the traditions of the prophets have been edited together as scripture in a manner that allows the prophetic books now to be read as commentary on the Torah of Moses. So, too, the Pauline Epistles, many of which precede the time when the Gospels were composed, now are found after the written Gospels as a part of a collection of "Pauline Letters" and provide a commentary upon the same essential message found in the four Gospels.

The Solomonic books offer a vivid example of how the canonical context alters our vision and reception of ancient traditions when read as scripture. Modern criticism properly questions a direct connection between the historical Solomon and the books of Proverbs, Ecclesiastes, and Song of Songs. Nevertheless, the context of scripture identifies these books in a highly significant manner as Solomonic "wisdom" within Hebrew scripture. Because of its association with Solomon, biblical wisdom cannot be equated uncritically with a strictly historical conception of ancient Israelite "wisdom" in the Near East. The canon-contextual presentation of Solomon delimits some crucial distinctions between the biblical wisdom traditions and those of the Mosaic Torah. For instance, Solomon epitomizes the wisest person who ever lived (1 Kgs 4:29–31), but he must, also, obey the Torah of Moses as did his father (1 Kgs 3:14). Furthermore, by assigning this "wisdom" literature to Solomon, the canonical context provides its own account for why wisdom literature appears to bracket out self-consciously the idiosyncratic language of faith about the Exodus, the giving of the law of God at Sinai, the covenant, and other historical details regarding Israel's faith in Yahweh. Part of the religious genius of biblical wisdom lies in its affirmation of an international collection of sayings that borrows from and rivals that of other nations, without resolving issues of conflict between different religions. It is the sort of knowledge that inspires the Queen of Sheba to travel to test Solomon with riddles. Biblical wisdom lends itself to an international cooperation in understanding territories not explicitly addressed by the Torah but shared by the wisdom of other religions. This demarcation of wisdom in association with Solomon, distinct from other parts of scripture, naturally invited a debate over how the parts of scripture relate to each other as a guide to the obedient life. Prior to Christianity, Judaism overtly affirmed that the Torah and Wisdom complemented one another and that the one could be read as a resource for refinements in the understanding of the other (cf. Sirach 24 and Bar 3:9–4:4). The manner in which wisdom relates to the Torah and to the Prophets, and how wisdom relates to all of these and to the Gospel, becomes part of the vocabulary that continues to inform the response of both Judaism and Christianity to issues of practical knowledge, scientific inquiry, psychology, and many other areas of common life.

C. Conclusion

Canonical criticism has become a popular, though debated, label for a variety of approaches that inquire into the form and function of the Bible as scripture. A canonical approach assumes a particular perspective by which biblical studies can understand the nature of scripture and its relation to the history of religious interpretation and theology. As shown by Childs' commentary on Exodus, this perspective encourages a critical examination of the history of interpretation, both ancient and modern. In my view, attention to the canonical context of scripture is essential for an appreciation of how religions construe reality and how competence in biblical interpretation is recognized in earlier periods. In the larger task of contemporary Christian theological interpretation, canonical approaches offer foundational descriptions of the context of scripture and detect warrants for a reading of the diverse traditions as multiple human witnesses to the same subject matter of faith and revelation.

CANOPY. Four different Hebrew words are rendered "canopy" in English versions. The first, *šḵḵ,* derives from the root *skk,* which means "to weave together," thus forming a thick material that can be a shelter, as in the "booths" made of boughs that served as temporary dwellings during harvest time. This noun is used in 1 Sam 22:12 and Ps 18:12 [—Eng 18:11] to refer to Yahweh's heavenly shelter and to enrich the dramatic language of divine theophany in these two passages. Another term, *ʿōb,* is found twice: once in an obscure reference to some part of the pillared forecourt (*ʾûlām*) to Solomon's "Hall of Pillars" (1 Kgs 7:6); and once in a description of a shelter in front of the forecourt (*ʾûlām*) of the Temple (Ezek 41:25). The latter reference uses "wood" with *ʿōb,* thus indicating a more solid architectural element than a woven canopy.

A third Hebrew word for canopy, *ḥûppâ,* is from *ḥpp,* meaning "to cover." The act of covering rather than the material itself is basic to this term, which appears in Isa 4:5 to refer to the way smoke and fire by day and night will provide a cover ("canopy") over the restored Mount Zion and its assemblies in the glorious future. Finally, the word *š apřr* (or *š aprĦr,* Qere) which appears only once in the Hebrew Bible (Jer 43:10), apparently denotes a royal pavilion or canopy being spread out by Nebuchadnezzar over his throne. Related to Akkadian *š uparruri,* it might also indicate a carpet being stretched out. In either case, this too appears to be a textile rather than a solid structure.

All the words rendered "canopy," along with "pavilion" and other terms, are part of the rich Hebrew vocabulary dealing with shelters, both temporary and permanent. Such terms designate both actual shelters and are also used symbolically to indicate God's sheltering, protective presence.

CAPE. See DRESS AND ORNAMENTATION.

CAPERNAUM (PLACE) [Gk *Kapharnaoum* (Καφαρναουμ)]. A place on the NW bank of Lake Tiberias (M.R. 204254). Josephus renders the Heb *kĕpar naḥum* as *kapharnaoum* (*JW* 3.10.8), as does the NT. The Arabs of the region call the spot Talhum or Tell Hum.

After Jesus began his ministry, he moved to Capernaum (Matt 4:13; Mark 2:1). Capernaum had a synagogue which had been built with the sponsorship of the local centurion (Luke 7:2–5). While in Capernaum, Jesus healed several people (Matt 8:5; Mark 1:21–28; 2:1–12; Luke 7:1–10; John 4:46–54) and taught in the synagogue (Luke 4:31–38; cf. John 6:22–59). The city, however, eventually received a scathing denunciation when Jesus condemned its stubbornness as worse than Sodom's (Matt 11:23–24). Later, during the First Jewish Revolt, Josephus was taken to Capernaum for his initial medical treatment after he was injured in battle (*Life* 72).

After having been abandoned and completely forgotten for centuries, Capernaum reemerged in 1894, when the ruins of the site were acquired by the Franciscan custody of the Holy Land from the As-Samakiyeh Arabs. The first exploratory excavations were conducted in 1905 under the direction of H. Kohl and C. Watzinger. Their probes were in the central and eastern naves of the synagogue, with a number of additional trenches in the western nave; these allowed a reconstruction of the plan of the building. In the same year, other excavations were conducted under the direction of F. V. Hinterkeuser, which continued until the outbreak of World War I. After the war, excavations resumed until 1921 by P. G. Orfali, who not only published a monograph, *Capharnaum et ses ruines,* but also began a restoration of the synagogue; this work, however, was not completed because of his tragic death.

In April of 1968, V. Corbo and S. Loffreda reopened the excavations of Capernaum and conducted 18 campaigns up to 1985; these excavations led to the discovery of many of the insulae of the city and to the rediscovery of the house of Simon Peter. They also led to the discovery of the synagogue of the Roman centurion beneath the foundations of the synagogue of the 4th–5th century.

A. The City

Until 1968, no remains of the city of the time of Jesus were visible; since then many insulae have been excavated. The city was laid out according to the orthogonal, or Hippodamian, urban plan, which consisted of a *cardo maximus* or *via principalis* (e.g., main N–S thoroughfare) and numerous *decumani* (e.g., E–W intersecting streets). Within the grid pattern of the streets, the dwellings were grouped in insulae. The use of this plan, along with the archaeological finds have allowed the excavators to date the origins of this city to the Hellenistic period. The city continued developing along this same plan until its abandonment in the 7th century C.E., when the Islamic invasion occurred. However, under the pavement of the synagogue, there are remains of an LB dwelling which appears to date to the 13th century B.C.E. During the campaigns of 1984–1985 in the lowest levels of the excavation, the archaeologists began to encounter dwellings with ceramics both of the Persian (538–332 B.C.E.) and of the MB Ages (1900–1550 B.C.E.). These dwellings were enveloped in the Hellenistic urban plan.

B. The Dwellings

In the insulae of the Hellenistic city, the archaeologists found dwellings of two types: "clan" dwellings and individual dwellings. The "clan" dwellings were arranged around internal courts, which numbered at times as many as three; around these courts were rooms which faced inward. There was a single entrance to the house, which faced the street and had a threshold and jambs with pins for the wooden door. The windows of the rooms opened onto the internal courts and never on the streets. Family life took place in the courts, where there were hearths, millstones for the grain, and handpresses. Also situated in the courts

were stairs which allowed access to the roofs, which were made with wooden beams and covered with a layer of packed mud.

Household furnishings included vases in white stone for holding water; basalt mortars; various basalt containers and vessels of a whole range of forms and sizes, and much ceramic pottery. The ceramics included lamps, plates, bowls, pans, amphorae, pots, and cups.

The houses were constructed with walls made of blocks of basalt dry-set; the interior faces of the walls were finished with ornamental patterns of pebbles. Seldom were there masonry walls, and then they were almost always of late date. The floors were made of basalt pebblework, sometimes covered with a layer of yellowish earth. The windows of the rooms were set in series on stylobate walls, and were formed of jambs supporting architraves which were crudely carved.

C. The House of Simon Peter

The house of Simon Peter at Capernaum is mentioned many times in the Gospels, so much so that in referring to his house, the Evangelists do so with or without the article (Matt 17:25; Mark 2:1; 3:20; 9:33); alternatively they refer to it with the name of Peter (Matt 8:14) or of Simon and Andrew (Mark 1:29).

The house of Simon Peter was found in 1968 in the first campaign of the excavations. It is situated in the SE corner of a vast insula which extends from the shore of the lake to the Hellenistic *decumanus.* Its N side lies under the balcony of the synagogue; its E side faces an open area which adjoins the *cardo maximus* and to which reference is made in Mark 1:33 and 2:2. The archaeological finds show that this house had already been built in the Hellenistic period, and that therefore, Simon Peter must have acquired it when he settled with his clan at Capernaum. The entry to the vast dwelling was from the open space to the E. See Fig. CAP.01. The plan of the house had three courts, around which were arranged the numerous living rooms. Among these rooms were two situated on the S side of the N court, which was the court into which one entered from the street. These two rooms were transformed in the apostolic period into a "house church"; here the excavators found part of the paving of the floor, which was surfaced with lime plaster—the same type of paving, in fact, which was found some years later in the triclinia of the palace of Herod at Macheron. The walls of the house–church were likewise covered with plaster and had painted decorations consisting of Judeo–Christian emblems. Christian pilgrims of the first centuries scratched on these plastered walls sacred and devotional graffiti in Greek, Latin, Syriac, and Aramaic (cf. Testa 1972).

The house of Simon Peter underwent a radical restructuring in the 4th century C.E. when, at the initiative of Count Joseph of Tiberias, a friend of Constantine the Great, the house–church was restructured on the interior with the addition of an arch supporting a new roof. The floor was also resurfaced; a new sacristy was added on the N side, while on the E flank a portico was built. The original entrance of the house, which had opened onto the *cardo maximus,* was closed, while there were opened two new entrances in the sacred wall—one on the S toward the shore of the lake and one on the N on the new *decumanus* which had been cut through the insula. This 4th century arrangement was seen by the pilgrim Egeria.

D. The Octagonal Church

In the second half of the 5th century, under the influence of the Gentile church, which, with its clergy of Greek culture, was progressively consolidating its influence in the Holy Land, the house of Simon Peter, including the house–church of the 1st to the 4th centuries, was razed. On the same spot, about 2 m above the earlier house–church, there was erected an octagonal church to mark in perpetuity the spot of the house of Simon. See Fig. CAP.02. The church consisted in fact of two concentric octagons, with porticos on five sides. The central octagon had eight pilasters which supported a roof covered with tiles. The paving of both octagons was wholly in mosaic: that of the central octagon showed a peacock fanning its tail, while in the large octagon were found the remains of a nilotic mosaic. The portico had mosaics with a woven-reed design laid in circles. This is the church seen by the "Anonymous Placentinus" in 570 C.E.

With the Islamic invasion of Palestine in 638, Capernaum was abandoned, and the two sacred buildings of the city, the church of the house of St. Peter and the synagogue, began to fall into ruin. The later Arab inhabitants who settled within the bounds of the city which had been abandoned in the time of the Omayyads (661–750) had no interest in the Christian and Jewish edifices, and began to despoil them.

E. The Synagogues of Capernaum

The excavations have brought to light two synagogue buildings. In 1905, Kohl and Watzinger partially excavated the later building, which had been seen in ruins by the first explorers in the 19th century. The excavation begun by the two German archaeologists was taken up by the Franciscan custody of the Holy Land. In 1921, Orfali completed the excavation and also tried a partial reconstruction. This synagogue in white stone, the most beautiful and grand of those which have been excavated in the Holy Land, has been variously dated. The two German archaeologists dated it to the 2d and 3d centuries C.E.; Orfali, on the other hand, put it in the time of Jesus. With the reopening of the excavations in 1968, the problem of the dating of this building was addressed once more, and based on remains found under the paving, it was attributed to the 4th–5th century C.E.

1. The Late Synagogue. This building is composed of two edifices—the prayer room, and a vast court. The prayer room is in basilican form without an apse (24.34 × 17.25 m), and has a central nave surrounded by three lateral naves in the form of a horseshoe (on the E, N, and W sides) with Corinthian columns on plinths. On the W and E walls were benches, while on the S side were the ark and the chair of Moses. It probably never had a women's balcony. On the E side, the synagogue adjoined a vast court with a portico on three sides (the S portico was the shortest—11.26 m). On the outside it measures 24.34 × 13.34 m. The portico area faced the *cardo maximus* with three large windows, while on the N and S sides were two or three portals. The court was constructed after the synagogue had already been completed. The synagogue was visited toward the end of the 4th century by the pilgrim Egeria (cf. Petrus Diaconus, Geyer, 112) who referred to it as having "many steps" and walls of "square-hewn stones."

2. The Synagogue of the Roman Centurion. In 13 years of patient research (1969–81), the area under the late synagogue was explored. On the basis of this research, it was possible to ascertain the chronology of the late synagogue; the researchers also discovered the remains of the synagogue constructed by the Roman centurion (cf. Luke 7:5) atop a very ancient dwelling. Under the paving of this earlier synagogue and the adjacent houses were found ceramics of the MB, LB, Persian, Hellenistic, and first Roman periods.

The synagogue of the centurion has a rectangular plan with a slight displacement of the axis with respect to the synagogue of the 4th–5th century. The external perimeter of the first synagogue is the same as that of the later synagogue. The internal area of the synagogue of the centurion, however, is a little smaller, because of the considerable thickness of the wall, which are made of blocks of basalt (120–30 cm). On the inside, on the E wall, there was a sort of atrium, while the wall-bench must have occupied the whole length of the W wall. The paving was of basalt pebblework.

VIRGILIO C. CORBO

CAPHAR-SALAMA (PLACE) [Gk *Chapharsalama* (Χαφαρσαλαμα)]. The location of an ambush of the Seleucid army conducted by Jewish rebels ca. 163 B.C. (1 Macc 7:31). This encounter may be the

same as that recorded in 2 Macc 14:16 as occurring at Dessau. The Seleucid army led by Nicanor was sent to Judea upon the request of Eliakim, the Seleucid candidate for high priest. This priest had ordered the execution of 60 pious Jews and as a result of his action, the Maccabees rallied opposition to Eliakim's religious and administrative activities.

Nicanor was an experienced general who had previously confronted the Judean rebels. He safely brought his army to Jerusalem but reportedly lost 5,000 men when he was ambushed at Caphar-salama. Subsequently he was forced to retreat to Jerusalem and to call for additional troops from Antioch to suppress the rebels.

The location of the ambush is not positively identified; however, it clearly took place near Jerusalem which was Nicanor's base of operations. Alternate locations of the battle site have been proposed, but Khirbet Selma (M.R. 167140), located halfway between Jerusalem and the Beth-horon pass, is frequently identified as the site (Goldstein *1 Maccabees* AB, 339–340). This argument is based upon the etymological similarity of the name and the geographic situation. The site is located near Jerusalem and would have provided the context for an ambush.

ROBERT W. SMITH

CAPHTOR (PERSON) [Heb *kaptor* (כַּפְתֹּר)]. CAPHTORIM. The seventh "offspring" of Egypt (Gen 10:13). The Caphtorim are described as originating in Caphtor and as displacing the Avvim along the coast as far as Gaza (Deut 2:23). They are explicitly associated with the Philistines in Jer 47:4 and Amos 9:7. Thus there is conjectured, without textual basis, the association of the phrase in Gen 10:14, "whence came the Philistines," with the Caphtorim rather than its grammatically closer subject, the Casluhim (so *BHS; IDB* 1: 534; Skinner *Genesis* ICC, 213; Speiser *Genesis* AB, 68; Strange 1980: 35 n. 132; Westermann *Genesis* BK, 519). Others accept the text as it now stands and apply the phrase to the Casluhim (cf. Cassuto 1964: 206–208; Kitchen 1973: 53; Rendsburg 1987; Wenham *Genesis* WBC, 225). In Jeremiah 47, the prophecy promises the destruction of Tyre, Sidon, and the Philistines from Caphtor. This passage also identifies Caphtor as an island or coastland. The possibility of the relation of the Caphtorim to the Cherethites is strengthened by the latter's association with the Philistines.

A problem associated with Caphtor is its identity. Its traditional identification with Crete (Vercoutter 1956) has been challenged with the proposal of Cyprus (Strange 1980; Merrillees 1982). The issue has been addressed in three areas: archaeology, philology, and geography. As to the archaeology, the absence of Cretan ceramic wares after the mid-15th century B.C. in Egypt and Ugarit, despite the presence of textual citations for Caphtor/Keftiu until the mid-14th century in Egypt and the mid-13th century at Ugarit, has been used to argue against Crete as an identification (Merrillees 1982: 247–48). However, a similar argument could be made for the Cypriote ware in Egypt (exclusive of Amarna) at the same time (Knapp 1983: 285–86; 1985). Further, the textual and pictorial evidence in the chapel of Rekhmire is closely tied together (Vercoutter 1956: 185–88) so that attempts to separate the Keftiu from "the isles in the midst of the sea" and from the Minoan dress worn by the figures (Strange 1980: 44–70) seem strained (Görg 1982; Kitchen 1983).

As to philology, the identifiable "offspring" of Egypt in Genesis 10 appears to reflect place names or people who lived in or near Egypt. The order of the names seems to be according to the number of consonants in the root, beginning with two (LUD) and proceeding to four (NAPHTUHIM and all the names of v 14). Thus the order of the names is probably not intended to follow a geographical sequence (Wenham *Genesis* WBC, 224). Caphtor is also mentioned in Egyptian (*kftiw, kftyw*), Akkadian (*kap-ta-ra*), Ugaritic (*kptr*), and Greek (*kabdēros*) texts (Vercoutter 1956; Strange 1980: 16–112). The 18th dynasty list of names from Egypt, with the title "to make names of Keftiu" has been used to argue a non-Greek, ancient Near Eastern environment more like Cyprus than Crete (Strange 1980: 94–96, 166). However, there can be no certainty as to what the list was intended to reflect (Astour 1982: 395) nor as to the accuracy of the analysis of the names (Vercoutter 1956: 46–47; Kitchen 1983).

A Theban topographical list of Amenophis III (Kitchen 1965: 5–6; Edel 1966: 33–60; Faure 1968) is best identified as a list of cities in the regions of *kftyw* and of *tny*, the latter to be identified with the

Danaoi, i.e., Greeks of the Argolid (Faure 1968: 145–47; Helck 1971: 306–7; Kitchen 1973: 54; 1983: 159) rather than Rhodes (Edel 1966: 54–55; Vercoutter 1956: 56) or Adana in Cilicia (Strange 1980: 22). This identification is preferred due to the agreement of the remaining names with places in Crete (e.g., Amnisos, Knossos, and Lyktos) and the Danaoi region (Astour 1966; Edel 1966: 33–60; Kitchen 1966). Thus the text suggests an equation of *kftyw* with Crete.

The remaining issue is geographical. To place Caphtor in Cyprus it is necessary to relocate Alashiya, which has traditionally been associated with that island. Either it becomes a part of the island or it is located near Alalakh (Strange 1980: 172, 183). This latter possibility has been denied by Astour (1982: 395) and Muhly (1972: 202), who find no room for such an important kingdom on the Syrian coast. Thus the identification of Caphtor with Crete remains a probability.

RICHARD S. HESS

CAPITAL [Heb *kaptôr* (כַּפְתּוֹר)*; koteret* (כָּתֶרֶת)]. Of the two Hebrew terms translated "capital," one always denotes a part of the Tabernacle menorah, except for two uses in prophecy; and the other signifies an architectural element of Solomon's Temple.

The term *kaptr̃* is used repeatedly in the tabernacle texts of Exodus in juxtaposition with "flower" (*peraḥ*). The former word may have an architectural meaning, in that it is used twice elsewhere (Amos 9:1; Zeph 2:14) in contexts that suggest a major building element. The ancient versions all indicate a spherical or rounded object, like a kind of fruit (as in the Peshitta and Targums). These renderings may be derived from the rounded shape of a simple capital. However, taken together with "flower," it forms a hendiadys. The two words together denote a floral, or more specifically, a lily capital, since *peraḥ* most likely means "lily" (Meyers 1976: 24–26). This decorative, architectonic element is repeated three times on each of the six branches of the Tabernacle menorah; and the central stand of the menorah features four such arrangements (see Exod 25:33, 35 = 37:19, 21; 25:31, 34 = 37:17, 20; 25:36 = 37:22).

The other word for capital, *koteret*, signifies the elaborate architectural feature surrounding the columns Jachin and Boaz, which were set at the entrance to the forecourt (*ʾûlām*) of the Solomonic Temple (1 Kgs 7:16ff. = 2 Chr 4:12, 13; 2 Kgs 25:17 = Jer 52:22). These capitals, or double capitals, were made of bronze and were exceptionally ornate and large (at least five cubits high). Because they were decorated with floral forms ("lily-work" and "pomegranates"), they can be considered part of the floral capitals that were characteristic features of monumental architecture in the ancient world. The size, material, and

decoration of the capitals contributes to the role of Jachin and Boaz as gateposts to the entrance of Yahweh's earthly dwelling (see Meyers 1983).

CAPITOLIAS (PLACE). See BEIT RAS (M.R. 230222).

CAPPADOCIA (PLACE). The great plateau which dominated central Asia Minor contrasted markedly with its surroundings. Flat, treeless, ringed by forested mountains, broiling in summer and gelid in winter, it constituted a land apart, difficult to reach but then easy to traverse. Its climatic extremes limited most agriculture to cereals and some fruits; most of its surface lay in pasture.

One long river, the Halys, traversed Cappadocia; another, the Euphrates, formed its eastern boundary; beyond lay Sophene, Atropatene, and the Parthian Empire. The Euphrates came to be regarded as the boundary between Parthia and the Roman Empire, beginning with a dramatic meeting at the Euphrates between Sulla and a Parthian representative of Mithridates II, with the Cappadocian king in attendance.

The Taurus and Antitaurus ranges on the south limited access to and from the Levant; just beyond these ranges lay Cilicia and Commagene. Boundaries to the west and north provided easier passage, leading to struggles with adjacent dynasties, especially in the 1st century B.C.

Cappadocia was notorious for possessing few cities, only two at the time of Christ. In Christian times this resulted in an unusual type of organization, based not on cities but on large districts containing numerous towns or villages.

Persian occupation of Asia Minor for centuries created an Iranian aristocracy ruling the native population. Local kings claimed descent from Darius the Great. After Alexander, the Ariarathid dynasty continued this claim and added Seleucid Greek lineage.

As the Seleucid Empire began to weaken in the mid-2d century B.C., Rome was drawn toward Cappadocia among others. Quarrels with the neighboring Galatians led to Roman mediation in 164 B.C. King Ariarathes IV was described at this time as "one of the true friends to the Romans" (Polyb. 31.7–8). About 160, envoys to Rome from Cappadocia spoke of "the friendly attitude" of King Ariarathes V (Diod. 31.28). The alliance between Rome and Cappadocia bore one unusual feature; instead of being with the king alone, it was "jointly with the Cappadocian king and with the tribe [*ethnos*]" (Strabo 12.2.11.540). That distinction probably arose from the unusual organization of the country into 10 administrative districts termed *strategiai,* one of them controlled by the powerful priest of Comana (Strabo 12.1.2.533). The nobles dwelt in "fortresses" and usually resisted centralized control.

To the north, the kingdom of Pontus arose from territory previously claimed by Cappadocia. By the late 2d century B.C., the expansionist monarch Mithridates VI Eupator of Pontus constituted a clear threat to Cappadocia, which he tried to control through a sister who became queen of Cappadocia, and then through a son who became king.

The Ariarathid line of kings ended early in the 1st century B.C. and Cappadocians elected a new royal house, that of Ariobarzanes I (Strabo 12.2.11.540; Justin 38.2.6–8).

Mithridates continued his interventions and drew Romans into Asia Minor to reinforce Cappadocian resistance. Two Roman allies already bordered Cappadocia, the kingdom of Bithynia and the country of the Galatians. A long struggle began about 95 B.C., which was aimed at adding Cappadocia to the roster of reliable Roman allies.

The Mithridatic Wars between Rome and Mithridates Eupator lasted some 25 years (89/88–63 B.C.) and led to fundamental alterations in the political map of Asia Minor. At the outset of the wars, Mithridates could order massacres of Romans along the Aegean coast and conduct operations as far west as Athens. He could rely on the assistance of his son-in-law, Tigranes the Great of Armenia, and of allies as far north as the Crimea. By the close of the wars, Mithridates was dead, Tigranes defeated, and part of Pontus a Roman province, with an allied king ruling the remainder.

Ariobarzanes I survived some five exiles at the hands of Mithridates or Tigranes, and handed over his kingdom to his apprehensive son about 63 B.C. In the next years, internal disruptions and a new external threat—Parthia—kept Cappadocia unsettled. Ariobarzanes II fell by assassination. His successor required the assistance of Cicero against enemies from within, and his kingdom appeared "stripped bare" by Roman creditors. Invasions were threatened from the directions of Pontus (Pharnaces II), Armenia (Artavasdes II), and Parthia (Orodes II; Pacorus I).

Perhaps against the odds, Cappadocia weathered these political storms and those of the Roman civil wars, too. In 47 B.C., Caesar came through Cappadocia, saw Pharnaces II, and conquered him at Zela. In the aftermath of Caesar's murder in 44 B.C., Cassius killed King Ariobarzanes III (Dio 47.33).

During the reign of his successor, Ariarathes X, a Parthian invasion of Asia Minor in 40 B.C. reminded Cappadocians of their vulnerability. A complicated internal struggle and intervention by Antony replaced this last member of the house of Ariobarzanes with a new king, familiar from Judean history: Archelaus I (Dio 49.32; Sullivan *ANRW* 2/7/2: 1149–61).

Archelaus enjoyed a long reign, over half a century from about 36 B.C. to A.D. 17. His father had held the powerful priesthood at Comana, and his grandfather had served as general in the Pontic army. Antony much admired Archelaus' mother, Glaphyra.

Augustus reconfirmed Archelaus despite his taking Antony's side at Actium (Dio 51.2). Some internal trouble is recorded (Jos. *JW* 1.507; Dio 57.17). However, Archelaus became an important king in the East, receiving additional territory to rule in Cilicia Tracheia and Armenia Minor (Dio 54.9; Strabo 12.2.11.540). Honors given him, his mother, or his son and daughter were recorded on stone in Athens, Olympia, Magnesia, Comana, and elsewhere (*OGIS* 357–63).

To judge from claims exercised by his descendants, Archelaus married a princess from the Armenian royal house. He passed on claims to the throne of Armenia to his grandson, Tigranes V (*ex regio genere Armeniorum* in the words of Augustus, *Res Gestae* 27). His daughter, Glaphyra, boasted of descent on her mother's side from Darius the Great (Jos. *JW* 1.476).

By marrying Queen Pythodoris, widow of Polemo II of Pontus, Archelaus linked two of the East's largest kingdoms (Strabo 12.3.29.556). Under the rule of this pair now fell a large territory in eastern Asia Minor, running from the Black Sea to the Mediterranean off Syria.

Archelaus also became an advisor to the Judean royal house, or a mediator in time of crisis (Jos. *JW* 1.507; 1.538; *Ant* 16.357). Herod came to view Archelaus "as one of his dearest friends" and in fact helped reconcile him with the Roman governor of Syria, Marcus Titius, after an unspecified argument (Jos. *Ant* 16.270).

Ultimately a marriage cemented these good relations. His daughter Glaphyra wedded Herod's son Alexander. Glaphyra's freely stated conviction that she outranked the other women at the Judean court through superior genealogy caused predictable friction. So did the habit Archelaus developed of intervening in Judean politics, as when he assisted two sons of Herod against their father. By 7/6 B.C., after Archelaus executed Glaphyra's husband, Herod returned her and her dowry (Sullivan *ANRW* 2/7/2: 1161–65).

The children of Glaphyra remained in Judea, and both her son Tigranes V and her grandson Tigranes VI attempted to rule Armenia. Her great-grandson, King Alexander (*PIR²* J 136), became the last royal ruler of Cilicia under Vespasian.

Glaphyra herself went next in marriage to King Juba of Mauretania (Jos. *Ant* 17.349). She returned once more to her father. Next, Herodes Archelaus, another son of Herod, married her, violating Jewish law. She died soon afterward.

Archelaus fell into disfavor with the emperor Tiberius on a charge of plotting revolution (Dio 57.17). He was summoned to Rome, tried before the senate, and probably condemned; at any rate, he died soon after that, most likely in A.D. 17. (Tac. *Ann.* 2.42). His son, Archelaus II, ruled a portion of Cilicia, at least until A.D. 36 (Tac. *Ann.* 6.41).

Cappadocia itself became a Roman province under Tiberius and remained that way. Vespasian grouped Cappadocia with several other regions in A.D 72, and Trajan later divided that grouping, joining

Cappadocia to Armenia Minor and Pontus. Diocletian divided the group again, leaving Cappadocia in two parts, only the western still called by that name. Late in the 4th century it was subdivided again, and the ecclesiastical boundaries—disputed between the bishops of Caesarea and of Tyana—ceased to coincide with the civil (Jones 1971: 183ff.). The ancient Cappadocian problems of central administration continued at least until Justinian, who complained that public lands there had frequently been alienated by private lessees.

The main lines of royal administration continued to be followed during the first centuries of the province, and the core of the previous kingdom remained permanently bereft of cities, which grew up on the Euphrates and along the trade routes from Cilicia but did not penetrate the interior.

Cappadocia retained a distinctive character for these thousand years (400 B.C.–A.D. 600). Its great size and important location made it a factor in Hellenistic and Roman history, as well as in the early spread of Christianity.

CARABASION (PERSON) [Gk *Karabasiōn* (Καραβασιων)]. A descendant of Bani who divorced his foreign wife during Ezra's reform (1 Esdr 9:34). Although 1 Esdras is often assumed to have been compiled from Ezra, Carabasion does not appear among the list of names in Ezra 10. Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text. Heltzer (1977: 68) argues that Carabasion is a Gk rendering of the Heb *qrbʿšh.*

CARAVAN. See TRAVEL AND COMMUNICATION.

CARIA (PLACE) [Gk *Karia* (Καρια)]. Rugged, mountainous region of southwest Asia Minor, bordered on the west by the Aegean Sea, the southwest by the Mediterranean Sea, along the Meander River by Lydia, and to the east by Phrygia and Lycia (1 Macc 15:23). Caria's early political history was dominated by independent cities of which Halicarnassus (the birthplace of Herodotus), Miletus (Acts 20:15–17; 2 Tim 4:20), and Onidus (Acts 27:7) were chief. Caria was ruled successively by Persia and later Rhodes (cf., Ptolemy 5.2), until Rome restored its freedom in 167 B.C.E. (Polyb. 30.5.12–16, 21.3–5, 31; Livy 45.25). In 139 B.C.E., the Carians were granted Roman citizenship (Livy 49.15) and in 129 B.C.E., Caria became part of the Roman province of Asia.

The coastal cities of Caria were populated primarily by Greeks, but the rest of the region had a mixed population which included a high density of Jews, evidenced by a number of Jewish inscriptions, epitaphs and synagogues from the region. According to 1 Macc 15:23, the Roman senate sent a letter in 139–138 B.C.E. favoring the Jews of Caria and the cities of Myndus, Halicarnassus, and Knidos, which, at the time, were independent enclaves within Caria. According to Josephus (*Ant* 14.244–46), the Romans intervened on behalf of the Jews of Melitus, guaranteeing their right to observe the Sabbath and to live according to their customs. The cities of Caria were only mentioned in the NT in connection with Paul's missionary travels at which time they were certainly evangelized. Ignatius of Antioch addressed a letter to a church in the Carian city of Tralles.

SCOTT T. CARROLL

CARITES [Heb *kārî* (כָּרִי)]. A group of mercenaries loyal to the Davidic house (2 Kgs 11:4, 19). In the account of the revolt against Queen ATHALIAH (2 Kings 11), they were one of the groups called on by JEHOIADA the priest to protect the Davidic scion JOASH, to seize and execute the usurper Athaliah,

and to rid the land of the foreign cult of Baal. The Carites are not mentioned in the parallel account in 2 Chr 22:10–23:21. They appear to be mentioned in the Heb consonantal text of 2 Sam 20:23. However the MT marginal Qere "CHERETHITES" (a change from *kry* to *krty*) is followed by the majority of scholars (e.g., McCarter *II Sam* AB, 433; but see Delcor 1978: 415 n. 21) on the basis of its standing in parallel with PELETHITES and of the LXX (B: *chelethi;* A: *chereththi*).

Attempts have been made to identify the biblical Carites with the Carians, a people of the 1st millennium B.C.E. whose homeland CARIA lay in SW Anatolia. Carians are known to have served as mercenaries in Egypt and Nubia under pharaohs Psammetichus I and II. However, the attempt to link them with the biblical Carites has been called into question on linguistic grounds (see Cogan and Tadmor *II Kings* AB, 126 and Schmitt *RLA* 5: 424). Although the suggestion has been made that the Carites as a royal guard were descended from the Cherethites (e.g., Greenfield *IDB* 1: 557), the evidence for this remains inconclusive at best.

CARL S. EHRLICH

CARKAS (PERSON) [Heb *karkas* (כַּרְכַּס)]. See MEHUMAN (PERSON).

CARMEL (PLACE) [Heb *karmel* (כַּרְמֶל)]. A town in the Judean wilderness (Josh 15:55) located approximately eight miles southeast of Hebron (M.R. 162092). Carmel was the site of a monument built by Saul (1 Sam 15:12); the location of the sheepshearing business of Nabal (1 Samuel 25); and the home of Abigail the wife of David, formerly married to Nabal (1 Sam 27:3; 30:5; 2 Sam 23:35; 1 Chr 11:37).

The monument Saul erected in Carmel following the defeat of the Amalekites was probably a victory stela signifying that he claimed authority over the region around Carmel (*HAIJ*, 138). Nabal's response to David's request for supplies (1 Sam 25:9–11) implies that the local inhabitants in the area of Carmel recognized Saul's authority as opposed to David's (*HAIJ*, 166). Aharoni suggested that David made incursions into the area, to Carmel and other sites (1 Sam 23:15, 24b; 25:2), from a base of operation, a fortress, perhaps Masada, a likely candidate because Iron Age sherds have been found at the site (*LBHG* 289–90, n. 9). While the reference to Carmel in the context of Josh 15:21–62 appears to provide information concerning the tribal period, many scholars suggest it reflects the administrative districts and towns during the time of the Judean Monarchy (*LBHG* 347), a period when Carmel was a part of the district of Ziph (*LBHG* 354–55). During the biblical period, Carmel was a fortification and an important part of the defense system of the Judean desert. Though the region appears to be a useless wasteland, on the contrary, in ancient times it was a politically strategic area with an economy based on animal breeding. For these reasons, the Judean desert had two lines of fortifications protecting the highways of the area, one located along the Dead Sea, the other several miles west. Carmel was a part of the western line of fortresses (Har-El, 1981: 13–14). The modern name el-Kirmil, the biblical Carmel, illustrates how the ancient name has been preserved, though the modern Arabic name includes the definite article (*LBHG* 121).

LAMOINE F. DEVRIES

CARMEL CAVES (M.R. 146230). Prehistoric caves in Mount Carmel. The term "Mount Carmel Caves" unmistakably refers to the three which were excavated under the direction of D. Garrod between 1929–34: Tabun, Skhul, and El-Wad. The three are located in a rock cliff on the S bank of Nahal Mearot, or "the River of the Caves," with a fourth one, the cave of Gamal which yielded no ancient remains. The cliff is some 20 km S of Haifa, at the border between Mt. Carmel and the coastal plain. The Tabun excavations were renewed by A. Jellinek between 1967–71, then by A. Ronen (1973–84). A test excavation at El-Wad was carried out by O. Bar-Yosef in 1981.

A. Tabun

The cultural deposits in Tabun were about 25 m thick, a long record with few parallels in the world. Two major units were present: Lower and Middle Paleolithic, each occupying approximately half of the deposits.

The Lower Paleolithic consisted of an Acheuleo-Yabrudian sequence (layers G[?], F, and E) and an Amudian episode located near the top of layer E. The material from layer G was too poor to be indicative. The Acheuleo-Yabrudian had hand axes and sidescrapers as its main tool types, with ratios varying from almost exclusively hand axes to almost exclusively sidescrapers. The dominant technology was flake production, non-Levallois. The Amudian episode was very different: typical tool types were burins and knives—typically *Upper* Paleolithic tools; the technology used in the Amudian was a highly sophisticated blade production, also typical of the Upper Paleolithic. There also appears an original and exclusive phenomenon of reusing older tools for shaping new ones.

The Middle Paleolithic consists of the Mousterian culture (layers D, C, and B), with two main phases. The lower (D) has typically long flakes and long points, the younger (layers C, B) has mainly large flakes and large points. The Levallois technique is widely used throughout the Middle Paleolithic sequence of Tabun.

During layer C, a shaft (or chimney) started to open in the ceiling of Tabun (hence its name, which means "the Oven"); it eventually widened to such a point that it rendered the cave uninhabitable. Afterward (layer B), the cave became a trap into which deer were driven and butchered. The accumulation of layer B may have ended some 40,000 years ago. After that only scattered remains were deposited ranging from the last 10,000 years (layer A), which marks the end of the Paleolithic occupation of the cave.

The Lower Paleolithic levels in Tabun are made of quartz and sand; the Middle Paleolithic levels are silt and clay, with a transitional zone between the two sediments (in layers E and D). The changing sediment probably indicates fluctuations in the sea level, which was probably high during the accumulation of sand, and low during the accumulation of silt and clay. See Fig. CAR.01. These fluctuations are attributed to Isotope Stages 5 and 4 respectively, or the last episode of high sea stand (130,000–80,000 years ago, possibly 20 m above present level), followed by the last glacial period with its very low sea stand (100 or more m below its present level). Some palynological evidence indicates a dry period, with few trees, when the sand accumulated, followed by a wetter climate, and hence a forested landscape, during the silt and clay layers. This theory still needs confirmation.

A Neanderthal burial was found in the Middle Paleolithic of Tabun, a female of 30–40 years of age who was placed in a contracted position. The precise Mousterian layer to which the burial belongs is unclear. Additional fragments of human bones were also found in the Mousterian of Tabun.

B. Skhul

This is the easternmost in the group of Carmel Caves, and had two cultural phases. The lower (layer C2) was a sandy deposit with Acheuleo-Yabrudian (?) remains and was preserved only in small, thin patches with very scanty remains (including hand axes) which do not permit a definite analysis. Above it were some 2.5 m of Middle Paleolithic remains in a reddish silty clay (layers C1 and B). The tools were like those of the younger Mousterian in Tabun, with abundant Levallois technique. The most important find in Skhul was its cemetery (layer B) with 10 fairly well preserved individuals. There were isolated remains of other individuals. These burials contain the remains of anatomically Modern Man, or *Homo sapiens,* as distinguished from the Neanderthal found in the nearby cave of Tabun. The precise chronological relations between these two neighbor populations remains unclear. In Skhul, like in Tabun, the Paleolithic occupation ended with the Mousterian. The upper layer (A) contained the mixed remains of the last 10,000 years.

C. El-Wad

El-Wad is the longest cave in Mount Carmel, penetrating some 50 m into the rock. At its base it contained the remains of Mousterian culture (layer G), overlain by Upper Paleolithic (layers F, E, D, and C) and Natufian (layer B; 12,000–11,000 years ago). El-Wad was then unoccupied except for occasional visitors and shepherds of the last 10,000 years (layer A). The entire sequence is 2–3 m thick.

The Mousterian at the base of El-Wad resembles that of Skhul and the upper part of Tabun, but the precise temporal relations between the three Mousterian occupations is unknown. El-Wad is the only cave among the Mount Carmel classics to have Upper Paleolithic and Natufian cultures.

The Upper Paleolithic starts with an Ahmarian phase, rich in retouched and pointed blades, and poor in grattoirs (end scrapers) and burins (layers F, E). This phase is followed by the Levantine Aurignacian culture, with its typical steep scrapers and abundant burins (layers D, C). In layer B, in a reddish silty clay, the Natufian cultural remains were found. The dominant tools (80–90 percent of the total) are tiny implements called microliths, mainly in the shape of lunates. Besides these there are some burins and scrapers, together with a new invention, the sickle blade, with its typical luster due to grass cutting. The Natufian of El-Wad yielded stone structures, mortars and pestles (in basalt or limestone), and a cemetery containing about 80 burials of anatomically Proto-Mediterranean man. A few individuals had decorations made of bone and seashell. Some had art objects associated with them (i.e., a human head covered in stone and a deer made of bone). The Natufian culture represents the earliest sedentary society in the Near East, and possibly in the world.

As with the other Carmel Caves, the upper layer (A) had mixed remains from the Neolithic period till the present.

AVRAHAM RONEN

CARMEL, MOUNT (PLACE) [Heb *har hakkarmel* (הַר הַכַּרְמֶל)]. A range of hills and mountains running SE from modern Haifa on whose promontory occurred the cataclysmic encounter between Elijah and the prophets of Baal (1 Kgs 18). Carmel, a common noun, means "garden," "vineyard," or "orchard" (Isa 10:18; 16:10; etc.). The name may reflect the fertility of Mt. Carmel's slopes which catch the Mediterranean moisture in the westerly sea breezes. Baly gives the annual rainfall as 28 inches (*GB*, 58). The abundance of these mountain slopes is reflected in modern times by the remnants of forests (mentioned by Baly *GB*, 81, see also Isa 33:9; Jer 46:18), by the presence of olives and grain, and by vineyards which produce the famous Mt. Carmel wine. Even today something of the slopes' beauty may be seen in the Bahai garden shrine. Mt. Carmel's beauty is certainly celebrated in the Bible. Cant 7:5 says the loved one's "head crowns you like Carmel, and your flowing locks are like purple." Mt. Carmel is compared to the Plain of Sharon, Lebanon, Tabor, Bashan, and Gilead (Isa 35:2; Jer 50:19). In reversal, a drought makes Mt. Carmel an area of desolation (Isa 33:9; Amos 1:2; Nahum 1:4).

What is usually called Mt. Carmel, Jebel Kurmul or Jebel Mar Elyas, is a headland that juts out into the Mediterranean Sea and helps to form to the N the Bay of Acre together with the modern harbor of Haifa. It appears on maps as a sharply pointed cape on an otherwise mostly smooth coast all the way to Egypt. The headland is the NW end of a 13-mile long, 5- to 8-mile-wide range of hills of hard Cenomanian limestone (formed ca. 55 million years ago). This limestone weathers into a rich red *terra rossa* soil, adding to the areas' fertility. The headland itself rises to ca. 556 feet and the range reaches ca. 1800 feet near its southeastern end. On the N, overlooking the Esdraelon Valley and the Kishon (Mugatta) River (Judg 4:7), the slope tends to be steeper than the S which slopes more gradually toward the Plain of Sharon. The range actually splits Palestine S–N with Sharon and Philistia to the S and Esdraelon and the coastal plain of Acco to the N. Though a narrow beach goes along the sea, traffic of antiquity normally turned inward and went through passes like the ones near Jokneam (Josh 12:22) and Megiddo.

Mountain caves such as those in Wadi el Mugharah (Valley of the Caves) overlooking Sharon, were inhabited from the Lower Old Stone Age through the Middle Stone Age (150,000–10,000 B.C.). Towards the end of this time, the Natufian period included the earliest art found in Palestine—carved animal heads of tool handles, a human head carved in limestone, pendants and beads of dentalium shells, etc. Palestinian Man, *Palaeanthropus Palestinus,* viewed by some as a hybrid of Neanderthal man and modern *Homo sapiens,* inhabited the caves. Others claim there are 10,000 years between the two types. These caves and mountains appear to hold prehistoric significance as the cradle of human development in Palestine (*EAEHL* 1: 290–98; see CARMEL CAVES).

Historically, Mt. Carmel has been mentioned in the writings of both Egypt and Mesopotamia. An indirect reference may be found in the records of the Egyptian pharaoh Pepi, ca. 2350 B.C. They mention a mountain running down to the sea, called "the Nose of the Gazelle's Head," behind which troops landed. Mt. Carmel appears as *Roš Qadeš,* "Holy Head," in the Egyptian records of Thutmose III (1490–1436 B.C.; as No. 48 in his topographical list), Ramses II (1301–1234 B.C.) and Ramses III (1195–1164 B.C.). This suggests that at least in the 2d millennium Mt. Carmel may have been a holy place or sanctuary. Aharoni (*LBHG*, 99, 171) identifies the Egyptian Mount User (e.g., *wsr* "strong, mighty") with Mt. Carmel in Papyrus Anastasi I from the time of Ramses II. In the annals of the Neo-Assyrian King, Shalmaneser III (841 B.C.), Mt. Carmel appears as Ba'li-ra'si (Safar 1951: 19). It is here that Tyre and Jehu, King of Israel, paid tribute to Shalmaneser.

This payment of tribute raises the issue of boundaries. The Mt. Carmel area seems to have formed a natural barrier that placed it in a border region. In the tribal boundaries of Joshua, the forest hills of Mt. Carmel form the southern boundary of the Tribe of Asher (19:26). Some say Mt. Carmel itself was part of Asher while others maintain that it was included in the northern border of western Manasseh (Kallai *HGB*, 176–77; *GTTOT*, 189 n. 173—the borders of Asher "touched" Mt. Carmel). Josephus included it in the tribal territory of Issachar (*GTTOT*, 352). Mt. Carmel may have also marked the border between Tyre and Israel during the period of the divided monarchy. Based on the Neo-Assyrian evidence for the location of the payment of tribute by Jehu and Tyre noted above, Astour (*IDBSup*, 141) maintains (1) that this confirms Mt. Carmel as the border between Tyre and Israel (Sidon and Israel says Simons [*GTTOT*, 87]); (2) that an Assyrian Army crossed Israel as early as 841 B.C. and provides that background for Jehu's seizure of power that year; and that Carmel was a sacred mountain, dedicated to the "Baal of the Promontory" (*IDBSup*, 141).

This evidence together with the Egyptian evidence cited above indicates the religious significance of the mountain and also a possible explanation for the choice of this site by the biblical writers as a background for the Elijah-Elisha cycle. In 1 Kings 18, Mt. Carmel is selected for the famous duel between Elijah and the 450 prophets of Baal and the 400 prophets of Asherah. There Elijah rebuilds an old altar and lifts a challenge to see whose deity would prevail. In this story, as the extrabiblical evidence would suggest, Baal is defeated by Yahweh on Baal's own ground (de Vaux *AncIsr*, 280–81). However, one must note that Baal worship, though dealt a significant defeat in the biblical story, was not eliminated in Israel. The exact location of the subsequent slaughter of the prophets of Baal is not known. One tradition locates it at el-Muragen (Karten Karmel), "the place of burned sacrifices" in the SE, while another refers to Tell el-Qassis, "the mound of Priest" NE of Mt. Carmel. This has become the traditional site. Subsequent to these momentous events, the Elijah cycle narrates the flight of Elijah to Mt. Horeb because of the wrath of Jezebel (1 Kgs 19:1–18). There he discovers a cave (v 9) where he encounters the Lord, the God of Hosts in a "still small voice" (v 12). Some attempts have been made to add to the religious significance of Mt. Carmel by identifying this cave with a grotto on the SW corner of the Mt. Carmel cape. This grotto is part of the antiquities site of Tel Shiqmona (LB–Byzantine period; includes a Byzantine monastery plus later Arab occupation; *EAEHL* 4: 1101–9). The religious significance of Mt. Carmel is perpetuated also with Elisha, Elijah's disciple. In 2 Kgs 2:25 and 4:25, the area seems to serve as a spiritual retreat for Elisha.

Mt. Carmel continues as a religious site into the Hellenistic and Roman periods. Pseudo-Skylax (4th century B.C.) records a temple to Zeus on Mt. Carmel (Aharoni *LBHG*, 361). Pythagoras meditated there. Vespasian and Trajan sacrificed there to the deity, Carmel. Tacitus notes that the priests of the Carmel oracle assured Vespasian that he would become master of the world. The sacredness of the area is indicated by a stone foot, discovered by Avi-Yonah in 1952 while visiting the museum of the Monastery of Elijah. The inscription of the foot reads, "To Heliopoleitan Zeus Carmel from Gaius Julius Eutychas, citizen of Caesarea." The foot was not part of a statue but a votive offering to the deity, Carmel, who is identified with Zeus.

Within the Christian period, Mt. Carmel has been equated with the monastic tradition. Monasteries were located on the summit for centuries and the mountain gives its name to the Carmelite monastic movement

originating from a group of hermits who came under the supervision of St. Berthold ca. 1150. A 19th-century monastery of St. Elias continues this ancient tradition.

In modern times, the sacred character of the mountain also continues in the Bahai garden shrine with the tombs of the Bahai leaders Bab-ed-din (d. 1850) and Abdul Baha (Abbas Effendi, 1844–1921). Baly further notes that in the 1930s people still spoke with awe of the "Forty Oaks," a sacred grove still standing on the heights of Mt. Carmel. Subsequently this sacred aura has been lost for "in January, 1970, it was a sorry mess," according to Baly (*GB*, 173 n. 11).

HENRY O. THOMPSON

CARMI (PERSON) [Heb *karmî* (כַּרְמִי)]. CARMITES. **1.** The fourth son of Reuben. He went down to Egypt with his father when the family of Jacob migrated from Canaan to Goshen (Gen 46:9; Exod 6:14; 1 Chr 5:3). He was the ancestor of the family of the Carmites (Num 26:6).

2. A man from Judah, he was the son of Zabdi (Josh 7:1, 18). Carmi was the father of Achan, the man who violated the religious ban imposed by Joshua upon the city of Jericho (Josh 6:17–19). Noth (*NHI* 64) has identified Carmi, the father of Achan, with the Reubenite family of Carmi (Num 26:6). In 1 Chr 2:7 the son of Carmi is listed as Achar, "the troubler of Israel." This variation in name was probably a deliberate effort to bring out a play on the Hebrew word for trouble: *ʿākār ʿkēr yišrāēl,* "Achar, the troubler of Israel."

In 1 Chr 4:1 Carmi, Perez, Hezron, Hur, and Shobal are listed as the sons of Judah. Of these, however, only Perez was Judah's son (1 Chr 2:4). Hezron was the son of Perez (1 Chr 2:5); Hur was the son of Caleb (1 Chr 2:19), who was the son of Hezron (1 Chr 2:18). Shobal was the son of Hur (1 Chr 2:50). Carmi should be reckoned as a descendant of Judah through Zerah and his son Zimri (1 Chr 2:5). The LXX identifies Zabdi, the father of Carmi, with Zimri (see Josh 7:1 where the LXX reads Zambri). For this reason, *BHS* proposes to read Caleb (1 Chr 2:18) or Chelubai (2 Chr 2:9) in place of Carmi in 1 Chr 4:1, thus presenting six generations of Judahites, from Judah to Shobal.

CLAUDE F. MARIOTTINI

CARMONIANS [Lat *Carmonii*]. A people referred to in the apocalyptic visions of war and calamity that constitute chaps. 15–16 of 2 Esdras (15:30). The Carmonians appear in the E, devastate the land of Assyria, and then engage in battle with the "dragons of Arabia." The Carmonians were a people culturally related to the Medes and Persians, who resided in the province of Carmania N of the Strait of Hormuz on the Persian Gulf (cf. Kerman in SE Iran). The vision in 2 Esdras 15:28–33 in all likelihood contains veiled allusions to the A.D. 259–60 campaign of the Sassanian king Shapur I (i.e., "the Carmonians"), who devastated Syria and Cappadocia (i.e., "the land of the Assyrians") and captured the Roman emperor Valerian. The Palmyrene prince Odenathus, husband of the famous Zenobia, then attacked Shapur, apparently in a vain attempt to liberate Valerian. For a detailed discussion of these events, see Myers, *1–2 Esdras* AB, 349–51.

GARY A. HERION

CARNAIM (PLACE) [Gk *Karnaim* (Καρναιμ)]. One of five cities in Gilead in which Jews were taken captive by the Gentile citizens (1 Macc 5:26). The city is widely identified with modern Sheih Sa'ad "because of its ancient city walls and also on account of its especially suitable situation as a place of refuge at the confluence of nahr el-aḥreir (ḥarīr) and wadi ezrāʿ" (*GTTOT,* 425). Goldstein (*1 Maccabees* AB, 303) thinks the site is the same as Ashtoreth-karnaim mentioned in Gen 14:5; Josh 9:10, 12:4; and Amos 6:13, and that the name implies that the goddess Ashtoreth (Ashtaroth) was worshipped in the city's temple in the form of a goddess with horns.

The Maccabean Revolt met with early success, leading to the Jews' retaking the Temple in 164 B.C. Gentiles retaliated in Gilead under a military leader named Timothy. Many Jews in Gilead fled to a

stronghold at the city of Dathema, from which they sent to Judas for aid. En route to rescue the refugees, Judas learned from a group of Nabateans that Jews were also under attack in the cities of Bozrah, Bosor-in-Alema, Chaspho, Maked, and Carnaim, as well as other cities (1 Macc 5:24–27). The last of these Jews to be liberated were those living in Carnaim. Judas attacked Timothy and his Arab mercenaries on the bank of a tributary of the Yarmuk River, causing the enemy to retreat to nearby Carnaim (5:43–44; cf. 2 Macc 12:21, 26). There they took refuge in the Temple of Ashtaroth, perhaps thinking the Jews would not attack a temple, even though dedicated to a pagan goddess, or hoping the goddess would save them (Goldstein *1 Maccabees* AB, 303). If so, they were fatally mistaken, for Judas captured the city and burned the temple and Timothy's army.

PAUL L. REDDITT

CARPUS (PERSON) [Gk *Karpos* (Καρπος)]. A resident of Troas and presumably a Christian, with whom Paul left some of his belongings (2 Tim 4:13). It may have been at the house of Carpus that the Christians of Troas held their gatherings, and perhaps Carpus was Paul's host on the occasion of his visit and preaching when Eutychus fell asleep and tumbled out of the window (Acts 20:7–12). For some reason, before one of his departures from Troas (apparently referred to in Acts 20:13), Paul had left a cloak, books, and parchments with Carpus, items Timothy was later asked to retrieve and bring to Paul in his imprisonment.

In anticipation of winter (cf. 2 Tim 4:21), Paul needed the cloak (called in Greek a *phailonēs*, usually understood as the equivalent of the Lat *paenula*—i.e., a seamless overcoat with a hole for the head and woven to resist rain—Johnson 1950: 8). Such overcoats (and other types) are known to have been made from black glossy wool. This wool, world-famous at the time, came from the region near Laodicea where it was woven, although it is uncertain whether the color's source was a special breed of black sheep or dyes. *Paenulae* later became popular in Rome and eventually developed into the ecclesiastical chasuble.

Paul was also concerned to have "the books, and above all the parchments" (4:13). "Books" (*biblia*) is normally interpreted as the more general term which includes the "parchments" (*membranai*). But Skeat translates: "the books—I mean the parchment notebooks" (1979: 174). The parchments, most likely in scroll form, were made from sheepskin and goatskin and naturally were more expensive than the papyrus rolls which would have made up other types of books. Papyrus was still the usual writing material at the time. Many suggestions have been advanced concerning the contents of Paul's books (e.g., letters to him, copies of his own correspondence, sacred books) and parchments (e.g., OT writings, official copies of the Lord's words, Paul's certificate of citizenship), but there is no way of knowing what they contained. It has been pointed out, however, that while *membranai* means "parchments," it is actually a transliteration into Greek of the Latin term *membrana* by which the Romans meant specifically a parchment notebook (in page form) used for notes, memoranda, or rough drafts (Skeat 1979: 173). Thus, if Paul were using the term in that sense he could have been referring to notebooks he especially valued, perhaps containing lists of Christians in various communities. Whatever their contents, Carpus was trusted by Paul to keep them until he sent for them.

FLORENCE MORGAN GILLMAN

CARSHENA (PERSON) [Heb *karšĕnāʾ* (כַּרְשְׁנָא)]. One of the seven princes of Persia and Media who were the advisers of King Ahasuerus (Esth 1:14). These men were the most prominent at the court (lit. "sat first in the kingdom") and had the privilege of personal audience with the king (lit. "saw the king's face"). That such a council of seven prominent nobles customarily advised the Persian monarch is

well known from extrabiblical sources (for references see Paton *Esther* ICC, 153 and especially *ISBE* 3: 971). Based on the MT form, the name is very likely Persian (see the arguments of Millard 1977: 481–88, who counters the excessive caution of Moore [*Esther* AB, 41–44] regarding the Hebrew spelling) and probably identical with the name *kur-iš-na* (Zadok 1976: 246) occurring in the Persepolis Fortification Tablets (see Mayrhofer 1973: 8.785). The etymology is uncertain. Millard (1977: 485) notes Mayrhofer's analysis into Avestan *Karša* "furrows" plus the patronymic suffix-*ina.* Zadok (1976: 246) offers the alternative explanation that it is from Sogdian *kršn* " (beautiful) form." It would appear that the form of the name in the LXX, *arkesaios,* omits the patronymic (Millard 1977: 485).

CASEMATE. See FORTIFICATIONS.

CASIPHIA (PLACE) [Heb *kāsipyā*› (כָּסִפְיָא)]. A place in the vicinity of the Ahava River (N Babylonia), where some Jerusalem "temple servants" apparently had been living in exile; Ezra sent a delegation to Iddo, "the leading man at the place of Casiphia" (Heb *hārō*›*š bĕkāsipyā*› *hammāq̃m*) to solicit volunteers to return with him to Jerusalem where they could presumably resume services as "ministers for the temple of God" (Ezra 8:15–20). Early versions reflect uncertainty about whether Casiphia (mentioned twice in v 17) was a proper (place) name or a common noun related to Heb *kesep,* "silver, money." LXX-A assumes that Iddo was a leading man at "the place of the treasury" (*en tō topō tou gazophylakiou,* 1 Esdr 8:44–45 [—Eng 45–46]), while LXX-B assumes that Ezra sent the delegation to the leaders "with money of the place" (*en argyriō tou topou,* i.e., with money presumably of Ahava, 8:17). The place of Casiphia is unknown, although Winckler (1901: 509–30) suggests that it might be identified with Ctesiphon on the Tigris River ca. 20 miles SSE of Baghdad. See also MERARI (PERSON) and SHEMAIAH (PERSON).

GARY A. HERION

CASLUHIM [Heb *kaslūḥîm* (כַּסְלֻחִים)]. Sixth "offspring" of Egypt, concerning whom it is said, "whence came A Commentary on the Book of Genesis" (Gen 10:13–14). On the basis of the plural suffix marker, *-îm,* this figure seems to be the name of an ethnic group. The order of the names appears to be according to the number of consonants in the root, beginning with two (LUD) and proceeding to four (NAPHTUHIM and all the names of v 14). Thus the order of the names is probably not intended to follow a geographical sequence (Wenham *Genesis 1–15* WBC, 224).

There are two problems surrounding the Casluhim: who are they, and is the gloss concerning the origin of the Philistines meant to apply to them? As to the first, *Pseudo-Jonathan* identifies the origin as *penṭapôlîṭî,* i.e., of Cyrene (cf. *pnṭsk (y)n*›*y* of two of the fragmentary targums). However, the two problems are related since those who compare Amos 9:7 (as well as Jer 47:4 and Deut 2:23) and transfer the gloss to the following name, Caphtorim, tend to associate the Casluhim with some part of Egypt (cf. Skinner *Genesis* ICC, 213, whose review of the options includes the nomadic Libyans of Herodotus, *nasamōnes* near the oasis of Amon) or provide no identification (Speiser *Genesis* AB, 68–69; Westermann 1984: 519).

On the other hand, those who retain the natural Hebrew grammar and associate the Casluhim with the home of the Philistines, attempt to reconcile the text by: (1) separating the Philistines of Caphtor from an earlier wave of Philistines from Casluhim (Cassuto 1964: 208; Kitchen 1973: 56; Wenham *Genesis* 1–15, 225); or (2) assuming that, by identifying the Pathrusim as Upper Egyptians and the Naphtuhim as Middle

Egyptians (or, more likely, "they of the Delta" or "they of the oasis land" as in Kitchen 1980: 1054, since Middle Egypt did not exist as a separate unit in ancient Egypt), the Casluhim must be Lower Egyptians who migrated to Crete before coming to the Levantine coast as Philistines (Rendsburg 1987); or (3) assuming a metathesis from *sklḥ (m),* which is related to the Tjekker of the Egyptian sources, with the addition of a non-Semitic suffix -ḥ (Kitchen 1973: 70 n. 3).

RICHARD S. HESS

CASPIN (PLACE) [Gk *Kaspin* (Κασπιν)]. A fortified town in the Hauran Plain captured ca. 161 B.C. by Judas Maccabeus (2 Macc 12:13). Judas' 8,000-man contingent of the Hasmonean army advanced into the region E of Galilee in order to rescue the Jewish populace from the hostilities of the Hellenistic Gileadite forces led by Timotheus. Caspin is equated with CHASPHO in a second account of Judas' Gilead campaign recorded in 1 Macc 5:9–54. The account in 2 Macc 12:10–31 contains fuller detail but is chronologically disjointed and suffers textual difficulties. The account in Josephus (*Ant* 12.8.3 §340) and that in Maccabees vary greatly, probably the result of the name being transliterated from a Semitic dialect into Greek (Goldstein *1 Maccabees* 301).

Caspin was identified by a band of Nabateans as one of the five fortified towns in Gilead where Jews were being held captive (1 Macc 5:24–27). These towns included Bozrah, Bosor in Alema, Chaspho, Maked, and Carnaim. Caspin was the site of one of the earlier confrontations of the Gilead campaign. It was attacked after Judas' army forced Timotheus and his forces to break their siege on a Jewish stronghold at Dathema (1 Macc 5:30–34).

The residents of Caspin were from a variety of ethnic groups and were well-disposed towards Hellenism. They were confident in the ability of their fortifications and provisions to withstand Judas' attack. However, their tauntings and curses were repaid with the slaughter of the residents of the city which was captured when Timotheus' forces were regrouping. A nearby lake reportedly turned red with the blood from the carnage. At the time of Judas' siege there were apparently no surviving Jewish residents in the city.

The location of Caspin has not been substantiated archaeologically. Proposed sites include Khisfin (M.R. 226250), 14 km E of the Sea of Galilee, and El Muzerib in the Wadi Yarmuk.

CATHUA (PERSON) [Gk *Kathoua* (Καθουα)]. A temple servant whose descendants returned from Babylon with Zerubbabel (1 Esdr 5:30). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2:47; Neh 7:49). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

CATTLE. See ZOOLOGY.

CAUDA (PLACE) [Gk *Kauda* (Καυδα)]. A small island (modern Gozzo or Gaudos) located approximately 23 miles S of Crete (34°50′N; 24°05′E) mentioned in Acts 27:16. Julius the centurion, Paul, and other prisoners boarded a large Alexandrian grain ship bound for Rome at Myra. Strong winds forced the ship to sail to the lee side (E) of Crete, and they set sail for the port of Phoenix where they intended to spend the winter. The ship, however, was forced off of its course by a wind of hurricane force called Euroquiloa or *"northeaster."* The ship could not head into the wind so it was forced to be driven along by the wind. The ship soon came to the lee of the island of Cauda, which provided enough protection for the crew to make some preparations for the storm. The crew stowed a lifeboat which was in tow and hindering steering, undergirded the ship with ropes, and lowered the anchor.

The exact spelling of the name of this island is problematic. Several manuscripts rendered it *Klauda.* The form Cauda is found in many of the most ancient manuscripts, and the Latin Vulgate rendering as *Gaudus* (see also Pliny *HA* 4:12), as well as the modern names, both the Greek Gaudos and the Italian Gozzo, give credence to this spelling.

The small island could only have supported a limited population. Cauda, however, did merit a bishopric during the Byzantine period, but this was undoubtedly due to its association with the apostle Paul. See Smith 1979: 95–96, 110–13; Jackson and Lake 1965: 332.

CEILING. RSV rendering of the Heb verbal *wayyīspōn,* "to cover/panel over" (1 Kgs 6:9).

CELIBACY. Votive abstention from marriage and sexual relations—unknown unless alluded to in Matt 19:12.

CELSUS (PERSON). Celsus was a late 2d-century Middle Platonist and vigorous opponent of Christianity. Nothing is known about him except what can be inferred from excerpts from his otherwise lost *True Doctrine (TD)* which are embedded in Origen's mid-3d-century work in eight books, entitled *Against Celsus (c. Cel.).* Origen's attempts to identify him with a known historical figure are contradictory and fail under close scrutiny.

———

A. The True Doctrine

1. The Trustworthiness of Origen's Quotations. Although earlier scholarship was mixed on the reliability of Origen's preservation of the original *TD,* more recent studies have concluded in favor of Origen's care and general objectivity in his quotations from the *TD.* He preserved the larger part of the *TD* in some form, most of it in direct quotations. These citations were presented with a remarkable degree of exactness and absence of alteration for apologetic purposes. Further, in almost every instance, the original order of the *TD* is reflected in Origen's quotations.

2. Date. More than a century ago Keim (1873) argued so convincingly that the *TD* was written in the year 178 C.E. that his dating became the scholarly consensus. Certain recent studies, however, have exposed major flaws in Keim's interpretation of key passages and have, in effect, reopened the date question. If, as they should be, Keim's arguments are rejected, the *TD* can be dated no more precisely than the last third of the 2d century.

B. Celsus the Person

1. Identity. A substantial number of men of letters and position in the first two Christian centuries bore the *cognomen* (family name) "Celsus." Unfortunately, Origen, who did not know the identity of his opponent, supplied no information on either Celsus' *praenomen* (first name) or his *nomen* (clan name), so nothing about his nationality or country of residence can be inferred from his name. Celsus' book reflects a broad acquaintance with the Mediterranean world but none of his ideas betray a narrow ethnic or national bias. Efforts to connect him specifically with Rome have failed and little else is known except that he at least traveled in the East. Celsus, thus, cannot at present be identified with any other known 2d-century figure.

2. Philosophical Views. The belief that Celsus was an Epicurean who lived during the reign of Hadrian was first championed (*c. Cel.* 1.8) then abandoned by Origen. In modern times a number of scholars have identified Celsus with the Epicurean to whom Lucian of Samosata dedicated his *Alexander the False Prophet.* This conjecture has rightly been criticized on the basis of the overt Platonism of the author of the *TD,* coupled with the incompatibility of Middle Platonism and Epicureanism during this period. Clearly, Celsus was in the mainstream of 2d-century Middle Platonism. This made him all the more powerful an antagonist of Christianity because he moved in the same intellectual milieu as his Christian apologist adversaries.

3. Scope of His Polemic. Celsus' arsenal contained an impressive array of weapons, from an imaginary Jew (the first two books) to Greek philosophy and mythology. He even pitted competing Christian groups against each other. Almost nothing about Christianity escaped his assault. Celsus attacked the person and teachings of Jesus and his original followers. Subsequent doctrines and practices were no less culpable to him. Christianity was hopelessly divisive, and its underhanded evangelistic methods attracted only the simpleminded. Christians were worthless as citizens and could not be counted on to defend the empire.

Encyclopedic in his knowledge of Christianity, Celsus left no type of Christian group untouched. Jewish Christians, various gnostic sects, and Marcionites were all targets of his scorn. The majority of his polemic, however, including virtually every attack preserved in the first five books of *c. Cel.,* was directed against "orthodox" Christianity or what Celsus characterized as the mainstream ("those of the multitude," *c. Cel.* 5.61). Only in 5.61–64 and 6.24–52 did Celsus focus on the sects, some of which have left no other trace of their existence. Elsewhere their theology surfaces only in scattered fragments in passages that deal predominantly with rather standard orthodox matters.

C. Celsus and Christian Literature

Celsus read widely in Christian writings and, in some cases, especially in biblical books, the literary source of his information can be established with a reasonable degree of certainty. In other passages his comments accurately represent the content of various types of Christian books but definite literary dependence cannot be demonstrated.

1. Old Testament. Although Celsus drew some of his information on the Judeo–Christian cosmogony from Marcionite (6.52–53) and Ophite (6.27–28) sources, in 4.20–53 he exhibited an in-depth acquaintance with the content of the book of Genesis which can only be explained adequately by his having read the book directly. In 4.20–21 he cited examples of divine intervention in the order in which

they occur in Genesis and connected one of them with Moses as the source. Celsus' critique in 4.36–47 covers the entire scope of Genesis, beginning and ending where Genesis does and presenting the material in the proper sequence. Celsus' allusions to material found in the rest of the Pentateuch and the prophets, on the other hand, are too brief and commonplace to determine their direct source.

2. New Testament. Celsus never quoted a NT book or author by name, but at several points ample evidence exists to conclude that he was directly dependent on certain NT documents.

Possible allusions to the Gospels present a methodological difficulty, because two thirds of them occur in 1.28–2.79, where Celsus put his anti-Christian argument into the mouth of a Jew. Because of the probable Jewish sources of this section, evidence for direct dependence on the Gospels must be limited to the rest of the *TD*.

While many references to the *TD* are easily explicable on the basis of direct knowledge of all of the four canonical Gospels, rarely can direct dependence be proven. Only in 5.52 was Celsus clearly dependent on Matthew (1:20, 2:13, 28:1–5), but the fact that material was drawn from widely separated passages to support a single line of reasoning suggests more than a casual acquaintance with the book. Similarly, in 7.18 Celsus betrayed familiarity with widely dispersed passages in Luke, thus suggesting that he was conversant with major portions of the work. No demonstrable allusions to Mark or John occur. Numerous additional statements can be explained on the basis of Celsus' having read other NT books but only in the case of the middle portion of 1 Corinthians is the evidence strong enough to suggest direct dependence (8.21–37).

3. Apologists. Celsus was well acquainted with the type of Christianity reflected in the 2d-century apologists. In fact, extensive arguments have been formulated to establish his dependence on Justin (Andresen 1955) and to a lesser extent Aristides (Harris 1893; 1921), the *Kerygma Petrou* (Robinson 1893), and certain other apologists. While all of these efforts fall short of proving a direct literary dependence on any extant 2d-century apologist (Burke 1985), Celsus' knowledge of the religion of the apologists was so extensive and accurate that such a dependence cannot be ruled out and remains a distinct possibility. Ironically, the sole apologetic writing Celsus actually named, the "Dispute Between a Certain Papiscus and Jason" (4.52), has only survived in three late fragments, the largest of which contains a mere seven words.

4. Sects. In 5.61–62, Celsus mentioned by name several sects which he was able to distinguish from what he called "those of the multitude."

a. Marcionites. Elsewhere he alluded to specific Marcionite teachings (5.54 and 6.74) without identifying them as such and in other passages he made possible allusions (6.29, 52–53, 73, 7.2, 18). In no case, however, did Celsus indicate whether or not his sources were Marcionite documents. Two passages, however, are of special interest. In 7.18 the formulation of Celsus' argument so resembles the approach in Marcion's *Antitheses* that he seems to have been familiar at least with Marcion's practice of formulating antitheses, if not with the *Antitheses* themselves. The fact that the quotation from the *Heavenly Dialogue* in 8.15 is consistent with Marcionite thought has led some (Aubé 1878: 374; Patrick 1892: 76) to conclude that it was a Marcionite document, but his citation is too short to make a positive identification. Hence, while Celsus knew Marcionites by name and theology, his direct acquaintance with their literature remains to be established.

b. Gnostics. Celsus treated the gnostic sects primarily in 5.61–64 and 6.24–52. Nowhere did he make any clear references to specific gnostic documents which are now known to exist or to have existed, but there are numerous parallels with statements in the anti-heretical writings of the Church Fathers and in extant Coptic gnostic writings. In 5.61–64 Celsus specifically mentioned by name Gnostics, Sibyllists, Simonians, Helenians, Marcellians, Harpocratians, and followers of Mariamme and of Martha. He seems to have alluded also to Valentinians, Ebionites, and possibly to Carpocratians, assuming that his mention of Harpocratians was not already a reference to that sect. All of this was treated superficially, so no source determination can be made. In 6.24–38 Celsus described a nonextant Ophite diagram which he had seen along with a written explanation of it. Some of his information about the diagram even came from conversations with sect members.

D. Celsus' Picture of Christianity

Celsus is himself a valuable source on certain aspects of late-2d-century Christian life and piety because his knowledge of Christianity was not limited to written sources. He drew much of the standard anti-Christian caricature but also exhibited a sophistication that is best explained by his extensive contact with and observation of Christians. Celsus discussed sectarian documents and theology with Ophites (6.25, 40). He observed Christian evangelistic and group teaching activities (3.72–78; cf. 3.44) and was on occasion even the object of efforts to convert Ophites (1.9, 12).

The following picture emerges from his vast reading of Christian literature and experience with Christians. Christians were, with few exceptions, illiterate members of the lower classes. Their teachers, even the relatively better educated ones (3.44), sought to attract the gullible, uneducated masses by discouraging any kind of rational thought or questions (1.9, 12; 3.49–50, 55; 6.10–14). The fact that such professions as woolworker, cobbler, and laundry worker (3.55) were common was further evidence of Christians' low social status. Because of his philosophical rejection of the notion that people can undergo radical moral change (3.65), Celsus was appalled by the fact that Christians consciously attempted to attract sinners (3.59, 62). Significantly, however, he did not repeat the oft-heard charges of immoral acts and, in fact, treated Christian ethical teaching as commonplace (1.4).

In sum, Celsus portrayed Christianity as a movement with no innate value or status in society. The great masses of Christians were of no consequence whatever and did not deserve to be taken seriously. Yet, Celsus did take them seriously and wrote no small book to discredit the movement. The danger rested precisely in Christianity's appeal to the masses. To the extent Christians could win the great bulk of society, pagan culture as it had been known for more than a millennium was in danger of being eroded. To his credit, Celsus perceived ever so clearly what eventually happened. His is one of the few and most articulate surviving voices from the side of the struggle which ultimately lost.

CENCHREAE (PLACE) [Gk *Kenchreais* (Κενχρεαις)]. The E seaport of Corinth, located on the Saronic Gulf ca. 11 km E of the city and ca. 4 km S of Isthmia. Two NT references (Acts 18:18 and Rom 16:1) confirm the existence of an early Christian community at the site and the name of one Phoebe, a deaconess of the church. Much later in its history, ca. 4th century C.E., a large Christian complex arose at

the S end of the harbor, eventually absorbing and incorporating earlier structures including the Isis sanctuary. It was apparently in use until the port's destruction in the 580s and possibly even beyond. The modern name of the village in the proximity of the ancient site is Kechriais.

A. History

The ancient site of Cenchreae is mentioned infrequently in surviving texts. Its *raison d'être* was to serve as Corinth's E portal to the Mediterranean. Its fate was inexorably linked to the history of the city it served, suffering and enjoying Corinth's changes of fortune.

Little is known of Greek Cenchreae from either extant literary texts or archaeological data, although it was certainly in existence by the Peloponnesian War (Thuc. 4.42). The site may have been in continuous use until its destruction or abandonment following Mummius' devastation of Corinth in 146 B.C.E. When Corinth was revived by Julius Caesar in 44 B.C.E., Cenchreae's situation improved. New harbor facilities were built to accommodate Corinth's rising importance as an emporium of the E Roman empire (Hohlfelder 1976). Two artificial rubble breakwaters were constructed to provide a deep-water anchorage that was available for use during the normal sailing season (approximately April to early October), and that was both larger and more suitable for Roman Corinth's expanded economic role (Hohlfelder 1985).

Its international prominence and prosperity probably peaked in the 2d century C.E. Although damaged by earthquakes and seismic sea waves in 365 and 375 C.E., the port revived and continued to play a significant role until Cenchreae was finally destroyed by marauding Avars and Slavs in the 580s. In the face of these attacks and subsequent vicissitudes, its population apparently fled to safer regions, ending urban life at the site (Hohlfelder 1973; 1975). Thereafter, it may have been occasionally occupied and the ancient harbor area even used intermittently as a fair-weather roadstead, but Cenchreae never again rivaled its earlier glory.

In addition to the artificial breakwaters, which are now submerged because of subsidence and/or a relative sea level rise of ca. 2 m since their construction, the Roman harbor was distinguished by various warehouses and support buildings, monumental statues, and several temples, the most notable being a sanctuary of Isis mentioned in Apuleius' *Metamorphosis.* An apsidal basin of this structure located on the S breakwater was excavated to reveal more than 100 glass *opus sectile* panels, dating from approximately the reign of Julian (361–363 C.E.). They were intended for a renovation that was planned, perhaps started, but never completed (Scranton 1967; Hohlfelder 1976).

B. Archaeology

Excavations were conducted at the site in 1963–1964 under the direction of R. L. Scranton and E. S. Ramage, and in 1965 under Scranton alone. J. W. Shaw led the underwater excavations, one of the earliest ancient harbor explorations and one that pioneered many survey and excavation techniques still in use (Shaw 1967). Fieldwork was conducted from 1963 through 1968 (excepting 1966), but was limited primarily to the Roman site. An adjacent alluvial plain, which has not been excavated, is believed to conceal the earlier Greek harbor. Five volumes of final reports have appeared to date (cf. Scranton, Shaw, and Ibrahim 1978; Ibrahim, Scranton, and Brill 1976; Hohlfelder 1978; Adamsheck 1979; and Williams 1981) with several more in preparation.

CENDEBEUS (PERSON) [Gk *Kendebaios* (Κενδεβαιος)]. Governor of the coastal plain, who attacked Judea, under the orders of the Seleucid king, Antiochus VII Sidetes (1 Macc 15:37–16:10). Cendebeus' name seems to be of Thracian origin. He was a supporter of Antiochus Sidetes. Josephus (*Ant* 13.225) assumed, maybe rightly, that he belonged to the *philoi* (the "Friends" in the court hierarchy). He is one of a line of governors of the coastal plain, the *Paralia,* which existed as a separate province since Antiochos V up to at least Antiochos VII. Cendebeus fortified Kedron, in the S coastal plain and harassed Judea (Bengston 1964: 176–81). Simon, with two of his sons, Judas and John, attacked him and won a battle at the SW corner of Judea, and drove away Cendebeus' forces as far as Kedron. See Goldstein (*1 Maccabees* AB) for new suggestions.

URIEL RAPPAPORT

CENSERS. Hand-held devices in which incense was placed along with burning coals; the burning spices would provide a pleasing odor. These devices could be either cup-shaped vessels at the end of a long handle, or bowls set onto an upright pedestal. The former is probably indicated by *maḥtāh* (Lev 10:1, etc.); the latter is called a *miqṭeret* (Ezek 8:11). The term *maḥtāh* can also be used here specifically for various temple vessels that could carry coals and thus be used to burn incense (e.g., RSV "firepans," Exod 27:3, and "snuffers," Exod 25:38). A word in Ezra 1:9 rendered "censer" in RSV probably means something else, but its meaning is uncertain. See also FIREPAN; SNUFFERS.

The cultic use of incense offered in censers may be Egyptian in origin. Its use in Egypt apparently served apotropaic purposes. Worshippers would carry censers in processions to keep away the evil forces associated with impurity (Haran 1978: 239–40). The use of incense in ancient Israel seems to have had similar apotropaic functions, as when Aaron is said to have halted an outbreak of disease by standing, with a censer of burning incense, "between the dead and the living" (Num 17:11–13 [—Eng 16:46–48]).

Most references to censers in the Hebrew Bible are in cultic contexts, and they indicate problems in the proper use of censer incense. Nadab and Abihu (Lev 10:1–3) met difficulties when they used "strange fire," apparently coals from outside the altar area and hence lacking requisite sanctity. Korah's company of 250 (Numbers 16) also apparently used improper incense; but their attempt to take over priestly functions, by using the censers, was an even worse misdeed, for which they were punished by being swallowed up by the earth. Similarly, Uzziah (2 Chr 26:19) contracted leprosy when he tried to take from the priests the right to burn incense in a censer. Finally, the 70 elders holding censers in Ezekiel's vision are called an abomination (Ezek 8:11–13). Clearly, the cultic use of censers was a prerogative of priests—or of angels (Rev 8:3, 5).

CAROL MEYERS

CENSUS. This entry consists of two articles, one surveying the census in the ancient Near East, and the other exploring the census in Roman times, particularly with reference to the census reported in the gospel of Luke.

ANCIENT NEAR EAST

Census, as we understand it in our day ("an official enumeration of inhabitants, with details as to age, sex, pursuits, etc."or the like) does not find a concrete application in the societies and cultures of the ANE. As is well known, a variety of administrative and economic clay tablets in cuneiform script from

Mesopotamia and outlying regions, from the 3d to the 1st millennium B.C., provide partial population listings and counts from various cities and territorial entities. What is lacking, on the other hand, are recordings of the overall size of the population in these places: recordings planned by the central administrations of the ANE in terms of fixed geographical limits and regular spans of time.

In most types of state-formation of the ANE during the Bronze Age, a certain number of contingent and practical needs—from the distribution of rations to fiscal revenues to military levies—constituted the main occasions for drawing up inventories of specific sectors of the population. Thus, e.g., the texts from Ebla (Syria, 24th century B.C.) leave us a list of food provisions for 260,000 people—but it is quite unlikely that this was a "head count" of the local population. On the other hand, the archives of Alalakh (level 4) and Ugarit in Syria (15th–14th century B.C.) present numerous registers of male individuals according to their village of origin and to their social grouping, essentially for the supply of military contingents. And finally, the many interconnecting legal documents from Sippar in lower Mesopotamia allow us to reconstruct the inner organization of this city in full for the period ca. 1900–1600 B.C., from settlement patterns to social mobility, including the career stories of men and women alike—but few, if any, numerical and statistical data and frameworks may be called upon for this picture.

The perspective changes somewhat for the period 1000–500 B.C., when the Mesopotamian states (first Assyria, then Babylonia) engage in the construction of universal empires. Figures on vanquished and deported populations begin to be quoted by the Assyrian kings in order to emphasize imperial might: a statistical study of these data has yielded a sum total of about 4.5 million deportees during the period ca. 930–630 B.C. Great care must be taken, however, in evaluating these materials, as the possibility for fictitious numbers (i.e., numbers inflated for ideological reasons) cannot be ruled out in various cases. On the other hand, partial calculations on these deportees, when proved to be likely, usually refer to an overall count of population—men, women, and children—similar to an actual census appraisal. Thus, e.g., it is of general statistical interest to note that Shalmaneser III (858–824 B.C.) reckoned at 110,610 the total of deportees during 20 years, and that Tiglathpileser III (745–727 B.C.) gives the sum total of 13,520 captives from N Palestine alone.

A group of tablets from the same general period, discovered in the archives of the Assyrian capital Nineveh, comes admittedly closest to a definition of "census" for the ANE, as was stated—with great enthusiasm—by the first editor, C. H. W. Johns: "… as a Census, this will bear comparison with the Census in Egypt, or the Roman Census, or the Doomsday Book, which latter it most resembles" (1901). The 21 tablets of the so-called Assyrian Doomsday Book, which are in a fair state of preservation, present divisions in columns and sections. Each section is opened by a list of people in family groups, enumerated in a rigid sequence by age and sex. First come the adult males (whose personal names and professional designations are given), then the "sons" (names but no profession given), followed by the adult women and the "daughters" (no names, no individual listings, just the total for each subgroup given). The sons and daughters are further described by their height in "half-cubits" or "spans," as a marker of their relative age before adulthood. Totals of the type "in all, *n* (people)" end the human enumeration.

The list continues with measurements of land parcels with specified destinations (barley cultivation, vineyard, orchards), and at times with mentions of further commodities forming part of the farm or tied to it (from animals to threshing floors to living quarters). A geographical setting for the plots concludes each section: and all such localizations point to the province of Harran or bordering regions in the NW corner of Mesopotamia. It is also clear, despite the fragmentary character of most texts, that general totals of some type were provided at the end of each document. These totals refer to persons outside of the register itself, at times provided with professional names identifying them as medium-to-high-ranking palace officials.

These clues are sufficient to conclude that not even the well-structured tablets of the Assyrian Doomsday Book may be considered to pertain to a veritable census of population in the modern sense of the word. Rather, it would seem that the interest for listing people and land around the old and famous city of Harran stemmed from a specific policy undertaken by Assyrian kingship: the overall tax-exemption decreed for a few choice sites of the Assyrian empire by Sargon II (721–705 B.C.). The list of

villages or other units of settlement, comprising the (servile and forcedly resident) population employed in agriculture, and the land itself with various commodities or fixtures, was drawn up in order to establish the amount of landed property belonging to this or that courtier or official, who was to be exempted from revenues and services otherwise owed to the state. The fact that the archives of Nineveh also yield larger digests, registering all the plots owned by particular officials, validates this theory, and implicitly shows the limits of censual interests in the ANE as consistently tied to here-and-now, practical and ephemeral, perspectives.

FREDERICK MARIO FALES

ROMAN CENSUS

The violent transition of Roman government from the late republic to the principate (inaugurated in 27 B.C.E. with Octavian's acceptance of the title Augustus and its attendant imperial prerogatives) was marked by innovations in fiscal policy. Significant among these was the institution of the provincial census. Caesar Augustus began the practice of a regular and periodic count (Lat *census,* Gk *apographē*) of the population of all the provinces of the Roman Empire, and a valuation of individually and corporately held property (Gk *apotimēsis*), for the assessment of tax liabilities. Revenues which the imperial government extracted from the provinces included taxes on land and usufruct (Lat *tributum soli*), variable-rate taxes on chattel and a fixed tax on each liable individual (Lat *tributum capitis*), rents on imperial and public property, percentage taxes on Roman citizens, and extraordinary levies (Neesen 1980). Taxes were variously payable in kind or in cash. In addition to individual liabilities were a variety of communal liabilities incumbent on cities. Public corporations formed for the collection and transmission of taxes became powerful and (at least in reputation) corrupt; but by the time of the principate, tax collection in the province of Judea was administered directly by Rome (see TAX COLLECTOR).

Two NT passages, both of them Lukan, refer to the Roman census. Both are synchronisms linking events in the narrative of Jesus' life, and its perduring effects, to the larger span of secular history. Both raise difficult questions about the accuracy of the chronological details in the gospel of Luke and the Acts of the Apostles.

The first reference to the census marks a transition from the narrative of the wonders surrounding John the Baptist's conception, gestation, and birth (Luke 1:5–80) to the etiology of Jesus' nativity in Bethlehem (2:1–8). The infancy narrative concerning John (which may derive from a pre-Lukan source, possibly in Hebrew or Aramaic) is set *en tais hemerais Herodou* "in the days of Herod" (Luke 1:5), the latest date for which would be the year of Herod's death, 4 B.C.E. The Bethlehem story is set in motion by a decree of Caesar Augustus *apographesthai pasan tēn oikoumenēn* "that all the world should be enrolled" (Luke 2:1). It is further specified that this census took place while Quirinius was governor of Syria (2:2; on the syntax and related matters see Fitzmyer *Luke I–IX* AB, 399–400).

The distinguished career of P. Sulpicius Quirinius is reasonably well documented from contemporary inscriptions as well as Latin and Greek historical writers (the sources are collected in *HJP²,* 259), chief among them Josephus. In all of the five Josephan passages in which Quirinius plays a part, he is associated with a valuation (Gk *apotimēsis*) of the Judeans and its political consequences (see ZEALOTS); the event is called an *apographē* (*Ant* 18.3; *JW* 7.253). In one passage (*Ant* 18.26), Quirinius' administration of the census is set in the 37th year after the defeat of Antony at Actium, and thus in the year 6/7 C.E. The decade separating the death of Herod from the census decreed by Augustus and carried out by Quirinius is the source of the difficulties critical readers have in relating the Baptizer's

infancy narrative to that of Jesus, since the pregnant mother of Jesus figures as a character in both. In addition, there are several potential difficulties involved in relating the journey of Joseph and Mary to Bethlehem to reconstructions of how Roman censuses were conducted.

The chronological uncertainties are compounded by the complex synchronism of Luke 3:1 and the reference to Jesus' age in 3:23. These passages imply that Jesus was "about 30 years of age" (3:23) in the 15th year of Tiberius Caesar (26/27 C.E.). This age accords with a date of birth ca. 4 B.C.E., but not with a birth in 6 or 7 C.E.

The apparently incompatible chronologies of these narratives in Luke's "orderly account" (1:3) of the Jesus story have provoked an enormous literature of controversy. Some of the most significant contributions to this literature were made late in the 19th and early in the 20th centuries, at a time when the relevant primary sources were acutely studied (the discussion in *HJP²*, 399–427 is fully documented from 1840 to 1972; more recent opinions are voiced by Stern 1974: 372–74; Brown 1977: 547–56; and Fitzmyer *Luke I–IX* AB [1981], 399–405).

Classical scholars are convinced that there is no evidence for a simultaneous census of every province of the empire (Neesen 1980: 39–42; Brunt 1981: 163), and it would be wooden to insist that Luke's use of the phrase "all the world" (2:1) is any less hyperbolic than its use in imperial decrees (*TDNT* 5:157). The rhetorical concern of the passage is to introduce the census in Judea; Luke did not necessarily understand the Augustan decree to have been carried into effect at once throughout the empire.

Proposed solutions to the chronological problem have attempted to separate Quirinius from the census by means of historical and linguistic arguments. The historical argument posits a census previous to that of 6/7 C.E., at some point late in the reign of Herod. Judea under Herod was a client kingdom (see CLIENT KINGS) not incorporated in the provincial system of the Roman Empire. It is thus unlikely, though not impossible, that a Roman census would have been conducted during Herod's lifetime. Relations between Augustus and Herod deteriorated over time, and Augustus threatened at one point to treat Herod as no friend but a vassal (*Ant* 16.9.3). The ensuing political tensions, it has been argued (e.g., by Stauffer 1960: 31–33), would have provided an opportunity for Roman punitive interference by means of a census and associated taxation; but nothing indicates that Augustus ever carried out his threat (Bammel 1968).

The grammatical argument necessitated by any separation of Quirinius from the census interprets the Lukan clause *hautē apographē protē egeneto* (2:2) adverbially as "this census was the first" (of two made by Quirinius) or "this census was before" (another made by Quirinius) (Turner 1963: 32). It fails to account for the following genitive absolute, and is therefore unsatisfactory.

Yet another approach has been to speculate that Quirinius held an earlier term of office as legate to Syria during which he conducted a census previous to the one with which Josephus concerns himself. Various inscriptions have been appealed to in support of such a reconstruction of Quirinius' career, but classical scholarship remains unconvinced (see CHRONOLOGY (NT); QUIRINIUS).

The census is mentioned again in Acts 5:37 in the course of a speech by Gamaliel to the Sanhedrin. Here it is associated with the uprising instigated by Judas of Galilee, an association made repeatedly by Josephus (see JUDAS (PERSON) #10; ZEALOTS). A revolt by THEUDAS mentioned in the previous verse (Acts 5:36) with the apparent implication that the two were contemporaries has been the source of further questions about Luke's chronological precision.

CENTURION [Gk *Kentyriōn* (Κεντυριων)]. See ROMAN ARMY.

CEREMONIAL LAW. See LAW, (BIBLICAL AND ANE).

CERINTHUS (PERSON) [Gk *Kerinthos* (Κερινθος)]. A gnostic teacher who lived in Asia Minor about 100 A.D. Irenaeus (*Haer.* 1.26.1) says that Cerinthus believed the world was created by a Power separated from and ignorant of the true God. He also taught that Jesus was the son of Joseph and Mary. At baptism the Christ descended on Jesus from the true God. He then proclaimed the unknown Father and performed miracles. Since Christ was a spiritual being incapable of suffering, he left Jesus before the crucifixion. Jesus suffered and rose again.

Hippolytus (*Haer.* 7.33.1–2, 10.21.1–3) differs little from Irenaeus. He claims that Cerinthus was trained in the teaching of the Egyptians (see discussion in Wright, 1984) and that he called the Power that created the world an angel. Pseudo-Tertullian (*Haer.* 3) adds that Cerinthus believed the Law was given by angels. According to Eusebius' sources (*Hist. Eccl.* 3.28. 1–6; 7.25. 1–3) Cerinthus taught that the kingdom of Christ would be set up on earth with its center in Jerusalem. Several sources associate Cerinthus with SIMON MAGUS or Carpocrates.

Irenaeus also reports that John wrote his gospel against the teaching of Cerinthus (*Haer.* 3.11.1). He quotes Polycarp as saying that one day when John was going to the bathhouse at Ephesus he heard that Cerinthus was there. John rushed out saying he was afraid the bath-house would fall because the enemy of truth was inside (*Haer.* 3:3.4). Eusebius knew some who claimed that Cerinthus wrote the Apocalypse of John (*Hist. Eccl.* 3.28.3–4). Epiphanius refuted those who held that Cerinthus wrote the Apocalypse and the Gospel of John (*Adv. Haeres.* 51.3.6).

Later writers tended to associate Cerinthus with the EBIONITES and describe him in Jewish–Christian terms. Epiphanius (*Adv. Haeres* 28.1–8) says that Cerinthus believed the Law and the Prophets were both given by angels, one of whom was the creator of the world, and that Cerinthus partially adhered to Judaism. He describes Cerinthus as one of the false apostles who promoted circumcision and opposed Paul in the early church. Cerinthus' followers are supposed to have had an edited version of Matthew's gospel which they used to argue that Christians should keep the Law. The reliability of Epiphanius' information is questionable.

Primary sources for Cerinthus with English translation are included in the selections from the Church Fathers in Klijn and Reinink (1973: 101–273). Klijn and Reinink also have a good discussion of these sources (3–19).

GARETH LEE COCKERILL

CHABRIS (PERSON) [Gk *Chabris* (Χαβρις)]. One of the elders of Bethulia (Jdt 6:15; 8:10; 10:16). He is also identified as the son of Gothoniel. The name Chabris is confined to the book of Judith, where at least 13 spelling variants are attested in the various Gk manuscripts. Given the number of variants, Moore (*Judith* AB), among others, has suggested that the name has been translated into Greek from a Hebrew name (possibly *ḥbry?*). This is possible but unproven. Chabris always appears with his fellow elder Charmis. He cannot be identified with any historical personage; the author's purpose in using the name appears to have been to add interest and detail to the narrative. This is in keeping with the genre of the book of Judith.
SIDNIE ANN WHITE

CHADIASANS [Gk *Chadiasai* (Χαδιασαι)]. A family which returned from Babylon with Zerubbabel (1 Esdr 5:20). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (cf. Ezra 2; Neh 7). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text. Turner (*IDB* 1: 549) and LaSor (*IDB* 1: 629) suggest that the family's place of origin may have been KEDESH (Josh 15:23).

MICHAEL DAVID MCGEHEE

CHAEREAS (PERSON) [Gk *Chaireas* (Χαιρεας)]. Commander of the city of Gazara, brother of Timotheus (2 Macc 10:32, 37). It is reported that Chaereas was killed with Timotheus and Apollophanes when Judas Maccabeus burned Gazara (2 Macc 10:32–38). This would suggest that Timotheus attacked Judea and then fled W to Gazara (biblical Gezer). However, the parallel account in 1 Macc 5:1–8 describes Judas as attacking Timotheus in his own territory of Ammon. The last city mentioned in this attack is Jazer in Ammon. Goldstein (*2 Maccabees* AB, 393–94) presents a convincing argument that the correct reading behind the text of 2 Macc 10:32 is Jazer and not Gazara. Chaereas would then be the commander of Jazer, a city under Ammonite control. Josephus (*Ant* 12.8.1 §129) also follows 1 Maccabees 5 and supports this conclusion.

RUSSELL D. NELSON

CHALDEA (PLACE) [Heb *kaśdîm* (כַּשְׂדִּים)]. CHALDEANS. Biblical name for S Mesopotamia, the area associated with Babylon.

A. The Form of the Name and Its Appearance in Genesis

The distinction between the Heb *kaśdîm* (cf. also Aram) and the Gk *chaldaioi* (cf. also Akk *kaldu*) may be explained linguistically either as the "sibilant + *d*" being assimilated to *ld* in Akkadian (Millard 1977: 70–71), or as an original Arabic (?) consonant "*ḏ*" lying behind both forms (Edzard *RLA* 5: 296). The LXX follows the Akkadian rather than the Hebrew/Aramaic spelling. The Chaldeans are associated with Ur, where Haran, brother of Abram, died, and whence Terah, Abram, and their family set forth for Harran and Canaan (Gen 11:28, 31; 15:7; Acts 7:4). To Nahor, Abram's other brother, was born Kemuel, father of Aram, and Chesed (Gen 22:22; cf. however Saggs 1960: 208–09). The Hebrew consonants of Chesed and *kaśdîm* are identical. The association of Aram and the Chaldeans is also to be found in Jer 35:11, where Nebuchadnezzar's army includes the army of the Chaldeans and the army of Aram.

B. Other Biblical References

The Chaldeans were a people with whom Judah sought an alliance which the prophets condemned using images of lust and harlotry (Ezek 16:29; 23:14–16). The Chaldeans were understood to have been brought against the people of God as a judgment (Job 1:17; Ezek 23:23; Hab 1:6). The term is applied to the Neo-Babylonian army which brought to an end the kingdom of Judah (2 Kgs 24:2; 25: 4, 5, 10, 13; 2 Chr 36:17; Jer 21:4; 22:25; 32:4–5, 24–25, 28–29; 33:5, 43; 37:5, 8–11, 13–14; 38:18–19, 23; 39:8; 43:3; 52:7, 17) and who supervised the land afterward (2 Kgs 25:24–26; Jer 40:9–10; 41:3, 18). On the other hand, in Jer 21:9 and 38:2, the Chaldeans are viewed as a source of life for the besieged inhabitants of Jerusalem who are willing to surrender. Associated with Babylon in the prophetic oracles against that city, the Chaldeans regard Babylon with pride (Isa 13:19).

The land of Chaldea is used in parallelism with Babylon (Isa 47:1, 5; 48:14; Jer 25:12; 50:1; 51:35). It is the land to which the Judeans are sent (Ezek 12:13), where as exiles they reside (Ezek 1:3; 11:24), whose language and culture they are taught (Dan 1:4), and from whence they will return (Isa 48:20; Jer 24:5; 50:8) after God punishes it (Isa 43:14; Jer 50:10, 25, 35, 45; 51:4, 24, 54). In the MT, Isa 23:13 refers to the destruction of Chaldea by Assyria who used it for ships. The Chaldeans appear in Daniel where Darius is made king over Chaldea (Dan 9:1). The Chaldeans are among the royal counsellors of the Babylonian court (Dan 2:2, 4, 5, 10). In the Deuterocanonical narrative of Judith, the Chaldeans are a polytheistic people from whom Israel is descended (Jdt 5:6–7).

C. Chaldean History

As a distinct people, the Chaldeans appear in the 9th century B.C. in the land lying to the S of Babylonia and reaching to the borders of Elam (Oppenheim *IDB* 1:549–550). Although they are already well established when they appear (Brinkman *CAH³*: 287), their earlier origins are uncertain. Neither the possible relationship of Chaldean with a Kassite name for Babylon, Karduniash, nor the presence of West Semitic personal names alongside the Akkadian ones, from the earliest 9th and 8th century sources, have proven conclusive (Brinkman 1968: 265–266). In Assyrian and later cuneiform sources the name appears as *kal-da-a-a; kal-di; kal-du; ka-al-du;* and *kal-da-ni* (Parpola 1970: 188–190; Zadok 1985: 191–192). Like their neighbors, the Arameans of S Babylonia (Dietrich 1970; Brinkman 1977), the Chaldeans possessed a tribal form of social organization, and in the Neo-Babylonian period no clear distinction can be made between the personal names of many of the Chaldeans and those of the Arameans; both may be identified as West Semitic (Zadok 1977: 10). However, the Chaldeans, with only five tribes (each of which was ruled by an individual tribal leader), were distinct from the Arameans (Brinkman 1977: 306–307); the Chaldeans were wealthier, involved in trade and politics, and more urbanized (Brinkman *CAH³*: 288–90; cf. Edzard *RLA* 5: 291–92 for a survey of the opinions on the relationship of these two groups).

During the Neo-Assyrian period, when Babylon was politically and militarily dominated by Assyria, the Chaldeans often found their interests in opposition to the Assyrians. Because of the presence of marshlands, Chaldea, known as the Sealand, made an ideal center from which to wage a guerilla war against the rulers of the Neo-Assyrian empire (Brinkman 1979: 244–25, 235–36). Often allied with Elam, Chaldean leaders were able to rise to positions of leadership in Babylon during periods of Assyrian weakness. One of the greatest of these figures was Merodach-Baladan II, who united the tribes of the Chaldeans and twice occupied the throne of Babylon during the latter 8th century B.C. He was able to lead delegations to other states such as Judah (2 Kgs 20:12–19), probably in order to organize a more widespread revolt against Sennacherib and the Assyrian empire of their day (Brinkman 1964: 33). By this time, the words Chaldean and Babylonian were becoming synonymous in biblical and other texts; indeed, in terms of language and writing, the Chaldeans were not distinct from the Babylonians. The 8th century rise of the Chaldeans, their association with Babylon, and their international policy coincide with their earliest mention in the Hebrew prophets (cf. Saggs 1960: 205–7).

Assyrian dominance in the later 8th century is attested by deportations of nearly 250,000 Chaldeans during the reigns of Tiglath-Pileser III and Sargon II; deportations which continued with Sennacherib (Brinkman 1979: 227). Although Assyria retained the upper hand, the domination was not to outlast the 7th century. With the weakening of the empire following the death of Ashurbanipal, the Chaldeans under Nabopolassar gained the upper hand in Babylonia, allied with the Medes, and drove the Assyrians W to Harran and Carchemish where they were defeated in 605 B.C. Under his rulership, a Chaldean dynasty in Babylon ushered in the Neo-Babylonian empire (Wiseman 1956; 1985). It was this empire that brought about the downfall of the Judean state in 587/586 B.C.

The Chaldeans remained an influence in the administration of affairs in the empire and seemed to have gained a reputation for wisdom and counsel throughout the Persian and even into the Hellenistic periods. We may observe the later tradition of Merodach-Baladan, who was said to have maintained a garden of exotic plants (supported by a contemporary list of 67 plants belonging to his garden) and to have had an observatory in Babylonia for purposes of astronomy (Brinkman 1964: 37, 40). Further, the beginning of careful historical, economic, and astronomical record keeping in Babylon in 747 B.C., roughly coincides with the rise of Chaldean influence, two events which later traditions were to relate to one another (Oates 1979: 112–113).

CHALKSTONES. See GEOGRAPHY AND THE BIBLE (PALESTINE).

CHALPHI (PERSON) [Gk *Chalphi* (Χαλφι)]. Father of Judas, a commander of elite troops under the Hasmonaean Jonathan (1 Macc 11:70). Nothing is known about the ancestry or descent of this family. Even the rendering of this name in Greek and its derivation is uncertain. Josephus (*Ant* 13.5.7.161) renders the name Chapsaios. Scholars have taken the Greek to be derived from the Hebrew root *ḥlp,* meaning a child given in birth as a substitute for another (Swaim *IDB* 1: 551). Another possibility would be a native of the town Heleph in Naphtali (Josh 19:33). It is further debated if the NT name Alphaeus (Gk *alphaios*), applied to the father of either Levi (Mark 2:14) or of James (Matt 10:3; Mark 3:18; Luke 6:15; Acts 1:13), is derived from the same Hebrew root as Chalphi (Swaim *IDB* 1: 551), or a Hebrew root *hlp* (BAGD, 41), or is a purely Greek name (Norris *IDB* 1: 96).

RUSSELL D. NELSON

CHAMPION. See DAVID'S CHAMPIONS.

CHAPHENATHA (PLACE) [Gk *Chaphenatha* (Χαφεναθα)]. A name given to part of the wall of the city of Jerusalem on the valley to the E which is the Kidron (1 Macc 12:37). The actual location of the place is uncertain, and the exact derivation of the name is unknown. This opens the topic to speculation and scholars offer various solutions. Torrey (1934: 32–33) reads *caph henatha* as "the bend of the fountains" and identifies the spot with the curved portion of the wall which ran from the Virgin's Fountain to the Pool of Siloam which was commonly referred to as a fountain (Neh 2:14; 3:15). Odelain and Seguineau (1981: 82, 283) think it possibly means a new quarter NW of the temple to which the city expanded (2 Kgs 22:14; Zeph 1:10). In the time of the Maccabean War, Jonathan (160 B.C.E.) sought to fortify Jerusalem and to build a rampart between the city and the citadel to prevent the garrison from having commercial transaction with the city (1 Macc 12:35–37). The suggestion of Goldstein (*1 Maccabees* AB, 465) that Chaphenatha derives from an Aramaic root meaning "hunger," may suggest an attempt to starve out the citadel, but this is purely speculation. Josephus does not speak of this wall by name, though he refers to Siloam as a fountain of sweet and abundant water (*JW* 5.4.1 §140).

BETTY JANE LILLIE

CHARAX (PLACE) [Gk *Charax* (Χαραξ)]. Ostensibly a town or city located in Gilead. The name appears only in 2 Macc 12:17 as a place where Jews known as Toubiani lived or had sought refuge, whom Judas Maccabeus subsequently transported to Judah for their safety during the early years of the Maccabean revolt (2 Macc 12:13–28; cf. the corresponding account in 1 Macc 5:24–51). The Gk common noun *charax* has the basic meaning of "stake" and, by extension, "palisade;" it was used to designate either a fort or a siege-enclosure (the latter in Luke 19:43, the only occurrence of the word in the NT); and

in the LXX *charax* translates any of several Heb words relating to fortifications or siegeworks. In the Greco–Roman world military camps and marketplaces occasionally bore this name (see L. Bürchner et al., PW 3:2121–2124). If the place name had a strictly Greek origin, it may have been a Seleucid fortification that later developed into a regional market town. By coincidence there was, however, a semitic noun *karak (a)* (from the root *krk,* "to encircle, fortify"), meaning "fortification," "city," "capital," or "mercantile center," which occasionally appears as a place name in the Levant, e.g., the Moabite capital of Karak Moab, transliterated in Greek texts as *Charachmōba* (or *Charakmōba*). The similarity of the two terms in both sound and meaning may have given rise to some confusion in antiquity. Abel (1949: 98, 436) identifies the site referred to in 2 Maccabees as the present village of el-Kerak (M.R. 217066). Goldstein (*2 Maccabees* AB, 440) argues that 2 Maccabees does not refer to a place named Charax at all, but erroneously alludes to the "palisaded camp," i.e., fortress palace, at Araq el-Emir, the seat of the Tobiad dynasty in Ammonitis.

CHARIOTS. Two-wheeled vehicles used throughout the ANE in warfare, hunting, and travel.

———

A. Egyptian Chariots
B. Levantine Chariots
C. The Origin and History of the Chariot

———

A. Egyptian Chariots

The basic design of the first chariots mentioned in the Bible, the Egyptian chariots of Gen 41:46; 46:29; and Exodus 14, must have been very similar to that of the chariots of the immediately preceding 18th Dyn.—the only chariots that have been preserved. These are the six from the tomb of Tutankhamen, the chariot box of Thutmosis IV, and the chariot of Yuia and Tuiu, which, although smaller and apparently hand-drawn, is constructed on the same principal. All of them are in the Egyptian Museum in Cairo. To this list should be added a chariot from an unknown tomb at Thebes, now in the Museo Archeologico in Florence, and a wheel hub with fragmentary spokes from the chariot of Amenophis III, in the Ashmolean Museum, Oxford. Further information is furnished by temple and tomb reliefs and wall paintings, showing such vehicles primarily in military or hunting scenes (Littauer and Crouwel 1985: 1–2, 67–69, 69: n. 4). Although there are no actual remains of chariots from the Ramesside period, reliefs of the era depict vehicles identical with the 18th-Dyn. ones, varying only slightly in the armament they carry (Yadin 1963: 232).

These chariots were light, open vehicles, with two spoked wheels; they were drawn by a pair of horses placed under a yoke at the end of the draft pole. There was just enough room for two men—the driver and the archer—to stand abreast. The floor plan was in the form of a capital D approximately 1 m wide by 0.5 m deep (from front to back). The floor was framed by one or two curved, heat-bent members and a straight, rear floor bar. The chariots were entirely open at the rear for ready access and egress. The light breastwork was framed by a rail of heat-bent wood that usually reached hip height.

The wooden axle ran under the rear of the vehicle (although in some representations it was convenient to show it somewhat farther forward). The wheels, which revolved freely on the axle, were of unique construction. The spokes were formed by the two equal sides of an isosceles triangle (with an apex of 60° for a six-spoked wheel or 90° for a four-spoked one). The legs of the angle (the half spokes) were joined back-to-back with those of the adjacent angles to form whole spokes, elliptical in section. The apices of the triangles either formed an integral part of the nave, as in the Ashmolean fragment (Western 1973), or they nestled in the bays of a casing surrounding the nave, as in the chariots in Cairo. The naves were further extended on either side of the wheel by flanges. The spoke ends were morticed into the rim, or

felloe, which was composed of two unequal lengths of heat-bent wood, beveled and overlapping at the ends. The nave and spokehead area was consolidated by glue and rawhide; the latter, when applied wet, has a compressing effect as it dries. The felloe ends were bound at their overlaps with rawhide. A rawhide tire, also undoubtedly shrunk on, helped to consolidate the whole, as well as to protect the tread of the wheels. In some cases the latter were also protected by a wooden "tire" in sections, flush with the rim and with a rawhide tire outside it (Littauer and Crouwel 1985: 76–79).

Rawhide again was the material used to lash the parts of the floor frame and the rear floor bar together, and the interwoven thongs formed a light, resilient flooring in an otherwise springless vehicle. This webbing also maintained tension on the bent wood of the floor frame and helped it to keep its shape.

It is noteworthy that such a construction method would have been practical only in a dry climate, since rawhide is susceptible to dampness. Protection against moisture is indeed implied by the birchbark covering of the rawhide bindings on certain chariots, birchbark having waterproofing properties. Since this material is not native to Egypt, the nearest source being E Anatolia, it seems likely that this design of wheel originated farther E and N as did, indeed, the chariot itself.

The wheels were secured on the axle arms by linch pins of wood, boiled leather, or bronze. The latter, the bronze nave hoops on some wheels and the bronze wire sometimes used to bind the ends of felloes with wooden tires, constitute the only metal parts of the chariot itself that were not purely decorative. Thus the vehicle was held together by a tough, resilient bonding material—rawhide—that could not be jolted loose in rough going, as could metal parts.

To compensate for the instability resulting from the lightness of the vehicle, the track was very wide (1.51–1.8 m). This also permitted long naves (0.32–0.44 m). These helped to reduce the tendency of a wooden wheel to wobble on a wooden axle, where it would not fit as snuggly as modern wheels with metal-lined naves can fit on metal axle arms. To help reduce friction and squeaking, the naves were lined with leather and appear to have been greased.

The chariot body had a siding around the front and the two sides; this was fenestrated in a manner that made it resemble a butcher's apron. In the majority of chariots this siding was probably of leather, of which traces remain; in the parade chariots it was of thin wood, which was coated with gesso molded in a design and gilded (two chariots of Tutankhamen) or silvered (chariot of Thutmosis IV) (Littauer and Crouwel 1985: pls 9, 17, 47).

The draft pole ran back all the way under the chariot floor, its flattened end fitting in an open, horizontal, U-shaped socket beneath the rear floor bar. This prevented horizontal movement and the consequent stress on the only area of attachment, which was to the floor frame at center front. Here it was secured by rawhide bindings and, after describing a flattened S curve, ran forward and upward to the yoke. Slender wooden rods joining the front rail to the pole a short distance before the body provided support for the front breastwork and reinforced the attachment of pole to chariot, which was susceptible to stress—particularly in rough going or on turns. Sometimes, however, if we are to judge from representations, the connection was of leather and could have served only the latter purpose.

The pole ran forward diagonally to a yoke, which was secured on top by a peg and lashings. A pair of straps ran out from an area on the pole, one to either arm of the yoke, and kept it from swiveling on the pole. The yoke, originally devised for bovid draft, lay on the neck directly in front of the withers, and was adapted to horses' conformation by yoke saddles (Littauer 1968: 27–31). These were lashed by their "handles" to the yoke arms, and their "legs" lay along the horses' shoulders and took much of the pull. Their ends were joined by a crescentic strap that crossed the front of the neck and kept the saddles in place. A slack strap ran from each outer yoke-saddle end and under the horse's belly to a point near the end of the pole. This served as a backing element, since there was no breaching strap (Spruytte 1983: 28).

The 18th-Dyn. Egyptian chariots carried as armament two bow cases; to these were added under the Ramessides a pair of short spears or javelins—never shown in use. They may have been for close fighting should the chariot be brought to a standstill. The warrior wore a long, protective tunic of lamellar armor; his head was bare. The driver carried a small rectangular shield. In battle, the reins were tied around the warrior's hips, while the driver with one hand held up a small shield to protect his companion's face and,

with the other hand, exercised directional control over the reins in front of the warrior. Both, in a sense, "hung on by the horses' mouths." (Metal horse bits—either of plain bar or jointed-shaffle type—begin to be documented in this period.)

B. Levantine Chariots

Levantine chariots, shown in battle or brought as booty or tribute to Egypt, usually appear almost identical to the Egyptian ones. Those of the Hittites or their Levantine allies at the battle of Kedesh (1286/1285 B.C.) are, however, shown as carrying three men: driver, shield bearer, and javelin thrower. They must have been deeper front-to-back than the Egyptian ones and their sidings are not fenestrated but solid.

The close relationship of chariots in the Egyptian/Near Eastern area may be materially supported by a recent find of the remains of a wheel of the unique "Egyptian" construction, in a 13th-century B.C. context at Lidar in SE Anatolia (H. Hauptmann, personal communication). From about the same period we also have evidence of a simpler and more familiar wheel construction. Wheels found in water-logged burials on the shores of Lake Sevan in Armenia had 28 spokes merely morticed into a barrel nave, although their felloes still consisted of two lengths of heat-bent wood. They belonged to light carts in which the occupants apparently sat, and which could not properly be called chariots (Piggott 1983: 95–96).

C. The Origin and History of the Chariot

These superbly designed Late Bronze Age chariots could not have come into existence without a long line of development behind them that stretched back at least to the Uruk period in S Mesopotamia in the later 4th millennium B.C. Here we find our first evidence of wheeled vehicles, in the form of pictographs on clay tablets. The latter show both sledges and what appear to be sledges mounted on four disk wheels (Littauer and Crouwel 1979: 12). More detailed information comes from the ED period (first half of the 3d millennium B.C.) in the form of bas-reliefs, painted pottery, shell mosaics, or models in the round. From this period also come the first remains of buried vehicles (chiefly in the form of impressions in the soil) in tombs at Kish and Ur. The wheel area has furnished the most definite—and certainly the most important—information. It reveals technical advances that suggest an earlier, intensive, trial-and-error period. The wheels already revolve differentially on a fixed axle, instead of being fixed on a revolving axle—the more primitive system. This not only facilitates turning, but helps to cope with uneven terrain. The disk wheels, moreover, were no longer made of single pieces, whether of slices cut across the grain or with it. A disk cut across the trunk would probably have been the first thing to suggest itself. Owing to the nature of tree growth, however, with its spongy heart wood, annual rings, and exterior sapwood and cambium, this method would soon have proven impractical. It would, moreover have limited wheel diameters to the size of trunks that could be worked with the means available. A solid cut lengthwise of the trunk (i.e. with the grain), while quite viable, would have been limited in size for the same reason. Hence a technique was worked out by which the wheel was made from three pieces of wood vertically cut: a wide central plank, through the center of which the axle arm passed, and two quarter moons flanking it on either side, the whole held together by external battens or thongs.

There were four-wheeled vehicles and two-wheeled ones, none of which could yet properly be called "chariots." The four-wheelers are indeed often depicted in battle scenes, but more than one factor must have discouraged this use, and after the middle of the 3d millennium B.C., they are no longer shown in military contexts. Without a horizontally swiveling front axle, the rear wheels of a four-wheeler cannot follow in the tracks of the front ones and are forced to skid, unless the turning is in a very wide arc. To keep the skidding to a minimum, the vehicles were made very short and narrow. There was just room for the driver and warrior to stand one behind the other, the driver necessarily in front. This would hardly make for an efficient instrument of war. Moreover, although the psychological impact of the first use of wheeled vehicles in battle may originally have had a daunting effect on the enemy, this would have worn off with familiarity. The frequently drawn parallel between these four-wheelers and modern tanks is quite invalid. In the tank the personnel and the motive power are both protected, whereas here both men and animals were highly exposed. While the tank can negotiate a variety of rough terrain, these vehicles were limited to smooth and level ground (Littauer and Crouwel 1979: 32–33).

The two-wheelers, of which there were two body types, are never shown in unquestionably military contexts, and since they could carry only one person, this is not surprising (Littauer and Crouwel 1979: 21).

Draft power in the 3d millennium B.C. consisted—apart from bovids—of teams of (usually) four equids under yoke, attached to a central draft pole. These were either domesticated donkeys (of which there is already evidence at this time) or hybrids. The latter are most likely to have been donkey crosses—either with a small local equid, *Equus hemionus* (similar to an onager), or with true horses. The latter animal was beginning to make its way S from the Pontic steppe, where it had been domesticated in the previous millennium (Littauer and Crouwel 1979: 23–28, 41–43).

It was just before and around 2000 B.C. that new types of wheels and vehicles began to appear and to develop rapidly. The first evidence of an attempt to lighten the clumsy disk wheel was found on a cylinder seal from Tepe Hissar in north-central Iran (Littauer and Crouwel 1979: fig. 21). This "cross-bar" wheel was not yet a spoked one, nor did it prove suitable for speed, but it is still in use today with slow-moving, ox–drawn vehicles in several parts of the world (Littauer and Crouwel 1977: 95–105). By about the turn of the millennium, this type of wheel was also used in central Anatolia, along with the first, truly spoked wheel. At the same time, a two-wheeler, with a light, railed body of different design from the previous ones, appeared. It was drawn by a team of only two equids that seemed to be horses rather than donkeys or hybrids. By the 18th–17th centuries B.C. Syrian cylinder seals began to show a variety of such light, horse-drawn vehicles with two-spoked wheels, demonstrating a period of lively experiment and advance—all tending toward the Late Bronze Age chariots we have described. For the first time, a chariot carried a man with a bow—that chariot weapon *par excellence.* And a chariot in which two could stand *abreast*—a requisite for efficient military performance—appeared. These developments took place in the Near East itself; there is no need for the popular theory of an invasion of horse-drawn chariots from the N steppe (Littauer and Crouwel 1979: 68–71).

The light, fast chariots of the period of the Exodus in the Near East and Egypt were used for warfare, hunting, parade, and travel. In warfare, when manned by archers, as they very often were, they constituted a mobile platform from which to fire volleys of arrows—particularly effective in softening up enemy infantry. Javelins or short, light spears could also be used as distance weapons and could serve for thrusting if the chariot were brought to a standstill. In both cases the chariots served as flanking and pursuing arms. It should be emphasized that frontal attacks by squadrons of chariots would have been self-defeating, with easily injured animals and wheels locking with enemy wheels (the long naves here would be a liability). Fairly smooth and level terrain was essential for the deployment of chariots. This limitation also applied to hunting use. Game would be driven by beaters across the path of the chariot over chosen ground. In Egypt, the Pharaoh and royal family were conveyed in chariots in a procession to the temple on a feast day. While travel is implied by various texts (many of them nonbiblical), its practicality, and certainly its comfort, may be questioned for periods before the introduction of the front-to-back division (see below). But to travel on animal back was considered beneath the dignity of members of a privileged class, and man will suffer much to preserve his status and prestige.

Later actual chariot remains in the Near East are scanty or, at best, only fragmentary, and pictorial evidence is largely wanting for something over 200 years after Ramesses III in the early 12th century B.C.

During the tribal period, the Israelites had neither use for nor the means of producing and maintaining chariotry. The rugged interior terrain they occupied would have been as unsuitable for their own chariots as for those of the enemy. Only the important states of the time, with their resources, organization, and technical skills, could have produced and sustained a chariot corps, with its specially trained wheelwrights, drivers, warriors, and draught teams. Hence the first chariots mentioned after the Egyptian ones of Exodus are not Israelite, but the "iron" chariots of Sisera and the Canaanites and their allies (Joshua 11, 17, 24; Judges 1, 4, 5). We would assume that the chariots of this period would still be very like those illustrated under Ramesses III, although there was a development toward what we see in 9th century B.C. Assyria, and perhaps rather rapidly. The repeated stress on "iron" is puzzling, but must reflect some actual iron component of the chariot—no matter how small. This may have seemed

remarkable to the Israelites, who had no iron themselves at the time (*CAH* 2/2: 516), and to whom even a small amount might have been sufficient to categorize the whole vehicle.

As we have seen, metal (even bronze) was rarely and sparingly used in Egyptian chariots, and iron was in general use in Egypt only very late. We should look in the opposite direction for this innovation—to the Neo-Hittite states of N Syria and to Assyria, in close proximity to Anatolia, where iron was already mined and used. Unfortunately, our earliest satisfactory chariot representations from these regions do not appear before the early 9th century B.C. The most suitable areas in the chariot for reinforcement by iron were the wheels and the pole-and-chariot-front connection. These were precisely the parts where iron may have been used on chariots under the Assyrian king Ashurnasirpal II (883–859 B.C.). Three wide wooden tires or felloes appear to have been set around a grooved rim so narrow it was more likely to have been of metal than of wood. Its outer face would have been channeled to receive the felloes, just as the surviving wheels of some cult vehicles from W Europe had channeled bronze rims for this purpose. The short, rodlike connection between the chariot front and the pole could also be of iron, adding greatly to its strength in this area of stress. It is doubtful that much more iron than this was employed. Iron was not yet a cheap commodity and its added weight in the chariot might not have been welcome. May we then assume that the chariots of Sisera resembled the 9th-century B.C. Neo-Hittite and Assyrian ones in general? It is impossible to say.

If the Israelites themselves had chariots, it was no earlier than the reign of David; their mention in 1 Samuel may not indicate anything more than the personal chariots appropriate to the status of oriental royalty (Yadin 1963: 284–85). It is clear that Solomon made efforts to build up an important chariotry. However, the discrepancies between the 40,000 "stalls for horses and chariots" of 1 Kgs 4:26, the 4000 of 2 Chr 9:25, and the 1400 chariots of 1 Kgs 10:26 are confusing and certainly point to the hyperbola typical of the scribes of the period. Yadin (1963: 286) suggests a force of 500 chariots, although Schulman (1979: 142) accepts the 1400 in a study that in general tends to deflate the numbers of Egyptian and Near Eastern chariotry. A yet thornier question is that of Solomon's "chariot cities" (i.e. his stables and carriage houses). The building at Megiddo originally identified as "Solomon's stable" is now known to belong to the period of Ahab (Yadin 1963: 286). The same function has been attributed to several smaller buildings of similar construction at other sites, but this hypothesis has been challenged (Pritchard 1970: 268–76, Herzog 1973: 23–30).

The largest body of documentation for 9th to 7th centuries B.C. comes from Assyria. Aside from texts, this consists of extensive bas-reliefs, a few painted murals, several ivory plaques and cylinder seals, all of which are in strict profile view. Thus some of the proportions have to be extrapolated from models in the round or from fragmentary remains of similar vehicles found in Cyprus and elsewhere dating from the 8th century B.C. and later.

The chariots of the reigns of Ashurnasirpal II (883–859 B.C.) and Shalmaneser III (858–824 B.C.) appear in Assyrian reliefs as identical. They preserved the features of the Egyptian chariot listed above, but varied from these in having a solid siding and smaller wheels with wider felloes. Since axles were placed directly beneath the floor, the reduced wheel diameter would have lowered the chariot. The body, to judge from models found in Cyprus, the Levant, and Transcaucasia, was strengthened by a support down the center. This bar ran from the front breastwork back to a vertical post or loop rising from the rear floor bar (Littauer 1976: 221–22), which provided a handhold for mounting and helped to prevent the crew from jostling each other. The loop or post at the rear seems often to have carried an extra shield, which may have provided partial rear closure.

The two-horse team of earlier times had disappeared. These chariots had teams of three or four, with only two horses under yoke, and the extra horse(s) attached loosely as outriggers. The chariots, however, still appear to function as fast, mobile platforms in warfare. Crossed quivers contained bows, arrows, and sometimes axes, and a short spear was carried at the rear of the vehicle; the latter two (close-range) weapons were for use dismounted or from a standing chariot, as was probably the shield carried at the rear. Both crew and horses might have worn protective armor.

By the time of Tiglath-Pileser III (744–727 B.C.), chariot bodies became rectangular and may have been covered with metal. Wheels were larger and usually had eight spokes. The quivers were hung vertically at each front corner of the body, and although the spear was still carried at the rear, there was no sign of the shield. There may have been a door at the rear and the shield may have been carried inside. The chariots had a complement of three—a driver and two warriors.

Chariots of Sargon II (721–705 B.C.), Sennacherib (704–681 B.C.), and Ashurbanipal (668–627 B.C.) were almost identical. They did not differ greatly from those of Tiglath-Pileser III except in having a larger body and an undoubted door closure at the rear. The wheels were larger and their treads were often studded. War and hunting chariots may have carried a complement of four, in the former case consisting of a driver, an archer, and two shield bearers. Although only one horse is shown in some depictions, these were four-horse chariots with a single draft pole and a fitted yoke, as we know from the depictions of unharnessed vehicles.

The Assyrian chariots of the later 8th and 7th centuries B.C. still appeared to be primarily firing platforms for archers in warfare, although less mobile than before as a result of increased size, heavier construction, and the limitations imposed by four horses under yoke. Better armed and protected, they were sometimes depicted as stationary firing platforms. Mounted troops were by now taking over the traditional role of the light, fast chariotry.

Royal chariot hunts were still taking place, with the aid of beaters and even special game parks. Chariots were also used for ceremonial purposes, sometimes carrying a parasol—the prerogative of royalty.

Unfortunately, despite all the references to chariots in the OT, there are not even fragmentary remains from Palestine. And the only representation of a Palestinian chariot is on an Assyrian relief of the conquest of Lachish by Sennacherib. Here, a chariot being carried off as booty by Assyrian soldiers is shown as indistinguishable from the Assyrian chariots. It is impossible to tell how accurately the Assyrian artist rendered a foreign chariot. In periods of active warfare, however, enemies were apt to copy each other's developments in military material. Moreover, there is recent textual evidence that horses from Kush (Nubia) were being imported by Assyria in the late 8th and 7th centuries B.C. via Samaria, where they were being trained specifically for chariot use (Dalley 1985: 43–48).

From the Persian period, the Levant offers only meager documentation in the form of representations of chariots on coins struck at Sidon under the Achaemenid domination. These resemble the Persian chariots on the reliefs at Persepolis and on some Persian cylinder seals. The floor plan is rectangular, the body spacious, the siding solid. The axle is fixed close to the rear and the large wheels are twelve-spoked. From models in the round we know that the front-to-back division down the center still obtained and was indeed broad enough at this time to furnish a seat on which one could sit sideways. The adaptation of this feature to sitting may possibly go much farther back. There is mention in 2 Kings 5 (among other places) of what seems to be simply traveling in a chariot. This could be very fatiguing if one had to balance standing for hours in a jolting vehicle without the stimulus of battle to keep one alert.

Of the Persian and Seleucid chariots with scythed wheels, mentioned in texts, which have fascinated posterity, there are no representations. Indeed, their role at the time must have been more psychological than practically effective, to judge from accounts of such battles as Cunaxa (401 B.C.) and Gaugamela (331 B.C.). In the former, they faced Greek mercenaries under Cyrus the Younger, and in the latter, Alexander's troops, but being heavy and clumsy, they were easily outmaneuvered and destroyed. These scythed and armored chariots represented an unsuccessful attempt to cope with the greatly increased number and importance of mounted troops. The military chariot was on its way out.

Under the Seleucids, the heirs of Alexander, who occupied Palestine from 199–165 B.C., Greek games were held, and these must have included chariot racing. These games were continued by at least some of the Roman governors, for Herod held them quinquennially. The Roman circus, with its permanent and monumental structure, only came to the Levant in the early 2d century A.D. (Humphrey 1986: 477, 529–33).

Travel by chariot was perhaps more convenient, with a seat when needed, and there were probably better routes. On the other hand, covered two-wheeled carts and four-wheeled wagons are attested in the

Near East, dating as far back as the 3d millennium B.C. and seem to have offered an alternative—if slower—travel conveyance (Littauer and Crouwel 1979; Crouwel 1985).

CHARMER. See MAGIC (OT).

CHARMIS (PERSON) [Gk *Charmis* (Χαρμις)]. One of the elders of Bethuliah (Jdt 6:15, 8:10, 10:6). He is also identified as the son of Melchiel. His name is a translation into Greek of the Hebrew name "Carmi" (Heb *karmî*), which appears in, e.g., Gen 46:9, Josh 7:1, Exod 6:14. He always appears with his fellow elder Chabris. Charmis cannot be identified with any historical personage; the author's purpose in using the name appears to have been to add detail and interest to the narrative. This is in keeping with the genre of the book of Judith.

SIDNIE ANN WHITE

CHASING. See JEWELRY.

CHASPHO (PLACE) [Gk *Chaspho* (Χασφο)]. One of five cities in Gilead in which Jews were taken captive by the Gentile citizens (1 Macc 5:26). The location of Chaspho is not definitely known, but two sites are often suggested: el-Mezerib on the Yarmuk (cf. Simons, *GTTOT*, 423–24; and Abel 1923: 519) or Khisfin, E of the Sea of Galilee (*MBA*, map 189; and Grollenberg 1956: map 31). The city is probably the same as Caspin, whose destruction is detailed in 2 Macc 12:13–16. Goldstein (*1 Maccabees* AB, 301) suggests that the uncertainty over the first letter of the city's name (*kappa* or *chi*) derives from Greek transliterations of the original name *kspw*. Heb and Aram *kap* is usually transliterated by Gk *chi*, but the local inhabitants may not have aspirated the consonant when pronouncing the name of their town, giving rise to an alternate spelling with a *kappa*. The same lack of aspiration may have given rise to differences in transliterating the *pe* as well. The final "-in" of Kaspin may be an Arabic form of the final *waw*.

The Maccabean Revolt met with early success, including retaking the temple in 164 B.C., which led to Gentile reprisals. Many Jews in Gilead fled to a stronghold at the city of Dathema, from which they sent word to Judas for help. En route to rescue the refugees, Judas learned from a group of Nabateans that other Jews were under attack in the cities of Bozrah, Bosor-in-Alema, Chaspho, Maked, Carnaim, as well as other cities (1 Macc 5:24–27). Judas defeated the Gentiles in Bozrah and Dathema before turning his attention to Chaspho. Assuming Kaspin in 2 Macc 12:13–16 to be Chaspho, one finds elaborations upon the defenses of the town and the extent of bloodshed in the battle. That account, however, makes no mention of Gentile persecution in Gilead and moves awkwardly from an account of victories at Joppa and Jamnia to a battle with Arabs and the attack upon Kaspin. The differences in the accounts in 1 and 2

Maccabees may be due to special pleading on the parts of the authors (i.e., 1 Maccabees was written by a Hasmonean propagandist, while 2 Maccabees was more open to contacts with Greeks) or defective accounts received by the author of 2 Maccabees (Goldstein *2 Maccabees* AB, 432–35).

PAUL L. REDDITT

CHEBAR (PLACE) [Heb *kĕbār* (כְּבָר)]. A Mesopotamian watercourse mentioned eight times in the book of Ezekiel (1:1, 3; 3:15, 23; 10:15, 20, 22; 43:3). The Hebrew phrase in which it always occurs, *nĕhar kĕbār,* is translated "river Chebar" in RSV, but the Chebar was actually a canal. Its ancient course left the Euphrates River N of Babylon and flowed 60 miles SE through the vicinity of ancient Nippur, rejoining the Euphrates S of Warka (biblical Erech).

It was beside the Chebar canal, as a member of a settlement of Judean exiles there (Ezek 1:1), that Ezekiel had the vision inaugurating the book of his prophecies (1:4–16). This or another settlement of exiles near the Chebar was called TEL-ABIB (3:15). The Chebar was undoubtedly one among the *nahărōt bābel* "waters of Babylon" by which Judean exiles wept (Ps 137:1).

The canal is referred to in cuneiform documents of the 5th century B.C.E. from the Nippur region (see MURASHÛ, ARCHIVE OF), spelled *ka-ba-ru* (Hilprecht and Clay 1898 [= BE] text no. 9.84; on the texts, see Zadok 1978: 287). Large manors and date palm groves were located along its course, and the names of several settlements near the Chebar are attested. The Chebar is probably the modern Shatt el-Nil, a silted-up watercourse that once ran E from Babylon and merged with a canal coming down from the Sippar region near Baghdad, continuing S to Nippur and Warka (Vogt 1958: 212). It was probably navigable at one time.

The Chebar is not the same as the Ḫabur River (sometimes spelled Khabur), a tributary of the Euphrates in N Mesopotamia (see HABOR).

HENRY O. THOMPSON

CHECKER WORK. An English term that translates three Hebrew words. Two of these are apparently derived from the root *šbṣ*, which in Late Hebrew means to decorate something with a pattern. In Exod 28:4 (*tašbēṣ*) and 28:39 (*Pi*ʿ*el* perfect verb) "checker work" designates an ornamental aspect of the tunic worn by the high priest. It may indicate some texture-giving process, such as embroidery. In any case, this ornamentation is used only for Aaron's garment and so contributes to the presentation of special priestly garb, of the best quality, reserved only for the high priest, the holiest of the servants of Yahweh in the tabernacle. The third word rendered "checker work" (Heb *śĕbākâ;* 1 Kgs 7:17) also represents an artistic decoration, the exact nature of which cannot be determined. The temple texts in 1 Kings describe the elaborate capitals surmounting Jachin and Boaz at the entry to the temple's forecourt. These large and symbolic architectural features are heavily adorned, including with "checker work with wreaths of chain work."

CAROL MEYERS

CHEDORLAOMER (PERSON) [Heb *kedorlāʿōmer* (כְּדָרְלָעֹמֶר)]. King of Elam (Gen 14:1, 4, 5, 9, 17) and the leader of a coalition of four kings (the other three were Amraphel king of Shinar, Arioch

king of Ellasar, and Tidal king of Goiim). The kings of Sodom, Gomorrah, Admah, Zeboiim, and Bela (Zoar) had served him twelve years before rebelling in the thirteenth year. In the fourteenth year, Chedorlaomer and his three allies came and defeated the Rephaim, Zuzim, Emim, Horites, Amalekites, Amorites, and finally the aforementioned five kings in a battle in the Valley of Siddim. They plundered Sodom and Gomorrah and took away Abram's nephew Lot, but on their way back were defeated by Abram and lost all of their booty.

A. The Name

The very peculiar Genesis 14 has long attracted the attention of biblical scholars and historians of the ANE who have tried to identify the four eastern kings and to clarify the historical background of the narrative. The name "Chedorlaomer" (which, as shown by the form in LXX, *chodollogomor,* was pronounced with a *ġayin*) was found to be genuinely Elamite; both of its elements, *kudur* (Akk rendering of Elamite *kutir*) and the DN *Lagamar*, occur in Elamite royal names. But no king of Elam named **Kutir/Kudur-Lagamar* is attested, nor is there the slightest evidence of Elamite political or military engagement in Palestine at any time in history. The key to understanding this name (as well as the names of his three confederates) is provided by the so-called "Chedorlaomer texts" (or "Spartoli tablets").

B. The "Chedorlaomer Texts"

1. General Description. Th. G. Pinches (1897) published, from a collection of late Babylonian tablets in the British Museum purchased from a dealer named Spartoli, three tablets (Sp. III:2; Sp. 158+II, 962; Sp. II, 987) containing personal names, three of which were in some way reminiscent of three of the four eastern kings in Genesis 14. The tablets date from the Parthian period (after 142 B.C.) but were no doubt copied from earlier (7th or 6th century B.C.) originals. One of the tablets is a prose summary, while the other two are fragmentary poetic presentations of the same events. They are written in a metaphorical, allusive style not unlike that of QL or the Sibylline Oracles.

These texts deal with four kings who, in consecutive turns and according to divine will, sacked, destroyed, flooded, or at least oppressed Babylon and its holiest shrine, Esagila, and carried away the statues of its gods. Afterward, three of them were murdered by their own sons, while the fourth was chased into the sea and died there. The names of these kings were intentionally disguised under pseudonyms or cryptic spellings based on the use of rare ideograms and on the play of polyphones. These names are: (1) ^{m}KU.KU.KU.MAL (in one tablet) or ^{m}KU.KU.KU.KU.MAL (in the other two) king of Elam, the only one whose country is plainly spelled out; (2) ^{m}BÀD.MAḪ-^{d}MAŠ (var. ^{m}DUR.MAḪ-^{d}MAŠ, incorrectly read by Pinches [1897] and Jeremias [1917] as *Dūr-maḫ-ilāni*) son of ^{m}ÌR-^{d}É-*a-ku*, var. ^{m}ÌR-É-*ku-a* (in which ÌR could be read *èri*); (3) ^{m}*Tu-ud-ḫul-a* son of ^{m}GAZ.ZA. […]; and (4) ^{m}*I-bil-*^{d}*Tu-tu.* Pinches tried to read the first name ^{m}*Ku-dúr-laḫ-mal* or ^{m}*Ku-dúr-laḫ-ga-mal* and equated it with the Chedorlaomer of Genesis 14. He saw in the patronymic of the second king, ^{m}*Èri-*^{d}É-*a-ku,* the prototype of Arioch; and in the name of the third king, ^{m}*Tu-ud-ḫul-a,* the prototype of Tidal (Heb *tidʿal,* originally, with LXX, **tadġal*), both of which are also mentioned in Genesis 14. This triple onomastic resemblance, as well as the general tenor of the Chedorlaomer texts (which is somewhat similar to the Deuteronomist historiography [see below]), make it highly probable that the author of Genesis 14 was acquainted with some earlier versions of these Chedorlaomer texts. This raises two questions: (1) what historical characters are hidden behind the cryptic names of the Chedorlaomer texts? and (2) what relationship, if any, exists between the events alluded to in these texts and the story of Genesis 14?

2. The Cryptic Names. Jeremias (1917), proceeding from the ample description of the destructions and atrocities perpetrated by ^{m}KU.KU.KU.(KU.)MAL in Babylon and other cities of Babylonia, identified him with the Elamite Kutir-Naḫḫunte (Akk Kudur-Naḫḫundu) II, who took part in the conquest of Babylonia by his father, King Shutruk-Naḫḫunte (1185–1155 B.C.), and was left behind as its viceroy (1160–1155). He also defeated and captured the last Kassite king of Babylonia, and deported him to Elam. In the words of a Babylonian historical inscription, he "swept away all the people of Akkad like a deluge, turned Babylon and the other famous shrines into piles of rubble," and carried away to Elam the statue of Marduk along with masses of Babylonians. Kutir-Naḫḫunte succeeded his father in 1155 but died after only four years on the throne. Jeremias read ^{m}KU.KU.KU.KU.MAL as ^{m}*Ku-dúr-náḫ-ḫun-***te*, in which only

the value of the last sign is hypothetical. This identification was accepted by Cameron (1936: 111), Albright (1942: 34), and Hinz (1972: 127). Earlier, Albright (1921: 71 n. 4 and 1926: 233 n. 8) showed that by a different decoding of the cryptic writing of the name it could be read ^{m}*Ku-dúr-laḫam-mal,* a decoding from which the biblical form of the name derived.

After Böhl's widely accepted, but wrong, identification of ^{m}*Tu-ud-ḫul-a* with one of the Hittite kings named Tudḫaliyaš, Tadmor found the correct solution by equating him with the Assyrian king Sennacherib (see TIDAL). Astour (1966) identified the remaining two kings of the Chedorlaomer texts with Tukulti-Ninurta I of Assyria (see ARIOCH) and with the Chaldean Merodach-baladan (see AMRAPHEL). The common denominator between these four rulers is that each of them, independently, occupied Babylon, oppressed it to a greater or lesser degree, and took away its sacred divine images, including the statue of its chief god Marduk; furthermore, all of them came to a tragic end.

3. Relationship to Genesis 14. All attempts to reconstruct the link between the Chedorlaomer texts and Genesis 14 remain speculative. However, the available evidence seems consistent with the following hypothesis: A Jew in Babylon, versed in Akkadian language and cuneiform script, found in an early version of the Chedorlaomer texts certain things consistent with his anti-Babylonian feelings. Among these were the following: (1) the depiction of history as a recurring cycle of sinfulness, divine wrath, and punishment by invasion and destruction, followed by repentance, divine forgiveness, and restoration; (2) stark images of violence and devastations visited upon Babylon, which must have been read with a gloating anticipation of their imminent repetition (compare Isaiah 47; Jeremiah 50–51); and (3) the recurring motif of deluge, flood, and the submergence of Babylon by water. This latter feature of the Chedorlaomer texts evoked the popular legend of the destruction of Sodom and Gomorrah, which was already being associated with the imminent destruction of Babylon in various prophecies of the exilic period (Isa 13:19; 14:22–23; Jer 50:39–40; 51:41–42). The writer of Genesis 14 replaced Babylon with Sodom and Gomorrah, and had them sacked by the same four kings simultaneously (rather than consecutively as in the Chedorlaomer texts). In addition, he depicted the four kings victoriously traversing the territory between Dan and Elath (El Paran), eventually to be defeated by Abram, who received a blessing from Melchizedek, king of Salem. This implies that the land legally belonged to Abram and his descendants, and that Salem (i.e., Jerusalem), in the person of its priest-king Melchizedek, exercised a religious supremacy over the country from the earliest time.

MICHAEL C. ASTOUR

CHEETAH. See ZOOLOGY.

CHELAL (PERSON) [Heb *kĕlāl* (כְּלָל)]. A descendant of Pahathmoab and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:30). His name does not appear in the parallel list in 1 Esdr 9:31. While the etymology of the name "Chelal" is not certain, it is probably derived from the root *kll,* meaning "to be perfect." Chelal was a member of a family from which groups of exiles returned with Zerubbabel (Ezra 2:6; Neh 7:11) and later with Ezra (Ezra 8:4). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

CHELLEANS [Gk *Cheleōn* (Χελεων)]. An otherwise unknown people mentioned in the book of Judith (Jdt 2:23). It should be noted that the Greek manuscripts show a wide variation in spelling (*chaldiaōn, chellaiōn, chaldaiou,* etc.). The reading "Chaldeans" should be understood as a scribal error. The definite article occurs as both a singular or a plural (*tēs* or *tōn*). Enslin suggests that the singular *tēs* understands an omitted *gēs* ("earth"), while Moore (*Judith* AB) translated the phrase as a place name ("south of Cheleon"), and identifies it with ancient Cholle (modern el-Khalle), located between Palmyra and the Euphrates. If the phrase is translated to refer to a people, they are located to the N of the children of Ishmael, above the desert. This location would still allow them to be connected with ancient Cholle. It is not clear whether or not the author intended them to be related to the site CHELOUS in 1:9.

Bibliography

Enslin, M. S. 1972. *The Book of Judith.* Leiden.

SIDNIE ANN WHITE

CHELOUS (PLACE) [Gk *Chelous* (Χελους)]. A site in the book of Judith, located in the vicinity of Jerusalem (Jdt 1:9). Two possible identifications have been proposed for this site. The first identification is with HALHUL (M.R. 159110) located 4 mi to the N of Hebron. This town is mentioned in Josh 15:58 as one of the towns of the tribe of Judah. The second identification is with Chalutṣa (M.R. 117056), modern Khalasa, which is located to the SE of Beersheba. It should be noted that, given the genre of the book of Judith, the name may be fictitious. It is not clear whether or not the author of Judith intended to relate the site Chelous with the CHELLEANS mentioned in 2:23.

SIDNIE ANN WHITE

CHELUB (PERSON) [Heb *kĕlûb* (כְּלוּב)]. 1. Brother of Shuhah, father of Mehir, and grandfather of Eshton (1 Chr 4:11). None of these persons are mentioned elsewhere and Chelub's own parents are not identified. In 1 Chr 4:12, the entire group is termed "the men of Recah" (LXX "Rechab," i.e., Rechabites). The LXX, Vg, and Syriac versions read "Caleb" instead of "Chelub" (see Williamson *1 & 2 Chronicles* NCBC, 60; Braun *1 Chronicles* WBC, 55–58). In addition, the LXX reads "the father of Ascha" in place of "the brother of Shuhah," a variation which reinforces the identification with Caleb who in Josh 15:16–17 (= Judg 1:12–13) gives his daughter Achsah to Othniel after he defeated Kiriath-sepher (= Debir). 1 Chr 2:9 mentions a person named Chelubai whose extended family does overlap partially with the extended family of Caleb (2:18, 42). In 1 Chr 4:11, however, the compiler seems to distinguish Chelub from Caleb, for the latter is included subsequently among the references to Kenaz (4:13–15).

2. The father of Ezri, who was a steward of royal property appointed by David (1 Chr 27:26). His name appears in a list of stewards of crown property (1 Chr 27:25–31).

RICHARD W. NYSSE

CHELUBAI (PERSON) [Heb *kĕlûbāy* (כְּלוּבָי)]. See CALEB.

CHELUHI (PERSON). A descendant of Bani and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:35). His name does not appear in the parallel list in 1 Esdr 9:34. The Hebrew text is uncertain (K *klhy,* Q *kĕlûhû*). The LXX (*chelia*) may indicate a corruption of an original *kĕlāyāh,* meaning "Yahweh is perfect" (Williamson, *Ezra, Nehemiah* WBC, 144). Cheluhi was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:10). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

CHEMOSH (DEITY) [Heb *kĕmôš* (כְּמוֹשׁ)]. The national deity of the Moabites. Like several other small kingdoms, the Moabites lost their independence during the Neo-Babylonian expansion in the early 6th century B.C. The Moabite state never reappeared, and the subsequent mixture of peoples and religions (e.g., Nabatean, Greek, Roman, Christian) led to the extinction of Moabite religion. Some of its features

persisted after the kingdom of Moab collapsed, even as some religious elements from the Bronze Age had undoubtedly survived in the beliefs and practices of the Moabites in the Iron Age. The position of the god Chemosh (hereafter Kemosh) remained significant throughout Moab's history; this deity is the fundamental datum in the study of Moabite religion.

Unfortunately, the extant sources that enable us to reconstruct Moabite religion are relatively meager. As in the study of other ANE religions, relevant data come from two kinds of sources, textual and archaeological. Naturally, many of the archaeological data are subject to a broad range of interpretation, and conclusions based on such evidence remain tentative. There is occasional uncertainty in the scholarly interpretations of written sources pertaining to Moabite religion. Few texts relate directly to the religious beliefs of the Moabites, and some of our knowledge about this people's religion is derived from non-Moabite texts.

The most important sources of information on Moabite religion are the OT and the Mesha Inscription. Although the Hebrew scriptures are critical of the religion of Moab, these incidental references should not be dismissed in a cavalier manner. Undoubtedly, the most important source for the study of Moabite religion is the Mesha Inscription, a 34-line text which was written ca. 830 B.C. This inscription is a memorial stele that commemorates Mesha's triumph over Israel, a victory that was attributed to the favor of Kemosh, Moab's principal deity. According to the stele (lines 3–4), Mesha commissioned the inscription to coincide with his dedication of a high place (*bamah*) in honor of Kemosh.

Many scholars have come to assume that Yahweh, Milcom, Kemosh, and Qaus were the leading deities, the national gods, of Israel, Ammon, Moab, and Edom, respectively. Clearly, these peoples held many religious beliefs and practices in common, so much so that the theologies and functions of these various deities were somewhat interchangeable. Even though the Hebrew Bible and the Mesha Inscription indicate that Yahweh and Kemosh and their peoples were in conflict with each other, the similarities in the theology and cult of these two deities are remarkable. Simply put, everything we know about the Moabites' perception of Kemosh finds its parallel in Hebrew religion. Indeed, one scholar has suggested that the Mesha Inscription's treatment of Kemosh reads like a chapter from the Bible.

The logical place to begin any detailed discussion of Moabite religion is with the nature and function of Kemosh. There seems to be little doubt that Kemosh was perceived as the national god of the Moabites, although it is likely that the people of ancient Moab practiced henotheism throughout their history (i.e., they worshiped Kemosh as their leading deity but recognized other deities as well). It is probable that the Moabites were polytheistic in some periods, which could reflect the Canaanite background of this region and the polytheism of Moab's neighbors during the Late Bronze Age and Iron Age.

Kemosh was, of course, very important to the Moabites, but their deity was also worshiped by other ancient peoples before the establishment of the Moabite kingdom and outside of Moab. A god named Kamish (^{d}*ka-mi-iš*) appears in deity lists on tablets from Tell Mardikh (ancient Ebla), the Syrian city-state whose royal archives date to ca. 2600–2250 B.C. There seems to be little doubt that this name "Kamish" is an archaic form of Kemosh. Not only is Kamish listed among the 500 deities acknowledged at Ebla, but he was regarded as one of the principal gods of the city, with his name appearing in the name of a month, in personal names, and in the place name "Carchemish" (*kar-kamiš*). There was a temple for Kamish at Ebla; Kamish was also the recipient of offerings. Of great importance is the way in which the Eblaite spelling ^{d}*ka-mi-iš,* or ^{d}*ka-me-iš,* may explain the variant spelling *k^{e}miš* in Jer. 48:7, since the other seven appearances of this god's name in the OT are read *k^{e}moš.* Textual critics have eagerly amended the consonantal *kmyš* of Jer. 48:7 to *kmwš,* but this is no longer necessary, since the former spelling may reflect the more ancient tradition. The Mesha Inscription spells this god's name *kms,* which is usually vocalized Kemosh.

Even before the recovery of the name "Kamish" at Tell Mardikh, a god with the compound name "mud" or "clay" + *kam (m)ut* (*ṭṭ* or *ṭ* + *kmt*) was known from the Ugaritic tablets. A little circular reasoning, based on this reference, allows us to infer that Kemosh was a god of infernal nature. This perception of Kemosh's character is reinforced by the equation between the Mesopotamian deity, Nergal, and ^{d}*ka-am-muš* in an Assyrian god list. Clearly, these ancient and extra-Moabite references to names similar to

Kemosh indicate that Kemosh, the leading Moabite deity, was part of an older Semitic pantheon with which a number of Near Eastern peoples were acquainted.

While the etymology of the name "Kemosh" remains uncertain, knowledge about the Moabite understanding of Kemosh's nature and function comes from a variety of sources. The OT mentions this god by name eight times (Num 21:29; Judg 11:24; 1 Kgs 11:7; 11:33; 2 Kgs 23:13; Jer 48:7, 13, 46), always recognizing that Kemosh was the national deity of Moab and that his cult, though similar to Yahweh's, was a rival to the faith of Israel. The one possible exception to the Bible's acknowledgment that Kemosh was the god of Moab exclusively is the puzzling and intriguing reference to this deity in Judg 11:24, a verse that has been interpreted in a variety of ways. In this text, Jephthah makes reference to Kemosh giving land to his (i.e., Kemosh's) people, the *Ammonites.* The problem has been variously solved by assuming that the verse contains a Kemosh-Milcom equation, a Moabite-Ammonite equation, an *ad hominem* argument, an interpolation, a scribal blunder, or an example of diplomatic protocol. Whatever the correct interpretation may be, the important thing to notice is that the text suggests that it was the prerogative of Kemosh to give land to his people.

Another source of information about Kemosh's nature and function is, of course, the Mesha Inscription itself. This Moabite text refers to Kemosh a dozen times, if one includes the theophoric name of Mesha's father, usually restored as Kemosh-yat (line 1), and the compound name of Ashtar-Kemosh (line 17). The precise meaning of the latter remains elusive, though many explanations have been proposed. A number of scholars have suggested that Ashtar-Kemosh is the name of Kemosh's consort, the goddess who was considered the female counterpart of Kemosh; Ashtar-Kemosh has been connected with Ishtar or Astarte. Among other evidence that supports this interpretation is an Aramaic inscription from Kerak that dates to the Hellenistic period; this late text identifies Kemosh's as Sarra. Reference should also be made to the presence of a god and a goddess on the famous Balu‘ Stele, which probably dates to the 12th–11th centuries B.C.

Another group of scholars suggest that Ashtar-Kemosh was simply a compound name for the leading deity of Moab. The element "Ashtar" is associated with the Canaanite god Athtar or ‘Attar, the Venus star; the compound name may have been an epithet or hypostasis of ᶜAttar. Therefore, according to this argument, the Mesha Inscription indicates that the two deities were either identified or assimilated. Since the text refers to Kemosh eleven other times, however, it is likely that Ashtar-Kemosh was simply another name of Moab's national god. In the final analysis, it must be admitted that the unique appearance of this compound name makes it impossible for us to be certain about the meaning of Ashtar-Kemosh.

In addition to the 34-line Mesha Inscription, another reference to Kemosh comes from another inscription from Dhiban, a fragmentary text whose last line can be restored as *bt kmš,* "temple of Kemosh." This text is contemporaneous with the Mesha Inscription and clearly refers to a Kemosh sanctuary in ancient Dibon. A fragmentary text from Kerak, dating to the same period, mentions Kemosh twice. One use of Kemosh appears in the theophoric name of Mesha's father, Kemosh-yat; Kemosh is also mentioned in this text in association with a cultic installation, perhaps a temple.

In addition to the preceding biblical and nonbiblical texts, there are several artistic representations that may (or may not) relate to Kemosh. Because of the description of Kemosh on the Mesha Inscription, it is perhaps natural to view this deity as a god of war. Indeed, this warlike character and the presence of a town named Areopolis (modern Rabba) in the center of Moab have led some scholars to link Kemosh with Ares, the Greek god of war, and to identify the figures on a Greek coin from Areopolis and on the Shihan Warrior Stele as Kemosh. It is possible that some of the small human figurines found in Moab and a recently published seal depict Kemosh, but it must be admitted that there is no representation that can be identified as Kemosh with certainty. It is likely that such artistic representations of Moab's national god were made, however, as may be implied in Jer 48:7.

While the Mesha Inscription was intended to celebrate the achievements of Mesha, there is no doubt that the text also reflects an attitude of loyalty and thanksgiving to the Moabite national god. The OT writers regarded the Moabites as the "people of Kemosh" (Num 21:29; Jer 48:46), a designation that was probably used by the people of Moab themselves. The frequent references to Kemosh in the Mesha

Inscription indicate that he was thought to display a wide range of emotions in his control over and involvement with Moab. While it is likely that the Moabites sought Kemosh's favor in many aspects of life, the Mesha Inscription is most emphatic on his intervention and specific guidance in times of war, as is clear in the Moabites' practice of *ḥerem.*
GERALD L. MATTINGLY

CHENAANAH (PERSON) [Heb *kĕna‹ănâ* (כְּנַעֲנָה)]. A great-grandson of Benjamin according to one Benjaminite genealogy (1 Chr 7:10). He is one of those Benjaminites described as "mighty warriors … ready for service in war," a designation particularly given to the descendants of Benjamin through Jediael. The genealogy in which Chenaanah is found belonging to Benjamin (1 Chr 7:6–12) has been considered by some scholars as mistakenly attributed to Benjamin. Guthrie (*IDB* 1: 556) suggests that the list more likely belongs to Zebulun. This suggestion is made on the basis that 1 Chronicles 8 gives a longer and very different genealogy of Benjamin, while Zebulun is lacking in the genealogies given by the Chronicler. Williamson (*Chronicles* NCBC, 77) calls attention to this and other features of the smaller list which have caused some scholars to view it as a corrupt genealogy of Zebulun, but he concludes that the names are probable in a Benjaminite context, and that the textual emendations proposed by those who wish to attach the list to Zebulun are "too violent to inspire confidence." Myers (*1 Chronicles* AB, 53, 59) likewise sees no reason to attribute the shorter genealogy to Zebulun, stating that it is found in its "proper place" in the Chronicler's arrangement of tribal genealogies.
SIEGFRIED S. JOHNSON

CHENANI (PERSON) [Heb *kĕnānî* (כְּנָנִי)]. A Levite present at the public reading of the Law by Ezra (Neh 9:4). A shortened form of a name (Heb *kēnanyāhû*) meaning "Yahweh has made firm" (Brockington *Ezra, Nehemiah, Esther* NCBC, 171).
FREDERICK W. SCHMIDT

CHENANIAH (PERSON) [Heb *kĕnanyāhû* (כְּנַנְיָהוּ), *kĕnanyâ* (כְּנַנְיָה)]. Two individuals in the OT bear this name. It is a theophoric name composed of two elements: *knn* = "be firm/substantial" and *yh* = divine name "*yah*"/"*yahu*" for Yahweh. The name has been translated either "Y. is firm" (Fowler *TPNAH*, 76) or "Y. strengthens" (Noth *IPN*, 179).

1. Leader (*śar*)of the Levites in 1 Chr 15:22, 27. In v 27 Chenaniah is clearly understood as the leader of the singers in the entourage which brought the ark to Jerusalem. Chenaniah's role in v 22, however, is not as clear (for divergent opinions on the relation of vv 22 and 27 and thus the role of Chenaniah, see Rudolph *Chronikbücher* HAT, 125 and Williamson *Chronicles* NCBC, 122). The issue turns on the interpretation of *bammaśśā›,* lit., "in the lifting up," in v 22. If its object is understood to be "songs," as in v 27, Chenaniah was an expert in and leader of the music. If, however, its object is the ark, as is clearly the case at 2 Chr 35:3, then his expertise was in the proper manner of carrying the ark (see 1 Chr 15:2, 13–15). If, on the other hand, *maśśā›* is to be understood as "oracle," as in 2 Chr 24:27, then Chenaniah was a leader who was learned in the art of giving oracles (Mowinckel 1923: 18).

2. An administrative official in 1 Chr 26:29. His Levitical roots are traced through Izhar, the son of Kohath. He and his "family" were appointed to secular tasks as judges and administrative subordinates to higher officials (van der Ploeg 1954).

CHEPHAR-AMMONI (PLACE) [Heb *kĕpar hā‹amōnāy* (כְּפַר הָעַמֹּנִי)]. A village that was listed among the cities of the tribe of Benjamin (Josh 18:24). The Hebrew text reading tradition (Qere) presented the name of this village as *kĕpar hā‹amōnâ* while the writing tradition (Kethib) presented it as

kĕpar hā-amōnāy or *kĕpar hā-amōnî.* This final presentation supports the conclusion that the village (Heb *kĕpar*) was one inhabited by Ammonites. Press (1952: 482) suggested its founder may have been Zelek the Ammonite, one of David's mighty men (2 Sam 23:37). Although the root *kpr* appears in 1 Sam 6:18 to indicate unwalled villages, Albright (1924: 154) noted that the term was not used in place names in the preexilic period, making it, therefore, unlikely that the name meant "village of the Ammonites." He posited that two cities were indicated by Chephar-Ammoni, Chephirah (a mistaken repetition from Josh 18:26), and Ammoni. Three major Greek versions (Vaticanus, Alexandrinus, and Luciani) do not translate *kpr* as "village," but instead transliterate *kfr* with the place name. Codex Vaticanus separates *kfr* from Moni as if they were separate villages (Gk *Kephira kai Moni*). The Vulgate, however, renders it, *villa Elmona.* Though it has been suggested that the present Khirbet Kafr ʿAna (M.R. 173153) is the site of Cephar-Ammoni (*GP*, 92; Press 1952: 482), this identification is not generally accepted by scholars. Kallai (1960: 33–34) noted that several of the names that are in this part of the list of Benjaminite cities actually lie outside the boundaries of Benjamin as described in the boundary descriptions (Josh 18:12–21). Both Beth-Hoglah and Beth-Arabah lay in the district of Judah. Zamarim, Bethel, Ophrah, and Geba (Geba of Ephraim) lay in the district of Ephraim. Chephar-Ammoni, like its neighbors in the list, probably lay in Ephraim (as does Khirbet Kafr ʿAna). The presence of all of these cities in a Benjamin city list is best explained as reflecting the territorial situation following Abijah's conquests in Mount Ephraim (2 Chr 13:19; *HGB*, 398).

SUSAN E. MCGARRY

CHEPHIRAH (PLACE) [Heb *kĕpîrâ* (כְּפִירָה)]. A town in the territory of Benjamin (Josh 18:26).

Chephirah was one of the four Hivite cities whose inhabitants deceived Israel, making peace with Joshua on the pretense that they were from a distant land (Josh 9:17). The inhabitants of Chephirah and the other three Hivite towns (Gibeon, Kiriath-jearim, and Beeroth) were thus spared annihilation and were allowed to live among the Israelites as woodcutters and water carriers (Josh 9:26–27). The town was incorporated into the tribal territory of Benjamin (Josh 18:26), and later its inhabitants were among those who returned from Babylonian Exile (Ezra 2:25; Neh 7:29).

Edward Robinson (1867: 146) was the first modern scholar to identify Chephirah with Khirbet el-Kefireh (M.R. 160137), a 4–6-acre tell located about 1.5 mi N of Kiriath-jearim and 5 mi WSW of Gibeon (el-Jib). Virtually all scholars agree with this identification (*GP* 2:92, 120, 298; Kallai *EncMiqr* 4:228–29; Yeivin 1971: 141, *LBHG*, 433; etc.). Kh. el-Kefireh has not been systematically examined. Garstang (1931: 166, 369) visited the site and found LB pottery there. The site is located on a steep, high spur, bounded on the N and S by two wadies that join just W of the ruin to form Wadi Qotneh, which descends to the Aijalon Valley. During biblical times Chephirah guarded the midpoint of a secondary road that connected the cities of Gibeon and Aijalon, the main connecting road being the famous Beth-horon Ascent, located about 3–4 miles farther N.

DAVID A. DORSEY

CHERAN (PERSON) [Heb *kĕrān* (כְּרָן)]. A clan name in the genealogical clan list of Seir the Horite.

This person appears in Gen 36:26 as well as in the matching genealogy in 1 Chr 1:41. He is said to be the fourth son of the clan chief DISHON and is thus the grandson of Seir. These relationships may reflect tribal affiliation or alliance rather than blood kinship. For discussion of the Horite clans, see JAAKAN.

VICTOR H. MATTHEWS

CHERETHITES [Heb *kĕrētî* (כְּרֵתִי)*; kĕrētîm* (כְּרֵתִים)]. A people of presumably Aegean origin who settled along the SW coast of Palestine and from whose ranks David drew the core of his personal guard (1 Sam 30:14; 2 Sam 8:18; 15:18; etc.). The term "Cherethite" is first encountered in reference to a region of the Negeb in the account of the sick Egyptian slave abandoned by his Amalekite master and found by David (1 Sam 30:14). The Cherethites are most frequently mentioned in conjunction with the PELETHITES. Together they formed a mercenary unit under the command of Benaiah which was distinct from the regular army (2 Sam 8:18; 20:23 [Qere; about the Kethib *kry* see CARITES] 2 Kgs 11:4, 19; 1 Chr 18:17; see also de Vaux *AncIsr*, 123, 219–22). They owed their allegiance to David and showed him great loyalty in times of crisis.

The Cherethites and the Pelethites accompanied David on his flight from Absalom (2 Sam 15:18); they went out in pursuit of Sheba during his revolt against David (2 Sam 20:7); and they were instrumental in Zadok, Nathan, and Benaiah's efforts to crown Solomon king (1 Kgs 1:38, 44). After the death of David, the Cherethites and the Pelethites disappeared from the biblical record. Albeit there are two references to the Cherethites as a people in poetic parallel with the Philistines in prophetic oracles (Ezek 25:16; Zeph 2:5).

Research on the Cherethites has tended to focus on the questions of their geographical origin and ethnic affiliation. Although the island of Crete is named Caphtor in the Hebrew Bible (Deut 2:23; Jer 47:4; etc.; Akk Kaptara, Eg Keftiu; see CAPHTOR), most scholars view the Heb *kĕrētî* as meaning Cretan and seek the Cherethites' roots on the island of Crete (Gk *Krētē;* Albright 1920–1921; Delcor 1978; but see Virolleaud [1936: 8–10] who views the Ugaritic hero Keret as the eponymous ancestor of the *kĕrētîm;* arguments against this latter view can be found in Delcor 1978: 414–15).

The exact relationship between the Cherethites and the Philistines is unclear. Since the Hebrew Bible ascribes the Philistines' origin to the island of Caphtor (Amos 9:7), it would appear that the Cherethites and the Philistines came from the same region of the Aegean. In spite of poetic passages such as Ezek 25:16 and Zeph 2:5 in which the Cherethites and the Philistines are juxtaposed, it cannot be determined whether the Cherethites were identical with the Philistines, a subgroup of the Philistines, or a separate ethnic entity. Owing to the absence of their name among the Sea Peoples in the Medinet Habu inscription of Ramses III (*ANET*, 262–63), Albright (1920–21) surmised that the Cherethites were foreign mercenaries already in Egyptian employ before the mass movements of Sea Peoples at the end of the Bronze Age and the beginning of the Iron Age which brought the Philistines to Canaan. Hence they were unrelated to the Philistines and able to enter David's service, in which they presumably fought against the Philistines. Using the same evidence, Delcor (1978: 421) concluded that the Cherethites must have arrived on the scene at about the time of David, or shortly before. In his opinion they either merged with or formed a subgroup of the Philistines. The area of Cherethite settlement was in the Negeb to the S and SE of Gaza (Aharoni 1958: 28–30). It may have been during the time of David's service to Achish, king of Gath, at Ziklag (1 Samuel 27; 29) that he hired the loyalty of the Cherethites and formed them into his personal bodyguard (McCarter *1 Samuel* AB, 435).

CARL S. EHRLICH

CHERITH, BROOK OF (PLACE) [Heb *naḥal kĕrît* (נַחַל כְּרִית)]. A stream on the E side of the Jordan River where Elijah hid from Ahab and Jezebel during the drought in Israel; he remained there until the spring dried up (1 Kgs 17:2–7).

Ever since the Middle Ages, scholars have been divided as to which side of the Jordan River this stream should be located. Those who have preferred a location on the W side have argued that the Hebrew word *ʿal-pĕnê* should be translated "before" or "toward" the Jordan (e.g., Gen 25:18; 18:16). Scholars preferring this translation include Marinus Sanutus (1321), who suggested ʿAin Fusail (*Phasaelis* of NT times) just N of Jericho, and E. Robinson who preferred the Wadi Qelt near Herodian Jericho. Robinson's argument was based on the idea that the Arabic *Qelt* could have been derived from the Heb *kĕrît.* A major difficulty with this location is that it is hardly an isolated stream, being one of the main routes connecting the two heavily populated centers of Jerusalem and Jericho.

Most scholars have preferred to locate the stream on the E bank, arguing that the most obvious reading of *ʿal-pĕnê* is "east of" the Jordan (e.g., Eusebius in the *Onomast.* p. 174). Although Thenius argued for the *Wadi Rajib or Ajlun,* a number of scholars, beginning with Benjamin of Tudela and including F. Abel (*GP* 1: 484–85) and N. Glueck (AASOR 25–28), have preferred the *Wadi el-Yubis* in the highlands of N Gilead. This suggestion may make the most sense in view of the fact that Elijah was a Gileadite (1 Kgs 17:1). This wadi empties into the Jordan about 8 km S of Pella.

RANDALL W. YOUNKER

CHERUB (PERSON) [Gk *Charaath* (Χαραα θ)]. The leader of a group of exiles returning from two Babylonian locations, Telmelah and Telharsha, who were unable to prove their genealogies (1 Esdr 5:36). While Cherub represents a personal name in 1 Esdras, in the parallel texts (Ezra 2:59 = Neh 7:61 [LXX *charoub*] it is a geographic location. See CHERUB (PLACE). Moreover, in 1 Esdras, Cherub and Addan have been combined in many manuscripts, among them Codex Vaticanus (Gk *charaathalan*) and the Vg (Lat *carmellan*). Variations such as these raise questions about the sources of and literary relationship among 1 Esdras, Ezra, and Nehemiah.

MICHAEL DAVID MCGEHEE

CHERUB (PLACE) [Heb *kĕrûb* (כְּרוּב)]. An unknown Babylonian site from which exiles returned to Jerusalem with Zerubbabel (Ezra 2:59 = Neh 7:61 [LXX *charoub*]). According to Ezra and Nehemiah, those returning from Cherub, as well as from Telmelah, Telharsha, Addon, and Immer, were unable to establish their genealogies, or prove that they belonged to the people of Israel. In the parallel text of 1 Esdr 5:36, however, Cherub (Gk *charaath*), Addan, and Immer appear as the names of the leaders of the people who returned from Telmelah and Telharsha.

MICHAEL DAVID MCGEHEE

CHERUBIM [Heb *kĕrûbîm* (כְּרוּבִים)]. The terms "cherub" (sing.) and "cherubim" (pl.) occur over 90 times in the Hebrew Bible (and only once in the NT, in Heb 9:5) in reference to fanciful composite beings. Although all of these references are in sacral contexts, there is no uniformity as to the nature of the strange creatures involved except for the fact that they are all winged beings. From a graphic perspective, the biblical description of cherubim can be divided into two major groups: those that were two-dimensional, as they appeared woven into textiles, or in low relief; and those that were free-standing either as modeled, three-dimensional forms or as living, moving creatures.

The two-dimensional or low-relief images of cherubim were those found in the sacred structure of ancient Israel. In the tabernacle, the inner curtains and the veil that closed off the inner sanctum or holy of holies were adorned with cherubim (Exod 26:1, 31; 36:8, 35). These decorated fabrics, made of a woolen-linen mixture and crafted in special (*ḥšēb*) workmanship, were part of the innermost and holiest part of the tabernacle complex. The Jerusalem temple, which was constructed of walls and not hangings, featured carved cherubim, covered with gold, on the corresponding elements: the sanctuary walls (1 Kgs 6:29; cf. 2 Chr 3:7 and Ezek 41:18–20) and on the doors separating the internal chambers (1 Kgs 7:32, 35; cf. Ezek 41:25). In addition, the temple had cherubim carved into panels that formed the base and part of the top of the stands for the lavers (1 Kgs 7:28, 36).

Three-dimensional cherubim were also part of the holiest elements of both tabernacle and temple. Two golden cherubim with wings extended were part of the covering of the ark, within the holy of holies of the tabernacle (Exod 25:18–22; 37:7–9). In the Jerusalem temple, two enormous olivewood cherubim, overlaid with gold, virtually filled the innermost chamber (1 Kgs 6:23–28) as a covering for the ark (1 Kgs 8:6–7). In both these instances, the cherubim apparently constituted a resting place, or throne, for God's invisible presence or glory (e.g., 2 Kgs 19:15 = Isa 32:16; 1 Sam 4:4; 2 Sam 6:2). As part of the cultic furniture for God in the divine dwelling place on earth (see Haran 1978: 254–59), these cherubim are to be related to figures attested in several biblical texts which envisage God riding upon living composite beasts (e.g., Ps 18:10 = 2 Sam 22:11) or in which God's glory rests upon the creatures (Ezekiel 10). Finally, the close connection between God and cherubim is present in their appearance as guardians of the garden of Eden (Gen 3:24).

The many variations of cherubim represented in the Bible—examples with one or more faces; with human, leonine, bovine, or aquiline faces; with two or four legs—correspond to various forms of composite beasts depicted in ANE art, particularly the art of Assyria (*TWAT* 4: 330–34). In ancient Israel and its contemporary world, cherubim were characterized by mobility, since they all had wings. By virtue of their combining features of different creatures or having more of such features than real animals or persons, they were unnatural. These characteristics made them apt symbols for divine presence, since deities moved where humans could not and were something other than either animals or humans. The cherubim of the Bible are hardly the round-faced infant cherubim known in Western art.

CAROL MEYERS

CHESALON (PLACE) [Heb *kĕsālôn* (כְּסָלוֹן)]. One of the towns along the N boundary of Judah, bordering on Dan (Josh 15:10). Eusebius, like LXX A, has *chasalōn,* while LXX B reads *chaslōn.* The imprecision in describing Judah's territory at this point probably stemmed from difficulties encountered by the biblical writer when attempting to define an evidently unsettled region. Eusebius (*Onomast.* 172.16) describes Chesalon in the 4th century C.E. as a large village in the territory of Aelia (Jerusalem), whereas Jerome says it lay in Judah. But neither writer defines its true position. Following the identification of Edward Robinson (1856: 2.30; 3.154), the biblical name is now generally agreed to be preserved in the ruin of *Kesla,* ca. 20 km/12 mi W of Jerusalem (M.R. 154132), and situated at 641 m/1920 ft above sea level. Chesalon was never a fortified town and consequently does not possess a tell. Its bare rock summit, though, is easily detectable in a region inhabited then, as today, by oak forests. A surface survey conducted there revealed pottery from the Iron Age II period and later (Gafni 1984: 26). The Bible locates Chesalon between Mt. Seir and Beth-shemesh, where it is mentioned as an alternative name for the shoulder of Mt. Jearim, meaning a "wooded mountain." When referring to a site in the hills, "shoulder" means the edge of a ridge or a range (*HGB,* 128). According to the biblical description, the border ran seaward from Kiriath-jearim to Mt. Seir. There it turned S, skirting along the edge of the Mt. Jearim range toward Beth-shemesh, including both Mt. Seir and Chesalon within the territory of Judah (*HGB,* 122). A corrupted form of Chesalon may appear in an LXX supplement to Josh 15:59 in the name of *koulon* (*HGB,* 392).

R. A. MULLINS

CHESED (PERSON) [Heb *kešed* (כֶּשֶׂד)]. The fourth son of Nahor and Milcah (Gen 22:22). Although it occurs only once in the Bible, this name has been associated with the people known in the Bible as the

Chaldeans. Chesed is orthographically and phonologically related to the Kasdim (Heb *kaśdîm*), and this group is identified throughout the Bible with the Chaldeans (e.g. Gen 11:28; Job 1:17; and elsewhere). The Old Babylonian term *kasdu,* which became *kaldû* in Assyrian documents, is the equivalent of this term, which the LXX translates *chaldiōn.* A connection could be drawn between the clan of Chesed and these Mesopotamian "Chaldeans," but to do so based on the similarity of terms only is unadvisable.
JOEL C. SLAYTON

CHESIL (PLACE) [Heb *kĕsîl* (כְּסִיל)]. A town in Judah located in the extreme S (Negeb) near Hormah and Ziklag and toward the boundary of Edom (Josh 15:30). In other lists of S Judean towns, it is replaced with Bethul (Josh 19:4) and BETHUEL (1 Chr 4:30). Also, 1 Sam 30:27 refers to a BETHEL in S Judah, in connection with David's exploits in the area around Ziklag and Hormah. Thus, it is impossible to be certain not only about the location but also about the precise name of this town.
GARY A. HERION

CHESTER BEATTY PAPYRI. The papyri named after Sir Alfred Chester Beatty (1875–1968), an American collector who in 1950 settled in Dublin, Ireland. The library which he founded, now called the Chester Beatty Library and Gallery of Oriental Art, was bequeathed to the Irish people at the time of Beatty's death.

A. The Chester Beatty Biblical Papyri

The appellation refers in the first instance to the famous Chester Beatty Biblical Papyri, the largest and most sensational discovery to date of Greek biblical mss written on papyrus, acquired by Beatty in 1930–31.

1. The Discovery. Announcement of Chester Beatty's acquisition was made by Sir Frederic Kenyon, the *Times* (London), November 19, 1931. Though the original announcement mentioned twelve codices, the figure was lowered to eleven when it was found that Pap. IX (Ezekiel, Esther) and Pap. X (Daniel) form part of the same codex. Though the exact place of discovery is unknown, some Christian church or monastery near Aphroditopolis (Carl Schmidt) or perhaps less likely in the Fayum (Kenyon) has gained general acceptance. Although Chester Beatty managed to make a second acquisition from the discovery, in 1935, by no means all parts of the eleven codices found their way to his collection. Substantial segments were acquired by John H. Scheide (Princeton), the Universities of Michigan and Cologne, and the Consejo Superior de Investigaciones Cientificas of Madrid. Fragments are in Barcelona and Vienna. (For all present locations of "Chester Beatty Papyri," consult the Bibliography. In what follows all will be counted as Chester Beatty Papyri).

2. Popular Designation. In spite of the official designation, "Chester Beatty Biblical Papyri," individual Papyri are normally cited as P. Chester Beatty … in conformity with standard papyrological practice.

3. The Manuscripts. Since the Papyri must be dated on the basis of paleography, no absolute unanimity among experts has been achieved. Nevertheless, at least the century to which each document was assigned by its chief editor still meets with general approval. Hence the dates range from the 2d (Pap. VI) to the 4th (XI, XII) centuries, with the majority falling in the 3d.

a. Papyrological Importance. At the time of their discovery, prevailing opinion was that the papyrus codex did not gain general acceptance among Christians until the 4th century. The evident date of most of the Papyri altered that opinion. Along with the earlier date for the general use of the codex form, they also supplied an abundance of information on how the papyrus book was constructed. Formats are as numerous as the Papyri. Page size ranges from about 18 by 33 cm (Pap. VI) to 14 by 24.2 cm (III). Similarly, the makeup of individual codices shows much diversity, some being constructed of a single gathering (quire) of papyrus sheets (Pap. II, VII, IX + X), while in others the gathering varies from a single sheet (I) to five (V) or seven (VII). The largest codex among them (Pap. IX + X) must have counted at least 236 pages.

One of the most interesting aspects of scribal practice concerns the *nomina sacra.* In the Papyri we find diversity not only on which names are contracted and how, but also early evidence of sacral treatment of nonsacral names. So, for example, already in the 2d century (Pap. VI) "Joshua=Jesus" was treated as a *nomen sacrum,* suggesting that the sacral treatment of "Jesus" had become routine.

b. Textual Importance. No less than their papyrological significance is the textual importance of the Papyri. Since all but two (Pap. XI, XII) of the eleven codices are dated earlier than the 4th century, they present important evidence for the text of the Greek Bible as it existed in Egypt prior to the *traditio codicum* (the "turning in" of Christian books during the Diocletianic persecutions) and a century or more earlier than the great vellum codices of the 4th century, namely Vaticanus (B) and Sinaiticus (S). Although the Papyri supply a wealth of new information on textual detail, they also demonstrate remarkable stability in the transmission history of the biblical text. In terms of textual affiliation, they can only be described as mixed or unaligned. Only if great latitude is allowed can they be counted as members of textual groups or representatives of particular text types. For the Greek OT, their great significance lies in the fact that their text is pre/nonrecensional, that is to say, their text is untouched by the systematic revisionary activity of Lucian (III–IV) and of Origen (III) as well as other more shadowy or entirely unknown revisers.

(1) OT Papyri. Even though two of the Papyri (VIII [containing Jer 4:30–5:24]; XI [Sir 36:28–37:22; 46:6–47:2]) give relatively little text, so as to make textual analysis precarious, they nonetheless are the most extensive early (3d/4th cent. A.D. and before) witnesses for their respective books.

Pap. IV (Gen 9:1–44:22) and V (Gen 8:13–9:2; 24:13–46:33) between them preserve four fifths of the book of Genesis, a book almost absent from both B and S. Together with the only other substantial papyrus, 911, they are our chief early witnesses to LXX Genesis. Only sporadic corrections to the Hebrew text are in evidence.

Pap. VI (Num 5:12–36:13; Deut 1:20–34:12), though the earliest among the Papyri, postdates P. Fouad 266 (847, 848) and P. Rylands 458 (957) by several centuries. Its text, however, is much more extensive and it exhibits few readings which need have arisen under Hebrew influence.

Pap. VII (Isa 8:18–19:13; 38:14–45:5; 54:1–60:22) has a very low number of unique readings and is an exceptionally good witness to the original text of LXX Isaiah. Its chief claim to fame, however, lies perhaps in its annotations in Old Fayumic. Most interesting among the OT Papyri is Pap. IX–X. Its 3d-century date makes it the earliest substantial witness for all three books it contains: Ezekiel, Daniel-Bel-Susanna, Esther.

Ezekiel (11:25–fin.). Though clearly nonhexapharic, the text of IX–X gives evidence of having undergone correction toward the Hebrew, but whether the equation *kyrios ho theos = adonai-yahweh* is to be counted as such is controversial.

Daniel (1:1–12:13)-Bel (c. 4–39)-Susanna (5-subscriptio). Since the popular text in antiquity was not LXX Daniel but the so-called Theodotionic version, the former is extant in but few witnesses, two of which are hexaplaric (88-Syh), while several others are very fragmentary. Pap. (IX–)X is the earliest by at least two centuries and, because of its age and extent, is the most important witness to LXX Daniel. Though not hexapharic, the Papyrus contains sporadic pre/nonhexaplaric corrections to the Hebrew. Uniquely, Daniel 7–8 precede 5–6, and 4:3–6, 5:18–22, 24–25 are lacking as in 88-Syh but against MT. Of considerable interest is the order of the "books" and, according to the subscriptio, that Bel and Susanna were regarded as belonging to Daniel.

Esther (1:1a–8:6). Not unexpectedly, the Papyrus contains the LXX rather than the so-called *L* version which is attested in only a small minority of witnesses. Additions A–D are attested in their usual locations in Greek mss.

The chief importance of Pap. XII lies in the newness of its contents.

Enoch (93:12–13; 94:7–8; 97:6–104:13; 106:1–107:3). The chief text is in Ethiopic translation. For Book V (91–105) and the concluding fragment from the book of Noah (106–107), the Papyrus supplies our only Greek text. Chapters 105 and 108 were never part of the text, and have been regarded as

secondary. The former chapter, however, is represented among the Aramaic fragments from Qumran (4QEn^{c}). The subscriptio reads "Epistle of Enoch."

Melito of Sardis, *Peri Pascha.* Though at the time of its discovery, Pap. XII constituted the only (original) Greek text of this treatise, it has since been supplemented by P. Bodmer XIII and P. Oxy. XIII 1600.

Apocryphon of Ezekiel. Though cited by Clement of Alexandria (*Paedagogus* I. ix. 84.2–4) Pap. XII supplies the only ms evidence of this work.

(2) NT Papyri. Pap. I (Matt 20:24–Acts 17:7) challenged the prevailing view at the time of the discovery of the Chester Beatty Biblical Papyri that, prior to the 4th century, each Gospel had circulated separately. The order of the individual books in the codex was apparently the so-called Western order: Matthew, John, Luke, Mark, Acts.

Pap. II (Rom 5:17–16:23, Heb, Cor, Eph, Gal, Phil, Col, 1 Thess). The placement of Hebrews among the Pauline epistles at a time when it was widely regarded as uncanonical is remarkable, and its location after Romans is virtually unique. Equally uncommon is that Ephesians precedes rather than follows Galatians. Perhaps the object of greatest textual interest is the doxology of Rom 16:25–27, which in our Papyrus closes chap. 15. That the Pastoral Epistles were not included seems certain but does not necessarily reflect doubts about their Pauline authorship, as some have suggested.

Pap. III (Rev 9:10–17:2). As is the case for most of Genesis (cf. Pap. IV and V), ms B is not extant for Revelation. Moreover, Pap. III is at least a century older than S and, of our early (3d/4th cent. and before) witnesses, is the most extensive.

B. Other Chester Beatty Papyri. Although the Biblical Papyri are the centerpiece of the Library's holdings in early biblical mss, they were neither Beatty's only nor his earliest acquisitions in this field.

1. Coptic Vellums. In 1924–25 Chester Beatty acquired three Coptic (Sahidic) volumes evidently produced in the monastery of Apa Jeremias at Saqqara. (Two more of the same find were bought by the University of Michigan.) All three volumes were in their original bindings, and written, not on papyrus, but on vellum. P. Chester Beatty 2003 (=813) contains the Pauline Epistles (Rom, Cor, Heb, Gal, Eph, Phil, Col, Thess, Tim, Phlm) and the Gospel of John; P. Chester Beatty 2004 (=814) has Acts and the Gospel of John, and P. Chester Beatty 2005 (=815) the first fifty psalms plus Matt 1:1–2:1 (ined.).

2. Manichea. Roughly contemporaneous with the Biblical Papyri was Beatty's acquisition of Manichean mss in Coptic (Sub-Achmimic) translation (ca. 400+ A.D.). Though part of the find of papyrus codices, reputedly from Medinet Madi in the S Fayum, ended up in Berlin (and Vienna), Chester Beatty gained possession of the Homilies and the Psalm Book. Part I of the latter remains to be edited, as well as the Synaxeis Codex now in Berlin.

3. Later Acquisitions. Acquisitions of papyri (and some parchments) continued, notably around the middle 1950s. Not only were some of these materials bought through the same dealer Martin Bodmer engaged, but like the bulk of the BODMER PAPYRI, they were from the discovery near Dishna in 1952. In two instances, a fragment each from Bodmer Papyri was bought by Beatty, namely from P. Bodmer II (John 19:25–28, 30–32) and from P. Bodmer XX (*Apology of Phileas* 135, 13–16 and 136, 14–17). In a third case, a substantial portion was acquired by Beatty: P. Bodmer XXI = P. Chester Beatty 2019. It is not clear which and how many mss in the possession of the Chester Beatty Library also derive from the Dishna discovery.

a. Greek Biblical Papyri. The series of Biblical (but cf. Pap. XII) Papyri launched by Kenyon has been continued for Greek "biblical" papyri acquired at later dates: P. Chester Beatty XIII (Ps 72:6–75:13; 77:1–88:2), XIV (Ps 31:8–11; 26:1–6, 8–14; 2:1–8), XV (*Acts of Phileas* plus Ps 1:1–4:2), XVI (*Apocryphon of Jannes and Jambres* [ined.]), XVII (Luke 14:7–14, XVIII (Job 9:2–3, 12–13. Chester Beatty accession no. (hereafter acc.) 1499 is a Greek grammar, and a Graeco-Latin lexicon on Romans, 2 Corinthians, Galatians, and Ephesians and is being edited.

b. Coptic Texts. (1) Biblical and related. P. Chester Beatty 2018 (*Apocalypse of Elijah*), 2019 (Josh 1:1–6:16; 6:25–7:6; 22:2–19; 23:7–15; 24:23–33 plus Tob 14:13–15), 2021 (John 10:8–13:38 in Sub-Achmimic plus mathematical exercises in Greek), 2023 (Gen 7:13–23, 27:23–25, 27–32), 2024 (Luke

1:63–9:31, 11:1–12:48, 18:8–15, 2 Cor 1:1–12:12 [ined.]), 2025 (lectionary containing at least Ps 31:1–4, 96:3–4, Mark 8:34, Acts 13:28–29, 31–33, 1 John 4:14–16 [ined.]).

(2) Hagiographica: P. Chester Beatty 2022 (Cephalon), 2028 (Herai), 2029 (Phoebammon), 2030 (Hermauo).

(3) Pachomiana: Chester Beatty acc. 1486 (Letter 2 of Theodore [on parchment]), acc. 1494 (Letter 3 of Horsiesius [ined.]), W.145 (Greek trans. of Pachomius' Letters 1, 2, 3, 7, 10, 11^{a} [on parchment]), acc. 1495 (Letter 4 of Horsiesius [ined.]), no. 54 (Pachomius' Letters 11^{b}, 10, 11^{a}, 9^{a}, 9^{b}).

(4) Miscellanea: P. Chester Beatty 2026 (nonbiblical fragment about Moses and Pharaoh [ined.]), 2027 (nonbiblical fragment about Pilate [Bohairic; ined.]), 2031 (tale featuring Pshoi s. of Jeremiah [ined.]). Various other bits and pieces still await identification.

ALBERT PIETERSMA

CHESULLOTH (PLACE) [Heb *kĕsûlōt* (כְּסוּלֹת)]. A town in the territory of Issachar (Josh 19:18).

The name is apparently a variant of CHISLOTH-TABOR.

CHEZIB (PERSON) [Gk *Chaseba* (Χασεβα)]. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:31). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (see Ezra 2:48; Neh 7:51). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.
MICHAEL DAVID MCGEHEE

CHEZIB (PLACE) [Heb *kĕzîb* (כְּזִיב)]. A city in S Canaan where Shelah, one of Judah's sons, was born of a Canaanite woman (Gen 38:5). The context of the biblical reference implies that the town was near Adullam (cf. Gen 38:1). The consensus is that the site is the same as ACHZIB [Heb *ʾakzîb*] in Judah (Josh 15:44; Mic 1:14), which results from the addition of a prosthetic *ʾalep* to *kĕzîb* (GKC ¶19m). Eusebius' (*Onomast.* 172) identification of Achzib with the town of *Chasbi* further preserves the consonantal tradition. Chasbi is now known as Tell el-Beida (M.R. 145116), which is near Adullam. Saarisalo (1931) visited the site, and although he identified Tell el-Beida as Moresheth-gath, he described a typical tell configuration with early Iron I and II potsherds on its surface; otherwise no archaeological work has been done at the site.

The MT states that "he was" (i.e., Judah) in Chezib when the woman bore Shelah; however the RSV follows the Gk which states "she was" (i.e., the Canaanite woman) in Chezib when she gave birth. Speiser's translation (*Genesis* AB, 295) essentially conflates the two traditions and renders the phrase: "they were at Chezib …" The Hebrew text, furthermore, implies that only Shelah was born in Chezib, while the Gk implies ("when she bore them") that there she bore all of the sons—Er, Onan, and Shelah. While the Gk may preserve the more accurate information, the first two sons, Er and Onan, became irrelevant as far as inheritance purposes were concerned, since they both died childless. The descendants of Shelah, however, would need this information (cf. Num 26:19–20). Perhaps the Hebrew text accommodates only the essential information (cf. Keil and Delitzsch n.d.: 339–340).

CHIDON (PERSON) [Heb *kîdōn* (כִּידֹן)]. An alternate form of NACON.

CHIDON (PLACE) [Heb *kîdōn* (כִּידֹן)]. The name of the threshing floor where Uzzah was struck dead for touching the ark of the covenant while it was being transported to Jerusalem by oxcart (1 Chr 13:9). David then renamed the spot PEREZ-UZZAH, preserving it in national memory as the place where God's wrath "broke out" against Uzzah for his irreverant act (1 Chr 13:11 = 2 Sam 6:8). 2 Sam 6:6 calls the place "the threshing floor of Nacon." Josephus, like the LXX A, writes *cheidōn* (*Ant* 7.4.2). LXX B omits "of Chidon." It is not clear from the text whether Chidon was the name of the place or its owner. Some have tried to identify the spot with the threshing floor of Araunah or Ornan the Jebusite (cf. 1 Chr 21:15). In Ugarit, threshing floors were often associated with cultic activity. Thus, Coggins (*1 and 2 Chronicles* CBC, 79) has suggested that the location may have been significant in the earlier form of the story, although it is likely that here the Chronicler was simply following his source. While no name resembling Chidon or Nacon has been preserved, there are two plausible routes for the transport of the ark to Jerusalem. The most direct, but more difficult access would have been to go somewhere along the line of the present Jerusalem–Tel Aviv highway, a distance of about 13 km/8 mi. The easiest, but longer way would have been to go from Kiriath-jearim to Gibeon (el-Jib); and then on to Jerusalem via Gibeah of Benjamin (Tell el-Ful). Thus the ark would have been brought through Benjamin in full view of the local population. Given the political tensions between the Benjaminite house of Saul and the Judean house of David, this would have served as a bold statement by David that he is now the one in charge. This latter route also has the benefit of high ground exposed to westerly winds needed for threshing grain. Several threshing floors still exist in the region today.

CHILD, CHILDREN. In the OT, children are a gift from God, instruments of God's activity, and symbolically a guarantee of the covenant between God and the people of Israel. In the NT, children are principally a model or image for the believer to emulate.

———

A. Children in the OT

God's greatest gift and guarantee of the covenant with Israel was that of children. Despite every other gift, Abraham felt at a complete loss without children (Gen 15:1–3). God's promise of a numerous posterity to Abraham and Sarah was at the root of the biblical covenant (Gen 12:1–3). In the creation account, the first woman was called Eve, because she was "mother of all living" (Gen 3:20) and thus source of hope for the fallen first parents. In view of the primacy of children, a favorite image was that of father, mother, and numerous children around a table (Ps 128:3–4). While every birth was considered a divine miracle, those with extreme difficulty or seemingly impossible due to old age were attributed to extraordinary divine intervention (Gen 17:17; 21:6). In the early biblical period, immortality was linked to living on through children who carried on the *name* of their parents (Gen 48:16). When there were no offspring, the Levirate law provided for carrying on this name and for continuity through the nearest relative (Deut 25:5–10). Children were important in worship, prayer, and ritual (Exod 13:8, 14; Deut 4:9; 6:7). The Bible attaches special significance to the blessing of children, especially before the death of

parents (Genesis 27, 48, 49). The ancient Jewish custom of blessing children follows the ritual of these texts. The priestly blessing is also used for them (Num 6:24–26).

Despite this special esteem for children, they were the powerless ones on the bottom rung of Hebrew and other ancient societies. Tradition and custom allotted the most important place to older people (Prov 16:31; Job 12:12; Sir 25:4–6). Parents had almost absolute authority over children, who were educated through strict obedience often enforced by severe physical punishment (Prov 13:24; 19:18; 22:15; 23:13; Sir 30:1, 12). The law reinforced parental authority with its own strong sanctions (Exod 21:17; Lev 20:9).

Yet in contrast to human ways, the Bible presents God as acting in a surprising way through children and young people. Wisdom is a special gift from God (Prov 2:6–7) granted even to little ones. God gives the young Joseph the gift of interpreting dreams and ruling the land of Egypt (Gen 41:38). The young Solomon asks God for wisdom through the gift of a listening heart (1 Kgs 3:5–9). The book of Wisdom expands on this story and describes Solomon as asking for wisdom as a child and pursuing it throughout his youth as if searching for a bride (Wis 6:3–7; chaps. 7, 8). In regard to creation, the Psalmist declares that even little children are able to perceive and praise the wonders of God's universe (Ps 8:2).

As if to turn the tables on ordinary human expectations, the Bible focuses on examples where God works through the young and little ones. He favors not Cain the firstborn son of the human race but the younger Abel (Gen 4:4–5). When Rebekah, Jacob's mother, consults the Lord, she receives an answer that the elder shall serve the younger (Gen 25:23). Before death, Jacob blesses his eleven sons, but gives a double blessing to the youngest, Joseph (Gen 48:1–22; 49:22–26). Joseph in turn desires Jacob's special blessing for his older son Manasseh; instead it is granted to the younger, Ephraim (Gen 49:13–20). When the prophet Samuel searches for a new king to replace Saul, he meets Jesse and his seven sons at their home. However, God tells him that despite their impressive strength and appearance none will be the anointed one. Instead, it will be David, a "little one" and shepherd out in the fields doing the work often allotted to children (1 Sam 16:1–13). God enables David, too young even for battle, to overcome the Philistine champion Goliath (1 Sam 17).

The image of a child plays an important part in messianic expectations. The prophet Isaiah announces a future *child* of David's line will be the hope of his people despite much suffering (7:14, 16; 9:16). The same prophet also describes this future in terms of an idyllic return to the childlike innocence of the garden of Eden (11:8–9). The prophet Zechariah has a vision of the messianic era as a time of peace and joy when "the streets of the city shall be full of boys and girls playing in them" (8:5).

B. Children in Mark

Mark writes for an audience oppressed and persecuted by abusive Roman authority. In response, some Christian leaders and prophets proclaimed an imminent powerful return of Jesus and substantiated their message through miracles and signs (13:6, 21–22). To counter these views, Mark presents children as models of discipleship. Two stories about Jesus and children form an important literary frame for illustrating true discipleship in a central teaching section formed around Jesus' three predictions of his passion and death (8:31; 9:31; 10:32–34). As Derrett has shown (1983), these children's stories should not be understood merely as examples of Jesus' compassion for little ones or as a support for the existence of infant baptism in the early church. Instead, they should be studied in light of their context and the importance of Jesus' blessing, which follows OT biblical models (Genesis 48–49).

The first story (9:33–37) follows Jesus' second prediction of death in 9:31 and the connected pericope about the disciples arguing over who would be the greatest among them. (Here Mark's audience would probably think of succession to Jesus in view of the statement about his departure.) There is a direct confrontation with the twelve, who are thinking in terms of power and authority. Jesus illustrates his own response by actions as well as words. He "takes the child in his arms" as again in the literary frame closure in 10:16. Derrett (1983: 5–10) has argued from OT parallels that this is part of an adoption ritual. Jesus then confirms this action by words, and announces that those who receive children receive him, thus introducing a succession motif with words similar to Matt 10:40 and John 13:20. Without a break in the scene, Jesus again confronts John, who wants to forbid someone outside the twelve from working in

Jesus' name (9:38). Then Jesus once more gives priority to the child in their midst by stressing the danger of leading little ones into sin (9:42).

The end of the children's literary frame (10:13–16) occurs at a significant point after Jesus has confronted the Pharisees in regard to divorce. Jesus' own disciples also find this difficult and question him in the house. Here there is an even stronger confrontation between Jesus and his disciples, who had rebuked those bringing children to him. Jesus is visibly *indignant* and publicly contradicts the disciples by saying, "Let the children come to me, do not hinder them; for to such belongs the kingdom of God" (10:14). Then Jesus states the necessity of receiving the kingdom as children (10:15). In this second text, children are not only "owners" of the kingdom but models of total childlike reception of Jesus' teaching. The two pericopes end with Jesus' blessing. This is especially significant given the OT parallels Derrett has pointed out and the power of Jesus' concluding blessing as seen in Luke 24:50.

Children and youngsters also play a distinct role in Mark's dramatic sequence. Jesus' greatest miracle is the raising of the twelve-year-old daughter of Jairus (5:35–43). The longest gospel miracle account is that of the young boy afflicted with a life-threatening illness resembling epilepsy (9:14–29). In the passion account, only Mark relates that a young man or youngster "closely followed" (Gk *synēkolouthei*) Jesus after all the other disciples had fled (14:50–51). Yet even this person fled away naked after the soldiers seized him, grabbing hold of the linen cloth around him.

Scholars have not agreed about the relationship of this disciple to the young man at the empty tomb who proclaims Jesus' resurrection (16:6). However, the following textual details suggest an identification as well as a key role in Mark's gospel conclusion. When Mary Magdalene and the other women came to Jesus' tomb, they said to one another, "Who will roll away the stone for us from the door of the tomb?" (16:3). Then the text notes that the women entered the tomb, found the young man sitting there, and were amazed. The sequence suggests that their amazement was due to their perception that the young man was the only one who could have performed the prodigious feat of moving the huge stone.

The following arguments support this view and point to the young man as part of a surprising climax of Mark's gospel: (1) The central importance of the resurrection proclamation needs support by a special sign, as customary in Mark and in prophetic OT proclamations (Mark 11:1–5; 14:12–16; Isa 7:10); (2) The Markan audience would look for an important biblical parallel to such a sign. This is found in the story of Jacob's arrival at the well in Paddan-aram (Genesis 29). Jacob proves God is with him and identifies himself to his future wife Rachel by miraculously rolling a huge stone from the well to water her flocks. The verb "roll away" (in regard to a stone) is found only in the LXX of Gen 29:3, 8, 10. In addition, the same description of a "large stone" occurs in both Gen 29:2 and Mark 16:4. Jacob's feat was really a formative miracle of Israel, for after this we hear about Jacob's marriage and the birth of his children. It would thus parallel a similar formative miracle in Mark announcing a new beginning.

The above considerations would prepare the audience for a final dramatic surprise: the previously weak youngster who had fled away naked (14:51–52) has become the miraculously strong proclaimer of Jesus' resurrection. Thus he summarizes Mark's theme that God reverses human expectations by working through the powerless, children and little ones.

C. Children in Matthew

In the stories of Jesus' birth and childhood, Matthew introduces some of his central gospel themes. Jesus' birth and the following events identify him with the *child* promised through Isaiah the prophet (Isa 7:14, 16). The child Jesus is called Emmanuel to fulfill these prophecies (Matt 1:23). This child will be the hope of the gentile world, as illustrated by the Magi's journey guided by God through a star and by dreams. The child is also one with his suffering people in history, especially in their exile in Egypt. The Jewish king Herod tries to kill the "newly born king," afraid that he himself may be supplanted by another. The experiences of the child Jesus are also remarkably similar to those of Moses, who was saved from death from Pharaoh by God's intervention. Just as Moses liberated his people at the risk of his life, so the child Jesus identifies with his people by suffering, exile, and danger.

Like Mark, Matthew also constructs a literary frame around two stories about children in his discipleship section (18:1–5; 19:13–15). However, unlike Mark, there is no sharp contrast to the twelve,

but a simple question addressed to Jesus about who is the greatest in the kingdom (18:1). Yet Matthew enhances the place of children by making this story an introduction to a whole discourse on church discipline (18:1 to 19:1). Thus children will stand as a model for a much larger group in the church. The first image is that of conversion: "Unless you turn and become like little children, you will never enter the kingdom of heaven" (18:3). The second is that of humility: "Whoever humbles himself as this little child is the greatest in the kingdom of heaven" (18:36). The third is that of identification with Jesus: receiving a child in his name (18:5) and the very opposite, causing a little one to sin. Here Matthew emphasizes the identification-with-Jesus theme that is central to his gospel. Jesus then highlights the importance of little ones by declaring that each has a special guardian angel assigned to them by God (18:10).

In this discourse, Matthew expands the image of children or little ones to include first of all lost community members. The audience should search for them like a shepherd looking for a single lost sheep, since it is not the Father's will that a single little one perish (18:14). The evangelist then gives two other examples of the search for little ones: first, the case of a serious transgression within the community where every possible effort should be made to have the transgressor realize what he has done. An initial step is a secret one-to-one talk, then two or three witnesses, and finally the whole community should try to win over the lost person (18:15–20). In regard to the weak backslider, forgiveness must be extended without limit, up to "seventy times seven" (18:22). The children's literary frame ends in 19:13–15. Matthew does not have Mark's significant blessing. However, he has Jesus twice lay his hands on the children. This could have special significance given the importance of the laying on of hands in the early church.

The theme of children/little ones is also important elsewhere in this gospel. Following the OT wisdom motif, Jesus praises God who has hidden things from the "wise and understanding and revealed them to babes" (11:25). When Jesus enters the temple for the last time, Matthew contrasts the indignant attitude of the chief priests and scribes to that of children who saw Jesus' wonderful deeds and cried out to him, "Hosanna to the Son of David" (20:15). When the Jewish leaders objected to the children's words, Jesus replied to them by quoting Psalm 8:2, which describes children as open to the wonders of God's universe. The Last Judgment scene in 25:31 sums up Matthew's theme of Jesus' identification with the little ones and least of the kingdom, who now include the poor, sick, hungry, and homeless in the world. Jesus declares, "Truly I say to you, as you did it to one of the least of these my brethren, you did it to me" (25:40). In contrast, what was not done to "one of the least of these" is not done to Jesus (25:45).

D. Children in Luke

Luke could well be called the "gospel of little children." The stories of Jesus' birth and childhood introduce central motifs found later in that gospel. As in Matthew, the child Jesus is the promised descendant of David. The nativity stories resemble Scripture meditations on the OT. There God directed the prophet Samuel to choose a "little one" as the future king, the youngster David who was out shepherding the flocks (1 Sam 16:1–13). In a similar manner, the promised child is discovered by shepherds in a rustic setting near David's own city of Bethlehem. The shepherds recognize the child through Isaiah's sign of the manger (1:1–2; Luke 2:7, 12, 16). The child's place in a feeding crib symbolizes he will be a shepherd and source of nourishment for his people. This prepares the way for a gospel climax in which Jesus will be recognized in the breaking of bread (24:30–31). The lack of hospitality at Jesus' birth contrasts with the hospitality shown to the mysterious stranger at the end of the gospel who proves to be the risen Jesus (24:28–32). The two childhood wisdom summaries (2:39, 52) are significant in presenting Jesus as a wisdom child in view of the OT wisdom scriptures. Later, Luke will take up the theme of God's gift of wisdom bestowed on little ones, even *infants* (10:21–22). At the Last Supper, Jesus teaches that the greatest of the disciples should be like the youngest (22:26).

Luke's gospel is unique in having a special journey section, beginning in 9:51, where most of his special material is found. He introduces it by focusing on children as the model for the new teachings on discipleship that he will present. J. Kodell (1987) has studied the literary children's framework in the journey section and shown how Luke teaches through opposing pairs based on the model of children and little ones. Jesus teaches that the disciples must receive children as himself and that the least among them

is the greatest (9:47–48). The first opposing group is the disciples who argue about first places in the kingdom (9:46–48). The second is the attitude of John forbidding someone outside the twelve from casting out devils in Jesus' name. Connected to this episode is Jesus' opposition to both John and James in their response to Samaritans (9:49–56). The closing children's story is near the end of Luke's journey section (18:15–17). Here the emphasis lies on receiving the kingdom as a child (18:17). Luke expands this to include the least and lowliest in the kingdom. The opposing pairs are the Pharisee and tax collector as well as the rich ruler and Pharisees (18:9–30).

E. Children in John

The gospel prologue announces the Word came down from heaven so that those who believe in Jesus might become children (Gk *tekna*) of God. In the Nicodemus episode, Jesus states the necessity of being born again (or from above) to enter the kingdom of God. While the Synoptic Gospels present children as models for this new birth, John appears to present this model through an actual person (Brown 1979: 31), the beloved disciple, although some scholars consider him to be an idealized disciple or model for the audience.

This beloved disciple (BD) seems to be a youngster, for there was a reported saying of Jesus that he would still be alive when Jesus returned (21:22–23). Also his position at Jesus' bosom at the last supper suggests a young age. His relationship to Jesus seems modeled on that of Jesus to the Father. Jesus reveals his Father's secrets because he is in his Father's bosom (1:18). Correspondingly, the BD at Jesus' bosom learns from him the secret of Judas' betrayal and tells it to Peter. The BD's special place at Jesus' side suggests that he will be his special successor, since chaps. 13–17 treat of Jesus' departure and his continued presence. The gospel presents the BD as the authority behind its views of Jesus' and his teaching. Hence the BD is presented as Jesus' successor either as a favorite disciple or as an adopted son, perhaps modeled on Joseph, the favorite son of Jacob, who receives a double blessing (Gn 49:22–26), and whose children Ephraim and Mannaseh are adopted as Jacob's own (48:1–22).

The following are ways that the BD appears as models for the gospel audience: (1) He is a model for the gospel's emphasis on the Paraclete or Holy Spirit as the inner successor of Jesus (Culpepper 1983: 123–24). As the Paraclete is the Spirit of truth (14:15) so the BD also proclaims the truth (19:35). As the Spirit bears witness, so does the BD (15:26; 19:35). They both teach and bring into remembrance what Jesus has said (14:25; 2:20–22). (2) The "one [or disciple] whom Jesus loved" is the principal designation of the BD in this gospel (13:23; 19:26; 20:2; 21:7, 20). Thus he is a model for every disciple who is likewise loved by Jesus. This love is parallel to and modeled on the love of the Father for Jesus. This is shown in statements like, "the Father loves the Son, and has given all things into his hand" (5:20; also 10:17; 15:9). A prominent example of this love is the "family relationship" of Jesus with Lazarus, Martha, and Mary. The gospel describes each of them as loved by Jesus (11:3, 5, 36). The quality of this love receives special notice, for Jesus risks his life to save Lazarus by being willing to go into Judea (11:8). In response, the family gives a reception for Jesus at Bethany, where Lazarus is seated at table, Martha fulfills her role in serving, and Mary affectionately anoints his feet with oil and dries them with her hair as an extraordinary sign of hospitality (12:1–3). (3) The BD is a model of faith for the audience. On hearing from Mary Magdalene that the tomb was open, the BD ran with Peter, noticed that the tomb was empty, and believed without any accompanying sign or confirmation.

JOSEPH A. GRASSI

CHILEAB (PERSON) [Heb *kil·āb* (כִּלְאָב)]. The second son of David, born at Hebron (2 Sam 3:3).

He was the firstborn of David and Abigail, the Carmelite, whom David had taken as a wife upon the death

of her foolish husband Nabal (1 Samuel 25). Presumably he had died, along with David's first- and third-born sons, Amnon and Absalom, when David's fourth son Adonijah attempted to seize the throne in the last days of his father's life (1 Kings 1–2). He is called "DANIEL" in 1 Chr 3:1, and this—or some form such as "Daluiah" (see McCarter *2 Samuel* 101)—was most likely his correct name. In 2 Sam 3:3, 4QSam[a] has *dl[ ],* the OG has *Dalouia,* and an OL fragment has *da[ ];* a textual corruption is easily postulated here, since the last three letters of the Hebrew—*l*ʾ*b*—are identical to the first three of the next word and since the letters *k* and *d* could have been easily confused.

DAVID M. HOWARD, JR.

CHILIASM. The materialistic and sensual aspect of millenarianism, the belief in an earthly paradise lasting about one thousand years. Illustrative of this belief is *2 Baruch* 29–30, a Jewish work of the early 2d century C.E. It says that the earth will yield "ten thousand fold," the vine will have a thousand branches, one grape will produce a cor (= 55 gallons) of wine, and manna will fall from heaven. This concept is employed and developed by a number of early Christians. Eusebius of Caesarea (ca. 260–ca. 340) states that the gnostic Cerinthus (ca. 100) taught a crude chiliasm which included belief in an earthly kingdom replete with sumptuous banquets, marital bliss, feasts, "sacrifices and slaughter of victims" (*thysiais kai hiereion sphagais*): presumably he means animal sacrifices (*Hist. Eccl.* 3:28; 7:25). Here Eusebius is quoting Dionysius of Alexandria (died ca. 264), who opposed the teaching of Cerinthus. Teaching similar to Cerinthus is attributed to Nepos of Arsinoe (Eus. *Hist. Eccl.* 7:24). He thought that the "divine Scriptures should be interpreted" "after a more Jewish fashion" (*Joudaïkoteron*), that is, according to the model of certain Jewish interpretations which anticipated an earthly paradise. Another exponent of chiliasm was Apollinarius (ca. 310–390). Epiphanius (*anac.* 77:36–38) states that Apollinarius expected persons to rise with resuscitated physical bodies and to observe both male circumcision and the Jewish dietary laws. Chiliasm is found in one of its most crass forms in Lactantius (ca. 224–ca. 320). He states that the righteous will have multiple offspring; celestial bodies will shine seven times more brightly than in this world; mountains will drip with honey; there will be streams of wine and milk and animals will cease to be carnivorous; there will be no need for commerce or agriculture. Dyeing of wool will not be necessary because the sheep will be of different colors (Lactant. *Div. Inst.* 7:24; cf. Verg. *Ecl.* 4:21–45). Commodianus (3d century or later) takes an approach similar to Lactantius and adds that there will be no rain or cold and that Jerusalem will be 12,000 furlongs square and reach as high as the heavens. The righteous shall beget children for one thousand years. Methodius of Olympius (died ca. 311) in *Banquet* 9 views the millennium as the fulfillment of the Jewish feast of Tabernacles. However, he states that there will be no begetting of children. The author of the *Apocalypse of John the Theologian* (von Tischendorf 1966: 70–94) takes a materialistic view of the renewed earth and also argues that there will be neither yellow nor red nor black races, neither Negro nor "different face," and all will be about the age of thirty. However, although his statements refer to a paradise on a renewed earth, he does not mention a thousand years per se.

J. MASSYNGBAERDE FORD

CHILION (PERSON) [Heb *kilyôn* (כִּלְיוֹן)]. Son of Elimelech and Naomi, husband of Orpah (Ruth 1:2, 5; 4:9). Chilion and his family migrated to Moab, where he married Orpah (4:9–10) and later died with his brother Mahlon and their father (1:4–5). Chilion is always paired with his brother in the story. The initial order of Mahlon followed by Chilion (1:2, 5) is inverted at the gate scene by Boaz (4:9) but not for the reason of chiasmus since 1:5 would interrupt this sequence. The inverted order presented by Boaz has been explained on the basis that the older brother's seniority would require him to be named first in such a commercial transaction and therefore it is assumed that Mahlon is the elder. The reason for the first pairing is unclear. Gordis (1986) attributes it to the symbolic meaning of the names "sickness" (Mahlon)

and "death" (Chilion), which together sum up the destitute condition of the family in Moab. See MAHLON.

The etymology of "Chilion" is uncertain, but many relate it to the noun *killāỹn* (masc.) from *kālâ;* thus the name is interpreted "destruction," "annihilation," or "failing" (cf. spellings *kelaion, chelaion,* and *chellaion*). Noth, however, prefers "consumption, a wasting disease" (*IPN*, 11). Those who take the characters as historical point out that the names in the story are plausible, some being attested in ANE onomastica. This is evidenced for "Chilion" in Ug (*klyn*), Phoen (*kly*), and Palmyrene *kylywn, kyly*).

KENNETH A. MATHEWS

CHILMAD (PLACE) [Heb *kilmad* (כִּלְמַד)]. A trading partner with Tyre mentioned only in the MT of Ezekiel's lament over that city (Ezek 27:23). The name is last in a list of five places, three of which are well attested: HARAN, EDEN (= Bīt Adini), and ASSHUR; CANNEH is otherwise unattested, but may be the same as CALNEH. Chilmad is obscure, and has given rise to speculative interpretations. LXXreads *Charman,* a puzzling name, and the Vulgate simply transliterates MT to give *Chelmad.* The Targums reanalyzed the consonantal text as *kl md[y]* "all Media," followed by some modern commentators (e.g., Eichrodt *Ezekiel* OTL, 381; Zimmerli *Ezekiel* Hermeneia, 50) and translators (NEB).

The trade with Tyre engaged in by Haran, Canneh, Eden, Asshur, and Chilmad (?) seems to have involved the export of textiles and other woven goods (Ezek 27:24). The three known places are located in Syria and N Mesopotamia, and this has induced suggestions of Mesopotamian and Syrian identifications for Chilmad. Among these are Charmon (Charmande) on the Euphrates near Babylon (Xen. *An.* 1.5.10), Kalwada near Baghdad (Smith 1872: 61; now generally rejected), and Kulmadara in N Syria (Astour *IDBSup*, 145, supposing omission of an *r* by haplography). Simons (*GTTOT* 457) observes that LXX *Charman* may reproduce the name of the Persian province Kirman; if so, the Greek translator may have already made implicitly the analysis of MT as a reference to Media followed by the later Targums. He further notes (Simons *GTTOT*, 488) that the "sons of *Cheleoud*" in Jdt 1:6 (RSV: "Chaldeans") have also been associated with Chilmad.

The revocalization *kĕlimmād* "like an apprentice" is at least as old as David Kimḥi (ca. 1160–ca. 1235) and was followed by some critics in the 19th century.

HENRY O. THOMPSON

CHIMHAM (PERSON) [Heb *kimhām* (כִּמְהָם)]. Son of Barzillai the Gileadite who resided with King David after the unsuccessful revolt of Absalom (2 Sam 19:38–39, 41—Eng 19:37–38, 40). On David's return to Jerusalem after quelling Absalom's rebellion, he wished to reward faithful Barzillai with a place at the royal residence in Jerusalem. Since he was eighty years old, Barzillai politely declined and, instead, asked the favor for "your servant" Chimham. David complied and Chimham returned to Jerusalem with him.

Although it is not stated that Chimham was the son of Barzillai, this can be reasonably inferred. Some Greek versions and the Syriac add "my son" to Chimham's name in 2 Samuel 19, and Josephus (*Ant* 7.11.4) believed that Chimham was the son of Barzillai. As one of his last requests, the dying David asked Solomon to continue to show favor to Barzillai's "sons" who lived at the royal residence (1 Kgs 2:7). It can be assumed that others had joined their kinsman (lit. brother) Chimham there.

The name also occurs in the place name, GERUTH-CHIMHAM (Jer 41:17). Since the name probably means "lodging place or fief of Chimham," and is located near Bethlehem, some commentators believe

that David awarded Chimham a grant of land from his patrimony. For further discussion see Williamson *Chronicles* NCBC.
STEPHEN G. DEMPSTER

CHINNERETH (PLACE) [Heb *kinnāret* (כִּנָּרֶת)]. Var. CHINNEROTH. Chinnereth was identified by W. F. Albright and G. Dalman with Tell el-ʿOreimeh (Tel Kinrot M.R. 200252) on the W shore of Lake Chinneroth, N of the el-Ghuwayer Plain. It comprises a small tell on top of a natural hill clearly visible from the S and the W, and of a lower city covering great parts of the slope extending to the shore of the lake. The primary water source is ʿĒn et-Tine, a spring located at the S foot of the hill underneath a steep cliff.

The identification agrees with the literary sources. Chinnereth is first mentioned in the list of Thutmose III as number 34, the last of four cities in the upper valley of the Jordan, after Laish, Hazor, and Peḥel. The importance of the town during the 18th Dyn. is further documented by the fact that Chinnereth is listed in Papyrus Petersburg 1116 A, together with ten other Canaanite cities, among which are Megiddo, Taanach, Ashkelon, and Hazor. During the later part of the 18th Dyn. no further reference to the town is made. In the Bible, Chinnereth appears one time in Josh 19:35 as one of the cities of Naphtali. However, it must have been an important city in the time of the monarchy, since the lake was named after the town (cf. Num 34:11; Deut 3:17; Jos 12:31; 13:27). In Josh 11:2 and 1 Kgs 15:20, Chinneroth probably designates the region S of Chinnereth, i.e., the el-Ghuwayer Plain. After the Assyrian conquest of the N Kingdom, the city was abandoned, and in Roman and Byzantine times it was replaced by the new settlement called Gennesaret (cf. Matt 14:34), which appears as Ginnosar in the Jewish tradition and can most probably be located in the vicinity of Kh. el-Minya, just.5 km S of Tell el-ʿOreimeh.

At the W edge of the tell, a city wall and part of a house were excavated that can clearly be dated to the EB II. But the pottery from various fills is a mixture of different wares from EB I and II. Common are sherds decorated in the band-slip or grain-washed technique, as well as sherds of red-burnished ware, both typical of EB I, suggesting that a settlement already existed during this period. Not a single sherd of KHIRBET KERAK WARE has been found, suggesting that the site remained unsettled from EB III until MB II.

From the MB and LB ages only scattered remains have been found, so that nothing conclusive may be said about the fortification and extension of the town during the 2d millennium. Habitation during the MB II and LB is indicated by sherds from different loci, including fragments of imported vessels such as Mycenaean bowls and Cypriot milk bowls.

The site was probably not settled during the Iron Age I. A new settlement was founded during the 10th century B.C., replaced by a city covering approximately 6 acres. The earliest city was defended by a massive wall system up to 11 m wide.

At the end of the 9th or the beginning of the 8th century B.C., the city was reduced in size. The city wall encircled only the upper part of the mound, protecting an area of about 2 acres. An entirely new city wall, 3–4 m wide, was built, partly founded on the earlier wall. At the S side, a citadel was separated from the rest of the city, which could be entered from the city in the N. The small two-chambered city gate stood at the E side, and beside it was a pillared building. The whole gate was filled with burnt mudbrick material and ashes to a depth of ca. 2 m, indicating a heavy and sudden destruction. According to the pottery from the rooms adjoining the gate, the destruction can be dated into the second half of the 8th century B.C., and may be attributed to the conquest of Tiglath-pileser III in 733 B.C.

During the Hellenistic period, most of the tell remained uninhabited. Only in the central depression were a few houses erected, and they are badly preserved. They were probably built by local farmers who used the slopes for agriculture. The rooms were entirely empty, with only some scattered fragments of Hellenistic pottery (such as bowls, cooking pots, lamps, and *uguenteriae*) found in the debris. Two bronze coins of the Ptolemaic period indicate that this farming activity started during the 3d century B.C. It probably did not last longer than early Roman times, and most likely came to an end during the war from 66–70 A.D.

CHINNERETH, SEA OF (PLACE) [Heb *kinneret* (כִּנֶּרֶת)]. See GALILEE, SEA OF.

CHIOS (PLACE) [Gk *Chios* (Χιος)]. A large mountainous island of volcanic origin in the Aegean Sea 8 mi W of Asia Minor (Strabo 14.1.35; Acts 20:15). The island's name was either derived from the Greek word for snow, because its mountains are perennially snow-covered, or from a Syrian word for mastic, because its forests abound with mastic. Chios is situated between the islands of Lesbos and Samos and is a principal island in the Ionian Archipelago.

The island's principal ancient city was named Chios also and had the advantage of a good harbor which could contain 80 ships (Strabo 14.1.35; Herodotus 6.8; Thucydides 8.15). Evidence of Chios exports have been found in large quantity in Naucratis, the Black Sea area, and Massilia, but rarely in the Greek peninsula. The men of Chios made slave trade a chief pursuit. Underwater archaeologists have found a number of amphoras testifying to the significance of the Chios wine trade (Strabo 14.1.15; 14.1.35; 14.2.19).

Emporio was the earliest fortification on the island (C-14 date 2075 B.C.E.) and the site was later settled by the Mycenaean. The site was destroyed by fire about 1100 B.C.E. and was left abandoned until about 750 B.C.E. at which time the population of the island gradually began to grow. The inhabitants of Chios were subject to the Ionians and in 546 B.C.E. fell with Asia Minor to the Persians. The Chians and the Miletians rebelled against the Persians and fought gallantly off the island of Lade with 100 ships only to fall again to the Persians. After the battle of Mycale in 479, the Chians joined the Athenian confederacy and in 412, they sided with the Spartans in the Peloponnesian war against their former allies, the Athenians. The Athenians retaliated by devastating the island of Chios. After the battle of Naxos in 376, the Chians revolted against the Spartans allying themselves again with Athens. In 363, the Chians joined forces with Thebes and successfully defeated the Athenian general Chares in battle. Athens recognized the island's independence in 355. The island later befriended Rome and subsequently had to surrender their ships and 2000 talents to the Pontic king Mithidates. The Romans recognized Chios' independence and probably never made the island part of the province of Asia (Pliny 5.38; 16.6).

Chios was renowned for its red wine (Pliny 14.9; 17.34.22; Horace *Od* 3.19.5; Virgil *Ecloques* 5.7; Athenagoras 4.167; 1.32), mastic (Pliny 12.36; 24.74; Dioscor. 1.90), and marble. The island was also one of the reputed birthplaces of Homer. According to legend, Homer gathered his pupils to himself at the foot of Mt. Epos on the coast of Chios, which was probably the same location of an ancient sanctuary of Cybele.

In Josephus' account of Herod's voyage to the Black Sea to meet Marcus Agrippa (*Ant* 16.2.2), he recorded that Herod was detained for some time by north winds at Chios. During his delay, Herod gave a generous sum of money for the restoration of public works on the island, which had been destroyed during the Mithridatic war.

Paul anchored off the island for a night while returning to Jerusalem after his third missionary journey (Acts 20:15), but never went to shore. Isidorus, an Alexandrian Christian and soldier in the Roman army, went with his fleet to Chios, where he was accused for his beliefs and martyred in 251 C.E. There is evidence of Christianity on the island by the 4th century, with a Bishop of Chios (who was not present at

the Nicaean Council) and post-Constantinian basilicas at Chios and Phana (on the southern end of the island).
SCOTT T. CARROLL

CHISLEV [Heb *kīslēw* (כִּסְלֵו)]. The ninth month of the Hebrew calendar, roughly corresponding to November and December. See CALENDARS (ANCIENT ISRAELITE AND EARLY JEWISH).

CHISLON (PERSON) [Heb *kislôn* (כִּסְלוֹן)]. A Benjaminite, and the father of Elidad (Num 34:21). The latter was selected from the tribe of Benjamin to help oversee the distribution of the land of Canaan W of the Jordan among the ten tribes who would occupy that territory.

Several meanings have been suggested for the name "Chislon." Johnson (*IDB* 1: 562), following Noth (*IPN* 227), suggested "slow" or "heavy of movement," relating the name to an Arabic cognate. Others have proposed "hope" or "aspiration" and have suggested a derivation from occurrences of the root *ksl* in Ugaritic sources (*EncMiqr* 4:222). There are also several cities mentioned in Scripture whose names recall that of Chislon: Chesalon (Josh 15:10), Chisloth-Tabor (Josh 19:12), and Chesulloth (Josh 19:18).
RAPHAEL I. PANITZ

CHISLOTH-TABOR (PLACE) [Heb *kislōt tābōr* (כִּסְלֹת תָּבֹר)]. Var. CHESULLOTH. A town on the S border of the territory of Zebulun (Josh 19:12). It is apparent that Chesulloth (Heb *kĕsûlōt*) in the territory of Issachar (Josh 19:18) is a variant name of this town. Eusebius states that it is "called Chsalous, a village in the valley by Tabor 8 miles from Diocesarea eastwards" (Klosterman 1904: 28, lines 23–25). Josephus mentions it twice, once as "Xaloth" (*JW* 3.3.1) as the S border of Lower Galilee, and again as "Exaloth" (*Life* 44). In a homiletical interpretation of Gen 49:14, *Gen. Rab.* (98:12) describes Issachar as a mountain between two valleys, that of "Iksalo" and that of "Jezreel."

As already recognized by Eshthori ha-Parhi (Edelman 1852: 47) and again by Guerin (1880: 108–9) and the Survey (Conder and Kitchener 1881: 365), the village of Iksal (M.R. 180232) 5 km W of Mt. Tabor retains this ancient name. However, no Iron Age sherds have been reported from Iksal, but neither has an alternative site been found in the immediate vicinity. The position of the four places mentioned in conjunction with Chesulloth in Joshua 19—Sarid, Daberath, Jezreel, and Shunem (the names of which having all survived in modern place names)—confirms the identification of Chesulloth/Chisloth-Tabor with Iksal.

Iksal's position shows the border between Issachar and Zebulun to have been at the foot of the hills, and also that in *JW* 3.3 Josephus excluded the Jezreel valley from Galilee.

CHITLISH (PLACE) [Heb *kitlîš* (כִּתְלִישׁ)]. A town situated in the Shephelah, or low country, of Judah (Josh 15:40), within the same district as Lachish and Eglon. The only reference to this settlement occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62; see also BETH-DAGON). The location of the ancient settlement is unknown. It has been suggested (Boling and Wright *Joshua* 386) that Chitlish may be the same place as Kentisha of the list of Thutmose III, and *k-n-ti-sa,* mentioned on a hieratic ostracon discovered at Lachish.

CHLOE (PERSON) [Gk *Chloē* (Χλοη)]. A woman singled out for mention by Paul in 1 Cor 1:11 because her "people," literally "those of Chloe," had reported to Paul about quarreling among the Corinthians. Chloe's "people" were presumably either family members, or slave or freed member employees of her household. The information they conveyed to Paul, who was in Ephesus, could have been delivered either by a letter from the Corinthians or by word of mouth. It is unclear whether Chloe's people resided in Corinth or in Ephesus at the time. An Ephesian rather than a Corinthian base for the household of Chloe seems more probable since Paul probably would not have been so tactless as to identify his informants in remarks to their local Corinthian brothers and sisters. On the other hand, since Chloe herself is apparently known to the Corinthians, she and her people may well have lived in Corinth. But in view of the conjecture above, it is more likely that they resided in Ephesus where, probably as a person of means, Chloe ran a business which required sending emissaries to Corinth and resulted in her being acquainted with residents there.

Chloe's people were obviously Christian. But the same cannot be said with certainty about Chloe. It has been noted, however, that the Greek phrase describing her people as *hoi tōn chloēs* lit. "those of Chloe" contrasts with references to Christian members of other households, e.g., *hoi ek tōn ›Aristoboulou, hoi ek tōn Narkissou* lit. "those from (of) Aristobulus, those from (of) Narcissus" (Rom 16:10–11). The absence of the Gk preposition *›ek* (from) in the phrase mentioning Chloe may imply that the whole of her household including Chloe was Christian (Meeks 1983: 217, n. 54). One can also surmise that Paul's identification of his informants by using Chloe's name could reflect some familiarity with her, perhaps acquired through business, but just as likely through membership in the Christian community. Chloe may well have been known to Paul as a believer along with her whole household. In that sense she would be reminiscent of Lydia of Philippi and, together with Lydia, might be cited as one type of woman who belonged to the Pauline communities: female heads of households and businesses, women thus accustomed to social leadership and decision-making roles.

FLORENCE MORGAN GILLMAN

CHOBA (PLACE) [Gk *Chōba* (Χωβα)]. Var. CHOBAI. A site in the book of Judith, located in Israelite territory (Jdt 4:4, 15:4, 15:5). The location of the site is uncertain, and given the genre of the book of Judith, the name may be fictitious. It is even unclear whether 4:5 and 15:5 are referring to the same place (15:4 gives the probable variant spelling *chōbai*). The Choba in 4:4 is located to the N of Jerusalem, but seemingly S of the area of Samaria, while in 15:5 it seems to be a border town. In 15:5 the mention of Damascus has led some to draw a connection with the Hobah in Gen 15:14, the place to which Abraham pursues the captors of Lot. However, that Hobah is located N of Damascus, so the connection does not seem fruitful. Aharoni and Avi-Yonah *(MBA*) have identified Choba with el-Marmaleh (M.R. 196163), which is located 30 mi S of Scythopolis and 3 mi W of the Jordan. Moore (*Judith* AB) suggests an identification with el-Mekhubbi, which is located between Tubas (biblical Thebez M.R. 185192) and Besan. See Abel *GP*.

SIDNIE ANN WHITE

CHORAZIN (PLACE) [Gk *Korazin* (Κοραζιν)]. Chorazin was a Galilean town rebuked by Jesus for its rejection of his message, although it had witnessed his miracles (Matt 11:21; Luke 10:13). Ancient Jewish sources describe it as a medium-sized town (*t. Mak.* 3:8) noted for its remarkable wheat production (*b. Menah.* 85a).

Eusebius (*Onomast.* 174.23) and Jerome (*De Situ et Nom. Loc. Hebr.* 194) located the ruins of the town 2 mi N of Capernaum. C. W. M. Van de Velde's identification of Khirbet Karazeh (M.R. 203257) as ancient Chorazin in the 1850s has been generally accepted (Yeivin 1987: 24).

Located in the hills overlooking Capernaum and the N shore of the Sea of Galilee, this town thrived in the 2d century A.D. when the population of the region expanded as a result of the Bar Kokhba rebellion. The imposing basalt ruins have been subjected to some architectural clearance by the Department of

Antiquities of Palestine in 1926, and more recently Ze›ev Yeivin has conducted excavations for the Israel Department of Antiquities and Museums 1962–65, 1982–86. Domestic complexes, a public building, and a synagogue have been exposed. The well-preserved architectural fragments of the 4th-century synagogue, which include friezes adorned with geometrical, floral, and even anthropoid imagery, make it an important site for the study of post-temple Judaism and synagogue architecture. The discovery of numerous coins on the floor of the synagogue has been interpreted as indicating that the town was a stop on the journey of Christian pilgrims who came to witness the fulfillment of Jesus' reproach and who tossed coins into the ruins.

Archaeological excavations as of yet have not unearthed evidence of occupation prior to the 2d century A.D. at Kh. Karazeh, although Chorazin's earlier existence is attested in the literary evidence. Only a small percentage of the site, which covers over 80 acres, has been excavated. The remains of 1st-century Chorazin remain to be discovered. See also *EAEHL* 1: 299–303.

ROBERT W. SMITH

CHORBE (PERSON) [Gk *Chorbe* (Χορβε)]. The head of a family in a list of returnees from exile in Babylon (1 Esdr 5:12 = Ezra 5:9; Neh 7:14). This section of the list (5:9–15) identifies laymen by family relationship rather than by town of origin. 1 Esdr 5:7–46 is based on the parallel in Ezra 2:1–70 rather than on Neh 7:6–73. However, both parallel verses in Ezra and Neh give the name "Zaccai," which either means "pure" or is a contraction of Zechariah ("Yahweh remembers"). Since the Gk text of 1 Esdras contains many corruptions of the Hebrew *Vorlage,* W. Rudolph (*Esra und Nehemiah* HAT) considers *Chorbe* to be a corruption of *zobbei,* a Gk transliteration of the Hebrew word *zabbai.* Some manuscripts interchange Zaccai and Zabbai in Neh 3:20, so it is possible for Zaccai to have been corrupted to Zobbei and then to Chorbe. One Gk manuscript of 1 Esdras has Zakchai instead of Chorbe. Nothing is known about this person, though a stamp discovered by Moscati contains the name "Zaccai." (See Myers *Esdras* AB.)

MITCHELL C. PACWA

CHOSAMAEUS (PERSON) [Gk *Chosamaios* (Χοσαμαιος)]. A name associated with Simon, a son of Annan, who divorced his foreign wife during Ezra's reform (1 Esdr 9:32). Although the RSV follows the LXX by listing Simon Chosamaeus as the last of the five sons of Annan, the apparently parallel account in Ezra 10:31–32 mentions eight sons of Harim, of which the fifth, Shimeon, is often assumed to be a Heb variant for Simon in 1 Esdras. Chosamaeus is lacking in the Ezra parallel. However, Fritsch (*IDB* 1: 563) argues that "the name Chosamaeus probably arose as the result of a scribal error in copying the three Greek proper names following Shimeon" in Ezra 10 (i.e., Benjamin, Malluch, and Shemariah). Differences such as this raise questions about the sources of and literary relationships among 1 Esdras, Ezra, and Nehemiah.

MICHAEL DAVID MCGEHEE

CHREIA [Gk *Chreia* (Χρεια)]. Isocrates used to say that the root of education is bitter, but its fruits sweet (Aphthonius in Hock and O'Neil 1986: 224). Diogenes, on being asked why people give to beggars but not to philosophers, said, "Because they think that they might become lame or blind, but they never think that they will take up philosophy" (D.L. 6.56). The forms of these two anecdotes—So-and-so said …, and So-and-so, on being asked …, said … —represent two of the most popular varieties of a literary form known in antiquity as the chreia, itself a very popular form in Greco-Roman literature. Indeed, one estimate of the number of chreiai attributed to Diogenes alone is perhaps a thousand (Fischel 1968: 374), and thousands more, attributed to other philosophers as well as to kings, generals, sophists, even courtesans, are scattered across the pages of Athenaeus, Diogenes Laertius, Plutarch, and Stobaeus, to name only a few writers who made extensive use of this form. In short, preserving the wisdom and wit of an Isocrates or a Diogenes by casting it as a chreia was a widespread habit among ancient writers, one that was learned early on, for the chreia was used in grammatical and compositional exercises in school.

The educational use of the chreia, however, assured more than its popularity; it also assured it of receiving a sustained and sophisticated analysis, as the chreia was taken up, along with a baker's dozen of other literary forms, into those teachers' manuals on elementary composition and argumentation known as *Progymnasmata.* The earliest surviving example of these manuals is that by Aelius Theon of Alexandria in the late 1st century C.E. (Stegemann *PW* 5A: 2037–54; Butts 1986), who was followed in the late 2d century by Hermogenes of Tarsus (Radermacher *PW* 8: 865–77; Rabe 1913), in the late 4th century by Aphthonius of Antioch (Brzoska *PW* 1: 2797–2800; Rabe 1926), and in the 5th by Nicolaus of Myra (Stegemann *PW* 17: 424–57; Felten 1913; see also Hock and O'Neil 1986). These manuals subject each form—fable, narrative, chreia, maxim, encomium, comparison, and so on—to a relatively standard analysis which emphasizes matters of definition and classification, and to various compositional exercises which would allow students who had just finished with their literary studies to learn the compositional skills and techniques necessary for writing speeches and declamations (Bonner 1977: 250–76; Hunger 1978: 92–120; Russell 1983). The terms of this analysis and the techniques of composition in these manuals thus provide a complex as well as a contemporary perspective from which to view these forms and the chreia in particular—a perspective that will organize and inform the following discussion of the chreia.

All the manuals define the chreia—and without substantial disagreement. Aphthonius's definition is: "A chreia is a concise reminiscence aptly attributed to some character" (Hock and O'Neil 1986: 225). The key term is "reminiscence," which Theon says is "an action or saying that is useful for living" (Hock and O'Neil 1986: 83). But since a reminiscence might be quite long according to Theon (Hock and O'Neil 1986: 83), the word "concise" is necessary to distinguish the chreia from its longer relative. In any case, the saying or action must also be attributed to some Gk *prosōpon*, whether to an individual person (e.g., Diogenes) or to an identifiable character (e.g., a defiant Laconian). In either case, however, the attribution must be "aptly" made, be "in character," as it were. For example: A Laconian woman, on being sold into slavery and asked what she knew how to do, said, "Be free" (Stobaeus 3.13.58).

Classifying the chreia according to species and subspecies serves to refine the definition further. All the manuals identify and illustrate the simple classification of three species: sayings-chreia, action-chreia, and mixed chreia (Hock and O'Neil 1986: 85, 175, 225, 255). The point of the chreia, accordingly, is made by a saying, an action, or both. The chreiai quoted at the outset thus become sayings-chreiai. An example of an action-chreia is: In response to the person who said there is no motion, Diogenes got up and walked around (D.L. 6.39). A mixed chreia: When Plato defined man as a two-footed, featherless creature and was highly esteemed for it, Diogenes plucked a rooster, carried it into the school, and said, "This is Plato's man!" (D.L. 6.40).

Only Theon provides a detailed discussion of the subspecies of chreiai and indeed provides two such classifications, though both are largely of sayings chreiai only. In one, he (Hock and O'Neil 1986: 85–87) distinguishes between chreiai whose saying is simply a statement *(apophantikai)* and those whose saying is a response to some remark, usually a question *(apokritikai).* The Isocrates chreia quoted at the outset thus becomes an example of a statement sayings-chreia; he simply said that the root of education is bitter and so on. The Diogenes chreia quoted at the outset is therefore a responsive sayings-chreia, as his saying about giving to beggars but not to philosophers is the response to a question. In the other way of identifying subspecies, Theon (Hock and O'Neil 1986: 89–93) restricts himself to classifying the formal features of the saying: maxim, demonstration, joke, syllogism, enthymeme, example, wish, symbol, figure, double entendre, change of subject, and a combination of two or more of these. Thus a saying with a syllogistic style, i.e., having clauses introduced by *ei men* … *ei de* … ("Now if …, but if …"), is: To the one who asked at what hour lunch should be eaten Diogenes said, "Now if you are rich, whenever you want, but if you are poor, whenever you can" (D.L. 6.40).

John Doxapatres, an 11th-century commentator on Aphthonius, illustrates how a chreia is classified according to species and subspecies. "Plato used to say that the off-shoots of virtue grow by sweat and toil. This is a sayings-chreia, with its statement made voluntarily, and it is figurative. It is a sayings-chreia because it discloses its benefit by means of a saying. It is a voluntary statement because Plato was not

prompted by some circumstance to utter this saying. And it is figurative because it has metaphorical language" (Doxapatres in Walz 1835: 230). Such then is a brief treatment of the classification of the chreia; more detailed treatments are available in Hock and O'Neil (1986: 27–35) and Robbins (1988).

The placement of the chreia in the series of *progymnasmata* varies. In Theon it holds first position, but by the time of Hermogenes it has moved up to third (Hock and O'Neil 1986: 65–66), and while either position is quite early in the sequence and thus called for rather simple exercises to be performed on it, the move from first to third changed the difficulty of the exercise perceptibly. In Theon the chreia still has grammatical purposes in the exercise known as "declension" *(klisis),* since students were asked to write the chreia by declining the character in it through the various cases and numbers. Thus in the nominative: Diogenes on being asked …, in the genitive: The saying of Diogenes on being asked …, in the dative: It occurred to Diogenes on being asked …, in the accusative: They say that Diogenes on being asked …, and the vocative: You Diogenes, on being asked … (Theon in Hock and O'Neil 1986: 95–99).

Other exercises with the chreia in Theon are more compositional. Included here are: recitation, or writing an assigned chreia in different words but without changing the meaning; commenting, or adding a single sentence to the effect that the recited chreia is true, noble, advantageous, or in keeping with the opinions of other distinguished persons; and expanding a concise chreia into a paragraph or condensing it back to its concise form (Theon in Hock and O'Neil 1986: 99–103). To illustrate only the last two: In the Gospel of Mark the so-called "Cleansing of the Temple" incident is cast in the form of an expanded chreia. "Jesus, on entering the Temple began to evict those who bought and those who sold in the Temple, and he overturned the tables of the money-changers and the seats of those who sold pigeons. And he taught and said to them, 'Is it not written, "My house shall be called a house of prayer for all nations"? But you have made it a cave for brigands' " (Mark 11:11–15). Luke, however, has condensed this expanded chreia back to a concise one: "Jesus, on entering the Temple began to evict the sellers and said to them, 'It is written, "My house shall be called a house of prayer," but you have made it a cave for brigands' " (Luke 19:45–46).

Once the chreia is in third position, however, as it is in Hermogenes, Aphthonius, and Nicolaus, the compositional skills taught become more advanced. Now the chreia itself is no longer declined, recited, commented upon, or expanded and condensed; instead, it becomes the basis for a short essay explaining the meaning and truth of the saying or action in the chreia. Aphthonius is fullest at this point. He identifies eight "headings" (*kephalaia*) under which the student was to organize the essay: (1) an encomium of the one who spoke or acted in the chreia, (2) a paraphrase of the chreia itself, (3) the rationale for the point made in the chreia, (4) an argument that the opposite or converse point is also true, (5) an analogy from other spheres of life, (6) historical examples which illustrate the truth of the saying or action, (7) a citation from an ancient authority which agrees with the point of the chreia, and (8) a brief epilogue (Aphthonius in Hock and O'Neil 1986: 225). Aphthonius provides a sample essay on the Isocrates chreia quoted at the outset (Hock and O'Neil 1986: 225–29), and many other such essays are extant, especially in Byzantine rhetorical texts (Hunger 1978: 98–100). These all show the decisive influence of Aphthonius's model essay, down to phraseology and figures of speech, but the outline is much older, perceptible already in the 1st century B.C.E. *Rhetorica ad Herennium* (4.44.56–57). Consequently, it is not surprising that the Gospel writers not only expanded and condensed chreiai but also organized longer blocks of teaching material according to this outline (Mack 1988: 161–65; Robbins 1988: 19–21).

CHRIST. The word entered English from Lat *Christus,* which transliterates Gk *christos.* Outside the LXX, NT, and early Jewish and Christian writings, *christos* is an adjective meaning "rubbed on" or "used as an ointment or salve." It modifies the word indicating the substance so applied, as in the expression *to elaion to christon* "the anointing oil" (Lev 21:10, 12 [LXX]).

Elsewhere in the LXX, the term is only used in connection with persons in the meaning "anointed," translating Heb *māšîaḥ.* This is also the case in early Jewish writings. In the books of the NT, *christos* is used generally of the coming "anointed one" ("Messiah") of Jewish expectation or specifically of Jesus, believed to be this "Messiah." In the Greek text of John 1:41—"We have found the Messiah (which means Christ)"—the Greek *messias* and *christos* are used (cf. John 4:25).

The word *christos* occurs about 350 times in the NT (exact figures are difficult because of the many variants in the manuscript tradition, particularly in the case of Jesus). It is often found in the combinations "Jesus Christ" and "Christ Jesus," and sometimes functions as a second name. In a considerable number of cases it cannot be demonstrated that *christos* carries the meaning "Messiah" or has messianic overtones.

C. The Use of *Christos* for Jesus

———

A. *Christos* in the LXX and in Early Jewish Sources

In the LXX *christos* is the regular term to translate the Hebrew word *māšîaḥ* in the OT. Anointing was part of the investiture of kings and priests in Israel, and holders of these offices were regularly referred to as "anointed" with reference to this symbolic act. See MESSIAH. The expression is used once of the patriarchs in Ps 105:15 (= 1 Chr 16:22), where Heb *mĕšîḥāy* "my anointed ones," used oddly in parallel with "my prophets," is translated into Greek *ton christon mou* (Ps 104:15 [LXX]).

The expression "the anointed priest" is found in Lev 4:5, 16; 6:15 (RSV 6:22); the Greek term found here is *christos.* In Lev 4:3, the LXX uses the participle *kechrismenos,* with the same meaning. Elsewhere in biblical Hebrew usage, the term "the Lord's anointed" and the corresponding expressions "my/your/his anointed" are used only of kings; compare also the expression "the anointed of the God of Jacob" in 2 Sam 23:1. In the two cases where the Hebrew Bible uses *māšîaḥ* absolutely but without article (Dan 9:25, 26), the two Greek versions give different translations. In v 25 only Theodotion has the phrase "until an anointed one, a leader"; in v 26 both Theodotion and LXX speak of "ointment" instead of "an anointed one," while LXX adds that a gentile kingdom will destroy the city and the whole place *meta tou christou*—either "with the anointed one" (Theod. "with the coming leader") or "with that which was anointed."

In the apocryphal books of the OT *christos* occurs in Sir 46:19 where the expression "the Lord and his anointed" is found in a reference to 1 Sam 12:5. In 2 Macc 1:10 Aristobulus is said to be "of the family of the anointed priests." In the Greek pseudepigrapha we note the expression "an anointed lord" (used of the expected ideal Davidic king) in *Pss. Sol.* 17:32. In view of *Pss. Sol.* 18:5 (and 18:7 with the superscription of this psalm), this passage is probably to be amended to "the anointed of the Lord." In the Testaments of the Twelve Patriarchs we find the word *christos* in *T. Reub.* 6:8 that speaks of " (the times of) the anointed highpriest, of whom the Lord spoke"; the passage in its present form is undoubtedly Christian.

Not only in Greek sources, but also in those preserved in other languages, the term "the anointed one" seldom occurs (see MESSIAH). References to a future royal figure predominate but differ in many details. Only in the Qumran Scrolls do we find the expectation of an anointed high priest in the future, and one reference to a prophetic "anointed one of the Spirit" in 11QMelch 18. The late apocalypses of Baruch (*2 Bar.* 29:3; 30:1; 72:2) and Ezra (*4 Ezra* 12:32) are the only ones that use the term "the anointed" in an absolute sense to denote the expected future king. This use of the term is common in the writings of the NT, also to characterize the central figure in Jewish expectation (Mark 12:35; 15:32; 7:27, 42; 12:34). Discussions between Jews and Christians mentioned in Acts (9:22; 18:5, 28) center around the nature of the expected messiah and whether Jesus is the awaited one. In these instances the designation *ho christos* is used without any further addition.

Josephus uses the expression *ho christos* twice, in two much-disputed passages about Jesus as the Messiah (*Ant.* 18.63–64 and 20.200).

B. The Use of *Christos* in the NT

1. Central Questions. The discrepancy between the frequent Christian use of the term *christos* as a central designation for Jesus and the very restricted use of the term in Jewish contemporary writings is striking. Why was the category "anointed one"/"Christ" considered appropriate to characterize Jesus? Who were the first to use this designation in connection with Jesus? Was Jesus called "Christ" by his followers only after his death and resurrection, or did his disciples apply the title to him during his lifetime? Did Jesus himself accept this title or did he avoid it? Scholars have given many different answers to these central questions, which can only be addressed after a careful and detailed analysis of the occurrences of the term "Christ" in early Christian writings.

2. The Letters of Paul. An analysis of the early Christian use of the word *christos* will have to start with the earliest written evidence, the letters of Paul. In Romans, 1 and 2 Corinthians, Galatians, Philippians, 1 Thessalonians, and Philemon, commonly regarded as genuine, the term occurs 270 times. Thus over half of the instances are found in about one sixth of the NT. Paul uses *christos* alone, with or without the article, but nowhere with a clear difference in meaning. He also uses it in combination with other words: "Jesus Christ," "Christ Jesus," "Jesus Christ the/our Lord" or "the/our Lord Jesus Christ." There does not appear to be a difference in meaning between "Jesus Christ" and "Christ Jesus"; the latter expression is sometimes preferred for grammatical reasons. We may compare here the case of Jesus' disciple Simon, who received the name Cephas/Peter ("man of the rock") and is referred to as Simon, Cephas/Peter and Simon Peter alike. The combination of *christos* with *kyrios* "Lord" is avoided by Paul (though it is found in Luke 2:11). In Rom 16:18 the expression "our Lord Christ" is probably used to contrast between serving the Lord and serving other lords (cf. Col 3:24). When *kyrios* is used by Paul together with "Christ Jesus," it follows that expression (Rom 6:23; 8:39; 1 Cor 15:31; Phil 3:8).

The fact that a direct combination of Christ with Lord is avoided in the Pauline letters shows that Christ is not a proper name. Nor does Paul use *christos* as a general term; it is always and exclusively a designation for one person, Jesus. The word is nowhere used as a predicate. Paul never finds it necessary to state "Jesus is the Christ." Expressions of the type "Jesus the Christ" are not found, nor does the OT expression "the anointed of the Lord" occur. The designation "Christ" receives its semantic content not through a previously fixed concept of messiahship but rather from the person and work of Jesus.

Yet Paul (and his readers) knew very well what the term meant to Jews. In a list of God's privileges for Israel, Paul states: "of their race, according to the flesh, is *ho christos*" (Rom 9:5); the titular use of the term is evident. Use of Christ as a title may also be intended in a number of other passages (Rom 15:7; 1

Cor 1:23; 10:4; 15:22; 2 Cor 5:10; 11:2–3; Gal 3:16; Phil 1:15, 17 and 3:7). We may note in passing that in Rom 1:3–4 Paul quotes a formula that states that Jesus was descended from David. But in all these cases it is not necessary to know that *christos* has "messianic" connotations. Invariably Paul speaks about the one Christ, Jesus, and even in Rom 9:4 his point is equally valid for those readers who do not realize that he is using a "technical" term. In 2 Cor 1:21 the Greek suggests a play of words between "Christ" and "anointing" ("It is God who establishes us with you in Christ, and has anointed us")—but significantly the verb *chriō* is applied to those united with Christ in baptism, not to Jesus himself. Paul also emphasizes that the crucified Christ of whom he preaches is a stumbling block to the Jews (1 Cor 1:23; Gal 5:11). Here and in Gal 3:13 we may detect biographical overtones; a crucified messiah was unacceptable for Paul before he found himself called to be an apostle of the one whom he persecuted. Yet in his letters he regards it as unnecessary to argue explicitly that Jesus is the *christos* whom Israel expected or why this is the case; Paul and his readers were convinced he was. When early Christians spoke about (the) "Christ," they meant Jesus in whom they believed; they did not necessarily intend to convey the "messianic" connotations of the term.

It can be shown that Paul refers to earlier formulas familiar to his readers in which *christos* is used of Jesus. The expression "Christ died for us/you" is such a fundamental statement; it is found (with variations) in Rom 5:6, 8; 14:15; 1 Cor 8:11; 2 Cor 5:14–15; 1 Thess 5:9, 10, and is clearly presupposed in 1 Cor 1:13; Gal 2:21; 3:13. "Christ" is not regularly used in formulas referring to the resurrection, but it occurs in a number of formulas speaking about Jesus' death and resurrection jointly: 1 Cor 15:3–5; 2 Cor 5:15; Rom 8:34; 14:9; "Christ" used absolutely in Paul's disquisition on baptism in Rom 6:3–11.

Introducing the statement in 1 Cor 15:3–5, Paul makes clear to his readers that its message constitutes the heart of the gospel which he preaches and which he himself received. Here and in 15:12–19 it is evident that the word "Christ" (denoting Jesus, who died "for us and for our sins" and was raised again, according to the Scriptures) indicates the core of what is believed and proclaimed as the gospel of salvation. It can be shown that in Paul's letters it is used repeatedly in combination with believing/faith (Gal 2:16; Phil 1:29), preaching (1 Cor 15:11–14; Rom 10:14–16), and gospel (see for the expression "the gospel of Christ" Gal 1:7; 1 Thess 3:2). This, too, may reflect pre-Pauline usage. As to Paul himself, he regularly introduces himself as the apostle or servant of Christ (Jesus), particularly in the prescripts of the letters, and emphasizes that Jesus Christ died on the cross (1 Cor 1:13, 17–18; 2:2, 8; 2 Cor 13:4; Gal 3:1; 6:12, 14; Phil 2:8; 3:18).

For Paul and the tradition before him, the designation "Christ" was thus linked with Jesus' death and resurrection and their salvific effects. It is relatively seldom found in texts speaking about the *parousia*, which seems to be traditionally linked with the designation "Lord." Only in Philippians does Paul use the expression "the day of Christ" (1:10; 2:16; cf. "the day of Jesus Christ" in Phil 1:6).

Among other instances where Paul clearly prefers the term "Christ" to other designations and titles of Jesus, we may note a number of cases where the term is used in connection with Christ's followers regarded as a close community united with him. In 1 Cor 1:10–16 Paul argues that there is only one Christ crucified for those who believe and in whose name all were baptized (this is implied in vv 13, 15). They now belong to Christ, are "of Christ" (v 12; 3:23; 15:23; 2 Cor 10:7; Gal 3:29; 5:24; Mark 9:41); they therefore form a unity and should live in harmony. Gal 3:26–28, using corporate language, emphasizes the unity of believers in Christ: "for in Christ Jesus you are all sons of God through faith. For as many of you as were baptized into Christ have put on Christ. There is neither Jew nor Greek, there is neither free nor slave, there is neither male nor female; for you are all one in Christ Jesus." Believers are "in Christ Jesus"; they are therefore one. In 1 Cor 12:12–31, Paul, in a plea for unity and diversity within the Christian Community, calls it "the body of Christ." In Rom 6:3–11, "baptism into Christ Jesus" implies being "baptized into his death" and sharing in his new life. "So you also must consider yourselves dead to sin and alive to God in Christ Jesus" (v 11). Similar corporate language is found in Rom 8:9–11; 2 Cor 5:14–15; Phil 3:7–11 (the figure of death and life is also central to Col 2:12–13; 2 Tim 2:11–12). Corporate notions occupy a very important place in Paul's thinking about the present and future effects of Jesus' death and resurrection on those who are united with him. It is not quite clear to what extent he

makes explicit here what was experienced by early Christians who underwent the ritual of baptism; it is likely, however, that the term "Christ" was connected with baptism from early times onward.

Baptismal language, with its imagery of death and rebirth, is brought into proximity with the Christian hope of future redemption in the expressions "in Christ Jesus" and "in Christ," both of which occur with some frequency in the Pauline corpus. In many cases the expressions serve to connect the salvation offered by God and experienced by Christians explicitly with the central event of Christ's death and resurrection (as in Rom 3:24 "the redemption which is in Christ Jesus"; Phil 3:14 "the upward call of God in Christ Jesus"; Gal 2:16 "to be justified in Christ"; 1 Cor 15:22 "in Christ shall all be made alive"). In many other cases the terms are connected with the Christian community (Rom 8:1 "there is no condemnation for those who are in Christ Jesus"; Rom 12:5: "So we, though many, are one body in Christ"; Gal 3:26–28; Rom 6:11). It is often difficult to determine the exact nuance of the Greek preposition *en* that is used in these contexts, and generally impossible to choose between an instrumental meaning and a locative one (implying corporate imagery). Essential is the fact that Christians live in close communion with Christ, the effects of whose death and new life determine their existence. With the "we … in Christ" corresponds the "Christ in us" (Gal 2:20; Rom 8:10; 2 Cor 13:5; Col 1:27—where "in you" may also mean "among you"; Gal 4:19; 2 Cor 13:3; Gal 2:8).

The other instances where "in Christ (Jesus)" occurs cannot be subsumed under a single heading. The expression is used there to characterize individual persons, specific activities, or situations. In all cases there is again a connection with the central message about Christ, though the term may sometimes be used rather loosely. There is not always a clear distinction between "in Christ" and "in the Lord," an expression used by Paul predominantly in exhortations and commands.

Finally, *christos* is found in parenetical statements which stress that Christ's conduct forms the foundation of the believers' conduct toward others and determines it (1 Cor 8:12; Rom 14:15). Related admonitions use the "conformity pattern" (Rom 15:2–3 and Rom 15:7), the much discussed "have this mind among yourselves which you have in Christ Jesus" (Phil 2:5), as well as the expressions "in accord with Christ Jesus" (Rom 15:5) and "Be imitators of me, as I am of Christ" (1 Cor 11:1). Paul can speak of fulfilling "the law of Christ" (Gal 6:2) and describe himself as one "under the law of Christ" (1 Cor 9:21).

3. The Deutero-Pauline Writings. Of those letters that are commonly regarded as written not by Paul himself but by authors standing in the Pauline tradition, Colossians and Ephesians use *christos* in much the same way as Paul. There are no "messianic" overtones.

In Colossians we find the expressions "apostle/servant of Christ (Jesus)" (1:1, 7; 4:12; cf. 3:24 comparable to Rom 16:18), "peace of Christ" and "word of Christ" (3:15 and 16). Interesting is the expression "to declare the mystery of Christ" (4:2), to be connected with "the knowledge of God's mystery, Christ in whom are hid all the treasures of wisdom and knowledge" (2:2–3). Elsewhere the author speaks of "this mystery, which is Christ in you, the hope of glory" (1:27). This mystery, hidden for generations, had been made manifest to "his saints" to whom in particular Gentiles belong. The mystery of Christ forms the content of the proclamation of the community of believers (1:24–29). They are "in Christ" (1:2); their faith is "in Christ" (1:4; 2:5). They "received Christ Jesus the Lord" (2:6) and live therefore "according to Christ" (2:8) and not according to the rules of the elemental spirits of the universe. The church constitutes the "body of Christ" (1:24, also 1:18 and 2:19 [Christ is the head of the body]). Much attention is paid to the idea of incorporation in Christ, with an emphasis on the present salvation enjoyed in communion with Christ (2:20; 3:1–4, 11; cf. 1:24).

In Ephesians the word "mystery" recurs, again centered around what has been effected by and granted in Christ (1:9; 3:3–13; 5:32; 6:19). Particular emphasis is laid on the unity of Gentiles and Jews in Christ (2:11–22; 3:3–13). Again we find the notion of being raised with Christ (after being dead in sin) and being exalted with him (2:1–6; cf. Col 3:1). In 5:14 the phrase "Awake, O sleeper and arise from the dead, and Christ shall give you light" seems to have been taken from a baptismal hymn. Often the author uses "in Christ" and "in Christ Jesus," and much attention is paid to the life of the community as that of a body of which Christ is the head (1:23; 2:16; 4:4, 12–16). The relation between Christ and the church is an example for relations between husband and wife (5:21–33).

In 2 Thessalonians "Christ" occurs only in the fixed expression "the/our Lord Jesus Christ" with the sole exception of the phrase "the steadfastness of Christ" (3:5). In the Pastoral Epistles (1–2 Timothy, Titus), we find stereotyped language, both in sentences using earlier christological formulas and in free composition. "Christ Jesus" is used twenty-six times, four times together with "the (our) Lord," and three times with "our savior"); five times we find "Jesus Christ" once with "our Lord," and once with "our savior"), and only once "Christ" (1 Tim 5:11). The frequent use of Christ Jesus (in all grammatical constructions) is striking. It may show awareness of the fact that Christ is more than just a name. The author may have been influenced by the earlier formulas he uses; their exact date cannot be determined and may differ from case to case. But 2 Tim 2:8 (which resembles the ancient formula found in Rom 1:3–4) mentions Jesus Christ's descent from David and it is possible that 1 Tim 1:15, 2:5–6, and 6:13 betray earlier formulaic usage of the term "Christ."

4. The Gospel of Mark. In this gospel, commonly regarded as the oldest of the three Synoptics, the word *christos* is used seven times. In 1:1 the evangelist characterizes the story he is going to tell as "the gospel of Jesus Christ." Important manuscripts add "the Son of God," bringing out an essential feature of Markan christology: Jesus, who is called the Christ, and who often refers to himself as "the Son of Man," is God's Son. Demons recognize him as such (3:1; 5:7), as does the Roman officer present at the crucifixion (15:39). Jesus accepts this designation during his trial before the Sanhedrin (14:61, cf. 8:38; 12:6–8; 13:32), and most significantly God himself is introduced in the story twice with a solemn declaration: "you are/this is my beloved son" (1:11; 9:7).

In the expression "gospel of Jesus Christ," Mark uses traditional terminology (cf. the use of "gospel of Christ" and of "Jesus Christ" in the letters of Paul). Also in 9:41, where disciples are characterized as "being of Christ," is conventional language. In the five remaining instances, however, the original titular meaning of the term is evident.

In 8:29 the disciples, through Peter, confess, "You are the Christ." For Mark and his readers, this is a well-known confession and it does not come as a surprise. Peter utters it after having witnessed Jesus' activity in Galilee as preacher, teacher, healer, and exorcist. It is understandable that outsiders regard Jesus, the herald of God's kingdom (1:14), as a revived John the Baptist, or Elijah, or one of the prophets (8:28); his disciples call him "the Christ." At the moment they say this, they do not yet know the whole story. Immediately after, Jesus enjoins his disciples to keep silent about him (8:30). He announces his suffering, death, and resurrection, referring to himself as Son of Man (8:31, repeated in 9:31; 10:32–34). He declares that those who follow him must be ready to lose their lives "for me and the gospel" (8:35); that they will be vindicated when the Son of Man returns "in the glory of his father" to introduce the kingdom of God with power (8:38–9:1). The story of Jesus' transfiguration follows (9:2–8) with God's solemn pronouncement "this is my beloved Son" (9:7) and another command for secrecy (9:9).

In 12:35–37 Jesus introduces the thesis "the Christ is the Son of David" as a typical opinion of the scribes. Similarly, in the crucifixion story the chief priests and the scribes speak about "the Christ, the king of Israel" (15:32). Earlier in the gospel, Jesus is twice addressed as "Son of David" by Bartimaeus (10:46–52), and he is associated with "the coming kingdom of our father David" by those who hail him at his entrance into Jerusalem (11:1–11). In 12:35–37 Jesus quotes Ps 110:1 and remarks that David addresses the one who is said to be his son as "lord." The true son of David—Christ—is different from what the scribes expect.

This becomes very clear in 14:61–62, where Jesus, standing before the Sanhedrin, acknowledges that he is "the Christ, the Son of the Blessed," but adds "you will see the Son of Man sitting at the right hand of Power, and coming with the clouds of heaven (an allusion to Ps 110:1 and Dan 7:13). Jesus the Son of Man will reign as the Son of David/Christ/Son of God when God's kingly rule will be established on earth (8:38–9:1; 13:26). In the story about the trial before Pilate and the crucifixion, the designation "king of the Jews" stands central (15:2, 9, 12, 18, 26, cf. v 32). Its thematic importance is that Jesus is not a king in the political sense; even less is he a bandit like the ones crucified with him, or an insurgent like Barabbas. His royal rule will only be revealed at the *parousia* when the crucified Christ will be shown to be triumphant.

Mark 15 reflects the political tensions before, during, and after the war between the Jews and the Romans, culminating in the destruction of Jerusalem and its temple in A.D. 70. This is also clear in chap. 13, where Jesus' followers are warned against people who say "Look, here is the Christ" or "There he is." False messiahs and false prophets will arise to lead astray the elect (vv 21–22). They need not waver, however, for they know whom they may expect: "the Son of Man coming in clouds with power and glory" (v 26).

5. The Gospel of Matthew. The two other Synoptic Gospels bring out more clearly what Mark wanted to convey. In doing so they could only rely on Mark and on general early Christian usage, but not on Q, the sayings-source commonly thought to have been used by Matthew and Luke. Mark uses *christos* very sparingly, but in the sayings attributed to Q it is not used at all.

Matthew knows Jesus Christ as a double name (1:1, 18 and 1:16; 27:17–22). Straightaway he explains to his readers that Christ denotes the Messiah, Son of David, king of Jews (2:1–6). It is clear, however, that Herod's interpretation of the term is wrong. While Gentiles worship the newborn "king of the Jews" (2:9–12; they are the first to do so), Herod tries in vain to destroy a potentially dangerous political opponent (2:13–18). Chap. 2 prepares the reader for the misunderstandings apparent in chap. 27 (= Mark 15). Matthew also stresses that Jesus is the Son of David (1:1–17; 1:20; 21:9; 22:41–46). He uses this term in particular in stories about healing (9:27–31; 12:22–23; 15:21–28; 21:14–17 plus the Bartimaeus story in 20:29–34).

The title "Christ/Messiah" receives more emphasis in the story of Peter's confession (16:16, "you are the Christ, the Son of the living God"; and 16:20, "… he strictly charged the disciples to tell no one that he was the Christ"). "The Christ" (with the definite article) is significant in 11:2 where "the works of the Christ" refers to Jesus' healings and his preaching of the gospel, as also in 23:10 ("you have one master, the Christ"). In 24:5 and 26:68 Matthew adds the designation in contexts where it was already used by Mark.

6. Luke-Acts. In Luke-Acts we find the phrase "the Lord's Anointed" (Luke 2:26, Acts 4:26) and "the Anointed of God" (Luke 9:20; 23:35); the genitive refers to the One who anoints, as in the Old Testament. Luke specifies that God anointed Jesus with the Spirit (see the quotation from Isa 61:1–2a in Luke 4:18; Acts 10:38; also 4:27). At the same time "Christ" and "Lord" are found as parallels in Luke 2:12 ("a Savior who is Christ and Lord") and Acts 2:36 ("God made him both Lord and Christ"). As Christ/Messiah Jesus is Son of David (Luke 1:32; 2:4, 11; 3:31; cf. 1:69). He is "King of Israel/the Jews," but does not exercise political power (brought out very clearly in Luke 23:3, 39; cf. Acts 17:7). There will be no end to the reign of this Son of David, who is at the same time Son of the Most High (Luke 1:32–33; cf. 1:69). The emphasis is on his reign after his exaltation in heaven (Luke 22:67–69; 23:42–43; Acts 2:36; but see also Acts 3:19–21, which connects the designation Christ specifically with the *parousia*).

Another feature of the Lukan use of *christos* has to be singled out. The word is used in a typical variant of the double formula speaking about Jesus' death and resurrection/exaltation. The first part speaks about "the suffering of Christ" (Luke 24:26, 46; 26:23; Acts 17:3; 26:23; cf. 3:18; 25:19, see also below on 1 Pet 2:21; 3:18). In Acts 17:1–3 it is made clear that this central element in the Christian message forms a special point of debate in discussions with the Jews. In the synagogue of Thessalonica, Paul explains "that it was necessary for the Christ to suffer and to rise from the dead" before testifying that Jesus is the Christ. In the narrative of Acts, the core of Paul's message (and that of Apollos) may be reduced to "Jesus is the Christ" (9:22) or "the Christ is Jesus" (18:5; 18:28). It may also be summed up as "Jesus is the Son of God" (9:20); also elsewhere the designations "Christ" and "Son of God" are closely connected (Luke 1:32–33; 4:41; 8:28; 22:67–69).

Finally it should be pointed out that according to Acts 11:26 (cf. 26:28 and 1 Pet 4:16), the designation "Christians" was first used for the followers of Jesus in Antioch. This implies that they formed a separate group, the identity of which was determined by their allegiance to one who was commonly called *christos* (see CHRISTIAN).

7. The Johannine Corpus. Apart from 1:17 and 17:5, where we find the expression "Jesus Christ," all instances of the use of *christos* in the Gospel of John presuppose the titular use of the term. The Gospel

wants to demonstrate what it means to believe "that Jesus is the Christ, the Son of God" (20:31). The confession "Jesus is the Christ" formed the breaking point with the synagogue (9:22), and followers of Jesus should therefore consider very carefully what constituted the core of their faith and what should be kept in mind in ongoing discussions with "the Jews."

John the Baptist, introduced as prime witness for Jesus, denies that he himself is the Christ (1:20, 25; 3:28). Two of his disciples follow Jesus and one of them, Andrew, tells his brother Simon: " 'We have found the Messiah' (which means Christ)" (1:41). Here and in 4:25 the Greek transliteration of the Hebrew term is introduced to illustrate the meaning of the designation "Christ." In 4:4–42 a Samaritan woman, after listening to Jesus, identifies him with the Messiah of Samaritan expectation, who "will show us all things" (4:25; cf. v 29; see also MESSIAH). Jesus answers "I who speak to you am he" (v 26). In a discussion with his disciples, he makes clear that his task is to accomplish the work of God who sent him, in complete agreement with the divine will (vv 31–38). After further contacts with the Samaritans of the woman's city, they declare, "we know that this is indeed the Saviour of the world" (vv 39–42).

In the debates between Jesus and the Jews and the discussions among the people in Jerusalem narrated in John 7, Jesus is called "the Christ" (vv 26, 27, 31) and "the prophet" (v 40, and an important variant reading in v 52). This chapter is important because here, as in 12:34, several aspects of the Jewish expectations concerning the Messiah are mentioned (see MESSIAH). But the Johannine Jesus puts all emphasis on his unique unity in will and work with the Father who sent him. In this light the Davidic descent of the messiah and his birth in Bethlehem are irrelevant (7:40–44). When in 10:24 the Jews ask Jesus, "If you are the Christ, tell us plainly," Jesus answers with a short discourse on the intimate union of the Father and himself, ending with the statement "I and the Father are one" (vv 25–30). Martha therefore confesses Jesus as the Christ, the Son of God (11:27); this is the message the Gospel is intended to bring to its readers (20:31).

The First and Second Letter of John address a different situation. Christians believe in "Jesus Christ, the Son of God" (1 John 1:3; 3:23; 5:20; 2 John 3). Confessing that "Jesus is the Christ" (1 John 5:1) stands parallel with confessing that "Jesus is the Son of God" (1 John 4:15; 5:5, 10, 13). Denying that Jesus is the Christ means denying Father and Son, according to 1 John 2:22 (2 John 9). This implies that the designations "Christ" and "Son of God" have become virtually interchangeable. The false teachers combated in the two Johannine letters believe in the Christ as the Son of God but fail to take seriously that this Christ is a human being of flesh and blood. Hence the emphasis on the part of the authors of the Letters on the confession that "Jesus Christ has come in the flesh" (1 John 4:2,3; 2 John 7).

Jesus Christ, he adds, "came by water and blood" (1 John 5:6). This is the sound "doctrine of Christ" (2 John 9) in which true believers have to abide. The dogmatic emphasis on Jesus' corporeal substance appears to address the beliefs of some groups of "Johannine" Christians who, perhaps by induction from their faith in the Son of God who exists and acts in complete unity with the Father, arrived at a conception of Christ that completely neglected Jesus' human life, work, suffering, and death. The authors of 1 and 2 John want to redress this neglect; in their contribution to the ongoing debate they do not try to explain the background of the term "Christ," but rather stress a more specific confessional statement: "Jesus Christ has come in the flesh."

Interestingly, the authors refer to the expectation that "Antichrist is coming" (1 John 2:18) to characterize opponents as "antichrists" (1 John 2:18, 22; 2 John 7) or false prophets inspired by the spirit of the Antichrist (1 John 4:3). Specific to 1 John is also the use of the term "anointing" as source of true knowledge of the (true) believers (1 John 2:20, 27; cf. 2 Cor 1:21–22).

8. Other NT Writings. Of the other writings in the NT, the Letter to the Hebrews, the First Letter of Peter, and the Revelation to John require our attention. In the first two writings we find no "messianic" overtones. In Revelation we find a few instances where *christos* is used as a title. Central in the argument of Hebrews is the notion that Jesus Christ, "the same yesterday and today and forever" (13:8), is the eternal Son of God and (high) priest after the order of Melchizedek forever (chap. 7). The eternal kingdom of the Son is emphasized by a citation (Heb 1:8–9) of Ps 45:6–7 (LXX Ps 44:7–8), including the sentence "therefore God, thy God, has anointed thee with the oil of gladness beyond thy comrades." A

subsequent concatenation of Psalm quotations (Ps 2:7 and 110:4, cited at 5:5–6) establishes that Christ did not arrogate high priesthood, but was divinely appointed to that office. The designation "Christ" is still used to indicate the central content of the Christian message. In 6:1 the author speaks about "the elementary doctrines of Christ"; he describes the believers as the house of Christ (3:6) and as sharing in Christ (3:14). The special connection between the designation "Christ" and Jesus' death for others comes out clearly in 9:11–28 (see v 11; v 14 "the blood of Christ"; v 24 and v 28 "Christ, having been offered once to bear the sins of many"; cf. 10:10). But to bring out the essential meaning of Christ's death the author, here and elsewhere, sets forth the implications of the fact that he is high priest after the order of Melchizedek.

The use of the word *christos* in 1 Peter shows many similarities with its use in the letters of Paul. The designation occurs in connection with Jesus' suffering and death or with his suffering/death and the following resurrection with an outlook on his present and future glory. At the same time the communion between Christ and the Christians (the term is used in 4:16) is emphasized. By way of example, we may mention 1:18–19 "you were ransomed … with the precious blood of Christ, like that of a lamb without blemish or spot" (cf. 1:2); 2:21 "Christ suffered for you, leaving you an example, that you should follow in his steps" (cf. 3:15). The "Spirit of Christ" speaking to the prophet of the old dispensation revealed to them that their message "predicting the sufferings of Christ and the subsequent glory" was intended not for their own, but for the present generation (1:10–12). In 3:18–22 we find a complete confession of faith, consisting of many old elements: "Christ suffered [or: died; because the Greek words are very similar the manuscripts differ here and at 2:21] for sins once for all, the righteous for the unrighteous, that he might bring us to God, being put to death in the flesh but made alive in the Spirit … preached to the Spirits in prison …, has gone into heaven and is at the right hand of God, with angels, authorities and powers subject to him." Christians, therefore, may live in hope through Jesus Christ' resurrection (1:3), looking out for his final revelation (1:7,13). They share in his sufferings (4:13–16; 5:10; cf. 5:1), but may be confident that they will share in his glory (4:13; 5:1, 10). In the meantime, knowing that Christ "bore our sins in his body on the tree, that we might die to sin and live to righteousness" (2:24, cf. Isa 53:4, 12), maintaining good conduct as aliens and exiles among the Gentiles (4:1–6; 2:11–12; cf. 1:1, 17). Christians are "in Christ" (5:14).

In the Revelation to John the designation "Jesus Christ" is found three times in the introductory verses. The word *christos* alone is found four times, in 11:15 and 12:10 speaking about "his (the Lord's, God's) anointed" and in 20:4, 6 where "his" is not found, but the titular meaning of *christos* is certainly present. In all four cases, Jesus is referred to.

The book contains the revelation of Jesus Christ to John (1:1) "who bore witness to the word of God and to the testimony of Jesus Christ" (1:2). In v 5a Jesus Christ is called "the faithful witness, the firstborn of the dead, and the ruler of the kings of the earth." Verses 5b–6 (perhaps using ancient baptismal terms) praise "him who loves us and has freed us from our sins by his blood and made us a kingdom, priests to his God and Father."

In chap. 5 the seer, after having heard the announcement that "the Lion of the tribe of Judah, the Root of David has conquered" (v. 5, cf. 3:7; 22:16) sees a Lamb standing near God's throne "as though it had been slain" (v. 6; cf. 7:9, 17; 12:5). This Lamb clearly is the victorious Lion of Judah; in hymns, God who sits on the throne and the Lamb are glorified together (5:13; 7:10). In 17:14 the victorious Lamb (accompanied by those who "are called and chosen and faithful" (cf. 3:21) is called "the Lord of lords and King of kings"; the same name is inscribed on the robe and the thigh of the rider on the white horse in (19:11–16), whose victory introduces the last series of eschatological events described in this book. In the first hymn to the Lamb in 5:9–10 we find a clear reference to 1:5b–6: "thou wast slain and by thy blood didst ransom men for God from every tribe and tongue and people and nation, and hast made them a kingdom and priests to our God, and they shall reign on earth."

In 11:15 voices in heaven announce: "The kingdom of the world has become the kingdom of the Lord and his Anointed [RSV: his Christ], and he shall reign for ever." The terminology is influenced by that of Ps 2:2 (cf. v 18, reminiscent of Ps 2:1–2, 5, 12 and Ps 99:1). The emphasis is on God's sovereignty, as vv

17–18, which speak only about God, show. In 12:10 another loud voice in heaven declares, "Now the salvation and power and the kingdom of our God and the authority of his Anointed [RSV: his Christ] have come." Satan no longer has power to accuse "our brethren" (cf. v 9) of whom it is said, "They have conquered him [i.e., Satan] by the blood of the Lamb and by the word of their testimony" for "they were willing to give their lives and die" (TEV). The connection with 5:9–10 (cf. 7:14) is obvious.

The final reign of the faithful who give their lives for their testimony to Jesus and for the word of God is described in 20:4–6. They will come to life ahead of others, and will reign with the Anointed/Christ for a thousand years as "priests of God and of Christ" (cf. 5:9–10). The pericope 20:4–6 describes one of the many episodes of the End; those who have resisted actively in the fierce struggle against Satan and his servants on earth will take part in the first resurrection, and reign with Christ on earth. The final judgment and another resurrection follow (20:11–15). In the new Jerusalem, descending on the new earth, there will be no temple (21:22) and therefore no priests. But "the throne of God and the Lamb will be in it, and his servants shall worship him" (22:3); "they shall reign for ever and ever" (22:5).

The use of *christos* in Revelation is interesting, because it shows that its original messianic meaning was still known. In the time of distress caused by discrimination and persecution in the nineties, Christians in Asia Minor associated this designation with the final triumph of God and the reign of Jesus as "the Lord's Anointed," as Davidic king on earth after the destruction of all hostile powers. At the same time it is made very clear that this future king is Jesus Christ, who redeemed the faithful by his death and rose from the dead; also the close relationship between Jesus Christ and the faithful receives emphasis: They share in suffering in order to share in the final victory.

C. The Use of *Cristos* for Jesus

From the Pauline Letters and the ancient formulas contained in them, it is clear that from a very early period the word *christos* was used in "Christian" circles as the central term to denote Jesus. It is used very often, and it received its content not through a previously fixed concept of messiahship but rather from the person and work of Jesus. The term is especially used in connection with his death and resurrection, the salvation effected by him, and the intimate bond between him and the believers. Although awareness of the original titular meaning "Messiah" persists, there is no longer any need to state explicitly "Jesus is the Christ."

In later writings (the Deutero-Pauline letters, 1 Peter, Hebrews) the same usage prevails. Speaking about Jesus, one uses the word "Christ," especially in specific contexts. Jesus Christ functions virtually as a double name. Yet in Revelation the OT designation of the king as "the Lord's Anointed" returns in connection with the final triumph of God and the reign of Jesus as Davidic King.

At the time the Gospel of Mark was written, it was clearly necessary to remind the readers how their confession "Jesus is the Christ" should be understood. The emphasis is on his impending suffering and death, and on the nonpolitical nature of his kingship. Matthew essentially underlines what is found in Mark. In Luke-Acts, Jesus' messiahship is the central issue in the debate between the early Christians and the Jews, bringing with it a discussion about the true meaning of predictions concerning the Messiah in the Scriptures. Two other features in Luke-Acts are of interest: a certain emphasis on Jesus' reign after his exaltation in heaven, and the explicit statement that God anointed Jesus with the Spirit. The latter is found in Jesus' first public speech, related in the gospel as having taken place in his home town Nazareth (Luke 4:18).

The Gospel of John, a late NT book, presents an interesting picture. On the one hand, it stresses that Jesus the Christ is the Son of God living in a unique unity with the Father; it does so to such an extent that later Johannine Christians have to be reminded that the Son of God in whom they believe really led a human life once. On the other hand, it pictures Jesus in an ongoing debate with Jewish opponents, a debate from which features of Jewish messianic expectation emerge.

Can we explain how the term *christos*, rarely found in contemporary Jewish literature, became so important to early Christians that it could receive a specific Jesus-centered Christian content and meaning very soon? In Jewish sources, the term is mostly used for a royal figure as agent of divine deliverance. The same notion seems to be present or presupposed where the Christian use of the term in connection

with Jesus is made explicit. Only in Luke-Acts do we find the notion of "anointing with the Spirit" (also found in 11QMelch 18). The idea of an anointed high priest, very important in the Qumran Scrolls, is not found in the writings of the New Testament. In Hebrews there is no emphasis on the anointing of Jesus as high priest; at the same time it is made very clear that the new high priest is of a completely different order than the Levitical (high) priests before him.

Why, then, was this term with its royal connotations used of Jesus? How did it become a very central designation?

In the oldest pre-Pauline tradition, the designation was especially used in connection with Jesus' death, and according to Luke-Acts it remained necessary to explain, to insiders and outsiders, that his death, followed by his resurrection, was "in accordance with the scriptures" (1 Cor 15:3, 4). In the pre-Pauline formula Rom 1:3, 4 Jesus' Davidic descent receives emphasis, and the motif of Jesus' royal lineage recurs in the latest books of the NT (e.g., 2 Tim 2:8; Revelation). In Mark (12:35–37; 14:61–62), it is made clear that the royal dominion of this Son of David/Son of God/Son of Man only becomes evident after his exaltation to God and will be fully realized with the coming of the kingdom of God in power—that is, God's definitive intervention in human affairs. Yet the Synoptics and John seem to prefer the term "Son of Man" in passages speaking about this future, and in the Letters of Paul the term *kyrios* predominates in such passages. "Christ" is used only seldom in connection with the eschatological rule (Phil 1:6, 10; 2:16; 1 Cor 15:23–28; cf. Acts 2:36; 3:20–21; and Revelation).

It is clear that Mark's story of the trial before Pilate and the crucifixion (chap. 15) combats the misunderstanding that Jesus, the Christ, the king of Israel, wanted to exercise political power. As chap. 13 shows, this misunderstanding will have been particularly acute in the troubles of the sixties when tension mounted in Palestine, finally resulting in the explosive Jewish war.

It is often argued that Mark 15 reflects the historical circumstances preceding Jesus' death on the cross. That Jesus was crucified is beyond doubt, but that he was crucified on the charge that he claimed to be "the king of the Jews" (Mark 15:26) is much more difficult to substantiate. Scholars have pointed out, however, that the story of Jesus' activities in Galilee and Jerusalem shows hardly any royal-messianic features. If we dismiss the unlikely hypothesis that they were there originally but were removed later, it must be assumed that in the events leading up to his crucifixion, accusations by his opponents that Jesus did in fact have royal-messianic claims, and was therefore a dangerous person, played a significant role. Because he was crucified as King of the Jews, his first followers took up the royal designation "Christ," particularly in connection with his death and resurrection.

According to this view, the opponents accused Jesus of royal-messianic pretensions because of the messianic hopes of his followers, his teaching with authority resulting in a sovereign attitude toward the Law and Jewish rules, and perhaps also his behavior in the temple (reflected in Mark 11:15–19). Jesus himself could not deny this charge without putting in question the final eschatological validity of his whole message. Whether he himself would have chosen this designation to express the essence of his mission and did, in fact, use it, remains uncertain.

It is difficult to verify the various constituent parts of this historical reconstruction; an unsatisfactory aspect of it is that it assigns a decisive role to Jesus' opponents in the choice of the term characterizing Jesus' public image. Another approach to the solution of this problem is called for.

It is difficult to believe that the term "Messiah/Christ" came to the fore only at the very last stage of Jesus' ministry because of the accusations of his opponents, and that it was only because of its prominence at the trial and the crucifixion that later Christians used it as the central designation for Jesus. Should we not assume that Jesus' disciples came to regard him as (a special) Messiah already during his lifetime, that this designation was misconstrued in a political sense by his opponents, but that it was taken up again in a nonpolitical manner (with emphasis on his suffering and his death) by his disciples after Golgotha? There is much to be said for this theory.

The Gospel of Mark not only uses the designation "Christ" (with Son of God, Son of Man) in connection with Jesus' future kingship, but it also has Peter confess Jesus as the Messiah in 8:29 on the strength of Jesus' activity as (unique) preacher, teacher, healer, and exorcist. For Mark, Jesus is the

Christ: on earth, a charismatic Spirit-inspired figure; at the final realization of his kingdom, king on God's behalf. Looking at Mark 10:46–52; 12:35–37; and 14:61, 62, we may say that his actions are those of a true Son of David.

It has been argued that the Gospel of Luke, which corroborates Mark's picture by explaining that Jesus could be called "the Anointed One" because the Lord anointed him with the Spirit (Luke 4:16–30), reflects Jesus' own opinion. Unfortunately, this hypothesis cannot be substantiated. The related Q-passage (Luke 7:18–23 [= Matt 11:2–6]) does not use *christos,* so that we cannot be sure that the early Christian use of *christos* was connected with the notion of anointing with the Spirit before Luke.

Interestingly, contemporary sources portray David not only as king but also as a prophet. On the strength of 1 Sam 16:13 and the directly following passage 16:14–32, Josephus emphasizes that immediately after the divine Spirit had moved to David, the latter began to prophesy and to exorcize the demons which troubled Saul (*Ant* 6.166–68). We may compare the statement "David was a prophet" in Acts 2:30 (cf. 1:16; 4:25) and 2 Sam 23:1–2, as well as Ps-Philo, *L.A.B.* 59–60 describing David's psalm-singing for Saul after his anointing by Samuel. A Qumran fragment, 11QPs[a] *David's compositions,* attributes 3600 psalms to David and no less than 450 songs, 4 of which were songs for making music over the stricken; it emphasizes that David spoke all these things through prophecy. It should be added that also in texts like *Pss. Sol.* 17 that picture the future Son of David as a king, that king is not simply a military or political figure, but a wise and discerning ruler; Isa 11:1–5 exercised a great influence on Jewish expectations concerning the coming Son of David.

In view of this, it is quite plausible that in the eyes of his earliest followers, if not in his own, Jesus was a true Son of David who could properly be called the Lord's Anointed, not only in view of his future role when God's kingdom would reveal itself in power, but already in the present while God's saving and liberating power manifested itself in Jesus' words and actions. Considering Mark's very restricted use of the designation "Christ," it is probable that the historical Jesus did not widely advertise any christological self-designations. If he used them, he used them creatively, in his own way, and he must have tried to avoid misunderstandings.

MARINUS DE JONGE

CHRIST, BODY OF. The NT usage of the phrase "body of Christ" and its parallel expressions divides naturally into three categories: (1) the physical body of Jesus Christ, (2) the references to the bread in the Last Supper and Lord's Supper, and (3) as a description of the relationship between the resurrected Lord Jesus and His *ekklēsia.*

A. Physical Body of Jesus

This concrete meaning is foundational, serving as the basis of comparison for the other categories (Gundry 1976; Hoehner 1984; Robinson 1952). A study of the Gospels yields a vast and varied amount of data pointing to the true humanity of Jesus (John 1:14; Luke 2:52). There is nothing to indicate that his physical being was other than a normal human body, with its needs and limitations (e.g. John 4:6–7; 19:28). The specific usage of the concept of the "body of Jesus [Christ]," however, is focused on his death and burial (Matt 27:58–59, and par; Col 1:22; Heb 10:10) (Robinson 1952:34–48). Relatedly, passages dealing with Jesus' resurrected body (e.g. John 20:19–29), ascension (Acts 1:9–11), and later appearances (e.g. Acts 9:3–6 = 22:6–8 = 26:12–15) imply both significant continuity and discontinuity with his pre-cross physical state.

B. Bread in the Communion Meal

The Synoptic Gospels record that, at the Last Supper, Jesus made the intriguing assertion "This is my body" after the breaking of the bread (Matt 26:26 = Mark 14:22 = Luke 22:19). This statement has been a notable *crux interpretum,* along with (perhaps) its earliest canonical echo in 1 Cor 11:24. Varied understandings of the relation between Jesus' actual person and the bread of the Eucharist (which He was instituting) have proliferated over the centuries, although such views can be generally categorized as "literal"/physical, metaphorical/spiritual, or some *via media* or combination approach (Küng 1967: 211–24; Ridderbos 1966: 373–76).

Of these historic options, careful exegesis of the 1 Corinthians 11 pericope indicates that the metaphorical, and thus spiritual, understanding of "body of Christ" in relation to the bread of communion is best. The continued Pauline references to "the bread" at the point of the individual's reception of the element (1 Cor 11:26–28) would be strange if there were any physical transformation involved. Certainly there is a close identification here with the physical "body of Christ," as the Corinthian church was urged to properly consider the meaning and significance of Jesus' death (1 Cor 11:27–29). However, such identification clearly stops short of full identity, as a physical understanding requires.

Similarly, in John 6, Jesus refers strikingly to himself as "the bread of life" (6:34, 48, NIV), "the bread that came down from heaven" (6:41), and "the living bread" (6:51). Even though the last usage is said by Jesus to be in reference to "my flesh" (6:51, NIV), there is no clear reference to the Lord's Supper here. It is no more intended for a literal understanding than "I am the light of the world" (John 8:12; 9:5) or "I am the door [of the sheep]" (John 10:7, 9). That is especially seen to be the case in John 6 when it is noted that the receiving of "the bread of life" there takes place by believing in Jesus (John 6:35, 40, 47).

C. Relationship between Christ and His Church

Within the Pauline corpus interpreters encounter a number of powerful expressions that picture the intimate connection between the resurrected Savior and His *ekklēsia.* Notable among these are references to the Church as the bride of Christ (Eph 5:23–32), the temple of the Holy Spirit (1 Cor 3:16; Eph 2:21), and the household of God (Gal 6:10; 1 Tim 3:15).

The most common and well developed of such expressions views the Church as "the body of Christ." The idea is utilized in different ways in different contexts, however. For example, in 1 Cor 12:12–27 and Rom 12:4–8 the emphasis is on the unity of the Church amid the rich diversity of its members. A related, but distinct, usage is seen in passages like Eph 4:4, 12–16 and Col 1:18–22; 3:15. There the focus is on Christ as the "head" of his body, the Church (Ridderbos 1966: 369–87).

Again, there is significant difference of interpretive opinion in regard to whether the idea of the Church as the "body of Christ" should be taken as speaking of virtual identity (the counterpart of the "physical" view of the Supper) or strong identification (Radmacher 1978: 223–37; Küng 1967: 224–41). To view the Church as an extension of the Incarnation might seem the implication of 1 Cor 12:12: "The body is a unit, though it is made up of many parts … So it is with Christ" (NIV; Robinson 1952: 58–59). However, the entire context, including the recapitulatory words "Now you are the body of Christ, and each one of you part of it" (1 Cor 12:27, NIV) argues for a close bond or link that is less than the fullest identification (Best 1955: 95–105; Ridderbos 1966: 369–71).

Thus, since the other passages assume (with minor variations) the same central sense for the imagery of the "body of Christ," it is preferable to understand it in a metaphorical way. The Church is not Christ in

the sense of embodying his authority and infallibility. Rather, it draws its direction and empowering from him as its head, as does a human body (Eph 4:15–16).

A final important consideration has to do with the origin of the Pauline phrase "the body of Christ." Various plausible backdrops for the idea have been postulated, arising out of Hebrew, Greek, Gnostic, and Eucharistic contexts (Best 1955: 83–93). However, the likeliest point of origin is the words of the risen Christ on the Damascus Road. "Saul, Saul, why do you persecute me?" (Acts 9:4 = 22:7 = 26:14; Kim 1981). Indelibly etched in Paul's thought patterns, these words best explain the close identification and communion between the Lord Jesus and His church as "the body of Christ" in 1 Cor 12:12, 27.
